15484. (Lt.-Col. J. Hickman.)—Smith takes a number in a small sweepstakes of 100 chances at 2s. 6d. each on a race in which 12 horses are entered. After drawing he forgets the name of the horse he drew, remembering only that it began with the letter *N*. When the race has been run he learns that the name of the winner begins with an *N*. The only further light he has as to the probability of his having won is that he believes $\frac{1}{20}$ of all racers bear names beginning with *N*. Proceeding on that assumption, find the precise mathematical value of his chance if the winner is to take $\frac{4}{5}$ of the stakes.

Solutions (I.) *by* D. Biddle; (II.) *by* V. Daniel, B.Sc., *and* E. F. Tipple.

(I.) Col. Hickman has done well to call attention, through the medium of this Question, the details of which are familiar to those who entered for the recent "*Times* Competition," to the unsatisfactory answer given to the example in the *Encyclopædia Britannica* (Vol. xix., p. 774), by reference to which the competitors were evidently intended to solve it. In the said example, the winning horse, like that drawn, is *black* (instead of being classed under the initial of its name); otherwise, so far as the chance of identity is concerned, the two are on all fours. The answer to the example, if applied to the present (or "Competition") question, would make the chance to be $1/(1+\frac{11}{20})$ or $\frac{20}{31}$, and, as $\frac{4}{5}$ of the stakes = £10, the required expectation is £6. 9s. $0\frac{20}{31}$d. according to the *Encyclopædia*. The method therein adopted is crude indeed, and I venture (though with some fear and trembling) to submit the following instead.

That one of the 12 horses has a name beginning with *N*, like that drawn, is certain; for the winner's name begins with *N*. The several chances that, of the 11 remaining horses, there are 0, 1, 2, 3, 4, ..., 11 with names beginning with *N* are given by the successive terms in the expansion of $(\frac{19}{20}+\frac{1}{20})^{11}$, namely, $\frac{19^{11}}{20^{11}}$, $\frac{11\,.\,19^{10}}{20^{11}}$, $\frac{55\,.\,19^9}{20^{11}}$, $\frac{165\,.\,19^8}{20^{11}}$, $\frac{330\,.\,19^7}{20^{11}}$, $\frac{462\,.\,19^6}{20^{11}}$, $\frac{462\,.\,19^5}{20^{11}}$, $\frac{330\,.\,19^4}{20^{11}}$, $\frac{165\,.\,19^3}{20^{11}}$, $\frac{55\,.\,19^2}{20^{11}}$, $\frac{11\,.\,19}{20^{11}}$, $\frac{1}{20^{11}}$. Here the common denominator is 204,800,000,000,000, whilst the several numerators are as follows:—

(1)	116490258898219,	(7)	1143957738,
(2)	67441728835811,	(8)	43005930,
(3)	17747823377845,	(9)	1131735,
(4)	2802287901765,	(10)	19855,
(5)	294977673870,	(11)	209,
(6)	21735197022,	(12)	1.

The numbers in parentheses not only represent the successive terms, but the number of horses having the particular initial *N* in the field, including the winner. These numerators must accordingly be divided severally and respectively by 1, 2, 3, 4, ..., yielding

116490258898219·000
33720864417905·500
5915941125948·333′
700571975441·250
58995534774·000
3622532837·000
163422534·000
5375741·250
125748·333′
1985·500
19·000
·08′3′

Digitized by Google

These numerators divided by the common denominator represent Smith's chances when the horses in the field and initialed N are respectively 1, 2, 3, ..., 12. Their sum gives his total chance, namely,

$$\frac{1568904023411153\cdot250}{2048000000000000\cdot000} = \frac{627561693644613}{819200000000000},$$

or, instead of less than $\frac{3}{4}$, rather more than $\frac{3}{4}$; whilst his expectation, instead of being only £6. 9s. $0\frac{3}{11}$d., is £7. 13s. $2\frac{1}{2}$d.

(II.) However small the frequency of the winner's initial, it must of necessity occur once, and from Smith's discovery nothing can be argued as to the relative probabilities of truth of 12 possible hypotheses. Hence we are concerned only with the *a priori* probabilities of the 11 other initials including 0, 1, 2, ..., 11 N's. These are the several terms of the expansion $(\frac{1}{20}+\frac{1}{20})^{11}$. His expectation on the r-th of the hypotheses is $S\mu_r/r$; therefore total expectation

$$= S\Sigma\mu_r/r = 20S\int_0^{\frac{1}{20}}(\tfrac{19}{20}+x)^{11}dx = 20S\,I_{\frac{1}{2}}[1-(\tfrac{19}{20})^{12}] = (\cdot76607)\,S$$
$$= £7\cdot6607.$$

Had a group of two or more, discovering they possessed the winner's initial, met and desired to calculate their expectation, it seems to me that the *a priori* probabilities of the 12 hypotheses would give place to *a posteriori* probabilities dictated by the knowledge of 1 at least, 2 at least, ..., N's among the 11 names which exclude the winner.

15450. (Professor Langhorne Orchard, M A., B.Sc.)—Find the product of the sum and difference of the series

$1+6+21+52+105+\ldots$ to n terms, $3+14+39+84+155+\ldots$ to n terms.

Additional Solution by H. Chennakesava Iyengar.

Adding the two series, we have 4, 20, 60, 136, 260, ...;

$$2\cdot2+4\cdot5+6\cdot10+8\cdot17+10\cdot26+\ldots.$$

Now, in the series 2, 5, 10, 17, 26, ... the nth term $= n^2+1$; therefore $T_n = 2n(n^2+1) = 2n^3+2n$; therefore

$$S_n = 2\Sigma n^3+2\Sigma n = \tfrac{1}{2}n^2(n+1)^2+n(n+1) = \tfrac{1}{2}n(n+1)(n^2+n+2).$$

Subtracting the first series from the second, we have 2, 8, 18, 32, 50, ...; $2\cdot1+2\cdot2^2+2\cdot3^2+2\cdot4^2+\ldots$; therefore $T_n' = 2n^2$; therefore

$$S_n' = 2\Sigma n^2 = \tfrac{1}{3}n(n+1)(2n+1);$$

therefore $$S_n\cdot S_n' = \tfrac{1}{6}n^2(n+1)^2(n^2+n+2)(2n+1).$$

15472. (Professor Neuberg.)—On marque sur les côtés BC, CA, AB d'un triangle ABC les points A', B', C' tels que BA'/A'C = CB'/B'A = AC'/C'B = K. On sait que les droites AA', BB', CC' sont équipollentes aux côtés d'un triangle A"B"C". L'aire de ce triangle est minimum lorsque K = 1.

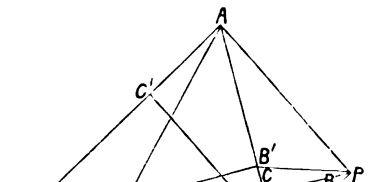
Solutions (I.) *by the* Proposer; (II.) *by* R. F. Davis, M.A.; (III.) *by* D. Biddle.

(I.) On peut projeter le triangle ABC orthogonalement sur un plan suivant un triangle équilatéral. Alors les lignes AA', BB', CC' se projettent suivant trois droites égales qui passent par un minimum lorsque A', B', C' sont les milieux de BC, CA, AB, ...

(II.) Draw A'P equal and parallel to BB'; then B'P will be equal and parallel to BA'. Join CP, AP. Since

$$CB' : B'P = CB' : BA'$$
$$= CA : BC,$$

and $\angle CB'P = \angle ACB$,



therefore the triangle CPB' is similar to the triangle ABC. Thus PC is equal and parallel to AC', and consequently PA is equal and parallel to CC'. The triangle AA'P has therefore its sides equal and parallel to AA', BB', CC'. The quadrilateral AA'CP is equal to the triangle ABC; for $\Delta APC = \Delta AC'C = \Delta AA'B$. The triangle AA'P is least when the triangle A'CP is greatest, that is, when A'C . CP is greatest, or when $[K/(K+1)][1/(K+1)]$ is greatest, which happens when K = 1. [Rest in *Reprint*.

15127. (Lt.-Col. Allan Cunningham, R.E.)—Factorise completely into *prime* factors $N = 10^{24}+\frac{17}{4}10^{12}+1$.

Solution by the Proposer *and* James Blaikie, M.A.

Let $N = x^8+\frac{17}{4}x^4y^4+y^8$; therefore $4N = (x^4+4y^4)(y^4+4x^4)$. Each factor is a Bin-Aurifeuillian, the resolution of which is known to be

$$4N = \{(x-y)^2+y^2\}\{(x+y)^2+y^2\}\{(y-x)^2+x^2\}\{(y+x)^2+x^2\}.$$

Now take $x = 1000$, $y = 1$; then N becomes the given number, and

$$4N = (999^2+1^2)(1001^2+1^2)(999^2+1000^2)(1001^2+1000^2)$$
$$= 998002\cdot1002002\cdot1998001\cdot2002001;$$

therefore $N = (23\cdot21737)(501001)(277\cdot7213)(2002001)$, **all primes.**

Note.—Similarly may be factorised

$N = 3^{48}+68\cdot3^{24}+2^8$; taking $x = 3^6$, $y = 2$.

$N = 5^{32}+68\cdot5^{16}+2^8$; taking $x = 5^4$, $y = 2$.

15441. (Professor Nanson).—Three triangles Δ_1, Δ_2, Δ_3 are inscribed in a conic. If Δ_2, Δ_3 are co-polar with Δ_1, then so is the triangle formed by the joins of corresponding vertices of Δ_2, Δ_3.

Solution by A. R. Richardson *and* A. M. Nesbitt, M.A.

Refer the conic to Δ_1 as triangle of reference.

$$S \equiv 2fyz+2gzx+2hxy = 0.$$

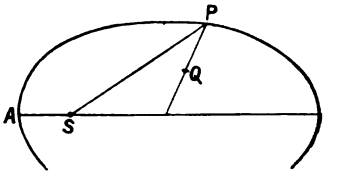
Eliminating x, y, z in turn from $hy+gz = 0$, $hx+fz = 0$, $gx+fy = 0$, we get $Fx = Gy = Hz$ as equations to the lines joining the vertices of Δ_1 with its polar triangle; therefore (1/F, 1/G, 1/H) are co-ordinates of the pole of Δ. This form will hold whatever triangle be taken as the triangle of reference. Therefore the pole of Δ_2 is (1/F', 1/G', 1/H'); of Δ_3, (1/F", 1/G", 1/H"), where F', F", ... are linear functions of F. Now the triangle formed by joining the vertices of Δ_2, Δ_3 has co-ordinates of its vertices linear functions of those of Δ_2, Δ_3, say $k\Delta_2+l\Delta_3$; hence the pole of ${}_3\Delta_2$ is $\left(\frac{1}{kF'+lF''}, \frac{1}{kG'+lG''}, \frac{1}{kH'+lH''}\right)$; but, since Δ_2, Δ_3 are copolar with Δ_1, therefore $F : F' : F'' = G : G' : G'' = H : H' : H''$; therefore ${}_3\Delta_2$ is also copolar with Δ_1.

15478. (Professor Nanson.)—If r, θ are the focal polar co-ordinates of the foot of a normal from r', θ' to a conic, prove that $r_1r_2r_3r_4 = b^2e^{-2}r'^2$, $\theta_1+\theta_2+\theta_3+\theta_4 = 2\theta'+(2n+1)\pi$.

Solution by Professor Sanjána, M.A., *and* Colin M. Ross.

The first part is Ex. 77, chap. x., in Smith's *Conic Sections*, k^2 being there put for b^2e^{-2}.

For the second result, let Q be r', θ'; let P have $\angle ASP = \alpha$, and let PQ be normal. Then α is found from



$$le\sin\alpha/(1+e\cos\alpha)r' = e\sin\theta'+\sin(\theta'-\alpha);$$

Smith, *Conic Sections*, § 165, Ex. 5. Let t denote $\tan\frac{1}{2}\alpha$, and we get the equation

$$\frac{le}{r'}\frac{2t}{1+t^2} = e\sin\theta'+e^2\sin\theta'\frac{1-t^2}{1+t^2}+\sin\theta'\frac{1-t^2}{1+t^2}-\cos\theta'\frac{2t}{1+t^2}$$
$$+e\sin\theta'\frac{(1-t^2)^2}{(1+t^2)^2}-e\cos\theta'\frac{2t(1-t^2)}{(1+t^2)^2},$$

which reduces to

$$e\sin\theta'\cdot2(1+t^4)+(1+e^2)\sin\theta'(1-t^4)-2t(1+t^2)(\cos\theta'+le/r')$$
$$-2t(1-t^2)e\cos\theta' = 0.$$

Hence $t^4(e-1)^2\sin\theta'+2t^3(\cos\theta'+le/r'-e\cos\theta')+2t(\cos\theta'+le/r'+e\cos\theta')$
$$-(e+1)^2\sin\theta' = 0;$$

so that, if the four values of α be $\theta_1, \theta_2, \theta_3, \theta_4$, we get

$$\Sigma\tan\tfrac{1}{2}\theta_1 = -\frac{2(\cos\theta'+le/r'-e\cos\theta')}{(e-1)^2\sin\theta'}, \quad \Sigma\tan\tfrac{1}{2}\theta_1\tan\tfrac{1}{2}\theta_2 = 0,$$

$$\Sigma\tan\tfrac{1}{2}\theta_1\tan\tfrac{1}{2}\theta_2\tan\tfrac{1}{2}\theta_3 = -\frac{2(\cos\theta'+le/r'+e\cos\theta')}{(e-1)^2\sin\theta'}, \quad \Pi\tan\tfrac{1}{2}\theta = -\frac{(e+1)^2}{(e-1)^2}.$$

Therefore

$$\tan\frac{\theta_1+\theta_2+\theta_3+\theta_4}{2} = \frac{-\frac{2(\cos\theta'+le/r'-e\cos\theta')}{(e-1)^2\sin\theta'}+\frac{2(\cos\theta'+le/r'+e\cos\theta')}{(e-1)^2\sin\theta'}}{1-0+\frac{(e+1)^2}{(e-1)^2}}$$
$$= \frac{4e\cos\theta'}{-4e\sin\theta'} = -\cot\theta' = \tan\{\theta'+(2n+1)\tfrac{1}{2}\pi\};$$

so that $$\theta_1+\theta_2+\theta_3+\theta_4 = 2\theta'+(2n+1)\pi.$$

15381. (Rev. T. Wiggins, B.A.)—At what times between the hours x and $x+1$ and between y and $y+1$ are the minute and hour hands in the former case in the same position as the hour and minute hands respectively in the latter case?

Solutions (I.) *by* Lt.-Col. Allan Cunningham, R.E., *and* A. M. Nesbitt, M.A.; (II.) *by* H. J. Woodall, A.R.C.Sc.

(I.) Let x hr. $+\xi$ min., y hr. $+\eta$ min. be the times indicated. Let α, β be the angular distances of minute hand from 0 hr. at those times; α, β

Digitized by Google

be the angular distances of hour hand from 0 hr. at those times; a', b' be the angular distances of hour hand from x hr., y hr. at those times (all angles measured in degrees). Here x, y always < 12, and ζ, η always < 60; so that 0 hr. means 12 o'clock.

Now, 1 minute space of minute hand $= \frac{1}{60}\,360° = 6°$, 1 hour space of hour hand $= \frac{1}{12}\,360° = 30°$; therefore

$$\alpha = 6\xi, \qquad \beta = 6\eta, \qquad a' = \tfrac{1}{12}\alpha = \tfrac{1}{2}\xi, \qquad b' = \tfrac{1}{12}\beta = \tfrac{1}{2}\eta,$$
$$a = 30x + a' = 30x + \tfrac{1}{2}\xi, \qquad b = 30y + b' = 30y + \tfrac{1}{2}\eta.$$

But $a = b$, and $\beta = a$ (since the hands interchange positions); therefore $6\xi = 30y + \frac{1}{2}\eta$, and $6\eta = 30x + \frac{1}{2}\xi$. Solving these gives ($\xi$, η in *minutes*) $\xi = \frac{60}{143}(x + 12y)$, $\eta = \frac{60}{143}(y + 12x)$.

(II.) Let n be the number of minutes the hands are apart. While the hour hand moves over $60-n$ minute spaces the minute hand moves over $60(y-x)+n$ minute spaces, and therefore gains $60(y-x-1)+2n$ in this time. On ordinary clock faces the minute hand gains 11 minutes in 12; therefore

$$12\{60(y-x-1)+2n\} = 11\{60(y-x)+n\}; \quad \therefore\ 60(y-x)+13n = 720,$$

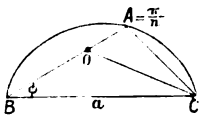
for example, shortly after 3 o'clock for the first position, about 12.15 for the second. Therefore $y-x = 9$; therefore $13n = 180$; therefore $n = 13\frac{11}{13}$. Now at 3 o'clock there is 15 minutes difference. The minute hand starting from the vertical position has to gain $1\frac{3}{13}$ minute spaces, and this it does in $\frac{12}{11} \times \frac{15}{13} = 1\frac{37}{143}$ min. Therefore the first position of the minute hand is 3 hr. $1\frac{37}{143}$ min., of the hour hand 3 hr. $15\frac{15}{143}$ min.; the second position of the minute hand is 12 hr. $15\frac{15}{143}$ min., of the hour hand 12 hr. $1\frac{37}{143}$ min.

15524. (R. Chartres.) (Suggested by Question 15447).—Find the mean value of the angle subtended by BC at all points of the area BAC, (1) when BAC is a segment of a circle and $A = \pi/n$, (2) when BAC is any triangle.

Solution by the Proposer.

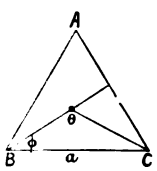
Taking the radius of circle $= 1$,

(1) $$M(\theta) = \pi - 2M(\phi)$$
$$= \pi - 2\int_0^{\pi - A} \phi \cdot \tfrac{1}{2}\,\frac{a^2 \sin^2(A+\phi)}{\sin^2 A}\,d\phi/\text{area}$$
$$= \pi - 2\int \phi\,[1 - \cos(2A + 2\phi)]\,d\phi/\text{area}$$
$$= \pi - 2\,\frac{[\pi^2(1-1/n)^2 - \sin^2 \pi/n]}{2\pi(1-1/n) + \sin 2\pi/n}.$$



If $n = 2$, then $M(\theta) = \frac{1}{2}\pi + 2/\pi$.

(2) $$M(\phi) = \int_0^B \phi \cdot \tfrac{1}{2}r^2 d\phi/\Delta$$
$$= \frac{a \sin C}{b}\int_0^B \phi\,\mathrm{cosec}^2(\phi + C)\,d\phi$$
$$= \frac{a \sin C}{b}(B \cot A + \log a/c),$$



with a similar expression for the other base angle;

therefore $M(\theta) = \pi - \left\{\frac{\cos A}{bc}(c^2 B + b^2 C) + \frac{\sin A}{bc}(c^2 \log a/c + b^2 \log a/b)\right\}$.

(i.) If the triangle is right-angled isosceles,

$$M(\text{supplement of } \theta) = \log 2.$$

(ii.) If the triangle is equilateral, $M(\theta) = \frac{1}{3}\pi$, which is evident since the sides subtend equal angles whose sum is 2π.

(iii.) Hence, also, if the figure is a regular polygon of n sides, the $M(\theta)$ ought to be $2\pi/n$.

QUESTIONS FOR SOLUTION.

15552. (G. H. Hardy, M.A.)—Prove that, if p and m are positive and m integral,

$$1 + \frac{(p+1)^m}{1!}x + \frac{(2p+1)^m}{2!}x^2 + \frac{(3p+1)^m}{3!}x^3 + \ldots = e^x P_m(x),$$

$P_m(x)$ being a polynomial of degree m all of whose roots are real and negative. Also prove that

$$\int_0^\infty e^{-x} P_m(-x)\,dx = (1-p)^m.$$

15553. (Professor Nanson.)—Eliminate x, y, z from

$$ax^2 + by^2 + cz^2 = 0,$$
$$(b-c)yz + (c-a)mzx + (a-b)nxy = 0, \quad lx + my + nz = 0.$$

15554. (J. J. Barniville, B.A.)—Having $u_n + u_{n+3} = 3u_{n+1} + 3u_{n+2}$, prove that

$$\left(\frac{5}{-1.7}\right)^2 - \left(\frac{13}{7.17}\right)^2 + \left(\frac{53}{17.73}\right)^2 - \left(\frac{193}{73.263}\right)^2 + \ldots = \frac{1}{2},$$
$$\left(\frac{5}{1.7}\right)^2 - \left(\frac{17}{7.23}\right)^2 + \left(\frac{65}{23.89}\right)^2 - \left(\frac{241}{89.329}\right)^2 + \ldots = \frac{1}{2},$$
$$\left(\frac{13}{-7.17}\right)^2 - \left(\frac{25}{17.31}\right)^2 + \left(\frac{109}{31.51}\right)^2 - \left(\frac{389}{151.529}\right)^2 + \ldots = \frac{1}{98},$$
$$\left(\frac{17}{-7.23}\right)^2 - \left(\frac{37}{23.47}\right)^2 + \left(\frac{151}{47.217}\right)^2 - \left(\frac{565}{217.769}\right)^2 + \ldots = \frac{1}{98}.$$

15555. (Robt. W. D. Christie.)—Let $p = a^2 + b^2$, $q = ac + bd$, $s = c^2 + d^2$, $ad - bc = 1$: prove $r^{2m} + 1 = ps$ and $r^{6m} + 1 = p(p - 2q + s)$; and more generally $(pt + r^m)^2 + 1 = pS$, $(pt + r_{3m})^2 + 1 = pT$, where r is any primitive root of prime $4m+1$, t any integer. Establish similar equations for prime $p = 4m-1$.

15556. (Lt.-Col. Allan Cunningham, R.E.)—Factorise completely into *prime* factors $N = G_4^4 + 8 + F_4^4$, where $G_n = F_0 . F_1 . F_2 . \ldots . F_{n-1}$ and $F_n = 2^{2^n} + 1$, a Fermat's number.

15557. (James Blaikie, M.A.)—If n be a number of r digits such that its square ends in the same r digits as the number, prove that (*a*) $10^r + 1 - n$ has the same property; (*b*) the square of $n-1$ ends in the same r digits as $10^r + 1 - n$; (*c*) the cube of $(n-1)$ ends in the same r digits as $n-1$. Also, if n be a number of r digits such that its cube ends in the same r digits, prove that (*d*) $10^r - n$ has the same property. Examples:

$890625^2 = \ldots 890625$, (*a*) $109376^2 = \ldots 109376$, (*b*) $890624^2 = \ldots 109376$,
(*c*) $890624^3 = \ldots 890624$, $6249^3 = \ldots 6249$, (*d*) $3751^3 = \ldots 3751$.

15559. (Professor R. W. Genese, M.A.)—An arc PQ of a uniform wire in the shape of an equiangular spiral attracts a particle at the pole O according to the law of nature. Prove that the resultant attraction is proportional to $\frac{\text{chord PQ}}{\text{OP . OQ}}$.

15560. (Professor Cochez.)—Construire les courbes—

(1) $y = 2^{(x^2-2x-1)(x+2)}$; (2) $y = \frac{1}{x-1} + \frac{1}{x-2} + \frac{1}{x-3} + \frac{1}{x-4}$.

15561. (C. E. Youngman, M.A.)—In a triangle ABC, with centroid G, that ellipse GBC is drawn for which A is the pole of BC; and to it any tangent EF across the angle A. Prove that the foci of the ellipse are also foci of the envelope of the circle AEF; the envelope being the inverse of a similar ellipse.

15562. (A. R. Richardson.)—Find the locus of the intersection of the directrices of two conics each of which touches two fixed conics, all to have a common focus.

15563. (R. F. Davis, M.A.)—Given a hyperbola whose eccentricity $= 2$, prove that the circle described upon any focal chord as diameter passes through the further extremity of the transverse axis.

15564. (A. M. Nesbitt, M.A.)—The normals at the extremities of a chord of an ellipse meet in the curve. Prove that the pole of the chord lies on a concentric ellipse.

15565. (Hon. G. R. Dick.)—If the bisectors of the base angles B and C of a triangle ABC meet the opposite sides in E and F, BC being given and the angle A constant, the line EF will touch a conic whose eccentricity is $\frac{1}{2}\,\mathrm{cosec}\,\frac{1}{2}A$.

15566. (D. Biddle.)—On the surface of a circle, of radius $=$ unity, a point (P) is taken at a distance x from the centre (O). Find the maximum, minimum, and mean areas of triangles inscribed in the circle and having P as their in-centre.

15567. (Solidus.)—Two equal circular discs are to be cut out of a rectangular piece of paper 10 inches long and 8 inches broad. What is the greatest possible diameter of the discs?

15568. (Professor Neuberg.)—Soient A′ le milieu du côté BC du triangle ABC, B′ et C′ les pieds des symédianes issues de B et C. Démontrer qu'on ne peut avoir A′B′ = A′C′ que si AB = AC.

15569. (S. C. Bagchi, B.A.)—Through the angular points of an n-sided plane figure, straight lines $l_1, l_2, \ldots, l_n$ are drawn. Show that they intersect again in $\left(\frac{\sum_{r=1}^{n} l_r}{2}\right) - \sum_{r=1}^{n}\left(\frac{l_r}{2}\right)$ points where $\left(\frac{1}{2}\right) = 0$.

Digitized by Google

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

9574. (Professor Ath Bijah Bhut.)—If $(4m+1)_a$ stand for the number of quadratic residues of the form $4m+1$ with respect to any prime number p, and $(4m+1)_b$ for the number of non-residues of the same form, show that, when p is of the form $4m+1$,

$$(4m+1)_a = (4m+3)_b, \quad (4m+1)_a > (4m+3)_a.$$

10349. (Professor Hain.)—Étant donné un triangle équilatéral ABC, si M, N, P sont les symétriques d'un point quelconque L par rapport aux trois côtés, démontrer que les droites AM, BN, CP se recontrent en un même point.

10383. (Professor Crofton, F.R.S.)—If n persons stand in a row, prove that (1) the number (N) of ways in which m things can be distributed among them in such a manner that no two consecutive persons are passed over is

$$N = \Delta^n 0^m + n\Delta^{n-1}0^m + \frac{(n-1)(n-2)}{1.2}\Delta^{n-2}0^m + \frac{(n-2)(n-3)(n-4)}{1.2.3}\Delta^{n-3}0^m + \dots;$$

and hence (2), n being large, if an event is found to occur m times in a period of n years, and never to fail for two years running, the problem of finding the probability of it failing to occur in a given year can be reduced to an equation in finite differences [n being large].

10390. (E. Césaro.)—Démontrer que la chaînette d'égale résistance, qui a pour équation intrinsèque $\rho = \frac{1}{2}a\,(e^{s/a} + e^{-s/a})$, est la seule ligne dont le rayon de courbure soit égal au segment de la normale intercepté par deux droites fixes parallèles.

10725. (Professor Catalan.)—Soit, suivant la notation de M. Hermite,

$$P_n = \int_{-1}^{+1} \frac{Z_n - X_n}{z-x}\,dz, \text{ on a: } P_n = X_n\left\{2\int \frac{dx}{(x^2-1)\,X_n^2} + L\frac{x+1}{x-1}\right\}.$$

10774. (W. J. Greenstreet, M.A.)—Prove from statical considerations that $4\sqrt{2}\cos 27° = 5\cot 36°$.

10812. (R. Tucker, M.A.)—DEF is the pedal triangle of ABC. K_a, K_b, K_c are the S-points of AEF, BFD, CDE; through K_a, K_b, K_c parallels B'C', C'A', A'B' are drawn to the sides, cutting AC, AB in M, N'; BA, BC in N, L'; CB, CA in L, M'. Prove that ABC, A'B'C' are equal, with (K) S-point of ABC on centre of perspective; that LL'NN'MM' is the common cosine circle of the two triangles; that the two triangles have a common B-ellipse; and that the centroids of AMN', BNL', CLM' have K for their centroid. [Other properties will be found in Vol. xlv., p. 57; Vol. li., p. 61.]

NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss Constance I. Marks, B.A., 10 Matheson Rd., West Kensington, W.

Vol. V. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, Francis Hodgson, 89 *Farringdon Street, E.C. Price to Subscribers, 5s.; Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, April 14th, 1904.—Dr. E. W. Hobson, Vice-President, in the Chair.

The following papers were communicated:—

"On a Plane Quintic Curve": Prof. F. Morley.

"Note on a System of Linear Congruences": Rev. J. Cullen.

"The Tile Theorem": Dr. W. H. Young.

"Note in addition to a former paper on Conditionally Convergent Multiple Series": Mr. G. H. Hardy.

"On Functions generated by Linear Difference Equations of the First Order": Rev. E. W. Barnes.

"Mathematical Analysis of Wave-propagation in Isotropic Space of p Dimensions": Mr. T. H. Havelock.

"On Spherical Curves, Part II.": Mr. H. Hilton.

"Perpetuant Syzygies of Degree Four": Mr. P. W. Wood.

"Extension of Sylow's Theorem": Prof. G. A. Miller.

"Transformation of the Function $F([\alpha][\beta][\gamma]x)$" and "The Extension of Neumann's Addition Theorem for Bessel Functions": Rev. F. H. Jackson.

Informal communications were made as follows:—

"The Singularities of Functions determined by Taylor's Series": Mr. H. M. Macdonald.

"Behaviour of a Power Series near a Point on the Circle of Convergence at which the Series diverges": Dr. H. F. Baker.

"Transvectant Operators in connexion with Binary Forms": Mr. R. J. Dallas.

"Factorization of $13^{39}-1$": Lt.-Col. A. Cunningham.

A COURSE OF PRACTICAL PHYSICS FOR SCHOOLS. By C. J. L. WAGSTAFF, M.A., and G. C. BLOOMER, B.A., Science Masters at Bradford Grammar School.

First Year.—Mensuration, Mechanics, and Hydrostatics. Demy 4to, 1s. 6d.
Second Year.—Light and Heat. Demy 4to, 1s. 6d.
Third Year.—Electricity and Magnetism. Demy 4to, 2s. 6d.

These books are intended to stimulate a boy to think for himself rather than to allow him to cull facts in a mechanical manner from a detailed text-book. Under the teacher's supervision the boy is set to deduce his facts by actual experiment, and to record those facts in the spaces provided in the book, and, judging from results, the method is to be considered eminently satisfactory. It gives at once scope to the teacher and individuality to the boy.

Just Published. Crown 8vo, 6s.

THE BIBLICAL HISTORY OF THE HEBREWS. A Text-Book based upon the lines of the Higher Criticism, designed for use in the Higher Forms in Schools and for Students generally. By F. J. FOAKES-JACKSON, B.D., Fellow of Jesus College, Cambridge, Hon. Canon of Peterborough.

Warmly welcomed by the majority of reviewers as a deeply interesting and scholarly book, which, while acknowledging the value of the critical work of recent scholars, maintains an inspired origin for the Biblical narrative.

"HELPS BY THE WAY" SERIES. Written by S. STEWART STITT, M.A. Crown 8vo, 2s. net.

NEW VOLUME IN CRAN'S MODERN LANGUAGE OBJECT LESSON SERIES.

ADVANCED COURSE

OF

OBJECT LESSONS IN FRENCH.

FOR USE IN SCHOOLS AND COLLEGES.

By ALEC CRAN, M.A.,

Examiner to the London and Edinburgh Universities.

With Vocabulary. Fully Illustrated. Cloth, price 1s. 6d.

This volume completes the series of three books of Object Lessons and Picture Lessons in French. Books I. and II. contain, in addition, Elementary Grammar Lessons and Exercises for Translation into French. These two books along with a suitable Reader form a graded course for acquiring some facility in speaking the language, understanding it when spoken, reading it, and writing it. The present volume is intended more especially for those desirous of developing the practical accomplishment of speaking the language. The art of speaking a language can, we think, be best acquired by practice in imitation of good models provided for the learner. The method, which is the same as in Books I. and II., aims at leading the student to associate the new vocabulary directly with objects instead of with their English names. The phraseology of everyday life forms the basis of all language. As many as possible of the most familiar words and expressions have been included, and an attempt has been made to base the lessons on subjects which, it is hoped, may be found both useful and interesting.

THE

EDUCATIONAL TIMES,

AND

Journal of the College of Preceptors.

Vol. LVII.] New Series, No. 518. JUNE 1, 1904.

Published Monthly, price, to Non-Members, 6d.; by Post, 7d. Annual Subscription, 7s.

COLLEGE OF PRECEPTORS.—

(Bloomsbury Square, W.C.)

The next Monthly Meeting of the Members will take place on Wednesday, the 15th of June, at 7.30 p.m., when H. C. BOWEN, Esq., M.A., will read a Paper on "The Part played by Books in the Education of the Individual."

A Discussion will follow the reading of the Paper.

Members have the privilege of introducing their friends.

C. R. HODGSON, B.A., *Secretary.*

COLLEGE OF PRECEPTORS.—

EXAMINATIONS, 1904.

1. DIPLOMAS.—The next Examination of Teachers for the Diplomas of the College will commence on the **30th of August.**

2. PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH. — The next Practical Examination will be held in **October,** 1904.

3. CERTIFICATE EXAMINATIONS. — The Midsummer Examination for Certificates will commence on the 28th of June.

4. LOWER FORMS EXAMINATIONS. — The Midsummer Examination will commence on the 28th of June.

5. PROFESSIONAL PRELIMINARY EXAMINATIONS.—These Examinations are held in March and September. The Autumn Examination in 1904 will commence on the 6th of September.

6. INSPECTION AND EXAMINATION OF SCHOOLS.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

PRIZES.

Diploma Examination.—The following Prizes will be offered for competition:—Theory and Practice of Education, £10; Classics (Greek and Latin), £5; Mathematics, £5; Natural Science, £5. The Doreck Scholarship of £20 will be awarded on the results of the Christmas Examination.

Certificate Examination.—Prizes will be awarded as follows, subject to the conditions stated in the Regulations:—

First Class.—Four Prizes for General Proficiency; two each for Classics, Mathematics, Modern Languages, Natural Sciences, and English subjects; one for Scripture History.

Second Class.—Four Prizes for General Proficiency.

Third Class.—Four Prizes for General Proficiency.

Two Medals will also be awarded to the best Candidates in Shorthand.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

PROFESSIONAL PRELIMINARY

EXAMINATIONS. — The COLLEGE of PRECEPTORS will hold an Examination for Certificates recognized by the Board of Education, the Incorporated Law Society, the General Medical Council, the Royal College of Physicians of London, the Royal College of Surgeons of England, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, and other bodies, on the 6th, 7th, and 8th of September, 1904.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool, Manchester.

Examination Fee, 25s.

Regulations and Entry Forms may be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

UNIVERSITY OF ST. ANDREWS.

REGISTRATION OF TEACHERS.

The Board of Education have made the following addition to Appendix B of the Teachers' Registration Regulations:—"A Certificate of the University of St. Andrews, granted under the conditions regulating the L.L.A. Diploma Examinations, and bearing *either* that the holder has obtained Honours in at least two of the subjects classed under Departments A, B, C of the L.L.A. Diploma Scheme of Examination; *or*, that the holder has obtained at least a pass in each of two Languages (other than English) and in Logic or Mathematics."

CHURCH EDUCATION CORPORATION,

CHERWELL HALL, OXFORD.

Recognised by Government as a Training College for Secondary Teachers.

A RESIDENTIAL TRAINING COLLEGE for Teachers in Colleges for Women and in Secondary Schools for Girls.

Students are prepared for the Oxford, Cambridge, and London Teachers' Diplomas. The work of the College is carried on in co-operation with that of the Tutors of the Oxford University Diploma Scheme. Fees, £65 a year (inclusive). For Prospectus and particulars of Scholarships, apply to the Principal, Miss MACKENZIE-SMITH.

MODERN LANGUAGES HOLIDAY COURSES, 1904.

Organized by the Teachers' Guild.

French at Tours and Honfleur; *German* at Neuwied (on Rhine); *Spanish* at Santander.

Commence early in August. Preliminary Programme gratis. Handbook, giving full particulars of the Courses, price 6d., post free, from the office of the Guild, 74 Gower Street, London, W.C.

ST. GEORGE'S TRAINING

COLLEGE FOR WOMEN TEACHERS provides a Course of Professional Training in preparation for Work in Secondary Schools or in Families.

The Students attend the University Lectures on the Theory, History, and Methods of Education, and have systematic practice in Class Teaching in Schools.

Two Bursaries of £30 are offered to Graduates entering in October.

Apply for further particulars to the Principal, Miss M. R. WALKER, 5 Melville Street, Edinburgh.

CORRESPONDENCE TUITION,

Classes, or Private Lessons in all Subjects for all Examinations, &c., at moderate fees. Special tuition for MEDICAL Prelims. Many recent successes.—F. J. BORLAND, B.A., L.C.P. (Science and Math. Prizeman), Victoria Tutorial College, 87 Buckingham Palace Road, S.W.: and Stalheim, Brunswick Road, Sutton, Surrey. Messrs. BORLAND & GODSELL, 49 King William Street, E.C.

Schools visited and Examinations conducted.

LONDON MATRICULATION and PROFESSIONAL PRELIMINARY EXAMS.—

Mr. ALEX. W. BAIN, B.A. (Lond.), B.Sc. (Hons. Lond.), F.C.S., Anglo-Saxon and Early English Text Society's Prizeman (Univ. Coll., Lond.), Silver Medal and Exhibition in Chemistry (Univ. Coll., Lond.), also Prize in Organic Chemistry (Univ. Coll., Lond.), Honours in Theoretical and Practical Chemistry (Board of Education), Sub-Examiner to the Univ. of London and College of Preceptors, &c., holds Classes (small) for the above and other Exams., at **207 Gray's Inn Road, London.** Coaching in Science and Advanced Mathematics for Degree Exams. by Private Tuition. Over 1,700 successes in 14 years.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.
(A Constituent College of the University of Wales.)
Principal—H. R. REICHEL, M.A., LL.D.

The Session begnn October 1st, 1903. The College Courses are arranged with reference to the Degrees of the University of Wales, and include most of the subjects for the B.A. and B.Sc. Degrees of the London University. Students may pursue their first year of Medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional Fee for Ordinary Arts Course, £11. 1s.; Ditto for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students in Upper Bangor. Fee, Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than Twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses, apply to

JOHN EDWARD LLOYD, M.A.,
Secretary and Registrar.

ROYAL HOLLOWAY COLLEGE
FOR WOMEN.
(UNIVERSITY OF LONDON.)

ENTRANCE SCHOLARSHIPS.—Eleven Entrance Scholarships from £75 to £35, and several Bursaries of £30, tenable for three years at the College, will be awarded on the results of an Examination to be held from June 27th to July 2nd, 1904. Names must be entered before June 1st. The College prepares Students for London Degrees and also for Oxford Honour Examinations. Inclusive fee, £90 a year.

The EASTER TERM begins on April 16th.

For forms of entry and further particulars apply to the SECRETARY, Royal Holloway College, Englefield Green S.O., Surrey.

THE ANSTEY PHYSICAL TRAINING COLLEGE FOR WOMEN TEACHERS

PROVIDES a full course of instruction in Swedish Educational Gymnastics, Medical Gymnastics, and Massage, the aim being to send out trained Teachers with increased health and bodily vigour, mental strength, and moral power; to spread a knowledge of Physiology and the Laws of Health; to teach Gymnastics, Outdoor Games, Dancing, Swimming, and other forms of Physical Exercise in Schools and Colleges; to treat cases of Spinal Curvature, and many ailments which can be cured by scientific movements.

This is a most attractive vocation for educated women, and there are plenty of good openings for those trained at this College.

Students are almost always engaged before finishing the course.

For further particulars apply to the Principal, Miss ANSTEY, The Leasowes, near Halesowen, Worcestershire.

BEDFORD PHYSICAL TRAINING COLLEGE.
LING'S SWEDISH SYSTEM.
Principal—MISS STANSFELD
(Vice-President of the Ling Association of Gymnastic Teachers, Teacher of Gymnastics in the Cambridge Teachers' College, Froebel Educational Institute, Bedford Kindergarten College, Bedford High School, &c.).

THE object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over two years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology and Hygiene, Dancing, Fencing, Lacrosse, Lawn-tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games. Swimming and Boating in the summer.

There is an increasing demand for Teachers thoroughly trained on this system.

For Prospectus apply—37 Lansdowne Road, Bedford.

LADY wishes to recommend refined HOME IN GERMAN FAMILY (Magdeburg). Every facility for learning language. Terms £5 per month. Particulars—Miss GULLAND, Berkley, Frome, Somerset.

New Edition. 18mo, price 9d.

THE ELEMENTS OF BOOK-KEEPING, by SINGLE and DOUBLE ENTRY; with Practical Explanations and Exercises on the most useful Forms for Business. By A. K. ISBISTER, M.A., LL.B., late Dean of the College of Preceptors.

BLACKIE'S

LIST.

Survey of the British Empire

Historical, Geographical, Commercial.

350 pages. Price **2s.**

This new volume gives a very thorough, interesting, and up-to-date account of the British Empire in its present extent, and of the way in which it has been built up. In the case of each of the great divisions of the Empire, a survey of the leading facts of its history is followed by an account of its physical and political geography.

Preliminary Geometry

By RAWDON ROBERTS, B.Sc., *Author of "A New Geometry for Beginners."*

In preparing this excellent little book an attempt has been made to steer a middle course between, on the one hand, making the exercises so difficult as to discourage the pupil, and, on the other, making the steps so easy that little or no mental effort is demanded. Price **1s.**

Contents:—Lines, Triangles, Circles: Right Angles, Squares, Oblongs; Right-angled Triangles; Angles; Drawing to Scale; Quadrilaterals; Polygons; Circles.

HOLIDAY TASKS.

Blackie's English Classics. The Works of the leading English Authors (37 Volumes), annotated for School use. Recent issues:—

KINGSLEY—**The Heroes.** Edited by E. H. BLAKENEY, M.A. 1s.

MR. MURRAY'S
Handbooks for Civil Service Examinations.

Edited by JOHN KEEFE,

Principal of the Civil Service Academy, Liverpool and Manchester.

(Adapted also for the Classes of Technical Institutes, Higher Grade Schools; Certificate, Scholarship, and other Public Examinations.)

ENGLISH COMPOSITION AND ESSAY WRITING. Adapted alike for Beginner and Advanced Student. Treats of Syntax, Synonyms, Paraphrasing, Simple Themes, Biographical Narratives, and contains ample Outlines on "Imperial Federation," "Payment of Members," "Shorter Parliaments," "Sunday Closing," "Standing Army," "Capital Punishment," "Eight Hours Question," and other subjects recently proposed in Civil Service and other Competitions. Crown 8vo, 2s. 6d.

HINTS ON COMPOSITION. Third Edition, considerably Enlarged. Demy 8vo, 6d.

"Under the title of 'Hints on English Composition,' Mr. Keefe, F.R.G.S., of Liverpool, has published a small *brochure*, which is a valuable compendium of practical information on prose composition, with special regard to the requirements of Civil Service Examinations."—*London Chronicle.*

CIVIL SERVICE SPELLING AND DICTATION BOOK. The work contains copious Lists of Words, ranged according to their number of syllables, likely to be mis-spelled, together with nearly ninety Dictation and Orthographical Exercises for Juniors and Seniors set in recent years by H.M. Civil Service Commissioners. Revised and Enlarged Edition. Crown 8vo, 1s. 6d. [*In the press.*

CIVIL SERVICE PENMANSHIP. This book contains varied Specimens of Civil Service Penmanship approved by the Examiners. It has been compiled to meet the wants of every individual student who wishes to minimize his labours in cultivating the popular "Civil Service" style of Writing. Third Edition. Fcap. folio, 1s.

INDEXING AND PRÉCIS WRITING. Many Exercises are provided in this important branch of work for candidates preparing for the Examinations, together with an Appendix. 212 pages. Crown 8vo, 2s.

CIVIL SERVICE TOT BOOK. Contains 144 Exercises in Long Tots or Compound Addition, and 192 Exercises in Cross Tots. Fourth Thousand. Fcap. oblong 4to, 1s.

HIGHER ARITHMETIC. This book contains exhaustive chapters, with ample Solutions of difficult Questions on Percentages, Stocks, Theory of Numbers, Scales of Notation, the Metric System, Duodecimals, Logarithms, Annuities, Surds, Continued Fractions, Square, Cube, and other Roots, together with 45 complete Examination Papers set during the last twenty years to competitors for Excise Assistantships and Second Division Clerkships. New and Revised Edition. Crown 8vo, 3s.

CIVIL SERVICE ARITHMETIC. Being a compilation of Papers set at Examinations for Boy Clerkships, Customs, Telegraph Learners, &c., together with Answers and an Appendix explaining Scales of Notation, the Theory of Numbers, Discount, Rate and Time in Compound Interest, Duodecimals, Clock Questions, Prime Factors, and other parts of Advanced Arithmetic usually considered difficult. Tenth Thousand. Crown 8vo, 1s. 6d.

CIVIL SERVICE BOOK-KEEPING. Examination Papers set for Second Division Clerkships, ranging over twelve years. These tests in Book-keeping are also well adapted to the needs of candidates preparing for the Examinations held by the Society of Arts, London Chamber of Commerce, and similar Examining bodies. Fcap. 4to, 1s.

DIGESTING RETURNS INTO SUMMARIES. This book contains most of the Exercises set during the last fifteen years in the open Competitions for Second Division Clerkships, Outport Clerkships, and Customs Assistants. Though mainly designed for Civil Service candidates, it will be found very useful to all who are engaged in Statistical Calculations. 2s. 6d. [*In the press.*

COPYING MANUSCRIPT. Contains Facsimiles of Exercises set in recent Civil Service Competitions. Fcap. folio, 2s.

COPYING TABULAR STATEMENTS. Contains 36 Exercises set in recent Examinations, with Hints for Practice. 4to, 1s.

A List giving full particulars of these Books, together with other Books suitable for Civil Service Candidates, will be sent post free on application.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,147,020. Annual Income, £400,381.

Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums chargod, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

MR. TRUMAN'S EDUCATIONAL AGENCY,

6 HOLLES STREET, CAVENDISH SQUARE, LONDON, W.

TELEGRAMS: "TUTORESS, LONDON." TELEPHONE NO.: 1167 MAYFAIR.

A.—EMPLOYMENT DEPARTMENT.

Mr. TRUMAN introduces (1) **University, Trained, and other qualified English and Foreign Lady Teachers** to Public and Private Schools (Girls' and Boys'); (2) **English and Foreign Governesses** to Private Families; and (3) **Lady Matrons and Housekeepers** to Boys' and Girls' Schools.

No charge is made to Principals, and the terms to Teachers and other ladies seeking appointments are reasonable, no charge being made unless an engagement be secured through this Agency.

B.—SCHOOL TRANSFER DEPARTMENT.

Mr. TRUMAN undertakes the negotiation of **School Transfers** and **Partnerships,** and assists ladies seeking **School Premises.** No charge is made to Purchasers.

C.—PUPILS' DEPARTMENT.

Mr. TRUMAN has organized a special Department for the introduction of Pupils to Schools and other educational establishments. No charge for registration.

Any negotiations entrusted to Mr. TRUMAN will receive his prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

The Educational Times.

The Private School.

"PRIVATE-SCHOOL teachers have still much to learn about the best way to reach the public ear." This is no dictum of ours, though we fancy it has much wider applications; it is the sorrowful remark of *Secondary Education* in the course of comment upon the Conference of the Private Schools' Association, which was held in the hall of Balliol College, Oxford, on April 13. We are afraid we did not ourselves contribute much to bring the Conference to the public ear last month, for reasons that need not be pressed; but we think it worth while, even at a late hour, to congratulate our contemporary on its probably unique good fortune in having secured and placed on record in its issue of May 7 a full account of the proceedings. We are glad, too, to learn that the Association numbers twice as many members now as it did four years ago, and six times as many as in 1891, the year of the successful meeting at Cambridge, and that the attendance at Oxford this year surpassed the most popular of all recent Easter gatherings. True, the ladies came up in greater force than the gentlemen; but the ladies, too, are teachers, their presence indicates a welcome interest and contributes a desirable impulse, and their keenness in educational matters sets an excellent example. So far well and good. Still, our contemporary's regretful remark should be borne in mind. The business man out West had the same situation in view when he advertised extravagantly: he sagely opined that "there's no use keepin' up a 'tarnal winkin' if nobody knows you're winkin'."

All the more important is the diffusion of knowledge of such conferences—of what is done at them, and of how it is done—in the present transitional period, when the position of the private schools is so widely supposed by private-school masters to be insecure, or at any rate in a measure doubtful. Yet one may easily scan the columns of the report and fail to carry away the impression that there is any gathering cloud overhead. Miss Wordsworth, the Principal of Lady Margaret Hall, just referred to the case of boarding schools, though apparently not to the specific difficulties raised by the new statutory organization of education. "Boarding schools," she is reported to have said, "no doubt have gone through a very bad time; but threatened men live long, and I think we see signs not only that they have not been above profiting by criticism, but that public opinion is veering round—to some extent, at least—in their direction." We believe this view is correct. The Vice-Chancellor of the University also made brief reference to the matter, putting his finger on the spot. "He thought that the Association would probably, in a great measure, be able to meet some of the dangers which they foresaw in the present day, and be able to temper the new principle of municipalized education." And Dr. Sibly, the President of the Association, made gallant and confident reply to Dr. Monro's cautious anticipation: "he knew that by the endeavours of the University they would succeed in spite of the dangers that at the present time menaced them." But, after all, there appears to have been no discussion of these dangers, or of the measures to be adopted in common with the view of meeting them successfully in case the menace should one day come nearer. One exception may be made, indeed: the concrete significance of Dr. Sibly's expectations from "the endeavours of the University" will appear presently. Apart from these indications—merely incidental indications they may be called—the Association went on courageously with their discussions as if the sky were all blue, and as if the education of the country depended upon their endeavours. The attitude is strikingly fine—if there be not in it some element of irony, not considered by Mr. Sidgwick in his interesting and scholarly address; and we trust there is not. Very likely the spectacle of simple-minded devotion to the cause of education is one of the best of prophylactics.

Dr. Sibly's hopes seem to be indicated mainly in the second and final clauses of the following resolutions and suggestions, which embody the relations that the Association desire to see maintained between private schools and the Universities:—

The Private Schools' Association assembled in Conference at Oxford on April 15, 1904, desire to express to the Universities of Oxford, Cambridge, and London—

1. A sense of the great value to secondary education of the stimulus given, and control exercised, by them through the Local Examinations.

Digitized by Google

2. An earnest hope that the said Universities will resist any attempt by the State to supersede these examinations, or to exercise any form of control over them.

3. A belief that the value of these examinations might be greatly enhanced, and that certain evils incidental to them might be eliminated by such changes in their character as shall tend to make (1) the mere accumulation of information on any subject quite subordinate to the use of this subject as an instrument for developing the mind; (2) the examinations, as a whole, an instrument for saving the country from an exclusively utilitarian education, and for upholding as an essential object the development of higher tastes.

The Association begs respectfully to suggest the following measures as desirable to effectuate these purposes:—

1. That the questions set on any subject shall not be set by any one whose duty it will be to mark the answers.

2. That such a choice of questions shall be given in every paper as shall enable a candidate who has studied only part of a subject to satisfy the examiners, provided his answers show a thorough and intelligent appreciation of the subject.

3. That the University shall not allow so many sections to be taken by a candidate as to encourage an overcrowded curriculum.

4. That no certificate shall be awarded to any candidate who fails to satisfy the examiners in either English literature, natural science, music, or some other section or sections of a humanistic or æsthetic character.

The Association desires, further, to ask the Universities to discourage the transfer from secondary schools to the local Universities of students who have not attained a University standard.

Whatever may be the real expectations from the Universities, the resolutions, and notably the third, exhibit an elevated concern for the essentials of true education which is very honourable on the part of the Association. There would be no harm, however, in having another string or two to the bow of self-defence. For, after all, the private schools have to fight their own battle, if it is to be fought successfully.

There should really be no doubt about the issue. The ability and enthusiasm for education exhibited generally throughout the proceedings cannot but impress upon those that come to be aware of it—we introduce the qualification designedly—the high national value of the services of the conductors and teachers of private schools. These again can hardly fail to appreciate the importance of combination, not only within their own circle, but also with other circles of teachers whose general interests are in great measure coincident with theirs. The tendency to combination is taking practical form in various ways, and no doubt the leading spirits of the Association will see their advantage in joining hands with their educational friends in other departments of the profession.

NOTES.

The old friends and the many other admirers of the late Edward Thring, of Uppingham, will welcome the fine literary memorial of this strong man and great teacher which has just been published in sumptuous style by Messrs. Constable, under the editorship of his son, Mr. G. Herbert Thring: "The Agamemnon of Aeschylus, translated into English Verse" (10s. 6d. net). "To Edward Thring," his son tells us, "this translation was a labour of love extending over long years of an active militant life." To some, no doubt, "will come back the Old School Hall, where to the Upper VI., in solemn conclave assembled, he interpreted in nervous, forceful English prose the mighty thunderings of the grand Greek poet"—"no common lesson," but "the preaching of a great truth." Others, who have not enjoyed the privilege of his personal instruction, will be able in some degree to enter into the experience when they read this strenuous and vivid rendering of the great drama. It is at once evident how thoroughly the translator has appropriated and transmuted the words and the mind of the tragedian, and how patiently he has searched for the just form and expression. The blank verse is varied, sometimes even adventurous (unless one has studied the capacities of the measure), and always reaching out to the vigour and force of the original; and the choruses, if not touched with the fine literary art of one or two of our recent translators of Greek poetry, are yet managed with remarkable dexterity and effect. Here and there, as is all but inevitable, the restraint imposed by conditions of the undertaking is slightly obtruded; yet the general result is to convey to the Greekless English reader a strikingly effective presentation of one of the most powerful and least accessible examples of Greek literary achievement. It is just twenty years since Thring completed his final revision.

Elsewhere we notice a literal prose translation of the "Agamemnon" by Dr. Walter Headlam, which compares very favourably with other prose versions. Yet look on this picture and on that, and consider the meaning of the profound difference between the two presentations of the same materials. Clearly the student of Greek must patiently work along the lines of Dr. Headlam's translation; but surely he ought also to go on to follow the lines of Thring's transfusion. Is this process adopted regularly, or to any considerable extent, in the study of the classical authors? Or is it that the verse translation too often diverges so far from the original as to render comparison but little instructive to the student? We hear on all sides the growing clamour of the Philistine champions of the "useful" in school education, and the space for classical subjects is threatened with not a little contraction. No doubt, improvements in method and in procedure generally will avail to maintain classical studies at least at their present pitch of accomplishment for many a day yet. At the same time it seems advisable to cripple the force of the attack by bringing home irresistibly to non-classical readers the literary power of the masterpieces of Greek and Roman literature. We should hope, therefore, that translations such as Thring's (not to mention others) will come to find a place in purely English courses; for there is wide room for a diffusion of the classical spirit—diluted, of course, but still in no little degree efficient—among English readers that have no opportunity or desire to master the original languages, but yet have acquired or wish to acquire a familiarity with the best works in their own language, and would willingly extend their interest to foreign works presented in a really English form.

In a recent number of the *Week's Survey* (May 14), a teacher—obviously a teacher of experience and of progressive energy—discourses on the question of "quicker and more intelligent methods" of teaching Latin and Greek. "The difficulty," he says, "lies chiefly with the young beginner": "the long preliminary work at half-understood grammatical forms discourages many, and puts them hopelessly out of the running." Inevitably; and the first thing to be recog-

Digitized by Google

nized is to have the pupil mentally abreast of his work, and to make him learn thoroughly, in its proper connexion, what he is set to learn. The writer sees this quite clearly; and, if all teachers could see it, one of the greatest obstacles to the maintenance of the classics would be summarily swept out of the way. He tells us that "pictures and models are becoming more and more popular," though there is "much truth" in the allegation that the illustrations in editions of the classics are distracting. Yes, distracting from the construing; but surely there is a ready cure for that. We do not know what is his authority for saying that "the deluge of annotated editions cannot be said to have improved English scholarship." Has it deteriorated English scholarship? Has it not facilitated English scholarship? It may be that the teacher is "the proper annotator," but the judicious annotator does part of the work of the teacher, and does it in a way that helps both teacher and pupil very effectively, while leaving quite enough work for both of them. It is certainly "good for a boy to feel his way and solve his own problems with the aid of dictionary and grammar," but such aids are very frequently inadequate, and it is very easy to waste time and interest in this "excellent training in research." Let us be yet a little more practical—in face of the enemy.

Sir Michael Foster does good service in the May number of the *Nineteenth Century* when he inquires whether the money expended by Government in grants for scientific work of one kind and another "is spent in the most economical way, and to the best advantage, either for the purposes of the Government or in the interests of science." The Government expects value for the money. The researcher, with his eye fixed on the achievement of this value—this concrete equivalent bargained for—is not free "to follow wherever the initial answers seem to beckon him": yet "experience has shown that absolute freedom to follow wherever Nature leads is the one thing needful to make an inquiry a truly fruitful one." "The cost of a 'fool's experiment,'" as Darwin called it (and he more than once found it profitable), "must not appear in the estimates laid before the public." How to reconcile the conflicting positions? Sir Michael takes the case of public health (in the widest sense), and he says:—

> What is needed is the endowment, and where necessary the establishment in London, and not in London only but in the provinces, of adequate laboratories, each supplied with a staff of investigators of various grades. The highest posts should carry emoluments large enough to tempt men of great eminence to hold them; the lower posts should be numerous enough and paid well enough to secure the needed number of promising younger investigators. Such institutions—and this is the point I wish to urge—would be most economically conducted and would prove most fruitful in scientific work, and so most useful to the public, if they belonged not to the Government alone, not to this or that University or other body alone, but to both together. . . . I am advocating the establishment of "Regius" Laboratories, with a new kind of "Regius" Professors, Directors, and other officers.

The full exposition of the plan is well worth attention, and is sure to attract serious consideration. It proposes system where there is now but fitfulness and irregularity, and would go far not only to ensure a better return for the money, but to advance the national achievement in all branches of studies. For, though Sir Michael deals directly only with public health, his principle extends to studies of every kind.

What is an examination for? "For the last two or three years," Sir R. K. Douglas is reported to have said (Royal Asiatic Society, May 11), "the post of Persian Librarian of the British Museum had been vacant, and, do what they would, the Trustees were unable to get a man to fill it with a knowledge of Persian who was able to satisfy the requirements of the Commissioners." "Who," observe; not "which." Now, really this is a piquant situation, and Prof. Browne, of Cambridge, throws a very much needed light upon it. He tells us (*Times*, May 13) that in 1900 one of the most brilliant of our younger English Orientalists—one whose reputation as an Arabic, Persian, and Turkish scholar was already established in England and on the Continent, who had an excellent knowledge of French, German, and Russian and a fair knowledge of Spanish and Italian, and who now holds an important and responsible educational post under the Indian Government"—actually submitted to examination for a post in the Oriental Manuscript Department of the Museum, and "was, to the amazement of all who knew his attainments, rejected by the examiners of the Civil Service Commissioners." And why? Because his Latin composition was not up to the mark! Prof. Browne mentions two other cases, in one of which the candidate also satisfied the examiners in Persian, but was rejected in German and Latin. He frankly says that all these candidates have, in his opinion, been "abominably treated." Whoever denies the proposition must have a peculiar notion of what constitutes fitness for the post. Here is one of the absurdities that tend to make the defence of classical study—and of examination—so painfully and unnecessarily difficult. The first man cited by Prof. Browne could easily have made himself first-class in Latin composition in a few months. To subject him to examination at all was an amazing red-tape idea, worthy of preservation in the Museum archives.

The best thing the Government could do with Coopers Hill is to shut it up. Inclusive of simple interest at 3 per cent. per annum on capital outlay, the deficit on the whole net working of the College is £170,643, and a further capital expenditure of some £40,000 is calculated to be soon necessary to keep it going. True, the cost to India is really a subordinate issue, but still it is an issue not to be disregarded in the position of the Indian Exchequer, or from the ordinary business point of view. What is the College there for? It was established to provide engineers for the Public Works Department, and this it has done so efficiently that the Government of India fancy they can never get so good engineers elsewhere, and plead for its continuance. This opinion, however, only shows that they do not appreciate the changed conditions of production of engineers, though these were put before them very plainly in the report of the Committee appointed by the Secretary of State for India to consider the expediency of maintaining the College. Replies to a circular addressed to fifteen Universities and other scientific institutions for the education of engineers show that "all the institutions consulted have expressed the opinion that there would be no difficulty in obtaining for India well qualified engineers from the United Kingdom, and the total number of candidates mentioned as likely to

Digitized by Google

come forward is greatly in excess of any number of engineers that would be required." Besides, "the narrow field of selection to which Coopers Hill is restricted must exclude many of the best men from the Indian service." The recent limitations on the admission of natives of India take away the patriotic argument. The maintenance of the College would be a continued waste of money. The staff will, of course, be properly compensated on disbandment.

Mr. H. T. Butlin, the eminent Dean of the Faculty of Medicine of the University of London, has "yet to learn" the advantages that the University will derive from the "incorporation" of University College, and some other people have yet to learn the advantages that University College will derive from its "incorporation" with the University. Let us cheerfully hope that both parties will learn by and by. But, meantime, Mr. Butlin, as one of the treasurers of the Institute of the Medical Sciences Fund of the University of London, finds it necessary to explain that Sir Donald Currie's munificent gift, though "it has actually been acknowledged and accepted by the University of London," is "really a gift to University College, and not to the University of London," and anyhow does not go to swell his fund. For our own part, we are not sure that, although the gift "was actually acknowledged and accepted" by the College, the College will derive any direct and permanent benefit from it. Anyhow, it may be that the best argument for "incorporation" lies in this hopeless inability of the public, and even of "quite a large number of members" of Mr. Butlin's own intellectual profession, to make out which is which. Why, the highest University authority, apparently, is unequal to the discrimination; for, indeed, Sir Donald's gift was "actually acknowledged and accepted by the University of London."

A correspondent writes:—"Considering the proportion of private schools to be found among the secondary schools of England, it is but natural that the strongest representations should have been made from time to time to Governments, both Liberal and Conservative, with regard to the exclusion of private teachers from such bodies as the Consultative Council. They manage these things differently in Norway. The proportion of private schools there is hardly as great as in this country; but the representation of such schools in their Secondary School Commission, which sat about the same time as our own, was five times as great as in England. And the Consultative Council, which was brought into existence by the new school law and whose members are appointed for five years at a time, is not regarded as complete without a private-school element. The Council consists of seven members, one of whom was chief assistant in the leading private school in Christiania, known by the name of Aars and Voss. He has been replaced this spring by Mr. Otto Anderssen, who more than twenty years ago was also with Aars and Voss, but has since that time been the head master of a private State-recognized school of 400 boys in the same neighbourhood. It was he who wrote the account of the new Norwegian School Law in Vol. VIII. of our Special Reports. Mr. Anderssen is a very capable English scholar, and has written for school use a 'History of English Literature' (in English) which is admirable for the selection of its matter, the brightness of its style, and the general justice of its estimates."

SUMMARY OF THE MONTH.

The King laid the foundation stone of the new buildings of the Royal College of Science, Ireland, at Leinster Lawn, Dublin (April 28). Sir Horace Plunkett, Vice-President of the Department of Agriculture and Technical Instruction, Ireland, read an address reviewing the work of the Department, and laying special stress on the work of the Royal College of Science and the importance of a complete system of national education. The King, having expressed his pleasure in performing the ceremony, said:

In these days scientific training is an indispensable condition of success in commercial and industrial life. To be thoroughly effective, it requires all the help which research and modern appliances can give. You are, therefore, wise in providing the improved equipment and the widened opportunity for instruction which this college will henceforth supply. You have told me that the efforts of your Department to extend scientific education among the people have been supported by popular sympathy and by the co-operation of representative public bodies. I am glad to receive this assurance; for without such sympathy and co-operation any scheme of technical instruction, however well devised, must fail to come into close touch with the life of the people, and must fall short of complete success. I agree with you in thinking that a complete system of education is necessary for the full realization of your aims; and my best wishes go with your efforts to improve the intellectual and material conditions of the country.

At a later stage of his Irish visit—at Kilkenny—the King again emphasized the value of education for the development of the country.

The International Printing and Allied Trades Exhibition at the Agricultural Hall, Islington (April 30 to May 14) was a great and instructive show of machinery, appliances, processes, and products. There were over three hundred exhibitors, representing almost every branch of the industry, and very few of the leading houses were absent. Some five hundred different modern and up-to-date machines and appliances were exhibited, about one hundred of them being shown in operation. Interesting historical examples were also to be seen in the gallery. The exhibition impressed at once the extent and the efficiency of modern developments.

The system of technical instruction for fishermen devised by the Lancashire County Council is said to be much appreciated by the fishermen along the Lancashire coast. The County Council has arranged for batches of fifteen fishermen at a time to attend at the Piel (Barrow) Hatchery and Marine Laboratory to be instructed in the habits and conditions of breeding of various kinds of fish. The course lasts a fortnight, during which time the fishermen reside at Piel. The County Council allows each man £5 towards his expenses. According to Prof. W. A. Herdman's syllabus of the lessons in marine biology given in these practical classes, the fishermen, after an introductory course, dissect and study the mussel, shrimp, crab, cockle, oyster, and fish parasites, and become acquainted with the leading facts about the breeding of these and other forms of life.

At the Glasgow School Board (May 16) a prolonged discussion took place over a motion proposed by the Rev. Mr. Forson that, in future, candidates for appointments should not be required to state the Church denomination they were connected with. Mr. Forson said that many teachers left a church of a smaller denomination to become attached to one of a large denomination. Mr. Martin Haddow, who seconded, said no matter to what church a teacher belonged it was no criterion of his character. They knew many men who belonged to no church, but were of good, sound character, both morally and otherwise. Miss Paterson moved the previous question. She pointed out that if teachers were to teach religion in the schools they ought to know that they had some church connexion. In these non-church-going days she thought it was very essential that the teachers should be able to say to the Board that they attended some church. The motion was carried by 4 votes to 3.

"Russia's failure is mainly from the inefficiency of Alexeieff and Stark in the days of peace: how many admirals have we who would have done better?" asks Mr. Fred. T. Jane in the May number of the *World's Work*. "Here is an instance in our Navy of how we get Starks instead of Togos. Some ten years ago one of the most brilliant officers in the Navy was detached to the Mediterranean, where he had the misfortune to arouse the jealousy or ire of a titled superior of the Stark calibre, and from that day he passed into obscurity—snuffed out. The same thing still goes on. Jealous mediocrities, retired and on the active list, work night and day to oust Admiral Fisher. To take another case, Captain Percy Scott is extremely likely to be snuffed out ere long. I do not know that he would necessarily make a supremely good admiral, but there is no doubt whatever that he has doubled, if not trebled, the gunnery efficiency of the fleet, and officers of the Stark type shake with jealousy in consequence. Such things should not be; the Navy needs the best men always, and the most urgent lesson of the war is that, unless we ensure getting the best men, heedless of sentiment and 'prior claims,' we, like Russia, may find a day when we send our Makaroffs and Skrydloffs too late." The case has wider applications.

Yet another relic of bygone London will have disappeared within the next few days (says the *City Press*, May 14). Already the housebreakers are at work behind the Minories, in connexion with the street widening scheme about to be carried out in that district. Among the houses that will be rased to the ground is one possessing not a little interest—especially to Churchmen. On the west of the Royal Mint, and exactly adjoining the entrance, are the premises which will be demolished first, and these include the first Protestant parish school erected in London. A casual observer would fail to observe any difference between the school and its neighbours, especially now that they are in the hands of the workmen; but about fifteen feet up, let into the wall, there is a slab bearing the following inscription:—"St. Botolph, Aldgate. First Protestant Parish School. Erected by Voluntary Contributions, 1793." Yesterday this evidence of the Church's early labours in the cause of education remained intact. By now, possibly, it is amongst the *débris*, the building itself having passed away, unthought of and unmourned.

Mr. Hilaire Belloc writes in *London Opinion*:

Get Church's stories from Homer. When you have read it (or as you read it) go to the British Museum and look closely at the archaic Greek sculpture—at the stiffness, and the astonishing realism of it, and at the fixed smile which some have thought cruel, others merely ritual. Catch the rhythm of this little book. Read twice or thrice the fainting of Andromache when she sees Hector dead; read, indeed, the whole most carefully. If you are lucky, there will happen to you what happened to me when I first read this book. The river you know best will be Scamander, and the war that dinned round Ilium will be fought in the road next your home, for, believe me, when I was a boy the sacred cities stood upon the foothills of the Downs, and the sea-plain held the camp of the Greeks, and Arun was Xanthus, and the Wight, a long way of, was Tenedos.

This way of bringing the spirit of the classics to touch the non-classical mind is daily gaining in importance,

---

Principal Reichel lectured to the Guild of Graduates of the University of Wales at Holyhead on "Some Interesting Features of American Universities" (May 12). He said that the Universities of America were far more numerous than ours, and they altogether surpassed ours in wealth, in equipment, in number of staff and students, in variety of study, and, above all, in the hold they possessed on the public confidence. The student there obtained his degree on the regular work he did throughout his University course, and, though there was a test at the end, it hardly ever took the form of a competitive examination in all he had been studying for two or three years. Often it was a thesis. The effect of this on the course of study was very marked. In America, English literature was the core subject in the schools, and to a large extent in the colleges. Our schools too often turned out their pupils with a positive distaste for reading good literature. The young American might not have learnt so many facts at school as the young Englishman, but in nine cases out of ten he had acquired not only a liking for literature, but some idea how to use the splendid public libraries which were maintained in every American city. In the matter of physical culture the Americans were, generally speaking, ahead of us: but the mischievous tendency to convert football, cricket, and other games into spectacular performances was quite as apparent in the United States as in Great Britain; and it was more aggravated by the American keenness to win, which tended to import into the football field regrettable practices. Taking all things together, however, he had no doubt that we had much to learn from the Americans in the matter of physical culture. The most admirable feature of the other side of the Atlantic, whether in the United States or in Canada, was the entire absence of any feeling that honest work of any kind could be derogatory to an educated man. The American or Canadian student whose friends could not afford to keep him at college paid his way either by working during the Long Vacation in all sorts of manual employment or by rendering what we should regard as menial services to his fellow-students during term-time.

At a meeting of gentlemen interested in technical education, held at the University of Birmingham (May 14), Prof. Heath, Vice-Principal, in the chair, the present state of technical education in the Midlands was reviewed, and the following resolutions were adopted:—

1. That an Association be formed of representatives of technical education in the Midland district, with the object of promoting consultation and collaboration amongst teachers, and of promoting the interests of technical education generally.
2. That the following be appointed as a Committee to organize such an Association, and to report to a future conference:—Mr. G. P. Bailey, Mr. F. W. Shurlock, Dr. W. E. Sumpner, Mr. Lloyd Whiteley, Alderman Bourne, Alderman Yates, and Profs. Hughes, Redmayne, and Turner.
3. That this meeting is strongly in favour of a reorganization and extension of evening continuation classes in order to fill the gap between elementary and technical education.
4. That this meeting believes that great benefit would result if manufacturers would encourage and facilitate the regular attendance of their employees at day and evening classes in technical schools.

Dr. A. W. Williamson, F.R.S., Emeritus Professor of Chemistry in University College, London, died at Hindhead, in his eighty-first year. He was appointed Professor of Practical Chemistry as far back as 1849, and was made Professor of Chemistry in 1855. He retired in 1887. His widow is a daughter of the late Prof. T. Hewitt Key.

The Council of University College, London, adopted the following resolution:—"The death of Dr. Alexander W. Williamson, Emeritus Professor and formerly for thirty-nine years Professor of Chemistry and Practical Chemistry in the College, having been reported to them, the Council record their sense of the great value of his service to the College during many years and of the distinction which his great eminence as a chemist and man of science conferred upon it. They lose in him a link with the earnest band of social and educational reformers to whose efforts the foundation of the College is due."

On the much-regretted death of Sir Henry Thompson the Council of University College, London, adopted the following resolution:—"The Council have received with much regret the information of the death of Sir Henry Thompson, Bart., Fellow of the College, Emeritus Professor of Clinical Surgery, and Consulting Surgeon to the Hospital. Sir Henry Thompson was not only a brilliant surgeon, but also attained notable distinction in other branches of science and in art. He rendered great services to the College and Hospital during the twenty years of his membership of the active staff, and as Professor of Clinical Surgery from 1866 till 1875 he was a most impressive and successful teacher. To the end of a long life he strove continuously to improve the social condition and sanitary welfare of the public. The Council desire to express their sympathy with Lady Thompson and other members of the family."

Prof. York Powell, M.A., LL.D., Regius Professor of Modern History in the University of Oxford, died somewhat suddenly (May 8), at the early age of fifty-four. He succeeded Mr. Froude in 1894. His chief interest lay in the earlier periods of English history, on which he wrote several well known volumes. He did excellent work in Icelandic literature by editing, in conjunction with Gudbrand Vigfusson, the "Corpus Poeticum Boreale," in two volumes (1883). He also took an active part in the general affairs of the University.

UNIVERSITIES.

(*From our own Correspondent.*)

Oxford.

We have had a term, so far, which could in no sense be said to be devoid of interest. When Congregation—*i.e.*, resident opinion—decided last term by a very substantial majority—a majority which included some of the leading theological authorities and teachers in the University—that it was expedient that others than those in priest's orders should be admitted as examiners in the Final Honour School of Theology, one could scarcely believe that outside voters would reverse by a colossal majority the decision of Congregation. But the opponents of the change at once set to work to canvass the non-resident clerics whose names are still on the Convocation list. The result was a wholesale invasion of Oxford: the Great Western Station was crammed with parsons from all parts of England, and many parishes must have been left unshepherded. Many of the visitors seemed to have stepped out of the last century: many others made business the opportunity for a holiday, and had brought up wives or families whom they conducted over the colleges. It was almost pathetic to see the greetings between those who presumably had not met since undergraduate days, and whose ecclesiastical paths and preferment had—to judge from the cut of their clothes—been widely different.

The debate itself had little dignity: the voters had come to vote and not to listen, much less to be convinced. The earlier discussion in Congregation had been refreshingly free from acrimony or the proverbial *odium theologicum:* the different standpoints had been put clearly and judicially. So—but for the audience—might have been the Convocation debate: but, as a matter of fact, the scene might have been a black-coated reproduction of a noisy Commemoration. The names of distinguished divines—not in Anglican orders—were even received with something closely allied to Australian "barracking." Altogether, though the invaders swept all before them, the manner in which they did so could hardly have been considered either dignified or acceptable. Indeed, the whole occurrence has raised the question—which has been raised before—whether in matters which are more properly the internal business of the University, a deliberate decision of residents should be at the mercy of a *plébiscite.* Had the resident verdict been less decisive, then its reversal by the non-resident vote might have seemed more equitable; as it is, we are faced by the position that the University—in the sense of the resident teaching University—can hardly be said to be able to legislate for itself.

Of Prof. York Powell so much has been written that little may seem remaining; but it would be impossible in an Oxford letter to omit the mention of one who was in an especially distinctive sense an Oxford man. There have been historians who have written more: there have been few who have known more. There is a good deal of truth in the remark that he gave to the University Press and to writers on historical subjects a critical knowledge of which he might have made a more selfish, and perhaps more profitable, use. It is a matter of common knowledge to those who know the working of the University Press that enormous importance was rightly attached to York Powell's advice and decisions. An author on a special subject might submit or suggest a work to the Delegates: if his suggestions were looked upon with favour, he was in most cases referred to York Powell. Possibly he might at first fight shy of criticism, feeling that he was in himself a special authority; but after his first interview he speedily realized that on all historical knowledge York Powell might have himself been a specialist, and he was only too ready afterwards to avail himself of felicitous suggestion, shrewd and unerring, if somewhat blunt, criticism and unfailing stores of knowledge.

Of the Professor's successor it is yet early to speak—though, of course, we do speak. Probably Firth is the favourite selection, though it can hardly be said that his books have been read by many, and although, if you mention his name to "the man in the street," he only associates it with the monograph on Cromwell. Yet Firth it will probably be. The Oxford History School teachers—"The History Ring," as it is called by its critics—is the best organized system in Oxford, and contains many able men; but none, perhaps, stand out pre-eminent. Richard Lodge has, of course, left us for Edinburgh: but we still have, among the older names, Lionel Smith, of Balliol; Arthur Johnson, of All Souls and Merton; Hassall, of Christ Church; Fletcher, of Magdalen; Oman, of All Souls—yet perhaps of these it can hardly be said that one star differeth from another in glory, though Oman's work is perhaps better known outside Oxford. Of the younger school it may probably be said, without hurting anyone's feelings, that Fisher, of New College, has made most mark and will go farthest; but perhaps his time has not yet come.

Prof. Bradley's lectures as Professor of Poetry continue to be extraordinarily popular; they have certainly been at once remarkable in themselves and characteristic of the man. One of the largest gatherings in the Schools which your correspondent has ever seen was present to hear the lecture on "Shelley"; while the most recent lectures, on "King Lear" and "Macbeth"—coinciding in date, as they have, with the Eights Week, and fixed at a convenient hour—have given, alike to sober resident and gay "ephemerid," an opportunity of combining instruction with the more serious business of Eights Week.

Of the Eights it may be said that the boats are not especially good; but the racing has been most entertaining. New College accomplished a remarkable performance, as their crew was sadly upset, both just before the races and during the races themselves, by illness; on the fifth night they felt themselves doomed, as their stroke collapsed, and their former stroke (out of the boat by doctor's orders) came back to save the situation, and rowed with marvellous pluck and success. Christ Church have had the fastest crew, and, starting sixth, made three bumps in three nights; they then found Magdalen a crew which, as always, take a great deal of catching. There should be fine racing between the two at Henley if Christ Church go for the "Ladies'," which Magdalen hold as winners last year.

The University Eleven has done quite well, but they really want some more batting: at present we are mainly dependent on Evans and Raphael—the latter of whom is certainly the "man of the hour," as in the latter part of his great innings against Yorkshire he made Hirst, Rhodes, and Haigh appear very ordinary bowlers.

(*From our own Correspondent.*)

Cambridge.

The death of Mr. G. F. Cobb came as a shock to many of us who for years have looked upon him as a type of perpetual youth. A more vigorous and many-sided man it would be hard to find in Cambridge or elsewhere; twenty-five years of unremitting work as Junior Bursar of Trinity were quite unable to check his energies, physical or mental. His book "The Kiss of Peace" showed him to be an acute controversialist and a learned theologian; his attainments as a musician were far above those of the ordinary professional—as an organist he was at his best when giving exquisite renderings of classical music on the organ of his college chapel, while who does not know his ever popular rendering of Kipling's "On the Road to Mandalay"? Yet as a founder of the Cyclists' Tourist Club, and as a tactful and courteous administrator of a great college like Trinity, he was as accurate and painstaking in the daily details of business as he was cultured and judicial in higher realms of work. If Cecil Rhodes and Gerard Cobb had met, Cambridge might have possessed some Rhodes scholars to-day.

The partnership which the University has for so long carried on in conjunction with the Clay family at the Pitt Press is not to be terminated just yet: certain changes are made in the publishing department, but Mr. John Clay will still be a managing partner in the concern which has been such a useful source of income to the University for the past twenty years. The opposition to the continuance of the partnership was represented by about sixteen votes in the Senate, and there is little chance of the existing arrangement being disturbed for many years to come.

Mr. Frank Smart has once more shown his liberality by endowing a research scholarship in Botany. It is impossible to overestimate the importance of such generosity: in no case have the holders of such studentships failed to justify the choice of the electors. The research work of our graduate students is the very best antidote to the banality of our Tripos system. The Girdlers' Company have also given us a Lectureship in Economics: they would have been better advised if they had created a studentship of the type alluded to above.

Proposals are now being made to modify the procedure in the election to certain professorships. The Council of the Senate at present are charged with the selection of the Regius Professors of Greek, Divinity, and Hebrew; while the Norrisian Professor of Divinity is elected by the Heads of Houses, who, quite possibly under modern regulations, may be profoundly ignorant of theology altogether. The scheme roughly is to create boards of nine members—the Vice-Chancellor, four mem-

Digitized by Google

bers nominated by the Council, two by the General Board of Studies, and two by the Special Boards concerned. In the case of the Lady Margaret Professor, who is at present elected by the Divinity graduates, it is proposed that the board shall be elected by the Divinity Faculty. The proposals will probably be carried.

After a quarter of a century's solid work in the University Laboratory, Mr. Fenton and Mr. Sell are to be rewarded by being appointed University Lecturers in Chemistry at a nominal salary of £50 a year: of course, the real emoluments of these posts come from fees, but the honour is as well deserved and as much appreciated as what would have cost us more.

The grand field day in the Senate on May 28 will be a matter of history before these notes see the light; scientists from the four quarters of the globe—and elsewhere, judging by their names—are to be offered the D.Sc. degree. Russia sends us M. Famintsyn; Germany, Herr Waldeyer, the anatomist; while the great Swedish anatomist M. Retzius will keep him company. Astronomy will be represented by Prof. Bakhuyzen, of Amsterdam; Physics, by Prof. Riecke, of Göttingen. Literary merit will be rewarded by the degree of Doctor of Letters in the person of M. Leroy-Beaulieu, Professor of Political Economy in the Collège de France; Prof. Krumbacher, Professor of Philology at Munich; and M. Georges Perrot, Director of the Ecole Normale Supérieure of Paris. It is to be hoped that they will understand the orations of our distinguished Public Orator, who may possibly, for this occasion only, adopt the pronunciation current on the Continent.

The appointment of Mr. Donaldson to the Mastership of Magdalene came rather as a surprise to the University. Eton men commend it warmly; and they ought to know.

The two great itinerant political clubs have both paid us a visit: the Liberals treated us to Mr. Haldane and the Unionists to Mr. Alfred Lyttelton. Naturally, the dinner to so well known and popular a sportsman as the present Colonial Secretary was well attended, both by Seniors and Juniors, and the guest of the evening had an enthusiastic reception.

The examinations are now well upon us, and until the middle of June lists will spasmodically make their appearance. Little-go candidates do not face the examiners till June 21, and have to do the last fortnight of their preparation amid the din and bustle of the "May Week" gaieties. Could any arrangement be more idiotic? Every one regrets the good old days when the Triposes were held in the October term. But the present arrangement suits the convenience of some of our officials; the candidates suffer.

The river is gay with the practising boats and irresponsible idlers. Third Trinity promise to retain the headship of the river; but Trinity Hall and First Trinity are exceptionally strong crews, and will make the racing exciting.

Our Eleven is not as bad as the papers think. Several of last year's untried men have proved their worth quite early in the season.

The Tripos men take their degree on June 22; then all will be over.

London. At an ordinary general meeting of Convocation (May 10), Sir Edward H. Busk, M.A., LL.B., was re-elected Chairman—a position he has held for twelve years past. Mr. T. Lambert Mears, LL.D., M.A., was elected Deputy-Chairman, in room of Sir Philip Magnus, to whom a vote of thanks was cordially passed for his services. In responding, Sir Philip remarked on the increasing weight of the work of the Senate, and especially in satisfying conditions attached to gifts to the University. For the rest, the meeting dealt with routine business.

Manchester. The University Court passed (May 5) Ordinances for the new Faculty of Commerce and Administration, and for the new Faculty of Theology. Regulations for granting a diploma in Veterinary State Medicine and for degrees in Public Health and Pharmaceutics were also adopted. Principal Hopkinson reported that the Joint Board representing the three Universities in the conduct of the Entrance or Matriculation Examinations was working satisfactorily. The Bill for merging Owens College into the Manchester University was now only awaiting the Royal Assent, and they now felt that their new organization was complete and in working order.

Birmingham. A summer school in mining, geology, and civil engineering has been arranged for the ensuing vacation, under the control of Prof. Redmayne, Prof. Watts, and Mr. F. H. Hummel.

The Council have rejected a petition praying them not to permit any one to perform experiments or enter the licensed laboratory who holds a certificate issued to him under the Act (1876) exempting him, partially or entirely, from the use of anæsthetics. While sympathizing with the humane intentions of the memorialists, the Council point out "that the certificate permitting a test to be made without an anæsthetic is intended for inoculation or feeding experiments, where the administration of an anæsthetic is wholly superfluous or impossible, and in any case would subject the animal to much more discomfort than the trivial puncture or scratch itself. The certificate is not asked for other experiments. With the exception of these feeding and inoculation experiments, permission to retain the animal alive after an operation is rarely asked, and is only permitted when a special certificate has been granted for the particular experiment. . . . The Medical Faculty has reported that so far no such special certificate has been applied for, nor will any be applied for unless the Faculty itself has come to the conclusion that in the particular case the object in view is of great importance. The Council accepts this assurance, and, having received a report upon the whole matter from the Senate, is of opinion that it is not necessary to impose any other conditions than the very stringent regulations laid down in the Act of Parliament and most fully carried out." The Hon. Stephen Coleridge says the reply will certainly fail to satisfy the signatories to the petition.

A Committee is endeavouring to raise £480 a year for three years, and an installation fund of £700, for the establishment of a Hall of Residence for women students.

Leeds. The Court of the University of Leeds held their first meeting (May 18), the Marquis of Ripon presiding. Lord Ripon, as the first Chancellor, said the duties which fell to them were of the very highest public importance. A University was not a technical college, though he did not speak lightly of technical education, as he believed that one of the foremost things which should be done for the maintenance of our industries and manufactures in the face of foreign competition was the spread of sound and high technical education. The object of their work should be a modern University on modern lines.

Wales. At a meeting of the Wales University Court (May 13), Sir Isambard Owen raised the question of petitioning for a supplemental Charter, which should include provision for enabling the University to grant degrees in Medicine, Surgery, and Obstetrics. A letter from Sir Arthur Bigge, Private Secretary to the Prince of Wales, Chancellor of the University, was read, expressing His Royal Highness's approval of including the power of granting degrees in Medicine in the petition for the supplemental Charter. Sir John Williams strongly supported the proposal, and stated that students from Welsh medical schools take distinguished places in the graduation lists of other Universities, while the Welsh University is deprived of her natural credit. The Court resolved to include this provision in the application for a supplemental Charter. The Senate was instructed to report on the inclusion of a conversational knowledge of French and German and of commercial geography among Matriculation subjects as necessary to maintain the nation's commercial progress.

Edinburgh. The special Committee appointed by the General Council of Edinburgh University to "watch the progress" of the Education (Scotland) Bill now before Parliament, and "to take any steps that may be necessary in the interests of the University," have forwarded to the Secretary for Scotland resolutions expressing approval of the Bill; noting with special satisfaction the proposed institution of Provincial Councils, whereby the Central Authority may be brought into communication with the opinion of Scotland and the Universities may take part in guiding the education of the country; and suggesting that, as regards the representation of the Universities on these Councils, it is matter for consideration whether the University Court should not be the electing body.

Glasgow.

THE Glasgow St. Andrew Society, which has decided to wind up its affairs, has offered the balance of its funds to the Senatus of Glasgow University for the encouragement of Scottish literature by means of bursaries, lectureships, or such other method as the University Court may determine. The Court (May 5) agreed to request that the funds in question might be devoted to the Celtic Lectureship, for which subscriptions are at present being collected.

Aberdeen.

THE University Court approved a scheme of post-graduate training of secondary teachers (May 10):

1. The course of training is open only to graduates of this and other Universities, and to those who have otherwise satisfied the Senatus of their fitness to profit by the training.

2. Every student must have taken the class either of Logic or of Moral Philosophy during his undergraduate studies; failing which he shall take it concurrently with this course.

3. The course of training shall extend over one year, commencing with the summer session.

4. The course of instruction will be theoretical and practical—100 hours of lectures, discussions, essays, reports, &c., and 250 hours of practice in the schools.

The Court resolved to proceed with the institution of a draft Ordinance for the degree of Doctor of Science in Agriculture (D.Sc.Agr.), which had been approved by the General Council.

St. Andrews—University College, Dundee.

AT a special meeting (May 11) the Governors of University College, Dundee, unanimously confirmed a resolution passed at a previous meeting empowering the Council to borrow £10,000 for the purchase of land at Union Mount for purposes of extension.

Lack of funds prevents the Council from taking up the proposal of a Chair of Agriculture for Forfarshire in connexion with the College.

UNIVERSITY EXTENSION.

IS IT A SUCCESS OR A FAILURE?

MR. HAROLD SPENDER writes in the *Manchester Guardian* (May 11):

Is the University Extension Movement a success or a failure? That is the question naturally suggested by the news that the Victoria University propose to enlarge the area of their Extension work in the districts round Manchester. Perhaps, as an old Extension lecturer who has long retired from the service, I may be allowed to say a word on the subject.

Since its enthusiastic beginnings the Extension Movement has been peculiarly at the mercy of random and ignorant opinions. It has been the favourite cock-shy of the superior persons in University common-rooms and elsewhere, and it has been the over-praised idol of the neophytes of knowledge whose draughts from the Pierian spring are rather frequent and various than deep. Amid the Babel of praise and blame, of ignorant contempt and fulsome worship, the true aim and merit of the Extension Movement is in danger of being forgotten.

Both parties make the same error. They mistake University Extension teaching for University teaching in the fullest sense. Starting from this point, the University don is perfectly right in denying the claim of Extension teaching to take the place of what we aim at in University teaching. I say what we aim at, for in reality Extension teaching, with its higher standard of lecturing and its stimulating atmosphere of faith, often achieves more than the University itself. The sister who attends at the Extension lectures often works harder and learns more than the brother who attends college wines and learns how to "cut" "pass" lectures. But of course there is no comparison between the effects of a few courses of variegated lectures and a steady and continuous training of three or four years under the best University teachers. The wise founders of Extension teaching never confused the two things, nor imagined that the University Extension Centre would take the place of a University. To them the University Extension lecturers were the scouts of the main army—the itinerant missionaries who prepared the way.

The University Extension Movement, therefore, is essentially a pioneer, and, in a sense, an experimental endeavour. In some towns of England it has already laid the foundations of new Universities; in others it has flickered out and expired. Reading and Exeter are two instances of towns which have witnessed the development of an Extension Centre into an Extension College, and finally into a full-blown University. In other towns the Centres have led to the formation of local institutes and societies, which still keep the flame alight. In both these cases the Extension Movement has only ceased because it has succeeded. It has created an intellectual centre which has become self-sufficient and requires no help from without.

There are too many other cases, indeed, where the Movement has died out without leaving any permanent fruit. In each case I leave it for the local world to decide which is to blame—the town or the Movement. But even where the Extension enthusiasm has become an extinct volcano we need not conclude that it has been a failure. On closer inquiry in any of these towns or villages we should probably find that there were many men and women of middle age who had learned from this Movement to love books and talk about books more than about their neighbours. Wherever a Centre has left one such person its work has not been entirely vain. There are many women in the towns and villages of England to-day who make better wives and mothers because of the Extension Movement. We do not want to breed students only, but good citizens.

The first Extension lecturers aimed chiefly at educating the working classes, and there are many who blame the Movement because it has not kept steadily to this ideal. But the middle classes stand in need of culture quite as much as the working classes. There is no need to narrow the Extension Movement down to a class—or a "mass"—movement. Its glory is that it comprehends all men and women. It is good for an Extension lecturer to address a big audience of working men one day and a little gathering of ardent ladies on the next. There are no better audiences for an Extension lecturer than the working-class audiences of towns like Manchester. But some of the best students I have ever known have been young men and women in places like Garstang and Lytham. A course of lectures on literature may lend a new meaning and purpose to life; half-a-dozen lectures on architecture may add a new value to travels; a course on modern history or modern science will make women better companions to their brothers or husbands. They will even be better housekeepers, and will order a better dinner, because they have better brains to do it with.

The later directors of the Extension Movement have made many efforts to make the courses of study more continuous and more thorough. The class after the lecture, the local association for study and discussion in the intervals of lectures, the essay, and the final examination—all these are admirable developments as long as they are not pressed too strenuously and pedantically. It is a mistake to exclude the more casual student. An Extension lecturer ought to be catholic—he ought to bear in mind both his students and his listeners. There is room for both. It is possible to stretch too far the ideal of continuous courses. There is a place for the six-lecture course as well as the twelve-lecture course, and, if you cannot persuade a town to study history for two years in succession, it it better to let them have their turn at modern science than that they should give up the Movement altogether. Here again we must remember that the Extension Movement is always a movement of test and trial.

With the growth of great provincial Universities, Oxford and Cambridge will be able to hand over some of the burden to their younger sisters. London University has always claimed the sphere of London. There is no reason why Victoria University should not do the work for Lancashire, and Leeds College for Yorkshire. With these Universities, the Extension Centres ought to be feeding agencies for the main corporation, and the lecturers ought to be more awake to local needs. The work of the Extension Movement in England will only be completed when there is a University accessible to every boy and girl in the kingdom. Until that ideal is achieved the Extension lecturer holds a high place among teachers. He is the sower of the seed.

UNIVERSITY EDUCATION IN INDIA.

1. THE UNIVERSITIES BILL.

THE Government Bill for the reconstitution of the University of India has undergone wide and severe Native criticism. Thus the Hon. Mr. Mehta, speaking at a meeting of the Bombay University Senate on December 21, dealt stringently with Mr. Raleigh's speech in introducing the Bill, affirming that "it only deals in assumptions without grappling with the detailed arguments derived from actual experience," and pointed out Lord Curzon's "utter misconstruction" of the attitude and motives of Native objectors. In particular, he criticized the inclusion of all the Universities in a single Bill; and, referring to Lord Curzon's advice to dismiss "all the wild talk about killing higher education and putting education under the heels of the Government," which he accepted as "entirely honest and sincere," he pointed out that they would have to deal with subsequent Viceroys, and said:

We have, therefore, to look—it is our duty to look—both behind and before. We know that in the past, not the killing, but the clipping, of

Digitized by Google

higher education has not been beyond the pale of political contemplation in the highest quarters. [Reference to the Government policy of 1890–91, as expressed by Sir W. Lee Warner and Sir Charles Crosthwaite.] . . . It is thus looking before and behind that we are alarmed at what is the aim, and will certainly be the result, if this Bill is passed, of making the University a department of Government. To really realize the drift and scope of the Bill you must take it as a whole, and not piecemeal as some of my colleagues on the Committee have done. Section 3 provides that the exercise of all and every function vested in the University shall be subject to the approval of Government. If the University has to make an appointment, it must be subject to that same approval. The composition of the Senate, under Sections 4, 5, and 6, is practically in the hands of Government. By the limitation of the number of Fellows to 100 even the hands of Government are tied so as to leave them very little discretion but to make it preponderatingly European and official. Under Sections 19–24, affiliation and disaffiliation are made direct acts of Government, the Senate and Syndicate only submitting to Government their inquiries and opinion. Under Sections 25–26, the by-laws and regulations are absolutely placed at the mercy of Government, who have power to add and alter the draft by-laws prepared by the Senate as they choose. This is all the Bill. Whether the Universities will be made teaching Universities, as is so often insisted on, is a nebulous problem left to Providence in the dim future. What is certain is that a clean sweep is made of the integrity and independence of the Senates, which have been such valuable factors of healthy growth in the past.

On the other hand, the Rev. Dr. Miller, speaking on College Day at the Christian College, Madras (December 29), said:

In his opinion the Universities Bill would be mainly for the good of the public. He undoubtedly did not regard the proposal as by any means perfect. It was a great blot upon the present Bill that it should practically be expected that under it all the influence of the public open to the University should be thrown into the hands, with scarcely one exception, of those who followed the profession of teaching and the profession of law. It was eminently desirable that all educated opinion should have its influence upon the life of the University; and he rejoiced to know that there was a movement among them for an amendment so that all well educated men might give their weight and influence in the ordinary University affairs. . . . No doubt a great deal would depend upon the way in which the measure was worked out hereafter in detail; and he fully admitted that the practical working out of the systems and the plans laid down in 1854 and 1882 were marred in many ways by a narrow conception of their duties on the part of those who mainly worked them out in practice. It might be so in the present measure too; but, in spite of all the narrowness, it could not be denied that in the past two eras the benefits that had been conferred upon the public had been enormous. In the present Bill there might be errors in the detail of working, but the plan as a whole should do great good. The outcry against the Bill came from those places where reform was most needed, and in that outcry all the attention had been given to subsidiary matters and little or none to the one great central benefit which the measure was intended to bestow, viz., that it gave a centre of gravity to University life by gathering the highest kind of education in one centre and putting it in the hands of the University itself. That was the very thing that their old style of education at the present time needed.

Our young and energetic contemporary *Indian Education* naturally leaves on one side the political issues, and is more concerned with the question: "What view should teacher stake of the Bill?"

We think they should all welcome a measure that offers them a real voice in University affairs. It may, indeed, be contended that teachers as such are not united by any common sentiment: Hindus, Catholics, and Protestants, they are all pursuing different ideals, and have no reason to wish success to each other. There is truth in this contention; and the difference of ideals in our colleges must always prevent our Indian Universities from becoming Universities in the European sense. Aligarh and the Central Hindu College have some chance of reaching this goal, while our older Universities must fight their way to a different ideal. But, for all that, our teachers have common grounds in non-contentious subjects, and a common objection to superficial and perverse curricula. They must no doubt define their own frontiers, but they have managed pretty well with this difficult task; and they possess a clearer view than the public how to arrange for mutual freedom. To all of them, then, the provision for more representation on the Syndicate should be welcome; but they should all bear in mind that they can only claim this privilege if they are prepared to use it in a tolerant spirit. As far as Bombay goes we believe this tolerant spirit exists and may be expected. Mr. Mehta indeed does not agree with this. He looks for little but jealousy and injustice from professors; or, rather, to be accurate, from *some* professors: "For God's sake," he cries, "do not let the Senate be largely composed of professors from some colleges!" By "some," no doubt, he means Government or European; but we believe that, if inquiry were made, from Kathiawar to Kolhapur, it would not be found that these professors had inspired the staffs of other colleges with the suspicion which Mr. Mehta nourishes—certainly they have not spoken for themselves to that effect.

One point remains in which as teachers we are interested. Mr. Gokhale repeated his complaints regarding the character of Government professors. He desires abler and more sympathetic men; he thinks these could be procured by offering them the pay of civil servants, and, if this were done, the tone of Government colleges would be completely altered in a few years. We will not again defend the character of Government professors: if the reader remembers the facts as produced in these pages once before, he will see that (without offence to the Civil Service) it may be claimed that the academic status of professors is much higher than that of the former. But we will again insist on the fact that men of the character Mr. Gokhale wants will not consent for the sake of a few rupees to waste their lives in India. To a man who hopes to achieve either fame or original work exile in India is clearly fatal. The one man who may carry these hopes to India is the Orientalist; yet even here we may note that Dr. Kielhorn left India at the earliest possible moment after fifteen years of service. If we consider the case of Prof. Raleigh, who had exceptionally pleasant conditions to keep him at Aligarh, can any one doubt that he did wisely to return to the English world of letters? Or, if scientific work be mooted, what sort of answers have the promoters of the Tata Institute received from European professors whom they have approached? No. The specialist in India loses his environment, his inspiration, and his public; and with them all his hopes of distinction. He would be foolish indeed to sacrifice these for a little money. . . .

We do not deny that Government colleges in India need much to make them "model colleges." They need *larger* staffs, and the distinction of Pass and Honour Courses, and divers other things—but we must confine ourselves to topics directly suggested by discussion of the Bill. We will close by repeating a doubt whether the Bill will affect the Bombay Presidency as much as is generally supposed. We do not think with Mr. Mehta that it will "clip the wings of higher education"; nor do we think, on the other hand, that it will make higher education much more efficient than it would have been without it. Progress, which has not been absent in the past, will go on in the future. It is a Bill plainly intended to correct certain abuses of the educational system, which, we may say without conceit, have not appeared in Bombay—or, at least, they showed their heads and have been suppressed.

2. A Mohammedan University.

The idea of a Mohammedan University, originating naturally at Aligarh, has come into general discussion throughout Mohammedan India. His Highness the Aga Khan, "the enlightened religious head of one of the largest and most influential communities of Western India," speaking as President of the Reception Committee at the seventeenth session of the Mohammedan Anglo-Oriental Educational Conference at Bombay at Christmas, said:

The far-sighted among the Mussulmans of India desire a University where the standard of learning shall be the highest, and where, with scientific training, there shall be that moral education, that indirect, but constant, reminder of the eternal difference between right and wrong, which is the soul of education. It is a source of regret for many of us that in the Indian Universities there is that divorce between learning and religion which, especially in the case of Moslems, will, I fear, lead to disaster. We Moslems would most gladly welcome a Hindu University at Benares; we would gladly welcome another at Poona, a third in Bengal or Madras. But, because there is evidently no desire on their part to have a sectarian University with a Brahminical atmosphere, it is absurd to deny us a University at Aligarh with affiliated colleges all over India. Another reason why we require a central University where our individuality may not be lost for the sake of turning out a mechanical imitation of a European is this: we have a history in which noble and chivalrous characters abound; we have a glorious past so full of heroic figures that direct contact and communion with them could not but improve and give our youth early in life that sense of the necessity for self-sacrifice, for truthfulness, and for independence of character without which instruction and knowledge are, from the national point of view, worthless. . . . It is for this that I beg of you that the cause of a central University—a University which, please Heaven! may rank with Oxford and Leipsic and Paris as a home of great ideas and noble ideals—should not be forgotten in the midst of the shouts of the market place.

Mr. Justice Tyabji, the President of the Conference, however, is not any farther advanced on the question than he was when it was first mooted. While as proud of the Mohammedan theology and the Arabic and Persian literature as the Aga Khan, he strenuously insisted that "we should do our utmost to master those branches of literature and science which are at this moment the distinguishing feature of the nations of Europe and America." "We must not shut our eyes to our changed circumstances." But as to a Mohammedan University—in Bombay at least:

My humble view is that a Mohammedan University, if properly conducted and adequately supported, would be a great advantage to our community. I am persuaded that a good University conducted on a sound basis is necessary to maintain the *esprit de corps* among us, to inculcate moral principles, to cultivate discipline, and, above all, to

impart sound religious instruction, without which we must soon disintegrate into separate atoms, and can never hope to be a united and single community. But the difficulties in our way are very great. To impart religious instruction which shall be broad, enlightened, general, and not narrow or sectarian, is no easy task. We are unfortunately split up into so many different sects and communities that I almost despair of any religious instruction which will not in some measure tend to bring about the very dissensions and disagreements which it is the desire of us all to remove and eradicate. Moreover, the establishment of a University presupposes the existence of a number of efficient colleges and educational institutions for Mohammedans throughout India. We can do without a University, but we cannot do without these local educational institutions. The foundation must first be laid; it must be firm and solid. It would be idle and vain to erect a superstructure of a University upon a weak foundation such as exists at the present day. Look at Bombay, with which I am perhaps more familiar than many of you who hear my words. What facilities have we for education in this great city? We have, in the first place, a few small, not very satisfactory, local *muctabs* "scattered" over Bombay. We have, then, the Anjuman-i-Islam schools; no doubt carrying instruction up to the matriculation standard, but these institutions are not sufficiently supported. The higher classes are half vacant. As to the colleges, we have no Mohammedan colleges at all, and very few students of our faith have joined such colleges as already exist. All this is, to my mind, most unsatisfactory. Considering the Mohammedan population of Bombay Presidency, the students in the high schools and colleges are a mere handful. I would first remedy these evils; I would first fill our primary, secondary, and high schools and colleges with Mussulman boys in this Presidency before I could be persuaded that a Mohammedan University for Mussulman boys from this Presidency is necessary. Supposing we had a Mohammedan University, how many students from the Bombay Presidency would join it? I am afraid, very, very few, indeed, if any. Therefore, so far as this Presidency is concerned, there is no immediate need for a Mohammedan University. I do not pretend to speak with any authority as regards the needs of other provinces.

Quhat say thay?—Lat thame say!

SUGGESTIONS FOR EDUCATIONAL REFORM.

To Link the School with Practical Life.

By R. W. Cole.

There is a growing feeling that the educational arrangements of this country are far behind the needs of the times. Formerly education was valued only for its own intrinsic merits and as a means of affording culture, and purely utilitarian results were not regarded. But the tendency of modern requirements is more than ever to look for some useful results from the national system of education. There is a growing belief that, besides affording mere knowledge, education must fit a boy for the station in life which he will one day occupy. The clerk must be educated to take his place in the office, the artisan in the workshop, and the future proprietor of an industrial or commercial concern must be so trained that he is capable of taking his place at the head of a complicated and highly scientific business. The need for smart and progressive men at the head of, and as subordinates in, industrial undertakings is always increasing. Partners and managers can no longer afford to sleep in their easy chairs and let their businesses rub along anyhow. They must always be alert and watchful; for what are up-to-date and efficient methods to-day will become obsolete and useless to-morrow. The modern stimulus of competition makes it necessary that all concerned shall be smart and capable men, or they will be ousted by clever rivals or the enterprising and pushing foreigner. In the near future the principle of the survival of the fittest will obtain to as great an extent in trade as it does in the natural world. Manufacturing processes become more complicated and scientific year by year, whilst competition increases the necessity for cheapness of production. Manufactured articles can be made cheaply only by quick appreciation and employment of the latest improvements by the proprietor who is gifted with keen foresight and sound judgment. He must also be backed up by an intelligent and progressive staff of workers. Such men are necessary to uphold our commercial supremacy in the teeth of American and Continental competition, and they can be obtained only by thoroughly revising our educational programme. America is very rapidly becoming our most dangerous rival in the commercial and industrial world; and it is only by being fully equipped with a sound and comprehensive education that we can expect our men to hold their own against Transatlantic rivalry. Expecting them to meet with success without up-to-date education is like requiring them to make bricks without straw.

Utility must be the sole criterion of all modern educational systems if they are to be up-to-date and thoroughly satisfactory. Our system of excessive classics and meagre English, science, and modern languages has become so stereotyped that it is exceedingly difficult to obtain any alterations. Many head masters view the relegation of the study of classics to a subordinate place with disfavour. Their own education has filled them with prejudices in favour of studies which the course of time or a fresh combination of circumstances has rendered obsolete. They studied only classics for many years when they were at school and again for three or four years at the Universities, and they have probably taught that subject ever since. It is, accordingly, the only subject which they understand and for which they have any sympathy. Under such head masters all other and more necessary subjects must go to the wall. The same is the case with a head master who is solely a mathematician or a specialist in any other branch of knowledge.

It is imperatively necessary that classics, notwithstanding its culture results and connexions with the past, should be relegated to a very subordinate position in school curricula, while other more important subjects are brought to the front. At most schools all boys, as soon as they can read and write, begin to study Greek and Latin. The advantages that are urged in favour of a classical education are that it trains the mind and teaches boys to speak and write English correctly. The disadvantages are that Greek and Latin are difficult languages to learn, their literature is uninteresting to boys and difficult to understand, and they deal with modes of thought and ideas which are two thousand years old. Boys cannot comprehend the spirit of dead languages, in which it is impossible for them to converse, as is the case with modern languages. Moreover, both of these languages are so idiomatic that even the easiest authors which are placed in the hands of the beginners cannot be translated literally without making absolute nonsense. The process of continually repeating a section of a book until it is learnt by heart and can be faultlessly translated into English only develops the parrot-like instincts of the schoolboy, without stimulating his thinking powers or enabling him to grasp the spirit of the language. This absurdity is encouraged by the habit so largely obtaining of prescribing set books for certain examinations. The futility of this system is demonstrated by the well known unsatisfactory performance of most schoolboys when they have to translate unseen passages. The translation of such passages is a much surer test of the soundness of a boy's knowledge of a language and his grasp of its genius than his ability to do set passages or grammar papers, for which he can be specially crammed. The injurious process of cramming will enable a boy to pass most examinations successfully; but he cannot be crammed to translate unseen passages. At most schools boys are trained in classics from the ages of ten to eighteen. A very small percentage become scholars, a few acquire a tolerable knowledge of Greek and Latin, whilst the great majority remember only sundry grammatical rules and stock quotations, and cannot make a decent translation of the easiest unseen passage.

Such is the unsatisfactory result of throwing every boy, without discrimination, into the classical mill and fastening him to a study for which he probably has no aptitude. I would have every boy well grounded in arithmetic, modern languages, history, English, and elementary science until he reaches the age of fifteen or sixteen. By that time, if he has any intellectual power at all, he will have shown an aptitude for either languages, mathematics, or science. Such being the case, he might be allowed to specialize in one of these subjects, but he should be compelled to study English, history, literature, arithmetic, and science for a certain number of hours a week, for no system of education can be called complete which does not include these subjects. In this manner an education would be acquired involving both culture and useful results. A system of education which means specialization in one particular subject to the exclusion of all others is not worthy of the name, for it narrows the mind and warps the intellect. All boys should, without exception, be thoroughly proficient in arithmetic, the principles of chemistry and physics, English history and literature, and at least one modern language. It is not of much use for any boys to attempt to study, or to be made to study, Euclid and algebra unless they show a decided aptitude for these subjects and are likely to proceed to the higher branches. A limited

Digitized by Google

knowledge of Euclid and algebra is of no use from a practical or educational point of view, and the time wasted over them is quite incommensurate with the advantages gained. Elementary mathematics should only be studied with utilitarian aims, as it is of little value as a mental training. The mental powers are not developed by wasting hours over abstruse subjects which are imperfectly understood. The time so employed would be much better devoted to easier, and to the unmathematical mind more interesting, subjects.

There is another lamentable defect in the present system of education. Our Empire is the largest and most scattered in the world, our commerce the greatest, and our manufactures the best; but ninety-nine boys out of a hundred on leaving school have only the vaguest notions as to the extent or whereabouts of our possessions or the conditions upon which our national existence depends. They know nothing about the natural features, products, constitution, and government of the separate colonies. They are also as ignorant of the commerce, manufactures, or even the government of the British Isles. To remedy this disgraceful ignorance, two or three hours a week should be devoted to the study of the British Empire at all schools. It is almost hopeless under the present system of organization and whilst almost all schools lie under the thraldom of boards of examiners to obtain any alterations in this respect. Those who arrange the syllabuses of our public examinations might encourage a knowledge of the British Empire by setting a paper on this subject.

Organization and origination are two subjects which might be taught to elder boys during their last year at school. Many boys of the upper classes will one day control factories and business concerns either as managers or as proprietors; yet how many are taught to organize or originate? The same is the case with military students; and their incapacity in this respect becomes painfully apparent later on in life when they are promoted to posts at the War Office. Lessons in organization and origination could be made very interesting, and would attract the attention of dull boys on account of their practical nature. Those who intend later on in life to start businesses on their own account would thus be fully equipped with the knowledge how to obtain and employ capital, of the laws of partnership, and of the manner of organizing and running an office or factory. It is true that such knowledge can be subsequently picked up by passing some time as a pupil with a manufacturer or merchant; but these practical men are not good teachers, their pupils are not under discipline, and knowledge is picked up in a haphazard way. With good teaching, an equal amount of knowledge could be acquired in one-tenth of the time.

Another serious defect in the modern educational system is the treatment of the stupid boy. There are many naturally dull and stupid boys at every school—that is to say, boys who are dull and stupid at book-learning. It is not fair to say that all such boys are lazy or do not want to learn; some simply cannot learn. The subjects on the curriculum are not suitable to their peculiar mental powers; and their lack of success demonstrates the folly of trying to subject all boys, without distinction, to the same mental training, and plane them all down to the same mental level. There are almost as many classes of boys, with their different failings and aptitudes, as there are fishes in the sea. The result is that many thousands of boys leave school with only a smattering of knowledge, which is useless for any practical purpose. How crass is the ignorance of such boys only those who teach them know; but, in spite of their ignorance, some of them afterwards become successful men of business, for they can flourish as soon as they get away from books, and can turn their attention to the practical aspects of life. This shows that, if the attention of apparently stupid boys could be diverted to subjects which suit them, they would be successes.

I have noticed that many boys who are of no use at book-learning are good at subjects in which they can use their hands. Thus, many apparently stupid boys are very good at geometrical drawing. Indeed, one might almost formulate a rule that boys who are very good at this subject do not get on with book-learning. Other stupid boys flourish at figure and landscape drawing; while many more are good at all kinds of manual work, such as carpentering, metal-work, model-engineering, surveying, and practical science. Here we have an abundance of useful and profitable subjects in which the so-called stupid boys flourish, and which they might be encouraged to pursue under an enlightened system of education. But, instead of being allowed to do so, they waste many years and much money in grinding at dead languages which they cannot appreciate and trying to learn propositions of Euclid and solve algebraic equations. It is head masters who are mainly responsible for the many absurdities of our educational system. A modern head master is not expected to write an elaborate treatise on Greek particles or to publish a recondite work on rigid dynamics. It is his business to find out the peculiar aptitudes of every boy under his care, and to so direct his energies that on leaving school he is well qualified for following a business or profession with success. Given a rational system of education and able teaching, full justice would be done to every boy; and, the number of failures being diminished, the efficiency of the nation would be greatly improved.

THE INTERNATIONAL ASSOCIATION OF ACADEMIES.

The session of the General Assembly of the International Association of Academies, which opened on May 25, has attracted immense interest in our higher educational circles. We record elsewhere the honours to be conferred by Oxford and Cambridge on the more eminent of the visitors. The Association was established on its present basis in 1899, on the initiative of the Royal Society of London. It now comprises twenty Academies and learned societies of Europe and America. The Association, at its meeting in 1901, delegated to a commission appointed from the Académies des Sciences et des Sciences Morales et Politiques of Paris and the Königliche Preussische Akademie der Wissenschaften in Berlin the task of preparing an edition of the works of Leibnitz. Other projects submitted to the Association are a general investigation, on common lines, of the anatomy of the brain; a scheme for carrying out a complete magnetic survey around a parallel of latitude; a proposal for carrying out at a large number of stations systematic observations upon atmospheric electricity; an extension of the geodetic arc along the 30th meridian; a proposal for facilitating the international loan of original manuscripts; plans for a critical edition of the Mahabhârata, for an encyclopædia of Islam, and for the publication of records of Ancient Greece; a proposition for a new Thesaurus of Ancient Greek, and another for a new Pali Dictionary.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—ED. *E.T.*]

THE DANGER THREATENING SECONDARY EDUCATION.

To the Editor of "The Educational Times."

SIR,—Although much has been done of late to provide for the organization of educational effort, it will not have escaped the notice of observers that the new system has induced dangers of its own, against which those especially concerned in secondary education would do well to guard.

Those dangers may be roughly divided into two classes, viz., those connected with the election to Local Education Committees of party men and loud-voiced demagogues who know little about secondary education and care less; and also those relating to the almost exclusive attention given by the Board of Education and by Local Authorities to public elementary education, and to the provision and assistance of candidates preparing to enter that branch of the profession.

The composition of the Education Committee of the London County Council illustrates the disadvantage under which secondary schools and secondary teachers must necessarily lie when matters attaching to higher education come before that body. How many amongst its members are eligible by knowledge and experience to represent the various phases of action and effort in the vast London area?

A powerful union is unceasingly active in keeping the educational and political side of elementary education before the public. Is there any sign that the various associations of secondary teachers and the large and important section of the public interested in the maintenance of our public and private schools are alive to the fact that union is strength, and that greater watchfulness and activity are necessary on their part to safeguard the position to which these schools have attained? Yet the question must soon be answered: Shall the forces which are designed to mould our educational system act from above or from below?—I am, Sir, &c.,

J. O. BEVAN.

Chillenden Rectory, Dover, *May* 9, 1904.

MACMILLAN AND CO.'S LIST.

THE MAKING OF ENGLISH.

By HENRY BRADLEY, M.A., Ph.D., sometime President of the Philological Society. Globe 8vo, 4s. 6d.

PALL MALL GAZETTE.—"Delightful and thoughtful essay."

SATURDAY REVIEW.—"One of the most agreeable and informed little books of the kind which have appeared of late."

LE THÉÂTRE À L'ÉCOLE. By Mrs. J. G. FRAZER. Globe 8vo, stiff boards, 1s.

Three original Plays primarily intended for performance in Schools. The titles are "Ogine D'Estrées," "Tel Maître, tel Valet," and "Une Noce en Panne."

THE PHILOSOPHY OF EDUCATION. Being the Foundations of Education in the Related Natural and Mental Sciences. By HERMAN H. HORNE, Ph.D. Crown 8vo, 7s. 6d. net.

OLD-TIME SCHOOLS AND SCHOOL BOOKS. By CLIFTON JOHNSTON. Illustrated. Extra Crown 8vo, 8s. 6d. net.

New Works on Geometry to meet the New Requirements.

A SCHOOL GEOMETRY.

By **H. S. HALL, M.A.,** and **F. H. STEVENS, M.A.** Crown 8vo.

PARTS I. and II.—PART I. Lines and Angles, Rectilineal Figures. PART II. Areas of Rectilineal Figures (containing the substance of Euclid, Book I.). 1s. 6d.

PART III.—Circles (containing the substance of Euclid, Book III., 1-34, and Part of Book IV.). 1s.

PARTS I., II., and III. 2s. 6d.

PART IV.—Squares and Rectangles, Geometrical Equivalents of certain Algebraical Formulæ (containing the substance of Euclid, Book II. and Book III., Props. 35-37). Sewed, 6d.

PARTS I.-IV. 3s.

PARTS III. and IV.—Containing the Substance of Euclid, Books II. and III. and Part of Book IV. 1s. 6d.

PART V.—Containing the substance of Euclid, Book VI., with additional Theorems and Examples. 1s. 6d.

PARTS I.-V.—4s. 6d.

PARTS IV. and V.—Containing the substance of Euclid, Book II., Book III., 35-37, and Book VI. 2s.

PART VI.—Containing the substance of Euclid, Book XI., 1-21, together with Theorems relating to the Surfaces and Volumes of the Simpler Solid Figures. [*In preparation.*

*** This Work is based upon the recommendations of the Mathematical Association.

JOURNAL OF EDUCATION.—"Seems quite the best of the new text-books of geometry that have lately been published. It is moderate in its changes, and excellent as to arrangement and selection."

A NEW GEOMETRY FOR SCHOOLS. By S. BARNARD, M.A., Assistant Master at Rugby School, Late Fellow and Lecturer at Emmanuel College, Cambridge; and J. M. CHILD, B.A. Cantab., Lecturer in Mathematics, Technical College, Derby. Crown 8vo, 4s. 6d.

THE EDUCATIONAL TIMES.—"In this work on elementary geometry we have probably one of the most important, and certainly one of the best, of the text-books whose production is to be traced directly to the movement for reform in the methods of teaching the subject."

A NEW GEOMETRY FOR JUNIOR FORMS. By S. BARNARD, M.A., and J. M. CHILD, B.A. Cantab. Crown 8vo, 2s. 6d.

*** This Volume contains all the Practical and Theoretical Geometry required for a Pass by Junior Candidates in the University Locals.

NATURE.—"The work is simple, very thorough, and in every way suited to the requirements of junior students."

THEORETICAL GEOMETRY FOR BEGINNERS. By C. H. ALLCOCK, Senior Mathematical Master at Eton. Parts I., II., and III. Globe 8vo, 1s. 6d. each. Part IV. [*In the press.*]

NATURE.—"For those who do not wish to be tied to Euclid's sequence, and yet who desire to retain a strictly deductive system, the book will be found eminently suited. It is well written and beautifully printed."

PRACTICAL GEOMETRY FOR BEGINNERS. By V. LE NEVE FOSTER and F. W. DOBBS, Assistant Masters at Eton College. Crown 4to, 2s. 6d.

PRACTICAL EXERCISES IN GEOMETRY. By W. D. EGGAR, M.A., Assistant Master at Eton College. Globe 8vo, 2s. 6d.

TEACHER.—"As an introduction to the study of theoretical geometry, while also affording a training in itself, nothing could be better. The scheme of the book is excellent, and it is well carried out."

CURRENT EVENTS.

Fixtures.

AT the monthly meeting of members of the College of Preceptors to be held on June 15, Mr. H. C. Bowen, M.A., will read a paper on "The Part played by Books in the Education of the Individual."

* * *

THE Annual Conference of the Association of Head Mistresses will be held at the Datchelor School for Girls, Camberwell, on June 11.

* * *

PROF. J. J. THOMSON (Cambridge) will deliver the Robert Boyle Lecture in the hall of Balliol College, Oxford, on the evening of June 3: subject, "The Structure of the Atom."

* * *

THE Romanes Lecture will be delivered by Sir Courtenay Peregrine Ilbert, K.C.S.I., in the Sheldonian Theatre, Oxford, on June 4, at 3 p.m.: subject, "Montesquieu."

* * *

IN the Oxford Long Vacation Course Mr. Mackinder will deliver the introductory lecture on August 2, at 8 p.m. He will also give three lectures on "The Relations of Geography and History." Mr. Beazley will deal with "The Advance of Geography: Land Travel, Oceanic Exploration, Scientific Geography" (three lectures); Dr. Dickson with "Some Problems in Physical Geography" (six lectures); and Mr. Herbertson with "The Geography of S.E. England, with special reference to the Oxford District" (six lectures and map demonstrations and three excursions). Dr. Dickson will also conduct a field class for surveying with plane table and prismatic compass (two whole days).

* * *

UNDER the Martin White benefaction, the University of London has arranged that during the session 1904–5 there will be delivered by Dr. Westermarck, of Helsingfors, a course of forty lectures on "Social Institutions and Relationships," and twenty *Seminar* classes in connexion therewith, as well as a shorter course on a kindred subject. Dr. A. C. Haddon, F.R.S., also will give a course of thirty lectures and thirty *Seminar* classes on "Ethnology." It is hoped that Mr. Lafcadio Hearn will be able to accept an invitation to deliver ten lectures on "Japanese Civilization."

Honours.

MR. JOHN MORLEY, M.P., has been nominated by the Chancellor of Manchester University a member of the University Court.

* * *

MANCHESTER UNIVERSITY has resolved to confer the honorary degree of LL.D. on Alderman Joseph Thomson, Treasurer of Owens College.

* * *

LORD KELVIN, the new Chancellor of the University of Glasgow, has appointed Mr. Henry Gordon, of Aitkenhead, his representative in the University Court.

ference of Academies, Oxford University proposes to confer honorary degrees as follows :—

D.C.L.: Chevalier Édouard Descamps, University of Louvain, Ministère d'Etat, Senateur Belge.

D.Litt.: J. L. Heiberg, University of Copenhagen; M. Émile Senart, Académie des Inscriptions et Belles Lettres, Paris; M. Boutroux, Académie des Sciences Morales et Politiques, Paris; and Prof. Collignon, Académie des Inscriptions et Belles Lettres, Paris.

D.Sc.: Prof. De Flechsig, Leipzig, Kgl. Sächsische Gesell. der Wissenschaften; Prof. E. Ehlers, Kgl. Gesell. der Wissenschaften, Göttingen; M. A. Giard, Académie des Sciences, Paris; Dr. Victor von Lang, Kaiserl. Akad. der Wissenschaften, Vienna; Prof. H. Mon, Christiania; and Prof. H. Obersteiner, University of Vienna.

The University of Cambridge proposes to confer the following honorary degrees :—

Sc.D.: Henricus Gerardus van De Sande Bakhuyzen, President of the Royal Academy of Sciences, Amsterdam, Professor of Astronomy in the University of Leiden; Andrej Sergejevitch Famintsyn, Member of the Imperial Academy of Sciences of St. Petersburg; Pierre Paul Leroy-Beaulieu, Professor of Political Economy in the College of France, Paris; Edmund Mojsisovics, Edlar von Mojsvar, Member of the Imperial Academy of Sciences, Vienna; Gustav Retzius, Member of the Royal Swedish Academy of Sciences, Emeritus Professor of Anatomy in the University of Stockholm; Edward Rieche, Member of the Royal Academy of Sciences and Professor of Physics in the University of Göttingen; Wilhelm Waldeyer, Secretary of the Royal Prussian Academy of Sciences and Professor of Anatomy in the University of Berlin.

Litt.D.: Amable Charles de Franquet, Comte De Franqueville, Member of the Academy of Moral and Political Sciences of the Institute of France; Ignacz Goldziher, Member of the Hungarian Academy of Sciences, Professor of Semitic Philology in the University of Budapest; Theodor Gomperz, Member of the Imperial Academy of Sciences, Vienna, Emeritus Professor of Classical Philology in the University of Vienna; Karl Krumbacher, Member of the Royal Bavarian Academy of Sciences, Professor of Mediæval and Modern Greek Philology in the University of Munich; Georges Perrot, Member of the Academy of Inscriptions and Literature of the Institute of France, Director of the École Normale Supérieure, Paris.

* * *

In Convocation, June 7, it will be proposed to confer the degree of Master of Arts by decree of the House upon Charles Francis Bell, Trinity College, Assistant Keeper of the Ashmolean Museum; Henri F. Berthon, Taylorian Teacher of French; Carlo Felice Coscia, Taylorian Teacher of Italian; and Don Fernando de Arteaga y Pereira, Taylorian Teacher of Spanish.

* * *

The Senate of the Royal University of Ireland has resolved to confer the honorary degree of Doctor of Science on Sir William Crookes, F.R.S., and on Prof. James Dewar, F.R.S.

* * *

The Council of the University of Birmingham has conferred the honorary title of Professor of Geography on Mr. W. W. Watts, M.A., F.R.S., Assistant Professor of Geology.

Endowments and Benefactions.

Mr. Francis G. Smart, M.A., M.B., of Gonville and Caius College, has founded, in the University of Cambridge, a studentship of £100 a year, tenable two years, for the encouragement of botanical research.

* * *

The Hon. T. A. Brassey (Balliol) has offered to the University of Oxford £400, to be given in one or more studentships for research in some subject of Mediæval or Modern history. He has also given £100 to the Bodleian Library, to be expended in the purchase of books dealing with the history of the English Colonies and Dependencies.

* * *

Mr. J. Martin White has made another generous contribution towards the expenses of the courses on Sociology organized by the University of London under the benefaction that bears his name.

* * *

The Mercers' Company have given a donation of £1,000 to the Institute of Medical Sciences Fund (University of London), and the Clothworkers' Company have given £300.

The trustees of the will of the late Miss Rebecca Flower Squire have handed over to the University of Oxford £3,000 in augmentation of the Squire Scholarships in Theology.

* * *

Sir John Williams, of Plas Llanstephan, and Mr. J. H. Davies, of Cwrtmawr, have provided for the transfer of their very valuable libraries in due course to a Welsh National Library, if such be established at Aberystwyth, or, failing such library, to the library of Aberystwyth University College. Sir John Williams has also purchased the still more famous Peniarth Library—"the premier collection of Welsh manuscripts both in extent and quality." The three collections contain well over a thousand MSS.

* * *

The Glamorgan County Council has established at Cardiff University College 3 studentships, £30 each, with free tuition for 3 years, to students studying for the B.Sc. of the University of Wales in mining subjects; 5 studentships, £30 each, with free tuition for 2 years, for students prepared to profit by the diploma course in Mining; 1 exhibition, £30, with free tuition for 3 years, to a student taking the diploma course in Engineering. The Council has also made certain provisions for the assistance of girls of the county studying for Honours or taking a Secondary Training Course.

Scholarships and Prizes.

A combined examination for scholarships, exhibitions, &c., will be held at Trinity, Clare, Trinity Hall, Peterhouse, and Sidney Sussex (Cambridge), on December 6 and following days. Forms of application from any of the Tutors of Trinity, the Senior Tutor of Clare, the Master of Trinity Hall, the Senior Tutor of Peterhouse, or the Master of Sidney Sussex. Entries should be made not later than November 18.

* * *

The British Fire Prevention Committee offer a gold medal and purse of £20 for "the best fable for children calculated to serve as a warning against the danger of playing with matches or fire." They will also reward meritorious essays with two silver and four bronze medals. Conditions from the Secretary, 1 Waterloo Place, S.W. (enclose stamped addressed envelope).

* * *

The University College of South Wales (Cardiff) offers a scholarship in Arts (£40, for three years) in September next.

Appointments and Vacancies.

The President of the Board of Education (the Marquis of Londonderry, K.G.) has appointed a Departmental Committee to inquire into the present working of the Royal College of Science, including the School of Mines; to consider in what manner the staff, together with the buildings and appliances now in occupation or in course of construction, may be utilized to the fullest extent for the promotion of higher scientific studies in connexion with the work of existing or projected institutions for instruction of the same character in the Metropolis or elsewhere; and to report on any changes which may be desirable in order to carry out such recommendations as they may make. Sir Francis Mowatt, G.C.B., is Chairman of the Committee, and Mr. J. C. G. Sykes, Assistant Secretary in the branch of the Board which deals with evening schools, technology, and higher education in science and art, has been appointed Secretary to the Committee.

* * *

The President of the Board of Education has appointed Sir Francis Fleming, K.C.M.G., and Mr. Sidney Wells, Principal of the Battersea Polytechnic, to be members of

Digitized by Google

the Teachers' Registration Council, in the place of the Rev. W. A. Fearon, D.D., and Mr. James Fitzalan Hope, M.P., resigned.

* * *

THE Council of the Incorporated Association of Head Masters has nominated the President, the Rev. Canon G. C. Bell, M.A., as the representative of the Association on the Teachers' Registration Council, in place of Dr. R. P. Scott.

* * *

THE REV. F. W. BUSSELL, D.D., Vice-Principal of Brasenose College, Oxford, has been elected Bampton Lecturer for 1905.

* * *

PROF. F. S. BOAS, of Queen's College, Belfast, has been appointed Clark Lecturer in English Literature at Trinity College, Cambridge, for the academical year 1904–5.

* * *

THREE Chairs are now vacant in Trinity College, Dublin: Arabic, by the resignation of Dr. S. Lane-Poole; Latin, by the translation of Dr. Purser to the office of Junior Bursar; and Ancient History, by the promotion of Dr. Tyrrell to the ranks of the Senior Fellows.

* * *

MR. ANDREW LANG, Honorary Fellow of Merton, has been appointed Ford's Lecturer in English History at Oxford for the ensuing academical year.

* * *

MR. C. H. LOCH, B.A., Secretary to the Charity Organization Society, has been appointed Tooke Professor of Economics in King's College, London.

* * *

MR. F. G. DONNAN, Ph.D., M.A., Lecturer in Chemistry in the Royal College of Science, Dublin, has been appointed to the Brunner Chair of Physical Chemistry in the University of Liverpool.

* * *

MR. T. W. ARNOLD has been appointed Professor of Arabic in University College, London.

* * *

AT Birmingham University Mr. George A. Lister has been appointed Lecturer and Demonstrator in Electrical Engineering; Mr. E. Langford Hazel, draughtsman in the Engineering Department; and Dr. W. A. Potts, Assistant Lecturer in Pharmacology.

* * *

MR. GEORGE K. MENZIES, M.A. (St. Andrews), has been appointed Secretary to the Academic Registrar of the University of London, in succession to Mr. Horace E. Mann, resigned.

* * *

MR. HAROLD WHYTE has been appointed Assistant in Ancient History to the Astor Professor of History in University College, London.

* * *

MR. THOMAS LEE HUTCHINS, M.A., B.Sc., science master at Ilminster Grammar School, has been appointed Head Master of Kirton Grammar School, Lincolnshire, in succession to Mr. W. St. G. Drennan, M.Sc. (Vict.).

Mr. Henry W. Mayo, B.Sc., A.C.P., succeeds Mr. Hutchins as science master at Ilminster.

Literary Items.

THE Delegates of the Clarendon Press have taken over the series of "The Regions of the World," which is under the general editorship of Mr. H. J. Mackinder, and in future this series will be published by Mr. Henry Frowde. Two new volumes will be issued this year—"North America," by Prof. Israel Russell, of the University of Michigan, at the end of this month; and "India," by Sir Thomas Holdich, K.C.I.E., in the early autumn. It is hoped that "The Far East," by Mr. Archibald Little, will soon be in the press. We have already noticed the three volumes that have appeared—"Britain and the British Seas," by Mr. Mackinder, "Central Europe," by Prof. J. Partsch, and "The Nearer East," by Mr. D. G. Hogarth.

* * *

MESSRS. A. & C. BLACK are publishing a new edition of "The Lady of the Lake," with vivid illustrations in colour and in black and white. Also a new work on "The Burns Country," by Charles S. Dougall, M.A., Head Master of Dollar Institution, with a frontispiece reproduction of the Nasmyth portrait of Burns and 50 illustrations from photographs.

* * *

MESSRS. T. C. & E. C. JACK have projected a series of elaborate monographs on the prominent personages that have made English history. These are intended to be at once works of beauty and models of historical research. Dr. Augustus Jessop is writing the first volume of the series, on William Cecil, Lord Burghley. The genealogy of the Cecil kin will be treated by Mr. Fox-Davies; while the Cecil family portraits have been collected and will be commented on by Mr. J. L. Caw, of the Scottish National Portrait Gallery. Mr. J. A. Gotch will write on the Homes of the Cecils. The general editor is Mr. Francis Pierrepont Barnard. The edition of each monograph will be strictly limited.

* * *

THE next volume in the thin paper re-issue of Mr. Fisher Unwin's "Mermaid" series will be a selection from the plays of Sir John Vanbrugh, edited by Mr. A. E. H. Swain.

* * *

"THE *Queen* Newspaper Book of Travel," compiled by the Travel Editor, is announced by Mr. Horace Cox. The volume will include full particulars of service to travellers, and also articles illustrated with specially prepared maps.

* * *

THE *Independent Review* (May) opens with a suggestive article, by Mr. C. F. G. Masterman, entitled "Towards a Civilization." But what has "the expenditure upon maintaining the White Man's Burden in Thibet" to do with the pockets of "the mass of the voters of this country"? It is the Indian, not the English, taxpayer that will have to pay. Mr. A. W. Pickard-Cambridge contributes a piquant notice of several recent books on higher education.

* * *

IN the *Monthly Review* for May, Mr. C. Litton Falkiner enters an interesting protest against Prof. Bury's dictum that "history is not a branch of literature"—that "to clothe the story of a human society in a literary dress is no more the business of a historian as a historian than it is the part of an astronomer to present in an artistic shape the story of the stars." But, after all, would there be anything to quarrel about if the terms of dispute were precisely attended to?

* * *

THE April number of the *Modern Language Quarterly* is especially strong. It contains Dr. Breul's Herder Centenary Address, Sir Arthur Rücker's Presidential Address to the Modern Language Association, and several important papers read before the Association.

General.

THE proposal of a memorial to the late Sir Leslie Stephen is well supported. It is suggested that, in the first instance, an engraving should be made of the portrait by Mr. G. F. Watts, R.A., and that copies should be presented to the London Library, the Athenæum Club, Harvard University, and Trinity Hall, Cambridge.

A STATUE of Shakespeare, executed by Prof. Lessing, has been erected in the Grand Ducal Park at Weimar by the German Shakespeare Society. On the occasion of the unveiling, the Society held its annual meeting at Weimar, and "Hamlet" was performed, the title *rôle* being taken by Joseph Kainz, the foremost living German actor.

* * *

WE regret to record the death of Mme. Joseph Neuberg at Liège on May 4. Prof. Joseph Neuberg, of the University of Liège, may be assured of wide sympathy among our readers, who are well acquainted with his valuable contributions to our mathematical columns during many years past.

* * *

THE *Physikalische Zeitschrift* for April 15 publishes a list of the courses of lectures for the summer term in the German-speaking Universities and technical schools.

* * *

WE understand that a site at Hampstead has now been definitely secured for University College School.

* * *

THE foundation stone of the Armstrong extension of the Durham College of Science, Newcastle-on-Tyne, was laid (May 2) by Mr. T. G. Gibson.

* * *

THE Board of Education have issued the Regulations and Syllabus for the King's Scholarship Examination, 1905, and for the Certificate Examination, 1906.

* * *

THE *London University Gazette* (May 14) publishes a convenient list of scholarships and exhibitions awarded by the University, by the schools of the University, and by institutions at which there are recognized teachers.

* * *

A MEMORIAL tablet to Mr. J. Lloyd Griffith, formerly member of the Council of North Wales University College, was unveiled (May 13) at St. Cybi Church, Holyhead, by Principal Reichel.

* * *

AT a largely-attended meeting at the Birkbeck Institution (May 14), Dr. R. P. Scott in the Chair, it was decided to form an Association including all teachers in schools and institutions other than primary receiving aid from the London County Council.

* * *

THE Board of Education have just issued a revised list of twenty-five Holiday Courses to be held on the Continent at different times during the present year, mostly in the summer months. Copies to be obtained post free on application to the Board of Education Library, St. Stephen's House, Cannon Row, Whitehall, S.W.

COLLEGE OF PRECEPTORS.

METHODS OF TEACHING MODERN FOREIGN LANGUAGES.

AT the Members' Meeting which took place on May 18, Mr. H. W. EVE in the Chair, an interesting demonstration of methods of teaching German and French was given by Mr. W. CAMPBELL BROWN, one of the Principals of the Tollington Schools, and Mr. R. J. SHANKLAND, modern language master at the same schools. A class of boys was in attendance for each of the lessons, which were given as far as possible under normal conditions.

In his introductory remarks Mr. BROWN explained the leading principles of the New Method, which was, he contended, a natural method, and not intended, as some had maintained, to technicalize language teaching. It might, in fact, be so conducted as to combine the advantages of mental training to be derived from what might be called the Classical Method with the living interest to be derived from oral teaching. On the other hand, the extreme advocates of the New Method, in insisting on regarding the learner as in the position of a child in learning his mother tongue, failed to take account of the increased powers that his general training had developed in him; and this consideration was more particularly to be kept in view when the study of a second foreign language was begun. The problem the teacher had to deal with was how to commence and continue the study, so as to excite and maintain the interest of the pupil, to acquire as speedily as possible a working vocabulary, and to make the most of the mental discipline that was to be derived from the analytic study of the foreign tongue. In this connexion, it was specially important to pay attention to the proper position of translation and of grammar. The advocates of the New Method were, he considered, entirely justified in their opposition to the practice of making construing or the study of grammar the principal factor in language teaching; but he held that they were equally wrong in asserting that no place should be found for translation and that the teaching of grammar should be entirely discarded. The question was rather how best to make use of both translation and grammar so as to aid in fixing the forms of the language. Translation should never be used in such a way as to imply that for every German or French phrase there was but one equivalent English expression; and the grammatical structure of the language should not be made a scientific and logical study until the foreign language was fairly well known and the grammar rules had been already intuitively assimilated by constant oral drill. It should, in particular, be noted that every grammatical point to which attention was drawn should be illustrated in an entire sentence.

Mr. Brown then proceeded to give a lesson to a junior class, the text of the lesson being a description, in German, of Germany in the olden times, illustrated by a large-scale map, on which the boundaries and physical features of the country were boldly indicated. The passage was first read aloud, and repeated by the whole class. Then each sentence was taken in succession and explained where necessary, the explanation being always in German, supplemented by the use of the black-board to illustrate grammatical points. The text was then made the subject of conversation, each member of the class being called on in turn to answer questions put by the teacher on the subject-matter. In the grammar practice particular attention was paid to the forms of the verbs, and the class was directed to alter the form of the sentence by changing the tenses, *e.g.*, using the present instead of the past, &c.

On the conclusion of the lesson, which occupied about half an hour, the Chairman invited discussion, and several members of the audience availed themselves of the opportunity to ask questions on the method of the demonstration, which were answered by Mr. Brown.

After an interval, Mr. SHANKLAND gave a demonstration of his method of giving a reading lesson in French to a more advanced class of boys. The text was taken from Edmond About's lively story of "Le Roi des Montagnes." The demonstrator prefaced the lesson by a few remarks, in which he deprecated the notion that he was adopting any stereotyped method. The teacher, he said, should not make himself a slave to a system. He must follow his own judgment, and vary his method according to the intelligence of his boys—now dwelling more on the pronunciation, now enlarging their vocabulary by conversation, now spending more time on the grammar and composition. It was his custom to prepare the class by simple conversation on a few commonplace topics, such as remarks on the weather, on the time of day, on interesting events discussed in the newspapers, &c. The reading was then taken paragraph by paragraph. Particular attention was directed to the pronunciation, mistakes being corrected by the boys, and the correct form repeated by the whole class in unison. The reading was followed by a general explanation of the piece by the master in the form of a paraphrase. The teacher should be able to perceive intuitively whether his words were understood, and be ready to vary his phrases accordingly. It was surprising to see how keen this exercise made the boys, each of them being eager to understand as much as possible. The way was now cleared for the fuller explanation of the piece sentence by sentence; unknown words were explained by a periphrase—care being taken always to use words already known—or by blackboard illustration. Occasionally the judicious use of gesture, or even a little acting, on the part of the teacher, might serve to make the lesson less monotonous; or, finally, recourse

Digitized by Google

might be had to translation, where abstract ideas had to be made clear. It was only at this stage that the grammar was touched upon. It was taught inductively. According to the antiquated method, they had only a collection of dry rules, so utterly distasteful to the boys, who could not be expected to understand their *raison d'être*. All the salient points of grammar should be explained as they cropped up; and when these rules were required to be known as such they were found to present little difficulty, as they had often been referred to, and the boys did not look upon them as lifeless and aimless rules. Finally, now that the words and the grammar presented no difficulties, they were ready to turn the phrases, now varying the tense, now the person; and sometimes a free composition was set to be written by the class, the subject being chosen so as to admit of the use of the words and forms which had been practised in the lesson.

The lesson which was given, following as it did very closely the lines indicated by the demonstrator, was followed by the audience with the greatest attention, and the eagerness and readiness of the boys themselves was the best testimony to the efficiency of the method.

A hearty vote of thanks to the two demonstrators concluded the proceedings.

COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A Meeting of the Council was held at the College, Bloomsbury Square, on May 18. Present: Dr. Wormell, Vice-President, in the Chair; Rev. Canon Bell, Rev. J. O. Bevan, Rev. J. B. Blomfield, Mr. Bowen, Mr. Charles, Miss Crookshank, Mr. Eve, Mr. Hawe. Rev. Dr. Hiron, Mr. Kelland, Sir Philip Magnus, Mr. Millar-Inglis, Mr. Pinches, Miss Punnett, Mr. Rule, Dr. R. P. Scott, Rev. Dr. Scott, Mr. Starbuck, Mr. Storr, Rev. J. E. Symns, Mr. Vincent, and Mr. Walmsley.

The minutes of the last meeting were read and confirmed.

The Secretary read a communication from the Rev. Canon Bell, asking the Council to take into consideration a movement that had been recently set on foot for constituting a federation of Associations of Secondary Teachers.—A Special Committee consisting of sixteen members of the Council was appointed to consider the proposals of the Federation Committee and to report to the Council thereon.

Professor Adams was appointed to deliver in the autumn a Course of Twelve Lectures to Teachers on the Practice of Education.

The Report of the Literary Committee was adopted.

The Report of the Finance Committee was adopted, and it was resolved to make arrangements for the lighting of the College building throughout by incandescent gas.

The following persons were elected members of the College:—

Mr. W. J. J. Gossling, A.C.P., The Links, Newport, Essex.
Mr. H. M. Hallsworth, B.Sc. Vict., L.C.P., 88 Rugby Road, Brighton.
Mr. L. W. Lyde, M.A. Oxon., Old Marlowes House, Hemel Hempstead.
Mr. A. Milne, B.A. Lond., University School, Hastings.
Mr. F. Phillipson, B.A. Lond., L.C.P., Commercial College, York.
Mr. P. W. Shelford, B.A. Lond., A.C.P., Duke's School, Alnwick.

The following books had been presented to the Library since the last meeting of the Council:—

By Mr. Baumann.—Baumann's Pictorial German Course.
By Bickers & Son.—Allen's Roman Problems from and after Plutarch's Roman Questions.
By A. & C. Black.—Kirkman's Premières Lectures; Lyde's Elementary Geography of the World.
By W. B. Clive.—Woodhouse's Tutorial History of Greece.
By Macmillan & Co.—Foster and Dobbs's Practical Geometry for Beginners.
Calendar of University College of Wales, Aberystwyth.

The League of the Empire has formulated a scheme dealing with historical study and research. An historical committee has been formed, with Prof. Bury as chairman, other members being the President of Trinity College, Prof. E. A. Gardner, Prof. Lodge, Prof. Flinders Petrie, Mr. R. D. Beloe, hon. secretary. The scheme seeks to encourage the study of history by the foundation of imperial scholarships, to be awarded to each colony in succession, and to be held at all recognized Universities of the Empire. For endowing the history scholarships an appeal is made to the public; cheques to be made payable to Sir Charles Lyall, 11 Dartmouth Street, Westminster, and crossed London and Westminster Bank.

REVIEWS.

The Reformation.

The Cambridge Modern History. Vol. II.: *The Reformation.* (16s. net. Cambridge University Press.)

The administrative and the literary capacity working out this great undertaking may be regarded as at a higher point of efficiency in the present volume than even in its two predecessors. The movements to be co-ordinated, the materials to be sifted and compressed to the due proportion, the judgments to be formed on men and on principles, are all testing in the highest degree; and the results constitute by far the fullest, the most trustworthy, the most instructive, and the most able, in point of literary presentation, of all the many histories of the Reformation, and especially of the single-volume works. Some notion of the mere initial difficulty of securing the contributors may be gathered from the fact that only nine of the nineteen chapters of this volume are the work of the authors to whom they were originally assigned. However, this and subsequent difficulties have been surmounted with conspicuous success.

Prof. Kraus, who has furnished a very fine opening chapter on "Medicean Rome," unfortunately died without giving it his final revision, and without appending the bibliography. He pictures in vigorous outlines the expansion and elevation of intellectual activity under Julius II.—"the zenith of Renaissance culture"—and, standing clear of narrow theological views (whose importance in their own place is amply recognized), he gets at the root of the question what the Papacy really was and really meant for those times. Revising undiscriminating eulogies of Leo X., he concludes that "Leo's one real merit was his patronage of Raffaelle." The artistic and literary life is effectively delineated. Mr. Stanley Leathes compresses into two weighty chapters the struggle of "Habsburg and Valois" through a long half century, foreshadowing the questions of religious reform in Germany (treated in full at a later point), dealing with the various developments of the Italian plot towards the permanent settlement of territorial questions in Europe, and adding necessary explanation of the internal affairs of France, Spain, and the Netherlands. The important chapter on "Luther" is from the pen of Principal Lindsay, of the United Free Church College, Glasgow. Admitting that "it may be an exaggeration to say that the religious side of the Reformation began in the inward religious growth of a single personality," Dr. Lindsay yet thinks that "the impulses in Luther's religious life may be taken as the type of forces which were at work over a wide area." "The real roots of the religious life of Luther must be sought for in the family and in the popular religious life of the times"; and this part of the inquiry is very interesting. Dr. Lindsay indeed traces with vigilant care the gradual development of Luther's thought and action down to his relegation to the Castle of Wartburg—the time when the Lutheran revolt merges in national opposition to Rome. This chapter is exceedingly lucid and able.

Prof. A. F. Pollard next takes up the story, dealing in four consecutive chapters with "The National Opposition to Rome in Germany," "Social Revolution and Catholic Reaction in Germany," "The Conflict of Creeds and Parties in Germany," and "Religious War in Germany." He writes (page 147):

The origin of the whole movement was a natural attempt on the part of man, with the progress of enlightenment, to emancipate himself from the clerical tutelage under which he had laboured for centuries, and to remedy the abuses which were an inevitable outcome of the exclusive privileges and authority of the Church. . . . It was in the beginning quite independent of dogma, and it has pervaded Catholic as well as Protestant countries. . . . This was, roughly speaking, the main issue of the Reformation; it was practically universal, while the dogmatic questions were subsidiary, and took different forms in different localities. It was on this principle that the German nation was almost unanimous in its opposition to Rome, and its feelings were accurately reflected in the Diet of Worms.

Prof. Pollard also contributes a subsequent chapter on "The Reformation under Edward VI.," and there he indicates thus the spirit and character of the movement in England (page 478):

The Reformation in England was divergent in origin, method, and aim from all the phases of the movement abroad; it left the English Church without a counterpart in Europe—so insular in character that no subsequent attempt at union with any foreign Church has ever come within measurable distance of success. It was in its main aspect practical and not doctrinal; it concerned itself less with dogma than with conduct, and its favourite author was Erasmus, not because he preached any distinctive theology, but because he lashed the evil practices of the Church. Englishmen are little subject to the bondage

Digitized by Google

of logic or abstract ideas, and they began their Reformation not with the enunciation of any new truth, but with an attack upon the clerical exaction of excessive probate dues. No dogma played in England the part that Predestination or Justification by Faith played in Europe. There arose a master of prophetic invective in Latimer and a master of liturgies in Cranmer, but no one meet to be compared with the great religious thinkers of the world. Hence the influence of English Reformers on foreign Churches was even less than that of foreign divines in England. Anglicans never sought to proselytize other Christian Churches, nor England to wage other than defensive wars of religion; in Ireland and Scotland, which appear to afford exceptions, the religious motive was always subordinate to a political end.

The Reformation in England was mainly a domestic affair, a national protest against national grievances rather than part of a cosmopolitan movement towards doctrinal change. It originated in political exigencies, local and not universal in import; and was the work of kings and statesmen whose minds were absorbed in national problems rather than of divines whose faces were set towards the purification of the universal Church. It was an ecclesiastical counterpart of the growth of nationalities at the expense of the mediæval ideal of the unity of the civilized world. Its effect was to make the Church in England the Church of England, a national Church, recognizing as its head the English King, using in its services the English tongue, limited in its jurisdiction to the English Courts, and fenced about with a uniformity imposed by the English legislature.

Those five chapters of Prof. Pollard's are conspicuously good—well informed, well thought out, and fluently and lucidly presented. "The Reformation in France" is treated by Mr. A. A. Tilley; "The Helvetic Reformation," by Principal Whitney, of the Bishop's College, Lennoxville, Quebec; "The Catholic South" and "The Scandinavian North," by Prof. (now Bishop) Collins—all of them comprehensively and efficiently.

The important chapters on "Henry VIII." and on "Philip and Mary" are severally furnished by the experienced pens of Dr. Gairdner and Mr. Bass Mullinger—names that carry their own guarantee. Dr. Gairdner, while not denying Wolsey's faults, signalizes "his splendid political abilities," and says that "he raised England from the rank of a second-rate Power among the nations." "The reign of Henry VIII.," he states, "has left deeper marks on succeeding ages than any other reign in English history . . . Henry VIII. was really a monarch of consummate ability, who, if his course had not been misdirected by passion and selfishness, would have left a name behind him as the very founder of England's greatness." To the decisive breach with Rome he "was driven with some reluctance": "he made Cranmer a sort of insular Pope," but "the innovations actually made consisted in little more than the authorization of an English Bible, the publication of some formularies to which little objection could be taken, and the first use of an English Litany." "The Anglican Settlement and the Scottish Reformation" are handled most capably by Prof. Maitland; Mr. R. V. Laurence deals with "The Church and Reform"—a chapter of large scope and interest; and Dr. Fairbairn treats of "Calvin and the Reformed Church," and closes the volume with a powerful review of the "Tendencies of European Thought in the Age of the Reformation."

The Romantic Movement in France.

Main Currents in Nineteenth-Century Literature. By Georg Brandes. Vol. V.: *The Romantic School in France.* (12s. Heinemann.)

The fifth volume of the translation of Dr. Brandes's great work, which originally appeared in the seventies, carries on the history of French literature commenced in the first volume (the Emigrant Literature) and continued in the third (the Reaction in France). The political background of the Romantic movement was not an inspiring one, but its very dullness stimulated the rising generation. The reaction under Charles X. and the ascendency of the *bourgeoisie* under Louis Philippe were equally the objects of their aversion. "During the Revolution," says Dr. Brandes, "they had worshipped liberty; under Napoleon martial glory; now they worshipped art." Literature came to be closely associated with painting and sculpture, and to be itself reckoned as art; creative power was esteemed above the "reason" and philosophy characteristic of the eighteenth century. The influences, foreign and domestic, which led up to Romanticism, have often been enumerated: Dr. Brandes dwells especially on two of them—the poetry of André Chénier, published long after his death, and the political and social ideas of Saint Simon, ideas which, he tells us, inspired in different ways men as diverse as Michel Chevalier, Augustin Thierry, and Auguste Comte. We are accustomed to think of the drama as *par excellence* the battle-ground of the Romantic movement: the preface to "Cromwell" and the fight that raged round the representation of "Hernani" are among the most familiar incidents of literary history. In the volume before us it occupies but a small place; the main current, to quote the title of the book, ran in other channels, and it is on poetry, fiction, and criticism that the chief stress is laid. "Romanticism," the author tells us, "was too essentially lyric to produce dramatic works of enduring value"—a suggestive, if somewhat too sweeping, verdict.

To begin with poetry. De Vigny is only just noticed; and so much of Victor Hugo's work lies outside the period that comparatively little space is given to him. In a previous volume the "Odes et Ballades" had been dealt with; in this volume "Les Orientales" is taken as his typical work, and is the subject of some acute and eloquent criticism. "Victor Hugo," it begins, "took the verse which André Chénier had created—that pellucid medium of pure beauty—and when he had breathed upon it it gleamed with all the colours of the rainbow." From Victor Hugo the natural transition is to De Musset, who early renounced all formal alliance with the Romanticists, and who, in the eyes of many Frenchmen, is the greater poet of the two. Dr. Brandes investigates the grounds of this preference. Hugo, no doubt, was a greater master of his craft, he had far nobler ideals, and possessed the qualities of a leader. De Musset was, indeed, for some time, the type of

> Some wild poet, when he works
> Without a conscience or an aim.

But, granting that the unsavoury character of his subjects—and he is far too partial to dissolute blackguards—can be tolerated, he is more genuinely lyric, more frankly human, less of a rhetorician than Hugo. Moreover, he has *esprit*, which Hugo has not. De Musset's later work, on which his brief friendship with George Sand had a marked influence, does show distinct progress in moral purpose, and less affectation of world-weariness. To this period belong his charming stories and plays, of which "On ne badine pas avec l'amour" is perhaps the best known.

Passing to fiction, George Sand and Balzac form the subject of interesting chapters. An extract from an account given by George Sand of a conversation with her great contemporary seems to serve as the text. "You," she said, "have the desire and the ability to paint the human being as you see him: I, on the other hand, feel impelled to paint him as I wish him to be, as I believe he ought to be." Another novelist, Henri Beyle (Stendhal), author of "Le Rouge et le Noir" and "La Chartreuse de Parme," seems, at first sight, to be quite unconnected with Romanticism. He was distinctly of the eighteenth century, and quite uninfluenced by the great Romanticists or their predecessors, André Chénier, Chateaubriand, and Madame de Staël. But as the author of "Racine et Shakespeare," published in 1822, he was their precursor, and he has in common with them the enthusiasm for energy and daring deeds, "quorum pars magna fuit," at Marengo, Jena, and Moscow, and a true Romantic aversion for the Philistine. He said of himself: "I shall be read about 1880," and he is, by his subtle analysis, one of the fathers of the modern novel. Dr. Brandes thus sums up his view of him:

> I, for my part, see in him not only one of the chief representatives of the generation of 1830, but a necessary link in the great intellectual movement of the century; for as a psychologist his successor and the continuer of his work was no less a man than Taine, and as an author his successor and disciple was Prosper Mérimée.

We have not space to dwell on the criticisms of Mérimée and Théophile Gautier, nor on the delicate appreciation of Sainte-Beuve, whose training as a poet, a novelist, and the historian of Port Royal helped to make him the founder of scientific criticism. One is inclined to think that, but for Sainte-Beuve, Dr. Brandes's own book would not have been written.

> Thanks to his reform the history of literature, which used to be a kind of secondary, inferior branch of the science of history, has become the guide of history proper—its most interesting and living part; for the literature of nations is the most attractive and most instructive material with which history has to deal.

It is difficult, in dealing with books about books, to say how far they are original and how far they resume ideas already in the air; but, in comparing this volume with one of the best of modern histories of French literature—that of M. Gustave Lanson—it seems as if the Frenchman owed some of his subtle criticism to his Danish predecessor. One fault we would find with Dr. Brandes—his eagerness to reproduce the environment of the authors he discusses leads him at times to dwell too much on episodes in their lives "sacro digna silentio."

The Story of Commerce.

A General History of Commerce. By William Clarence Webster, Ph.D., Lecturer on Economic History in New York University. (6s. 6d. Ginn.)

With the requirements of students constantly in mind, Dr. Webster has "tried to tell the story of commerce in a systematic manner, in order that the reader may get clear-cut and accurate pictures of the commercial growth and decay of separate nations, and an understanding of the forces—industrial, racial, and climatic—which have contributed to the steady expansion of the world's trade." He fully recognizes how much more than mere international exchange a nation's commerce is—how deeply it ramifies throughout the life of a nation. He treats in succession Ancient, Mediæval, and Early Modern Commerce (down to the end of the eighteenth century), and then the Age of Steam and the Age of Electricity. He, of course, gives special attention to the industrial and commercial progress of the United States; but that does not prevent him from dealing adequately with the development of other nations. It is interesting to note that he does not accept the view that "the slower relative increase in England's foreign commerce during the present period—especially during the past decade, as compared with that of the previous period—the actual decrease of her trade in some markets, and the increasing excess of her imports over her exports, and the much more rapid commercial expansion of the United States and Germany," show "that British foreign trade is in a state of chronic decline." He says:

> The excess of imports is not necessarily a danger, and is explained by certain circumstances that are really quite favourable—viz., by England's capitalistic supremacy and extensive carrying trade. We have also seen that while her trade is decreasing in some markets it is still gaining very rapidly in others. Although her total foreign commerce has not increased in value as rapidly during the present period as formerly, it has, nevertheless, on the whole, made remarkable progress; and, if we should consider the increase in the volume and bulk of her trade rather than its value, we should probably conclude that she has really made nearly, or quite, as rapid progress as during any previous period of like length. Furthermore, the great increase in both her imports and exports during the years 1899 and 1900 has done much to overcome arguments of "an early decline to the condition of a second-rate power." . . . On the other hand, we should remember that England could scarcely be expected to permanently maintain so rapid a rate of increase in her trade as she made during the decade of the previous period, nor so rapid a rate as that of countries like the United States and Germany, whose commerce has just begun to expand in recent years. These, and some other countries, have inevitably cut into British trade quite deeply in some markets with their competition; but it can scarcely be maintained that their commercial expansion as a whole has, thus far at least, been seriously detrimental to that of England. . . . Furthermore, those who argue that England's commerce is in a state of decline too frequently assume that other countries, like the United States and Germany, will continue indefinitely to increase their trade as rapidly as they have during the past few years; but this assumption is highly improbable for very many reasons.

All he will admit is that "the struggle between England and her rivals for the world's markets is sure to become more and more intense"; and that is all that can safely be admitted. The volume is very carefully compiled, and the judgments pronounced are cautious and level-headed. It ought to be very useful in a commercial course. References to authoritative works are appended to the several chapters. There are numerous excellent maps, and ten illustrations, showing the changes that have come over ships in the course of history.

The Theory of Integers.

Elements of the Theory of Integers. By Joseph Bowden, Ph.D., Professor of Mathematics in Adelphi College, Brooklyn. (5s. net. Macmillan.)

People generally, even the best educated and the most intellectual, are content to accept without further inquiry ready-made ideas as to number and arithmetic. Hence Dr. Bowden's work on "The Theory of Integers" will, in all probability, create an entirely new current of thought in the minds of many of his readers. In this able treatise he investigates the very foundations of the subject under consideration, and seeks to develop in a thoroughly logical manner the theory on which the leading operations of arithmetic are based. He starts from the fundamental ideas of *number*, of *equality*, and of *sum*, and from axioms chosen with a view to their possessing as a whole the essential characteristics of being necessary, sufficient, consistent, and mutually independent. In the present volume the author has only discussed the theory as applied to two types of number—the *primary* number or purely positive integer and the integer in general, which may have a positive, negative, or zero value, and which is regarded as the difference between two primary numbers. The well known laws of association, of commutation, and of distribution are established first by means of primary numbers and with reference to them alone; later, it is shown that by the adoption of suitable definitions the same laws hold for the generalized integer. A large number of very important theorems are fully demonstrated, and others are either merely enunciated or have their enunciations supplemented by a brief indication of the method of proof. The volume constitutes the first two parts of a work to be completed in the future; and the remaining portions will be devoted to the extension of the writer's investigations to *rational*, *real*, and *complex* numbers. Judging from what has been already published, the entire treatise is likely to be a valuable addition to the literature of mathematics.

A New Italian Dictionary.

An Italian and English Dictionary. By Hjalmar Edgren, Ph.D., Recent Professor of Romance Languages in the University of Nebraska, Member of the Nobel Institute of the Swedish Academy in Stockholm; assisted by Giuseppe Bico, D.C.L., of the University of Rome, and John L. Gerig, A.M., Instructor, University of Nebraska. (15s. George Bell.)

There is, indeed, no lack of Italian dictionaries; but Dr. Edgren's work will make room for itself. His idea is to produce a lexicon "based on the foremost recent authorities, and embodying a copious selection of modern words as well as important obsolete ones, presented in a practical and yet etymological form." The Italian-English part follows as its chief authority Petrocchi's "Nuovo Dizionario Scolastico," with constant reference to other works of esteem, English as well as Italian. The vocabulary is very full—quite adequate for all ordinary purposes. Irregular inflexions are carefully noted, often as titles in alphabetical order—a very helpful—arrangement. Idiomatic expressions are given liberally, and we should have gladly missed a good many unusual vocables in order to make space for more of them. Pronunciation and derivation are carefully attended to; but neither involves any great difficulty. So far as English students are concerned, the main interest of the English-Italian part lies in the fullness and accuracy of the equivalents, and on this head they will not be disappointed. We give the volume a cordial welcome. The print and the get-up are very creditable to the publishers.

GENERAL NOTICES.

CLASSICS.

"Classical Translations."—*Æschylus: The Agamemnon.* Translated from a Revised Text by Walter Headlam, Litt.D. (1s. George Bell.)

Dr. Headlam maintains at least the high reputation of the series. His task is a difficult one, and he has faced it very frankly, working in the apparent improvements of the past twenty years both in text and in interpretation. In the absence of the text he has necessarily added a considerable number of concise footnotes, showing his departures from the ordinary version, alternative meanings, and other illustrative matter. The work is done with evident care and thoroughness of scholarship, and it will prove most helpful to the student. Yet the English reader, ignorant of Greek, or perusing the translation without the Greek in mind or at hand for ready reference, will be apt to marvel at the outcome. Nobody but a translator would deliberately construct such collocations of English vocables. If the substance—to say nothing of the spirit and tone—of the great classical works is to be brought home to the English mind (in spite of non-classical detractors), our translators will have to recognize that the English language needs study as well as the classics, and, moreover, that it has capacities of expression, in prose as well as in verse, that have hitherto been strangely allowed to rust unused. English, as well as science, has a grievance against the classic. The little book is well printed on good paper and tastefully encased in paper covers.

"College Series of Latin Authors."—*Cicero: Tusculanarum Disputationum Liber Primus, et Somnium Scipionis.* Edited by Frank Ernest Rockwood, Professor of Latin in Bucknell University. (4s. 6d. Ginn.)

A very handy, serviceable, and attractive edition. Prof. Rockwood follows Müller's Teubner text, with divergences noted and explained in a careful and concise critical appendix. The introductions deal pleasantly and luminously with the literary and philosophical matters

Digitized by Google

pertinent to the two selections, and they are unusually full and satisfactory. The notes, if occasionally elementary, perhaps err on the safer side. Generally they are instructive, and references and parallel passages are more frequent than appeals to somebody's grammar. Peculiarities of language and style are constantly marked; but the main purpose is to bring out the trend and force of the argument. The editor shows familiarity with the literature of the subject in every aspect. We shall look forward with interest to his further work on the "Tusculan Discussions." The volume is admirably printed and got up.

MATHEMATICS.

An Algebra for Junior Forms. By R. B. Morgan, B.Litt., L.C.P. (1s. 6d. Relfe.)

A very useful and well written little volume, in the compilation of which great attention has been paid to the recommendations of the Committee of the Mathematical Association with regard to the teaching of algebra. Some of the more important changes adopted have reference to the order in which the elementary portions of the science should be taught, and among these may be noted the early consideration of *negative* quantity and of graphical methods with their application. The beginner is wisely led to look on algebra as generalized arithmetic—in fact, the rules are in many instances built up as the results of investigating purely numerical examples.

Elementary Geometry, Section II. By Frank R. Barrell, M.A., B.Sc.' Professor of Mathematics, University College, Bristol. (1s. 6d' Longmans.)

The first section of Prof. Barrell's "Elementary Geometry" has already been noticed in these columns. The second deals with much of the substance of the Second, Third, Fourth, and Sixth Books of Euclid. The manner in which the author handles his subject is interesting. Algebra enters largely into the mode of demonstrating the Second and Sixth Book propositions. Although *commensurable* quantities alone find place in the formal discussion of ratio and proportion, the writer is careful to introduce the notion of *incommensurables*. Some of the constructions appear to be original. The volume is well brought out, and the diagrams are very good and clear.

Elementary Geometry. By C. Godfrey, M.A., and A. W. Siddons, M.A. (3s. 6d. Cambridge University Press.)

The scope of the work has been primarily determined by the nature of the new Schedule of Geometry which has lately replaced the older syllabus used at Cambridge. The book, however, is not only adapted for students intending to take a Cambridge University course; it will also serve the purpose of candidates reading for Oxford Responsions and University of London examinations. The volume is more important than most of those of the new type which have already appeared, and it promises to be a useful text-book. It fulfils the three-fold object of providing instruction in experimental, in practical, and in theoretical geometry, and it essentially covers the ground familiar to readers of the first Four and the Sixth Books of Euclid. It has been well brought out, and contains an excellent series of diagrams. The exercises are varied in character and detail, and they are very numerous. In the portions dealing with *constructions*, although the work is not free from the defects generally noticeable in books on elementary practical geometry, yet there is evidence of a more strenuous effort to secure accuracy of expression.

A New Geometry for Junior Forms. By S. Barnard, M.A., and J. M. Child, B.A. (2s. 6d. Macmillan.)

A separate publication of the more elementary portions of the "New Geometry for Schools" recently published by the authors and favourably reviewed in these columns. Some suitable additions have been made, and the volume, which should be welcome, is now a text-book of moderate size, comprising a course of geometry calculated to place the reader on the same level as candidates successful in passing the Oxford and Cambridge Junior Local and other similar examinations.

ENGLISH LANGUAGE.

An Old English Grammar. By Eduard Sievers, Professor of Germanic Philology in the University of Leipzig. Translated and edited by Albert S. Cook, Professor of the English Language and Literature in Yale University. Third Edition. (5s. Ginn.)

Prof. Cook finds it difficult to keep up with Prof. Sievers: the third English edition dates five years later than the third German edition. The author scarcely did himself justice with this edition: he started with the idea of giving a mere reimpression of the second edition, "instead of the complete revision which, though it had been in hand for a long time, was only partly finished"; and presently, finding that this plan would not do, he "rectified and expanded the old text" as best he could under pressure of the printers. However, both in the phonology and in the inflexion he made numerous alterations, all for the better. Prof. Cook has again done devoted service to the work. It is, of course, indispensable to the serious student. The publishers deserve a special word of credit for the clear and accurate printing of much difficult "copy," and for the substantial and agreeable get-up.

A Primer of Historical English Grammar. By Bertha M. Skeat, Ph.D. (Zürich). (2s. 6d. Blackie.)

Miss Skeat intends the volume for "the Upper Forms in a Public School," and professes to give "sufficient information for the guidance of students preparing for the London Matriculation." She has carefully selected the topics of chief interest and importance, and the illustrative examples, avoiding excessive detail. She explains the relation of English to other languages, the development of it in England, the growth of the vocabulary, the vowel and consonant changes, derivation and inflexion. The arrangement and the statement are lucid, and the book generally is quite trustworthy and suitable to its purpose. We should hope, however, that it will be studied more by way of frequent reference than of systematic reading—at any rate, in the first instance.

ANNOTATED ENGLISH CLASSICS.

Bacon. *Selected Essays.* Edited by A. E. Roberts, M.A. (George Bell. English Classics.)

Mr. Roberts furnishes a good biographical and literary introduction and sensible and scholarly notes to eight Essays, having primarily in view the requirements of pupil-teachers sitting for the King's Scholarship. An appendix treats briefly and usefully of differences between Bacon's English and ours. The publishers give good paper, round and clear type, and tasteful and substantial binding.

Burke. *Thoughts on the Cause of the Present Discontents.* Edited by J. H. Boardman, B.A., L.C.P. (2s. net. Normal Correspondence College Press.)

The introduction deals generally and sufficiently with matters biographical, political, and literary. The notes are full and serviceable, although a good many explanations of vocables seem unnecessary. Appendixes contain short biographies of leading statesmen of the period, test papers, &c. The edition will be helpful.

Chaucer. *The Knight's Tale.* Edited by Alfred W. Pollard. (2s. 6d. Macmillan. English Classics.)

Mr. Pollard has expended much scholarly labour on the poem. In the introduction and notes he has "tried to illustrate Chaucer's methods as a story teller at a particularly interesting stage of his career, and in doing this to show in some detail what was the degree of his indebtedness to Boccaccio's 'Teseide.'" This is very well for advanced students by way of "easy introduction to poetical criticism," although the study would still be on a narrow basis unless the students could follow the original under comparison. But the plan introduces a great deal that less advanced readers will probably skip. There is a useful glossary, and the type and get up are good.

Shakespeare. (1) *The Merchant of Venice*, edited by R. Scott, M.A., Professor of English Literature, Wilson College, Bombay. (Cooper: Bombay). (2) *Hamlet*, edited by Oliphant Smeaton, M.A.; and (3) *As You Like It*, edited by Flora Masson. (1s. 4d. each. Dent. Shakespeare for Schools.) (4) *Julius Cæsar*, edited by David Patrick, M.A., LL.D., and Thomas Kirkup, M.A.; and (5) *Much Ado about Nothing*, edited by T. E. Margerison, M.A. (1s. 6d. each. Chambers. The Academy Shakespeare.)

(1) Prof. Scott, in a long literary introduction (64 pages), deals amply with the date, construction, lessons, and characters of the play, and sketches the life and work of the author. The notes are very full, no doubt from special regard to Indian pupils; but such as seem superfluous for tolerably advanced classes here would be helpful to less advanced classes, and they are all carefully and ably presented. Additional illustrative matter is given in appendixes. A very instructive edition, on bad paper. (2) and (3) are both excellent additions to the series, the introductions being specially good, and notes concise and to the point. (2) has six illustrations and coloured frontispiece by Patten Wilson, and (3) has seven illustrations and coloured frontispiece by Dora Curtis, while both have many other illustrations from contemporary prints. The get up is in all points agreeably artistic. (4) and (5) are very good examples of the new series, the quality of which is guaranteed by the general editorship of Dr. Patrick. The introductions and notes handle adequately and judiciously the literary and philological elements, with special purpose "to bring out more clearly the meaning of the author and the spirit of the play, as well as to train the student in the right understanding and appreciation of Shakespeare's English." The type is clear, and the get up is both agreeable and substantial.

ENGLISH READERS.

To the "Ludgate Standard-Authors Readers" have been added two more volumes, attractive in matter, printed in bold type, and firmly bound: (1) *The Children of the New Forest* (Captain Marryat), with thirty-nine illustrations by Sir John Gilbert, R.A., and Paul Hardy; and (2) *Our Village* (Miss Mitford), with sixty illustrations. (1s. 6d. each, Routledge.) Both volumes have some useful explanatory matter in appendix.

The "Ludgate Nature-Study Readers" form three books (1s., 1s., 1s. 3d., Routledge), edited with much care and judgment by John C. Medd, M.A. They consist of some forty lessons each, by writers of special knowledge and (for the most part) of special educational experience, on familiar natural objects or aspects of Nature. "One

Digitized by Google

consistent purpose runs through the three volumes—namely, to emphasize the fact that opportunities for Nature-study abound on every side, to illustrate the wide range which it now covers in schools of varying types and grades, and to indicate to teachers courses which they may pursue with a minimum of inconvenience and expense." The books are well calculated to stimulate observation, thoughtfulness, and inquiry; and they are excellently printed, illustrated, and got up. The series will, no doubt, be very cordially welcomed. The series is followed up by *The Frank Buckland Reader* (1s. 6d., Routledge), which consists of selected readings from the famous naturalist's "Curiosities of Natural History," systematically arranged, briefly annotated, and furnished with seventy-four illustrations. This is a kind of book that children would read with interest by themselves.

"The Standard Second Reader," edited by Isaac K. Funk, LL.D., and Montrose J. Moses, B.S. (Funk & Wagnalls), contains interesting lessons, and is liberally and attractively illustrated (partly in colour). Much use is made of phonetics—with but doubtful advantage, we are inclined to think; only teachers can take their own course in regard to them.

Dr. W. Peterson, C.M.G., LL.D., has now combined his "Junior" and "Senior" volumes into *A School Poetry Book* (3s. 6d., Longmans)—a handsome and substantial collection. It was a worthy aim "to keep in view the tastes and sympathies of both the branches of the English-speaking people." We hope the pieces will escape the processes of parsing and analysis, and be simply read, or recited (in the good old sense, and not in the American sense), and in many cases committed to memory. Dr. Peterson aptly quotes Matthew Arnold's remark that the learning of good poetry is a "discipline which works deeper than any other discipline in the range of work of our schools; more than any other, too, it works of itself." A well considered and attractive selection.

We can now fill up the gap in our notice of the *Junior Country Readers* (by H. B. M. Buchanan and R. R. C. Gregory) in our April issue. No. II. (1s. 2d., Macmillan) consists of "More True Animal Stories"—"stories of familiar wild animals common to our English woodlands and meadows"—through which habits and characteristics of the animals are unobtrusively and effectively indicated. Spelling and transcription exercises follow the lessons. There are twenty-nine illustrations, appropriate and well reproduced.

"The Youth's Companion" series has developed an additional branch—"The World's Progress Readers," of which two volumes have recently appeared: (1) *Triumphs of Science*, and (2) *Industries of To-Day*, both edited by M. A. L. Lane (1s. each, Ginn). The subjects are judiciously selected, interestingly written (mostly by specialists), well printed, liberally illustrated, and excellently got up.

The First Infant Reader, in McDougall's "Alexandra" series (6d., cloth), relies on the interest of the stories and on the illustrations (many in colour) rather than on graduation of difficulties of the language, though these will have been partly got over in the primers. The present volume is fresh and attractive.

The Story of the East Country, by E. S. Symes, who has already written of the North Country, is an excellent addition to Mr. Edward Arnold's series of "Local Readers" (1s. 6d.). The Fenland Monasteries, the Draining of the Fens, the Norfolk Broads, the Great Forest, the East Coast Fisheries (Yarmouth bloaters), Stourbridge Fair, the important towns, castles, &c., afford abundant material, historical and social. The points are well selected and the text is pleasantly written, and the illustrations are numerous and good.

MODERN LANGUAGES.

(1) *How to Teach a Foreign Language.* By Otto Jespersen, Ph.D., Professor of English in the University of Copenhagen. Translated from the Danish original by Sophia Yhlen-Olsen Bertelsen, M.A. (3s. 6d. Swan Sonnenschein.) (2) *L'Enseignement vivant des Langues vivantes.* Par J. Lecoq, Professeur Agrégé de l'Université. (Paris: Edouard Cornély.)

(1) Prof. Jespersen, who is already well-known to students of English, hopes "to pay off a little of the debt he owes to England and to many Englishmen" by the present exposition of his views. Originally his book was written with Danish schools and Danish methods more or less exclusively in mind, and consequently he has cut out such parts as seemed less applicable to English methods. "Now," he says, "the really important thing is less the destruction of bad old methods than a positive indication of the new ways to be followed if we are to have thoroughly efficient teaching in modern languages." Accordingly, he is positive rather than destructive, although he is not a little destructive. He still has his fling at the disconnected sentences about "the garden of the uncle" and "the carriage of the aunt of the friend." Generally he proceeds on the best modern lines, and considers the character of reading selections, the way they should be dealt with in the class-room, the graduation of materials, phonetics, translation and re-translation, and so forth. Incidentally, there are criticisms of more or less popular methods. The little book is written in sprightly and interesting fashion, and will be found very serviceable and suggestive to teachers.

(2) M. Lecoq does not write "pour les maîtres, pour les gens du métier." He will not go into the battle raging between "les partisans des diverses méthodes." "Ce qui me préoccupe," he says, "c'est ce que peut et doit penser l'honnête père de famille, le brave homme qui voudrait bien procurer à son enfant la meilleure éducation possible, et la plus utile, et qui, en échange des sacrifices parfois très lourds qu'il s'impose, en demande vulgairement, prosaïquement, 'pour son argent.' C'est lui que je voudrais éclairer et rassurer." He carries out his project with great vivacity and vigour, not indeed searching for the best method, or inquiring where the best method should lead to, but rather criticising the latest official syllabuses and speculating on the results that may be reasonably expected from them. At length, however, he reaches "la méthode directe," and explains it and its applications and possibilities at every educational stage. "Je suis, en ce qui me concerne, plainement convaincu que les résultats espérés seront obtenus, que la méthode se justifiera par les faits. A mes yeux, c'est un point acquis, sur lequel il est d'ailleurs oiseux de discuter." The whole book is racy and interesting.

Un Episode de Waterloo: Extrait de La Chartreuse de Parme. Par "Stendhal." Adapted and Edited by Maurice A. Gerothwohl, B.Phil., L. ès L., F.R.S.L. (2s. Murray.)

The narrative is simple and engages the interest, a good deal of dialogue being interspersed. Appended is a good account of the life and works of the author, as well as some useful grammatical notes and an index of military terms. Occasional footnotes are given in French. The type is good. There seem to be misprints on page 16, line 19; page 27, line 19; page 34, line 14; page 44, line 2; page 59, line 21—insignificant essentially, but they might just as well be rectified.

HISTORY.

A History of the Middle Ages. By Dana Carleton Munro, Professor of European History, University of Wisconsin. (4s. net. Appletons. Twentieth Century Text-Books.)

Prof. Munro emphasizes three main subjects: "first, the work of the Christian Church, the greatest of the civilizing agencies; second, the debt which we owe to the Byzantine and Arabic civilizations; third, the life of the times." The volume is but a slim one, and the author succeeds in presenting a sharp outline by characteristic decisiveness of statement as well as of selection. Especially useful are the chapters devoted to the social side of existence—the monastic orders, the life of the nobles, the life of the people, schools and universities. The enforced brevity sometimes leads, inevitably, to inadequacy of statement; but otherwise the presentment is generally good, pointed, and effective. Brief references are added to the chapters; and there are 12 useful maps, 9 dynastic tables, and some 60 illustrations, judiciously selected and well reproduced.

A History of Modern Europe. By Merrick Whitcomb, Professor of History, University of Cincinnati. (4s. 6d. net. Appletons. Twentieth Century Text-Books.)

Prof. Whitcomb differentiates his treatment by laying greater emphasis upon "the Contemporary Period," and upon the parts of the earlier history that bear more directly upon it. At the Congress of Vienna, therefore, he has still in hand one half of his space. Still, he handicaps himself with sketches of the history of the minor States, and with "source reviews" at the end of chapters—good things in their way, but hampering the main business. On the whole, however, Prof. Whitcomb gives an effective grip of the general trend of modern European development. At the same time, his work is cast on such different lines from Mr. Myers's second volume that the two are rather complementary than mutually exclusive. There are at least 150 illustrations, including some good maps and scenes and many portraits, though some of the portraits are not the best available nor yet well reproduced.

EDUCATION.

Education in accordance with Natural Law. By Charles B. Ingham. (Novello.)

Mr. Ingham modestly describes his book as "suggestions for the consideration of parents, teachers, and social reformers." He says "education works in an area in which natural energy or force is the essential factor," and so is "an effort to obtain, by devised arrangements, the fullest manifestation of the power and possibilities underlying physical and physiological existence." Men have looked too much upon results perceivable and measurable, and have been too anxious for speedy results. But "the problem is not one to be solved by ideas or views, or even theories, however specious: it is a search for facts, the inquiry being 'What are the *precise external conditions* in which these subtle forces, manifest in physiological and psychological action, and constituting the essence of individual existence, will most fully exhibit themselves for the purpose of evolving personal efficiency and completeness? This is the essential problem to be solved in education.'" Mr. Ingham, however, "has not dared to attempt" an answer: he contents himself with the negative work of "pointing out some prevalent views and practices which, on the surface very plausible, are, nevertheless, not in accordance with natural law, and are accountable for much disastrous mischief." The little volume is

Digitized by Google

thoughtful, earnest, and unpretending; but it embodies more suggestive views than many another work of higher professions.

Short Studies in Education in Scotland. By John Clarke, Lecturer on Education in the University of Aberdeen. (3s. 6d. net. Longmans.)

Mr. Clarke first sketches the history of the existing classes of educational institutions and reviews the governing bodies and funds in order to catch the general trend of development. Elementary education, he finds, "is fairly well organized, and in many respects highly efficient." But "in the field of secondary education chaos reigns supreme; multiplicity of agency is aggravated by insecurity of resources"; and "nothing short of legislation can clear up the situation." How, then, shall order be evolved out of this chaos? Mr. Clarke discusses the matter in considerable detail, and at length sketches a plan of his own, and finally deals with some of the outstanding problems that will face the renovated Local Authority. The work is well informed and impartial in argument, and it will be usefully suggestive towards a conclusive solution.

ART—DESIGN—DRAWING.

Modelling: a Guide for Teachers and Students. By Ed. Lanteri, Professor of Sculpture at the Royal College of Art, South Kensington. Vol. II. (15s. net. Chapman & Hall.)

Sir W. B. Richmond, who furnishes a preface—which he would rather call a "tribute" than an introduction—says that "by all students of sculpture Prof. Lanteri's admirable book must be welcomed with enthusiasm"; for "it is indeed refreshing to read these pages, written not only with healthy vivacity but with a thoroughness of knowledge, aye, more, a scientific insight uncommon in a tentative and experimental period of both teaching and learning." Prof. Lanteri "has approached his subject seriously, religiously, as a teacher and as a workman." This is very high praise indeed, and not to be gainsaid. The volume is handsomely got up, with full-page plates, and numerous illustrations and diagrams, some 130 figures in all. Yet another volume is promised to complete the series.

Elementary Design. By C. F. Dawson, Head Master of Accrington Municipal School of Art. (3s. net. Chapman & Hall.)

The object is "to place before students and teachers a systematic course of study in design, so that a beginner may become acquainted with the different kinds of pattern it is possible to make under given conditions." It is really a book of problems, thoughtfully devised and graduated; the first part (thirty exercises) being directed to a varied knowledge of design, and the second part (thirty exercises) furnishing extra practice or else being taken as a supplementary or second year's course. The whole series, honestly worked through, cannot fail to ensure the student an excellent grounding. There are forty full pages of illustration, containing some two hundred and forty diagrams. The volume is handsomely got up.

Philips' Coloured Nature-Study Drawing Cards, by A. F. Lydon, in four sets—Animals, Birds, Flowers, Insects—sixteen plates each set (1s. 9d. each set)—are admirably adapted to their purpose. Each set is accompanied by "Notes for Composition" (by R. A. Holden, Head Master of Cuerdon Endowed School, Preston), which will be very useful.

Messrs. Nelson's *New Drawing Course*, intended "to co-ordinate the ordinary forms of Manual Occupations with Freehand, Freearm, Ruler-drawing, and Design," by J. Vaughan, Director of Drawing and Manual Training to the Glasgow School Board, is specially directed to meet the fullest requirements of the Board of Education Primary Drawing Circular. It is in four Stages, in quarto form (2s. 6d. each Stage). The graduation of the work corresponds carefully with prescriptions of the Circular, the explanation is lucid and adequate, and the plates exhibit a vast variety of figures excellently drawn and reproduced. We have seen nothing finer or more appropriate. As a "Teacher's Handbook" the series will be most valuable.

MANUAL WORK.

Messrs. Cassell publish *The Handyman's Book of Woodworking*, edited by Paul N. Hasluck (9s.), a substantial volume of some 760 pages (double columns), dealing with the tools, materials, and processes employed in the craft, and containing 2,545 illustrations and working drawings. Mr. Hasluck, who ought to know, entertains "the confident belief that it is by far the most exhaustive book on the subject hitherto published"; and we believe he is right. The treatment is simple, explicit, and adequate. While the needs of the amateur have been carefully consulted, the professional craftsman in carpentry, joinery, and cabinet work will find numerous valuable suggestions. The volume is thoroughly practical, and it ought to be at the elbow of every worker in wood.

Messrs. Chapman & Hall issue an artistic little volume on *Metal Work*, by Frank G. Jackson (3s. net), treating concisely, but pointedly and lucidly, of the crafts of *repoussé* and chasing for the elementary instruction of industrial home art workers. The treatment is strictly practical. The author gives exercises in sufficient variety, accompanied by detailed description of the mode of working each example, the modes deemed most suitable for the elementary student being selected. At the end of each chapter is a summary of the special tools and materials mentioned in the text. The final chapter deals briefly with the colouring of metals. There are 58 figures.

MAPS.

Messrs. George Philip & Son publish a *Modern School Atlas of Comparative Geography*—"a series of 64 coloured plates, containing 136 maps and diagrams, with introduction and complete index"—edited by George Philip, F.R.G.S. (3s. 6d.). The plan is most successfully directed to the illustration of the intimate relations between Physical, Political, and Commercial Geography; and the gradual expansion of the British Empire is shown by an historical chart, and separate maps of all the British Colonies and Dependencies are given on uniform and unusually large scales. The climatological maps are excellent, and very special attention is bestowed on Commercial Geography. The maps are beautifully produced, the names full without being crowded. Altogether an admirable school atlas at an astonishingly low price.

Messrs. Philip also issue a large Chart, *Trade and the Empire*, graphically represented by 56 coloured maps and diagrams (1s.). The statistics are taken from the Board of Trade returns. The sheet is very opportune for the present fiscal discussions, as well as for school use.

NEW EDITIONS AND REPRINTS.

First of Messrs. Constable's new series of copyright novels (at half-a-crown net), in excellent print and attractive binding, is *Cardigan*, by Robert W. Chambers—an historical romance of sustained interest, written in vigorous and cultured style.

Messrs. George Bell and Sons have just issued separately Part I.—the French-English portion—of the well known and highly esteemed *Concise Dictionary of the French and English Languages*, by F. E. A. Gasc (2s.). The type, though small, is very clear, and the get-up is handy and serviceable.

Mr. Fisher Unwin publishes a sixpenny edition of *How to be Happy though Married*, that delightful "Handbook to Marriage by a Graduate in the University of Matrimony." It is liberally printed and got up, and will be very deservedly popular.

Messrs. Seeley & Co. have added to their sixpenny series a reprint of *The War in the Crimea*, by General Sir Edward Hamley, K.C.B.—a capably and gracefully written work of great interest and value.

The Navy League (13 Victoria Street, S.W.) sends forth a revised and enlarged edition of "*The British Navy, Past and Present*, with lists showing strength of H.M. Fleet in all Classes of Ships," by Rear-Admiral S. Eardley-Wilmot (1s. net). Different classes of vessels are usefully figured.

FIRST GLANCES.

Classics.

Latin, Steps to: from Second to Fifth Class. By Gavin Hamilton, M.A. Melrose: Macbean.

["According to Cicero and Cæsar, not modern foreign theorists. Designed to make pupils laugh rather than cry."]

Livy, Book VI. By A. R. Cluer, B.A. New Edition, revised by P. E. Matheson, M.A. 2s. Clarendon Press Series.

[Introduction contains historical summary, excursus on Livy's Latin, and note on the Roman army of the period. Map of Central Italy. Summary at head of each chapter. Notes discriminating and careful.]

Mathematics.

Arithmetic, "A.L." Problematic: Scheme B. Standards I. and II., 1d. each; Standards III.–VI., 2d. each; Standard VII., 3d. Leeds: E. J. Arnold.

Arithmetic, Pitman's Scheme A, Books III., IV., V., VII. By W. H. Higden. 2d., 3d., 3d., 5d. (cloth, 1d. extra each).

Arithmetic, Scheme A, Guide to the Teaching of. Book V. By W. H. Higden. 1s. net. Pitman.

Arithmetic, Senior, Longmans'. For Schools and Colleges. By T. F. G. Dexter, B.A., B.Sc., and A. H. Garlick, B.A. 4s. 6d.

[Very comprehensive; 554 pages. Very numerous examples (worked out and for working); test papers; answers.]

Decimals and the Metric System. 2d. Blackie (Supplementary Arithmetics).

Geometry, Elementary. By Cecil Hawkins, M.A. Part II. 2s. Blackie.

[Areas, Ratio and Proportion, Similar Triangles, Similar Polygons, Further Properties of Triangles and Circles, Miscellaneous Examples.]

Geometry, Practical, for Beginners. By V. le Neve Foster and F. W. Dobbs. 2s. 6d. Macmillan.

Trigonometry, Plane. By James M. Taylor, A.M., LL.D., Professor of Mathematics, Colgate University. 3s. 6d. Ginn.

English Literature.

Lamb. Tales from Shakespeare. (1) With Introduction and Notes by C. D. Punchard, B.A. 1s. 6d. Macmillan. (2) In Oliver

& Boyd's "Continuous Readers." Part III., 3d. (paper); Part IV., 4d. (cloth).

[(1) Brief and useful notes; some general examination questions appended. Reprint of the edition of 1899.—(2) Brief introductions, notes, and meanings; two illustrations each. Handy and nicely got up.]

Scott. (1) Woodstock. 1s. George Bell (Bell's Reading Books). (2) Rob Roy. 1s. 6d. Black ("Sir Walter Scott" Continuous Readers). (3) A Legend of Montrose. Edited by William Keith Leask, M.A. 1s. 6d. Blackie. (4) Kenilworth. Edited by J. H. Flather, M.A. 2s. 6d. Cambridge University Press (Pitt Press Series).

[(1) Abridged for schools; illustrations by M. Crabtree—very good. (2) Illustrated; introduction and short notes. Agreeable and serviceable. (3) Very thorough and capable; excellent notes. (4) Attractive and handy edition; author's notes at end; occasional notes under text; glossary.]

Poems, English. Selected, arranged, and annotated for the use of Schools by J. G. Jennings, M.A., Professor of English, Muir Central College, Allahabad. Two vols.: 1s. and 1s. 6d. Macmillan.

[Good selection, judiciously classified; simple notes.]

Poetry, English, A Book of, for the Young. Arranged by W. H. Woodward, Professor of Education in the University of Liverpool. Two vols.: 2s. each. Cambridge University Press.

[(1) For Preparatory and Elementary Schools. (2) For Secondary and Higher Schools. Excellent selections; admirably got up.]

Shakespeare. (1) Helps to the Study of Richard II. By C. W. Crook, B.A., B.Sc. 2s. Ralph, Holland, & Co. (2) Helps to the Study of Much Ado about Nothing. By Alfred L. Cann, B.A. 2s. Ralph, Holland, & Co. (3) Selections from King Henry IV. 2d. Blackie (English Classics). (4) Selections from King Henry V. 2d. Blackie (English Classics). (5) The Winter's Tale. Edited by Thomas Page. 2s. 6d. A. J. Arnold (Moffatt's Plays of Shakespeare).

[(1) and (2) Very full apparatus; most helpful. (3) and (4) Handy; simple and pointed notes. (5) Careful and instructive; worthy of the excellent series.]

EDUCATION.

Adjustment, Education as. By M. V. O'Shea, Professor of the Science and Art of Education, University of Wisconsin. 6s. Longmans.

[Discusses "in a rather untechnical and popular way the meaning, aim, and general method of education when viewed from the standpoint of biological, sociological, and psychological thought."]

Animal Education. By John B. Watson, Ph.D., Assistant in Experimental Psychology in the University of Chicago. 1.25 dols. net. University of Chicago Press.

["An experimental study on the psychical development of the White Rat, correlated with the growth of its nervous system."]

Fatigue. By A. Mosso, Professor of Physiology in the University of Turin. Translated by Margaret Drummond, M.A., and W. B. Drummond, M.B., C.M., F.R.C.P. Edin. 4s. 6d. Swan Sonnenschein.

History, A Short, of Education. By G. Benson Clough. 2s. 6d. Ralph, Holland, & Co.

[Sketch. Latter half annalistic.]

Method, School, Practical. By J. H. Boardman, B.A. (Lond.), L.C.P. 3s. 6d. net. Normal Correspondence College Press.

[Very full and practical manual, "the outcome of actual experience derived from a twofold source—the training of teachers as well as the teaching of children."]

Public Schools and Public Opinion. By T. Pellatt. 2s. 6d. net. Longmans.

["An apology for certain methods in English higher education."]

Reading as a means of Education. By Maria C. Mondy. 4d. National Home-Reading Union.

MANUAL WORK.

Laundry Work, The Science of. By Margaret Cuthbert Rankin. 1s. 6d. Blackie.

[Careful, simple, full of matter. Good notes of lessons, with blackboard summaries. Well illustrated.]

Metal-Working, an Introduction to. By J. C. Pearson, Technical Assistant to H.M. Inspector of Reformatory and Industrial Schools. 2s. Murray (Home and School Library).

[Practical, concise, and plain. 88 figures.]

Upholstery. Edited by Paul N. Hasluck. 1s. Cassell.

[In *Work* Handbook Series. Comprehensive, concise, and thoroughly practical. 162 figures.]

Work. Vol. XXVI. 4s. 6d. Cassell.

[Coloured supplements; countless figures. Practical; profusely varied.]

MATHEMATICS.

15359. (Robt. W. D. Christie.)—Without the use of the method of continued fractions, solve the equation $X^2-149Y^2=1$, and generalize your method.

Solutions (I.) *by* Lt.-Col. Allan Cunningham, R.E.; (II.) *by* R. F. Davis, M.A.; (III.) *by* A. H. Bell.

(III.) Let us first consider the general equation $x^2-Ny^2=\pm1$, and assume

$$Ny^2+1=x^2=(Nmy/n-1)^2 \text{ and } y=2mn/(Nm^2-n^2)\ [x=(Nmy/n)\pm1] \quad \ldots\ldots\ldots\ldots(1).$$

To have integral values of y, Nm^2-n^2 must be found a factor of $2mn$; when it is one, by transposition we have a solution of the proposed equation for the condition -1. Now

$$Nm^2=n^2+d=(n+1)^2-d' \quad \ldots\ldots\ldots\ldots(2),$$

by taking successively $m=1, 2, 3, \ldots$, discloses the law of development, and it will be found that the smallest values of d return at equal intervals, alternately changing signs, but the corresponding values of m, n have increased in a uniform arithmetical ratio. The smallest values of the d's occur at a change of signs in the series, which we call convergent differences, C.D. This series is one of two differences, and to develop the three series of m, n, d require three terms of (2), and they have these relations with each other. Let L and F be written for last term of a series and first term of next, and A.S. for an arithmetical series, D for difference.

No. of term.	Diff.	0,	1, ...,	Diff.,	L. and F.
A.S. m =	m'''	m +	m'	m^0,	m''
A.S. n =	n'''	n +	n'	n^0,	n''
C.D. =	$(\pm d''')$	$(\pm d)$,	$(\mp d')$	$(\mp d^0)$,	$(\pm d'') : (\pm d^{iv})$
1st Diff. =	$(\mp d')-(\pm d)$	D_1,	D'_1	$D_1{}^0$	D_1'' : $D_1{}^{iv}$
2nd Diff. =	$(\pm 2d'')$	$(\pm D_2)$,	D'_2	$(\mp D_2{}^0)$,	$(\mp 2d^0)$

$[D_2{}^0=3d^0-d''', \text{ where } d''' \text{ and } d^0 \text{ belong to two consecutive diff. terms}]$ .....(3).

The difference term supplies the ratios for extending a triple series; this series terminates when the series of d's changes signs; the last term is the first term of the next series, and the preceding term provides the ratios for extending it, &c. Where the same C.D. with a change of sign appears in the next series we find the middle of the development, and it can be proved that, if two such terms are represented by

m^0, m, then $q=m^2+m^{0^2}$; if by n^0, n, then $p=mn+m^0n^0$, the end of cycle; if by $+d^0$, $-d^0$, then 1 .....(4).

It is observed that m''', n''' are the common differences for the m', n' of the first term in (3) respectively; also the sign of d''' in this difference term must be opposite to that of the first term; and twice this d''' is D_2. Also in developing the triple series as shown in (3), the next to the last term becomes the difference term for the next series, by supplying an intermediate ($D_2{}^0$); the initial terms 0 and 1 are omitted, and the second term becomes the first term of the new series. This initial of the beginning of the development of a new series in the d's explains how the formula is obtained for this intermediate ($D_2{}^0$), and why we immediately extend the triple series by taking the last term for the first term of the next series. In commencing a triple series by means of (2) it is only necessary to select such initial terms as have the conditions given in (3), and there need be no hesitancy then in arriving at the true and final results sought.

The solution of the general indeterminate equation of the second degree as given above in (1) represents the method used by Diophantus, and ordinarily these formulæ are as difficult to determine as the original equation. By abridging the development still more than as here shown, it is possible to arrive at the values of x, y much more easily than by any other known method.

Now consider the solution of $X^2-149Y^2=1$, in whole numbers without the aid of continued fractions.—We have, by (2),

N. m^2	n^2+d	n'^2-d'
$149\cdot1^2=$	$12^2+5=$	$13^2-20,$
$149\cdot2^2=$	...	$=25^2-29,$
$149\cdot3^2=$	...	$=37^2-28.$
$149\cdot4^2=$	...	$=49^2-17,$
$149\cdot5^2=61^2+4$		

....(5).

On account of the small d's we choose this last for the difference term, and the $12+5=0$ term, their difference, shows that $49-17$ must be the first term to commence the triple series (3); then

No.	Diff.	0	1	2	3	4	5	Diff.	7 & 1
Series m,	5 =	1,	+4,	...,	...,	...,	...,	29,	34:
,, n,	61 =	12,	+49,	...,	...,	...,	...,	354,	415:
,, d,	+4	+5,	−17,	−31,	−37,	−35,	−25,	−7,	+19:
D_1	= −22,	−14,	−6,	+2,	+10,	+18,	+26,	+1:	
D_2, 2.4,	+8,	+8,	+8,	+8,	+8,	+8:	(−25):	−14:	

Second Series.

2	3
...,	92,
...,	1123,
+20,	+7,
−13,	

by (3), $(-25)=-3\times7-4$ .....(6).

The series of d ends at the seventh term, and of the arithmetical series m, n, whose common differences are 5, 61, we need only the difference and the seventh terms; continuing the d series, until finding the same d, 7 with the sign changed shows the middle of the development (4); then the formulæ give

$$m=q=92^2+29^2=9305,\ n=p=92\cdot1123+29\cdot354=113582,\ d=+1 \quad \ldots\ldots\ldots\ldots(7).$$

These values $n=x$, $m=y$ satisfy the equation $x^2-149y^2=-1$. When these values of m, n are substituted in formulæ (1) we have the solution of the proposed equation

$$y=2mn=2\cdot9305\cdot113582=2113761020,$$
$$x=2\cdot149\cdot9305^2-1=25801741449.$$

The triple series could have commenced with $25-29$ for difference term; then (3) A.S. m, $2=1+1$, A.S. n, $25=13+12$, and series d is $-29, -20, +5$, $D=-58$, and developed by the above method will soon merge into the development as given. When (D^0) causes a change of signs immediately the series ends, and a new one commences, which requires a new (D^0), but is used but once in commencing a series.

15490. (R. Tucker, M.A.)—Find the envelope of a parabola which cuts a given parabola in four points three of which are given co-normal points.

Solutions (I.) *by* Professor Sanjána, M.A.; (II.) *by the* Proposer.

(I.) Let the given parabola be $y^2=4ax$, the other

$$(x+py)^2+2gx+2fy+c=0.$$

The ordinates of the four intersections are given by

$$y^4+8apy^3+(16a^2p^2+8ag)\,y^2+32a^2fy+16a^2c=0.$$

If m be the tangent of the angle made by the normal at a point with the axis, the ordinate of the point is $-2am$; hence, if m_1, m_2, m_3 be the co-normals and m the fourth point, we have $\Sigma y_1=-8ap$, so that $\Sigma m_1+m=4p$. Similarly, $\Sigma m_1m_2+m\Sigma m_1=4p^2+2g/a$, $m\Sigma m_1m_2+m_1m_2m_3=4f/a$, and $mm_1m_2m_3=c/a^2$. But, if the normals at m_1, m_2, m_3 meet in (h, k), it is known that $\Sigma m_1=0$, $\Sigma m_1m_2=2-h/a$, $m_1m_2m_3=-k/a$; therefore $m=4p$; also $c=-4pka$, $f=2ap-ph-\frac{1}{4}k$, $g=a-\frac{1}{2}h-2ap^2$. Thus the equation of the variable parabola is

$$(x+py)^2+x\,(2a-h-4ap^2)+y\,(4ap-2ph-\tfrac{1}{4}k)-4pak=0.$$

or $$p^2\,(y^2-4ax)+2p\,(xy+2ay-hy-2ak)+x^2+2ax-hx-\tfrac{1}{4}ky=0.$$

Hence the envelope is readily seen to be

$$(xy+2ay-hy-2ak)^2=(y^2-4ax)(x^2+2ax-hx-\tfrac{1}{4}ky),$$

which is the cubic

$$xy^2\,(2a-h)+4ax^3+\tfrac{1}{4}ky^3+4ax^2\,(2a-h)-6akxy+(2a-h)^2\,y^2 -4aky\,(2a-h)+4a^2k^2=0.$$

Note.—If we do not take the three co-normal points to be fixed, we get only one relation between the four parameters p, g, f, c, and the envelope can only be represented by its differential equation.

(II.) In my paper (*Proc. Lond. Math. Soc.*, Vol. xxi., Nos. 397, 398) on "Co-normal Points" the equation to the parabola is found to be

$$(y+\lambda x)^2=\tfrac{1}{2}\,[ax\,(8+\lambda^2S_2)]+\tfrac{1}{2}\,[\lambda ay\,(2S_2+\mu\lambda)]+4\lambda\mu a^2,$$

where λ is arbitrary and $S_2=\Sigma m^2$ and $\mu=m_1m_2m_3$. If the co-normal points are fixed, then the envelope is found from

$$\lambda^2\,[x^2-(\tfrac{1}{2}S_2)\,ax-\tfrac{1}{2}\mu ay]+\lambda\,(2xy-S_2ay-4\mu a^2)+y^2-4ax=0.$$

Hence the curve is

$$2\,(2x^2-S_2ax-\mu ay)(y^2-4ax)=(2xy-S_2ay-4\mu a^2)^2,$$

a cubic curve (since the terms of the fourth degree vanish).

Digitized by Google

15022. (Rev. Prebendary WHITWORTH, M.A.)—If n be a positive integer, show that

$$1-\frac{2n}{1.3}+\frac{2^2n(n-1)}{1.3.5}-\frac{2^3n(n-1)(n-2)}{1.3.5.7}+\ldots=\frac{1}{2n+1},$$

and that

$$1-\frac{n}{1.3}+\frac{n(n-1)}{1.3.5}-\frac{n(n-1)(n-2)}{1.3.5.7}+\ldots=\frac{1}{2n+1}\Sigma_0^n\left(\frac{C_x^n}{C_{2x}^{2n}}\right).$$

Solution by SOLIDUS.

The first part is proved directly by continued application of the identity

$$\frac{1}{2n+1}=\frac{1}{2r+1}-\frac{2(n-r)}{2r+1}\cdot\frac{1}{2n+1},$$

putting successively $r=0, 1, 2, \ldots$. Thus

$$\frac{1}{2n+1}=1-\frac{2n}{1}\cdot\frac{1}{2n+1}=1-\frac{2n}{1}\left(\frac{1}{3}-\frac{2(n-1)}{3}\cdot\frac{1}{2n+1}\right)$$

$$=1-\frac{2n}{1.3}+\frac{2^2n(n-1)}{1.3}\left(\frac{1}{5}-\frac{2(n-2)}{5}\cdot\frac{1}{2n+1}\right)$$

$$=1-\frac{2n}{1.3}+\frac{2^2n(n-1)}{1.3.5}-\frac{2^3n(n-1)(n-2)}{1.3.5.7}\cdot\frac{1}{2n+1},$$

and so on.

To prove the second part, note that the series $1-\frac{n}{3}+\frac{n(n-1)}{3.5}-\ldots$ is a particular case of the hypergeometric series, being $=F(1, -n, \frac{3}{2}, \frac{1}{2})$, while the series $\Sigma_0^n\frac{C_x^n}{C_{2x}^{2n}}$ which may be written

$$1+\frac{1}{2n-1}+\frac{1.3}{(2n-1)(2n-3)}+\ldots \text{ is } =F(1, \tfrac{1}{2}, \tfrac{1}{2}-n, -1).$$

Now one of the standard identities in connexion with hypergeometric series may be written (see Forsyth, *Diff. Eq.*, 1st ed., § 127)

$$Y_1=M_5Y_5+N_5Y_6,$$

where $M_5\equiv\frac{\Pi(\gamma-1)\Pi(\beta-\alpha-1)}{\Pi(\beta-1)\Pi(\gamma-\alpha-1)}$, $N_5\equiv\frac{\Pi(\gamma-1)\Pi(\alpha-\beta-1)}{\Pi(\alpha-1)\Pi(\gamma-\beta-1)}$,

$$Y_5=y_{13}=(1-x)^{-\alpha}F[(\alpha, \gamma-\beta, \alpha-\beta+1, 1/(1-x)],$$

and $Y_1=F(\alpha, \beta, \gamma, x)$. Now putting in the values $\alpha=1$, $\beta=\frac{1}{2}$, $\gamma=\frac{1}{2}-n$, $x=-1$, these relations reduce to the following :—

$$M_5=\frac{\Pi(-n-\frac{1}{2})\Pi(-\frac{3}{2})}{\Pi(-\frac{1}{2})\Pi(-n-\frac{3}{2})}=\frac{-n-\frac{1}{2}}{-\frac{1}{2}}=2n+1,$$

$$N_5=\frac{\Pi(-n-\frac{1}{2})\Pi(-\frac{1}{2})}{\Pi(0)\Pi(-n-1)}=0,$$

$$Y_5=(1+1)^{-1}F(1, -n, \tfrac{3}{2}, \tfrac{1}{2})=\tfrac{1}{2}F(1, -n, \tfrac{3}{2}, \tfrac{1}{2}),$$

and the identity $Y_1=M_5Y_5+N_5Y_6$ becomes

$$F(1, \tfrac{1}{2}, \tfrac{1}{2}-n, -1)=\tfrac{1}{2}(2n+1)F(1, -n, \tfrac{3}{2}, \tfrac{1}{2}),$$

which again may be written

$$\Sigma_0^n\frac{C_x^n}{C_{2x}^{2n}}=\frac{2n+1}{2}\left(1-\frac{n}{3}+\frac{n(n-1)}{3.5}-\ldots\right).$$

It would seem that the particular result deduced from Forsyth's formulae is incorrect to the extent of a factor $\frac{1}{2}$. Will some reader indicate an error in the deduction, or, failing that, an error in the general formulae given by Forsyth?

It may be noted that the first part of the Question is a particular case of the well-known formula

$$F(\alpha, \beta, \gamma, 1)=\frac{\Pi(\gamma-1)\Pi(\gamma-\alpha-\beta-1)}{\Pi(\gamma-\alpha-1)\Pi(\gamma-\beta-1)},$$

as is seen by putting $\alpha=1$, $\beta=-n$, $\gamma=\frac{1}{2}$, $x=1$.

The PROPOSER solves the second part as follows :—

Let a pack of cards consist of two suits of n cards each. Let x cards be drawn. The number of ways is C_x^{2n}. The number of ways consisting only of *pairs* is $C_{\frac{1}{2}x}^n$ if x be even, and zero if x be odd.

The number of ways in which an ace is *unpaired* is C_{x-1}^{2n-2}. The number of ways in which an ace and a deuce are unpaired is $2^2C_{x-2}^{2n-4}$, and so on. Hence (*Choice and Chance*, Prop. xiv.) we have

$$C_x^{2n}-2C_1^nC_{x-1}^{2n-2}+2^2C_2^nC_{x-2}^{2n-4}-\ldots=C_{\frac{1}{2}x}^n \ (x \text{ even})$$

$$=0 \ (x \text{ odd}).$$

Divide throughout by C_x^{2n}. Then give x every integral value from 0 to $2n$; add and divide throughout by $2n+1$, and in virtue of *Choice and Chance*, Excursus, Art. 10, we have the result required.

15141. (The late Rev. G. RICHARDSON, M.A.)—If a be an edge of a tetrahedron, A the dihedral angle at that edge, Δ the area of a face, l the perpendicular distance between a pair of opposite edges, and V the volume, then $3V\Sigma(1/l^2)=\Sigma(a\cot A)$ and $9V^2\Sigma(1/l^2)=\Sigma(\Delta^2)$.

Solution by R. F. DAVIS, M.A.

Let ABC be a triangle; A, B, C its angles, and a, b, c its sides. Also let D be the vertex of a tetrahedron having ABC for its base; DA $=p$, DB $=q$, DC $=r$. Then if M, N be points in BC, DA respectively, such that MN is a minimum and therefore perpendicular to both these opposite edges (BM $=x$, DN $=y$), from

$$\Delta ABC \ldots c^2(a-x)+b^2x=a\left\{AM^2+x(a-x)\right\},$$

from $$\Delta DBC \ldots q^2(a-x)+r^2x=a\left\{DM^2+x(a-x)\right\};$$

whence $$c^2(a-x)+b^2x-q^2(a-x)-r^2x=a\left\{(p-y)^2-y^2\right\}=ap(p-2y),$$

$$(b^2+q^2-c^2-r^2)x+2apy=a(p^2+q^2-c^2).$$

Similarly from the triangles BAD, CAD, we get

$$(b^2+q^2-c^2-r^2)y+2apx=p(a^2+q^2-r^2).$$

These equations are sufficient to determine x, y, MN^2. The work is rather lengthy; but the final result is

$$MN^2\left\{4a^2p^2-(b^2+q^2-c^2-r^2)^2\right\}=144V^2,$$

which easily leads to the second part of the Question.

If α, β, γ be the trilinear co-ordinates of E the foot of the perpendicular from D on the plane of ABC,

$$a\cot(BC)+b\cot(CA)+c\cot(AB)=(a\alpha+b\beta+c\gamma)/DE=2\Delta/DE=2\Delta^2/3V.$$

There are three other similar relations, and $\Sigma a\cot(BC)=\Sigma\Delta^2/3V$.

15513. (J. MACLEOD, H.M.I.S., I.S.O.)—Using the usual notation for the ellipse, if at S a perpendicular SD to the major axis is raised equal to SP and in this perpendicular a point E is taken such that SE $=$ AN, prove that $\Delta TDE=\Delta ADS$. In what case does the tangent PT coincide with TD?

Solutions (I.) *by* G. G. MORRICE, M.D., *and* J. BLAIKIE, M.A.; (II.) *by the* PROPOSER *and* A. M. NESBITT, M.A.; (III.) *by* C. M. ROSS *and* W. SCRIMGEOUR, M.A., B.Sc.

(I.) $$CX=a/e, \quad CT=a^2/x, \quad a-ex=e(CX-x),$$

$$(a^2/x-ae)(a-x)=e(CX-x)(a^2/x-a), \quad (CT-CS)AN=CXN.AT,$$

$$ST.AN=SP.AT, \quad SP(ST-AS)=ST.AN, \quad ST(SP-AN)=AS.SP,$$

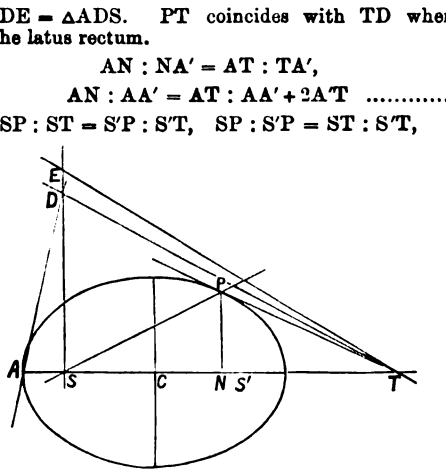
or $$\tfrac{1}{2}ST(SD-SE)=\tfrac{1}{2}SD.AS;$$

therefore $\Delta TDE=\Delta ADS$. PT coincides with TD when P is an extremity of the latus rectum.

(II.) $$AN:NA'=AT:TA',$$

$$AN:AA'=AT:AA'+2A'T \quad \ldots\ldots\ldots\ldots(1),$$

$$SP:ST=S'P:S'T, \quad SP:S'P=ST:S'T,$$



or $$SP:AA'=ST:AA'+2A'T \quad \ldots\ldots\ldots\ldots(2).$$

From (1) and (2), SP : AN $=$ ST : AT. Hence the theorem follows at once, and the tangent coincides with TD when N coincides with S.

(III.) 1. $$SD=SP=a+e.CN, \quad SE=AN=a+CN;$$

therefore $$DE=CN(1-e).$$

Again $$ST=SC+CT=a(e+a/CN).$$

Hence $$\Delta TDE=\tfrac{1}{2}CN(1-e)a(eCN+a)/CN$$

$$=\tfrac{1}{2}a(1-e)(eCN+a)=\tfrac{1}{2}AS.SD=\Delta ADS.$$

2. Again $$\frac{SD}{ST}=\frac{a+eCN}{a(e+a/CN)}=\frac{CN}{a},$$

also $$\frac{PN}{NT}=\frac{(SP^2-SN^2)^{\frac{1}{2}}}{CT-CN}=\frac{CN(1-e^2)^{\frac{1}{2}}}{(a^2-CN^2)^{\frac{1}{2}}} \text{ (after reduction).}$$

Then, if PT and TD coincide, $CN/a=[CN(1-e^2)^{\frac{1}{2}}]/(a^2-CN^2)^{\frac{1}{2}}$; there-

Digitized by Google

fore $a^2-CN^2 = a^2-a^2e^2$; therefcre $CN = \pm ae$ = CS or CS'; *i.e.*, the tangent PT coincides with TD when the perpendicular PN passes through either focus.

15538. (W. H. Blythe, M.A.)—There are N bullets in a bag to be divided among n people. The first takes what he considers to be his share, finding one remainder which he lays aside. The second, not knowing the first has removed any of the bullets, does exactly the same thing, and each of the people in turn repeats the process. Finally, the remaining bullets are divided into n equal portions, with one remainder, each person taking his share. Show that N is of the form An^p-n+1, where A is any positive integer, and p is not less than $n+1$. Find an expression for the share of each person.

Solution by Lt.-Col. Allan Cunningham, R.E.

Let x_r = share taken by the r-th person (before final adjustment);

let N_r = number of bullets remaining after r-th operation (excluding those laid aside);

let x_r' = share received by r-th person after final adjustment;

let $\nu = (1-1/n)$, for shortness.

Then $x_1 = (N-1)/n$, $x_2 = (N_1-1)/n$, ..., $x_r = (N_{r-1}-1)/n$ ..... (1),

and $N_1 = N-x_1-1 = (N-1)-(N-1)/n = \nu(N-1)$.

Similarly, $N_2 = \nu(N_1-1) = \nu^2N-\nu^2-\nu$;

similarly, $N_3 = \nu(N_2-1) = \nu^3N-\nu^3-\nu^2-\nu$.

Lastly, $N_n = \nu^nN-(\nu^n+\nu^{n-1}+\ldots+\nu^2+\nu) = \nu^nN-\nu(\nu^n-1)/(\nu-1)$...(2).

Now let X = *additional* share given to each person on final division of the remaining (N_n+n) bullets (including the n previously laid aside).

Then $X = (N_n+n-1)/n$ .....(3).

By (2) and (3), $\nu^nN-\nu(\nu^n-1)/(\nu-1) = N_n = nX-(n-1)$.

But $\nu/(\nu-1) = -(n-1)$;

therefore $\nu^nN = nX-(n-1)-(n-1)(\nu^n-1) = nX-(n-1)\nu^n$;

therefore $N = nX/\nu^n-n+1 = n^{n+1}[X/(n-1)^n]-n+1$

$= n^{n+1}A-n+1$; [writing $A = X/(n-1)^n$], as required.

Also $x_r' = x_r+X = (N_{r-1}-1)/n+(N_n+n-1)/n$,

which, after some reduction, becomes $x_r' = (\nu^{r-1}+\nu^n)n^nA-1$.

15428. (C. M. Ross.) (Suggested by Question 15376.)—Evaluate

(1) $\int \cot x \cot 2x \cot 3x\,dx$, (2) $\int \tan x \tan 2x \tan 3x \tan 4x\,dx$;

and generalize (2).

Solution by George Scott, M.A., *and the* Proposer.

(1) To find $\int \cot x \cot 2x \cot 3x\,dx = F(x)$. Let the product of cotangents be called $F'(x)$. $\cot 3x = \cot(2x+x) = (\cot 2x \cot x-1)/(\cot 2x+\cot x)$; hence $\cot 2x \cot 3x = \cot 2x \cot x-\cot 3x \cot x-1$; therefore

$$F'(x) = \cot^2 x(\cot 2x-\cot 3x)-\cot x = \cot^2 x\,\frac{\sin x}{\sin 2x \sin 3x}-\cot x,$$

$$\sin 2x \sin 3x = 2\sin^2 x \cos x(3-4\sin^2 x);$$

therefore $$F'(x) = \frac{\cot x}{2\sin^2 x(3-4\sin^2 x)}-\cot x$$

or $$= \tfrac{1}{3}\left\{\frac{\cot x(1+\cot^2 x)^2}{3\cot^2 x-1}\right\}-\cot x;$$

therefore $$F(x) = -\tfrac{1}{3}\int\frac{(\cot x+\cot^3 x)\,d(\cot x)}{3\cot^2 x-1}-\int\cot x\,dx,$$

whence, by division,

$$F(x) = -\tfrac{1}{6}\int\cot x\,d(\cot x)-\tfrac{2}{3}\int\frac{\cot x\,d(\cot x)}{3\cot^2 x-1}-\int\cot x\,dx;$$

therefore $\int \cot x \cot 2x \cot 3x\,dx = -\frac{1}{6}\cot^2 x-\frac{1}{3}\log(3\cot^2 x-1)-\log\sin x$

[Rest in *Reprint*.

15508. (R. F. Davis, M.A.) [Suggested by Mr. C. E. Youngman's Question 15435.]—Three circles touch each other externally and touch externally the circum-circle of a given triangle ABC at A, B, C respectively. Show that their radii are $R/(\cot B+\cot C-1)$, ...

Solution by Frances E. Cave.

Let α, β, γ be the required radii. Then triangle of sides $R+\alpha$, $R+\beta$, $\alpha+\beta$ has angle 2C opposite to third side; therefore

$$\operatorname{cosec}^2 C = [(R+\alpha)(R+\beta)]/\alpha\beta,$$

with two similar equations; therefore

$(R+\alpha)/\alpha = (\operatorname{cosec} C \operatorname{cosec} B)/\operatorname{cosec} A$ (since R and α are positive)

$= \cot B+\cot C$;

therefore $\alpha = R/(\cot B+\cot C-1)$.

QUESTIONS FOR SOLUTION.

15570. (S. C. Bagchi, B.A.)—At noon, on an equinoctial day, a spherical shell of 6″ diameter was projected from a cannon fixed vertically to the horizontal ground of a place on the Equator. The bomb burst in mid-air, casting a shadow bounded by $x^2 = 9(1-2x^2-2y^2)(8x^2+8y^2-5)^2$, $z = -180''$. Show that a portion was torn off along a curve making a constant angle 60° with the vertical diameter of the shell. (The origin of reference being the centre of the sphere and z-axis measured upwards.)

15571. (Professor Neuberg.)—Soient Ox, Oy, Oz trois axes rectangulaires. On prend sur Ox, Oy les longueurs $OA = a$, $OB = b$. Soit C un point quelconque de la droite AB. Trouver l'équation de la surface engendrée par une ellipse qui a pour demi-axes OC, OD, la droite OD étant prise sur l'axe OZ et égale à K . OC, K étant un nombre donné.

15572. (Professor E. B. Escott.)—Find two large consecutive numbers ($> 10^{17}$) all of whose prime factors are less than 200. Examples:

$$\begin{cases} a^2 = 306 \cdot 331 \cdot 585^2 = 5^2 \cdot 7^8 \cdot 17^2 \cdot 19^2 \cdot 79^2, \\ a^2-1 = 2^7 \cdot 3 \cdot 11^2 \cdot 13 \cdot 31 \cdot 37 \cdot 83 \cdot 101 \cdot 107 \cdot 151; \end{cases}$$

$$\begin{cases} a^2 = 315 \cdot 630 \cdot 756^2 = 17766^4 = 2^4 \cdot 3^{12} \cdot 7^4 \cdot 47^4, \\ a^2-1 = 5 \cdot 11 \cdot 13 \cdot 17 \cdot 19 \cdot 37 \cdot 73 \cdot 89 \cdot 101 \cdot 109 \cdot 163; \end{cases}$$

$$\begin{cases} a^2 = 940 \cdot 737006^2 = 2^2 \cdot 3^4 \cdot 11^4 \cdot 19^2 \cdot 127^2 \cdot 179^2, \\ a^2-1 = 5 \cdot 7 \cdot 13 \cdot 17 \cdot 23 \cdot 31 \cdot 41 \cdot 47 \cdot 59 \cdot 71 \cdot 103 \cdot 193. \end{cases}$$

15573. (Lt.-Col. Allan Cunningham, R.E.)—Factorise completely into *prime* factors $N = (208^{13}-1)$. [This contains 30 figures.]

15574. (Robt. W. D. Christie.)—Find an infinite number of positive integral values of X *having the same* Y in the Pellian equation

$$X_n^2-PY^2 = -1;$$

e.g., $70^2-29 \cdot 13^2 = -1$, $746^2-3293 \cdot 13^2 = -1$, ...

15575. (R. Chartres.)—If $mx-1 = r \cdot s$, $x > 3$, then, if (1) r and s are consecutive integers, r the greater, $1/x$ will give six recurring (*bona fide*) figures in the scales $\left(\frac{nx+r}{-s}\right)$, and three recurring (*bona fide*) figures in the scales $\left(\frac{nx+s}{-r}\right)$; (2) but, if $r = s$, $1/x$ will give four such figures in the scales $(nx \pm r)$. Proof required without the modern theory of numbers.

15576. (Solidus.)—Given

$$(c+x)(c-y) = (\mu^2-1)(1-c^2), \quad (z-x)(z+y) = (\mu^2-1)(1-z^2);$$

prove that the equations got by interchanging x, y, and μ with c, z, and $1/\mu$ must also hold good.

15577. (Professor H. Langhorne Orchard, M.A., B.Sc.)—Find (1) the sum of n terms of the series

$$0+128+4374+49152+312500+1399680+\ldots;$$

and (2) the sum of n terms of the series in (1) added to n terms of the series $1+128+2187+16384+78125+279936+\ldots$.

15578. (C. M. Ross.)—Find $\underset{n=\infty}{\mathrm{L}}\,[(1+a)(1+a^2)(1+a^3)\ldots(1+a^n)]^{1/n}$.

15579. (*Communicated by* Rev. T. Wiggins, B.A.)—Sum to infinity the series $\sin^2\theta-3/2\sin^2 2\theta+3^2/3\sin^2 3\theta-3^3/4\sin^2 4\theta+\ldots$.

[*Note.*—This was one of several series proposed for solution at an examination conducted by the Board of Education. Is the series convergent?]

15580. (Professor Sanjána, M.A.)—A parabola has contact of the second order with $y^2 = 4ax$ at the vertex, and cuts it again at the point whose normal is inclined at $\tan^{-1}m$ to the axis. Prove that its equation is $(4x+my)^2 = 4am^2x$.

15581. (C. E. Youngman, M.A.)—If A, B, C, D, E be five points on a rectangular hyperbola, A, B, C, D concyclic, DD′ a diameter of the circle, EE′ of the hyperbola, then the conics ABCD′E and ABCD′E′ will be ellipse and hyperbola, with their axes parallel and proportional.

15582. (W. Scrimgeour, M.A., B.Sc.)—QSQ′ is a focal chord of a conic. PG, the normal at a point P on the curve, is perpendicular to QSQ′, and meets the axis in G. Prove that $QS \cdot Q'S = PG^2$.

15583. (Rev. T. Roach, M.A.)—Simplify

$$[(1-e^{i\theta}\cos\theta)/(1-e^{-i\theta}\cos\theta)]^{\frac{1}{2}i}.$$

15584. (James Blaikie, M.A.)—Let O be any point in the plane of a triangle ABC, and let any straight line through O meet BC in P, CA in Q, AB in R; then, if points P′, Q′, R′ be taken on the line, so that $PO = OP'$, $QO = OQ'$, $RO = OR'$, prove that AP′, BQ′, CR′ are concurrent.

15585. (D. Biddle.)—AB, AC are two straight lines of indefinite length; P is a point lying between them, the centre of two circles—the one touching AB, the other touching AC. Draw three straight lines, two tangential to the smaller circle and the third tangential to the larger circle, in such manner that the three intercepts between AB and AC may be equal; and find the locus of P, when the three lines so drawn meet in a point.

NEW SCHOOL ARITHMETIC.

By **CHARLES PENDLEBURY, M.A.**, Senior Mathematical Master at St. Paul's School;
Assisted by **F. E. ROBINSON, M.A.**, Assistant Master at St. Paul's School.

*** This new Arithmetic is specially designed in arrangement and method to accord with the recommendations made by the Committee of the Mathematical Association and by the Cambridge Syndicate. While the features are retained which have made Mr. Pendlebury's well-known Arithmetic so popular, the New School Arithmetic is to a great extent a new book, and not merely a revision of the present work. The original Arithmetic will also be kept in print, and will be revised and kept up to date with each new edition as hitherto.

The following divisions of the subjects are worked out in the Sheets:

1. **FREEHAND and FREEARM DRAWING.**
2. **DESIGN.**
3. **DRAWING from NATURE.**
4. **MECHANICAL DRAWING or RULER WORK.**
5. **COLOUR WORK.**
6. **BRUSH DRAWING.**
7. **CLAY MODELLING.**
8. **CARDBOARD WORK.**

Teachers' Handbooks

To Nelson's New Drawing Course—Drawing, Design, and Manual Occupations.

Stages I., II., III., and IV. By J. VAUGHAN. With numerous Drawings and Plates. 4to. Cloth back. Price **2s. 6d** each.

Stages I., II., and III., in One Vol., cloth, **6s.**

Nelson's Freearm Drawing Cards.

For Blackboard or Paper Work.

Twelve Cards (containing about 100 examples) in each Set, printed on both sides in soft Chalk Line. Size, 9 × 6¼ in. Sets I., II., III., and IV. now ready. Price **1s. 6d.** per set.

THE SCHOOLMASTER says:—"The 'New Drawing Course' is complete. Skilful help is given at every step. As regards the merit of the work, it needs only to be said that Mr. Vaughan has had a wide and varied experience in all the branches of work here drawn out, he has used his skill and knowledge to the very utmost of his ability, and has produced a work which must go far towards setting him amongst the very foremost of drawing instructors of the day. No course of drawing has been reviewed in this paper that has given us more pleasure, or has afforded us greater assurance in classing it as one of the very best and most up-to-date productions we have ever seen."

☞ SEND FOR ILLUSTRATED PROSPECTUS, POST FREE ON APPLICATION.

☞ **New Volume in Cran's Modern Language Object Lesson Series.**

Advanced Course OF Object Lessons in French.

FOR USE IN SCHOOLS AND COLLEGES.

By ALEC CRAN, M.A.,
Examiner to the London and Edinburgh Universities.

With Vocabulary. Fully Illustrated. Cloth, price 1s. 6d.

This volume completes the series of three books of Object Lessons and Picture Lessons in French. Books I. and II. contain, in addition, Elementary Grammar Lessons and Exercises for Translation into French. These two books, along with a suitable reader, form a graduated course for acquiring some facility in speaking the language, understanding it when spoken, reading it, and writing it. The present volume is intended more especially for those desirous of developing the practical accomplishment of speaking the language. At this stage the learner is supposed to study his grammar, composition, and reading from separate books, these being now of a nature too complex to be included in one volume. The method, which is the same as in Books I. and II., aims at leading the student to associate the new vocabulary directly with objects instead of with their English names.

Nelson's Pictures of the Empire.

Each Sheet beautifully printed in Colours. 28 ins. by 21 ins. Prices:—Unmounted, 1s. each net; with metal mounts at top and bottom, 1s. 6d. net; mounted on thick cards, eyeletted and varnished, 2s. net; mounted on linen, with wooden rollers and varnished, 2s. 6d. net. Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

HOME AND COLONIAL SCHOOL SOCIETY.

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

Training College (non-Government Branch) for KINDERGARTEN TEACHERS and LOWER FORM MISTRESSES IN HIGH SCHOOLS.

HIGHBURY HILL HOUSE, N.

Principal—Rev. D. J. THOMAS, M.A.

Vice-Principal—Mrs. J. WHITE, D.Sc. (Lond.).

Students trained for the Examinations of the National Froebel Union.

Two Scholarships will be awarded to Students who have matriculated before entrance.

BEDFORD PHYSICAL TRAINING COLLEGE.

LING'S SWEDISH SYSTEM.

Principal—Miss STANSFELD

(Vice-President of the Ling Association of Gymnastic Teachers, Teacher of Gymnastics in the Cambridge Teachers' College, Froebel Educational Institute, Bedford Kindergarten College, Bedford High School, &c.).

THE object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over two years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology and Hygiene, Dancing, Fencing, Lacrosse, Lawn-tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games. Swimming and Boating in the summer.

There is an increasing demand for Teachers thoroughly trained on this system.

For Prospectus apply—37 Lansdowne Road, Bedford.

LONDON COUNTY COUNCIL.

TRAINING OF TEACHERS FOR SECONDARY SCHOOLS.

A POST-GRADUATE COURSE for the Training of Teachers for Secondary Schools is conducted under the direction of the London County Council at the London Day Training College. The Course is confined to Students who have taken a University Degree or passed Examinations equivalent to those required for a degree. The next Course will commence in October, 1904. The fee for the year's Course is £20. In the case of Students who reside within the County of London, the London County Council is prepared to remit the fee in special cases, if it is satisfied that Students are unable to go through the course without financial assistance. The Lectures and practical work are arranged under the general supervision of Professor ADAMS, the Principal of the College, 9 Southampton Street, High Holborn, W.C., to whom early application should be made by intending students.

G. L. GOMME,
Clerk of the Council.

The Educational Times.

The Proposed Federation of Secondary Teachers.

It will probably be within the knowledge of many of our readers that in the spring of the present year a movement was set on foot for combining in one organization the various existing associations of secondary teachers under such conditions as to provide for common action on educational questions and on matters affecting the profession in general, while leaving them a free hand in their several departments. It appeared to the promoters of the movement that, by its antiquity, by its catholic and non-sectional character, by the lead it has from time to time taken in promoting registration and other measures calling for joint action, and, last and not least, by the resources it had accumulated during many years of efficient management, the College of Preceptors formed the natural nucleus of any such federation. No less was due to the pioneers in the training and certification of teachers, in the system of local examinations, and in the promotion of common professional action. It was therefore resolved to approach the College, and, after considerable discussion, a set of proposals was drawn up by some of the promoters of the movement. These proposals received the approval of a Federation Committee, including representatives of the Head Masters' Conference, the Incorporated Association of Head Masters, the Head Mistresses' Association, the Private Schools' Association, the Preparatory Schools' Association, and the Associations of Assistant Masters and Assistant Mistresses. They were then examined by a Special Committee of the Council of the College, and the report of that Committee, recommending them, as a whole, to the favourable consideration of the Council, was approved at its last meeting. A small Sub-Committee was instructed to meet an equal number of members of the Federation Committee, and to endeavour to come to an agreement as to details and to report to the Council. There the matter at present rests. Should a satisfactory agreement be reached, it will, of course, be necessary to submit it to a General Meeting and to obtain their sanction to petitioning for an amending charter. Meanwhile it is worthy of note that the existing Charter covers all, or nearly all, the possible objects of such a federation as is contemplated.

It is obvious that, from the point of view of the College, no arrangement would be satisfactory that did not, in the first place, provide that any reconstitution should be a development of the existing College, and not its supersession by some different institution, and next that, under all circumstances, including the possible miscarriage or disruption of the proposed federation, its real and personal property should be placed in an unassailable position. The latter requirement it is proposed to meet by the appointment of trustees in whom all property should be vested; the former condition seems to be adequately secured by various details of the proposals. On the other hand, the idea of federation necessarily entails considerable alteration in the mode of election to the Council laid down in the present Charter. It has for many years been the practice of the College to secure the presence on the Council of representatives of as many sections of the profession as possible. Under the proposed conditions direct representation of federated associations is essential, and it seems likely that it can be secured without any serious breach of continuity in the composition of the Council.

It remains only to add a few words on the opportuneness of the scheme. The recent Education Acts have initiated what may be far-reaching changes in the management of secondary education. Whether such changes will be for the public benefit, time alone can show; the general interest roused in educational questions is an undoubted gain. But, at such a crisis, it is incumbent on the profession to formulate its ideas and to make its voice heard on the many problems that have to be solved. To a well organized centre of professional knowledge and professional opinion the more intelligent among those to whom the supervision of education is entrusted would gladly have recourse, nor would they be averse to profiting by professional criticism. They feel that, after all, it is only by making the profession attractive to men of ability, character, and culture that efficiency in education can be secured, and that, without such men, costly buildings and elaborate appliances are useless. Are there not signs that the career of a schoolmaster is less sought after by capable men than it was a few years ago? If so, all the

Digitized by Google

more reason for machinery for familiarizing the world with professional needs and aspirations. No doubt there are interests and interests: head masters and assistant masters, public- and private-school masters, do not always view things in exactly the same light; but their points of agreement are far more numerous than their points of difference, and all are alike eager to do the best for the rising generation and to promote the dignity and usefulness of the great profession to which they belong. The present transition period is surely one when their combined influence is most needed, and most likely to be effectual.

For many years the College of Preceptors has opened its doors to many educational associations; it has more than once served as a rallying-point for their conferences with each other. But, just as the action of the Universities in examining first pupils and then teachers necessarily limited the field of usefulness open to the College, so the development of these very associations may in the long run destroy its *raison d'être* and force it into being the organ of but a small section of the profession. It is therefore to be hoped that the steps now being taken to make it a meeting-point for all sections may be brought to a successful issue, and that the College may in the future more effectually than ever fulfil the duty laid upon it by its charter "of promoting sound learning and of advancing the interests of education."

NOTES.

The Board of Education has just issued the year's "Regulations for Secondary Schools," to be operative from August 1, 1904, to July 31, 1905 (Cd. 2128. 2d. Eyre & Spottiswoode). A prefatory memorandum of some length explains that the Regulations "have been framed with the view of promotimg the provision and organization of secondary schools, each of which shall have a clearly defined purpose and a well considered scheme of instruction suiting it to take its proper place in an organized system of National Education." Here is the right note, and the details are worthy of careful consideration. The term "Secondary Education," for the purposes of these Regulations, and particularly for the "administration of grants to secondary schools upon a wider and firmer basis," will be held to include "any day or boarding school which offers to each of its scholars up to and beyond the age of sixteen a general education, physical, mental, and moral, given through a complete graded course of instruction of wider scope and more advanced degree than that given in elementary schools." The Board emphasize and explain the three essential qualities of the required instruction: general, complete, graded. Moreover, "the earlier education leading up to this course, and the further education (if any) given beyond it, are regarded by the Board as forming together with it a single organic and progressive system." Here is a clear effort at welding the system. But there is more to be done yet: Section 20 of the "Conditions of Recognition" provides that "the school must not be conducted for private profit." The Bedfordshire scheme may prove suggestive to the Board of Education. This provides frankly "that, where possible, the Local Education Authority should *make or refuse grants to schools which are conducted for private profit in the same way and on the same conditions as such grants are made or refused to schools conducted on a purely public basis*"—a notable example of good sense and public spirit.

The University of Manchester has honoured itself in doing honour to the memory of Prof. Adamson. A bronze medallion portrait of the late Professor was unveiled in the Christie Library (June 3)—a replica of that in the University of Glasgow; accompanying the medallion was a gift of £300, the surplus subscriptions, for the foundation of an Adamson Lectureship in philosophy, literature, or science; and there was also a gift of Adamson's philosophical library, which triples the former extent of the philosophical library of the University. Before going to Aberdeen and Glasgow, Adamson had laboured for seventeen years at Owens: he practically drafted the plan of studies there, and worked with his usual untiring energy as Registrar, as first Secretary to the Board of Studies, and then as Chairman of the Board. He was undoubtedly, as Prof. Sorley said, the man of greatest philosophical learning of his own age and country: only his friend Croom Robertson could have come into competition with him on that ground. How thoroughly he had lived through the great systems of philosophy, ancient and modern, can readily be seen in the two volumes of his lectures recently edited by Prof. Sorley (Blackwoods). But his subtleness of intellect and comprehensiveness of speculative power would not have led him to his conclusions if he had followed the too common philosophic practice of sealing himself up hermetically in a glass jar, or retiring from the world like a Sanyasi. Adamson was a keen man of affairs as well as an earnest student, and all the more effective a philosopher for his familiarity with the practical life of the world about him. He was a greater man than Manchester even yet knows: his modesty still veils his qualities. These memorials of him in the place of his first public work will grow in value with the years and stimulate and elevate the coming generations of students.

In "An Oxford Correspondence of 1903," which he professes to "edit" (2s. 6d. net. Blackwell (Oxford); Simpkin, Marshall, & Co.), Mr. W. Warde Fowler plays deftly, and by no means ineffectively, around the outworks and substructions of the Modern *v.* Classical Question at Oxford. From the correspondence, which passes between an Oxford tutor and a "second-class" pupil that has failed to get into the Indian Civil Service list, it appears that there is a good deal to be said on both sides as to the scheme of Greats, though the experience of a new interest without an examination at the end of it and the example of work at Zürich University and Polytechnikum give impressive weight to other views of working methods. We quite agree that "it won't do to run a tilt" at examinations; but, if "the remedy for their present exacerbation is to be found in a wholesomer educational atmosphere," we wish the accomplished tutor had shown how such atmosphere is to be induced. True, the wise physician "will study the whole constitution and try to attack the mischief at its roots"; only is it not about time that he was getting at those roots? But in any case the *brochure* makes very charming reading, and combatants

Digitized by Google

of every colour will vote it delightful—even, we venture to speculate, that terrible "man of science who lectured a day or two ago here on Oxford and Physical Science." Yet, after all, why not grasp the nettle, and get forward with the business?

"To change the system, to do away with compulsory Greek from Responsions, means to disorganize the education of almost all the schools of the country." "Take away the great basis of educated thought, the slight but widespread acquaintance with the greatest of languages and literature, and the whole basis of modern life is transformed." Such is the burden of "The Study of Greek" (6d., Parker)—a militant pamphlet by the Rev. Dr. I. Gregory Smith, with recommendatory preface by the Master of Pembroke (Oxford). No doubt there are minds that will respond to this sort of appeal, but we rather fancy that a strict regard to the point at issue and a careful estimate of the facts involved would be more serviceable to the cause. Greek is in no danger whatever; whether a certain number of youths would derive more advantage from transferring their time and energy from a rather futile struggle with Greek to some other subject or subjects is a very different matter, and really a somewhat smaller matter.

THE bitter cry of the Irish Protestant National Teachers' Union on the question of tenure was heard at Belfast on June 18. It is but recently that all Irish elementary teachers were in the same boat of absolute insecurity; but the Catholic hierarchy had the good feeling and the good sense to resolve that no clerical manager should dismiss a teacher without the sanction of the Bishop of the diocese, and now the Protestants have to fight their own battle. The *Irish School Weekly* (June 11) quotes Dr. Starkie, the Resident Commissioner:

> The present system of school management in Ireland is such as no other country can parallel, and only historical reasons can justify or palliate. The local managers have absolute power of appointment and of dismissal of teachers, although they are not responsible for any portion of the salaries, and are merely the channels through which the State grants pass.

Our contemporary also quotes from a speech of the Chief Secretary (April 18):

> In Ireland the teacher is in the same anomalous position. He is practically under the Board so far as prospects in his profession are concerned. His appointment and dismissal are exclusively in the hands of the management. What general result of education can you expect when the teacher is absolutely at the mercy of the managers of some twopenny-halfpenny schools? He can only be appointed by one man and dismissed by that man any day of the week.

This renders intelligible the phraseology of a Tipperary rector, who advertised (February, 1901) in a Dublin daily for "a Classed and Trained Principal Teacher under the National Board, able to conduct the playing and singing in the Parish Church, thoroughly conscientious and disciplined, strictly obedient in all details to the Manager, and humble and respectful to all." Really it seems a strange phenomenon that, in a society where such things are possible, there should have been found spirit enough to start a Union. The position of these teachers is humiliating and discreditable in the last degree, and disastrous to the interests of education.

SIR COURTENAY ILBERT'S Romanes Lecture should have the effect of drawing some attention to Montesquieu, who, though 'no longer the oracle of statesmen," is a most charming, writer, and still possesses a large literary and historical interest. It could scarcely be otherwise if he "was during the first half of the nineteenth century the inspiration of all constitutional monarchists both in France and in other European countries." The transformations operated by physical science have issued in a new world, no doubt; but the historical importance of Montesquieu's ideas still remains. Sir Courtenay thus summed up:

> Montesquieu left two great legacies to the world. He formulated the theory of the British Constitution, which held the field for a century, and was the foundation of every constitutional Government established during that period. He gave a new direction to the study of legal and political sciences. Montesquieu was one of the greatest of the apostles of liberty in modern times. Socially and politically he belonged to the old *régime* which in France passed away in 1789, which in England, where changes were less catastrophic, began to pass away in 1832. Scientifically, also, he belonged to a bygone age. His new ideas, his new methods, once so fresh, so attractive, so stimulating, had passed into and been merged in the common heritage of Western thought. But in his generation he succeeded with a success beyond his most sanguine hopes in doing what he tried to do—he made men think.

ANOTHER proposition for the furtherance of "Imperial Education"—this time from Canada. Spite of tariffs and tiffs, we all love Canada, and many of our people go out "to share in the development of the unrivalled wealth of the Dominion's resources." But it is only the man with an art in his muscles or at his finger-ends that can at once take off his coat and go to work—the farm-labourer, the artisan, the mechanic. In business it is different: business men do not arrive ready-made; and "the Canadian man of business is not going to engage a man of thirty, or even four or five and twenty, with no business training, when he can get boys of seventeen or eighteen who will go in at the very beginning and learn the very alphabet of his methods." We cannot complain: it is very much our own principle. But Mr. J. F. Crowdy, classical master in the Upper Canada College, Toronto, and an old Harrow and Trinity man, proposes to meet the difficulty in this way (*College Times*):

> A boy could be educated in England till he was fourteen, at one of the preparatory schools, where he can get the best of grounding; then come out to Canada, enter some good school here, and spend three or four years in it. With such a beginning he would go far in scholarship, and would lay the foundation of friendships that would be useful in his business career. . . . It would give to Englishmen at home a knowledge of Canada, an insight into Canadian thoughts and feelings, which at present they do not possess, and who can say that much benefit to both countries might not result?

Boys cannot very well be sent everywhere; but, if Canada be chosen as their future field of business operations, the proposition does not seem amiss.

IT runs against the grain to apologize for bad spelling, but after all very much depends upon the circumstances. We do not inquire now whether spelling comes, when it comes in proper form, by nature or otherwise. But, surely, when it stands in competition with practical qualities there should be no question which is to be preferred. It is reported that Lord Roberts has refused to appoint some officers on the Staff because they spell badly. If he has plenty of competent officers to choose among, then that may give some weight to his exclusion of such as are weak in spelling, though perhaps not much weight. An officer writes:

> Although a bad speller, I was almost invariably selected to make

Digitized by Google

surveys in my regiment. I was also first in fortification at one examination at Sandhurst, and made 49 out of 50 possible at the digging class, Chatham. On one occasion, on mentioning this defect (bad spelling) to a general officer who had been Commandant at the Staff College, he remarked that he had two sons—one in the Engineers, a very clever man, but who, nevertheless, could not spell correctly; and the other in a Line regiment, but not clever, who never made a mistake in spelling. Now, which would you rather have as a Staff officer of these two?

Yes, but that is not quite the point; the case assumes that there is no adequate choice among officers that can spell. But why a man should be thrown back in so utterly practical a profession on the ground of his spelling is difficult for an outsider to understand. Were the Boer officers examined in spelling before appointment? On the other hand, why on earth should a man not be able to spell decently? The puzzle seems hopeless, though one might have fancied that a very little attention would soon settle the matter.

SUMMARY OF THE MONTH.

Floreat Etona! The Fourth of June was a fine day and a brilliant day at Eton. Among the famous visitors were Earl Roberts, Lord Curzon, Mr. Brodrick, and Mr. Wyndham; and Lord Curzon, in professing his indebtedness to Eton, went very near to adapting to his own career in India the Wellingtonian legend about the virtue of the playing-fields. The wet bobs, the procession of boats, the speeches of the Upper School—we quote the descriptive formula from a respected contemporary—"all went off with a swing."

THE Greek Play at Bradfield College—this year the "Alcestis" of Euripides—was acted by the boys with great applause. Some fifteen hundred persons accepted invitations for one or other of the five days of the play, and the weather was propitious. The dresses and other appointments were archæologically correct; and the lion's skin worn by Hercules (H. A. Robinson) was lent by Mr. F. C. Selous, to whom it was presented by the late King Lobengula. The music was written by the Rev. S. J. Rowton, M.A., Mus.Doc., Director of Music at the College. Dr. Gray was deservedly complimented in the highest terms, and the labours of all those engaged in the representation were greatly appreciated.

AT the National Society's annual conference of diocesan secretaries and inspectors, principals of training colleges, and others interested in Church schools (June 10), the Bishop of Gloucester in the chair, the Rev. Prebendary Hobson, Principal of St. Katherine's Training College, Tottenham, speaking on "The Supply and Training of Teachers," said it had been calculated that in London alone, to bring the Church schools to the level of the old Board schools in respect of staff, two thousand certified teachers were needed. At the present time there was a deficiency of five hundred certified teachers in the London Board schools, and in the whole country there was need of from fifteen to twenty thousand certified teachers either now or in the very near future. Canon Hankey, referring to the pupil-teacher system, said that a system by which children of between fourteen and sixteen years of age were taught to be young prigs by being placed in charge of other children was utterly vicious and wrong. The Rev. Donald Jones, Principal of Bede College, Durham, dealing with "the syllabus of the religious knowledge examinations in Church training colleges," remarked that it was an impossible syllabus.

AT an adjourned Conference between the representatives of the County Councils and County Borough Councils of Lancashire and Cheshire with reference to the provision of training colleges for teachers, held at Manchester (June 9), the following resolutions were passed (after considerable debate on the second):—

(1) That, in the opinion of this Conference, the number of trained teachers employed by the various Elementary Education Authorities should be largely increased. (2) That, in the opinion of this Conference, it is desirable that the various Educational Authorities in the whole of Lancashire and Cheshire should co-operate in the training of teachers and in the provision of training colleges, and that a sub-committee be appointed to draw up a scheme for consideration, carrying out the foregoing proposal.

After further discussion, it was decided that the committee should consist of two representatives of each of the County Boroughs, three representatives each of the Universities of Manchester and Liverpool, together with the chairman and deputy-chairman and the chairman of the Elementary Sub-Committee of the Lancashire and Cheshire County Education Committees, and the principals of the training colleges at Warrington, Edge Hill, and Cheshire.

THE Annual Conference of the Association of Head Mistresses was held at the Mary Datchelor School for Girls, Camberwell (June 11), Mrs. Bryant, D.Sc., President, in the chair, and 165 members in attendance. The Presidential Address dealt with the correlation of the school stages of education. Far above the cultivated intellect and the carefully formed habit of will was the importance of turning all powers to purpose, and the beginning of sound education consisted in the development of the child's interest in all sorts of humanly interesting things. The following resolutions were discussed and carried unanimously:—

That, in view of the forthcoming issue of supplemental registers, the Association desires that evidence of a good general education be required in addition to the qualification in the special subject.

That the Association welcomes the proposal to constitute a College of Secondary Teachers, and desires to co-operate with other recognized associations in carrying it into effect. The most important objects of such a college were represented to be: (1) to promote sound learning and in particular to advance secondary education; (2) to form a corporate body of teachers as fully representative as possible of the various branches of secondary education; (3) to press upon Central and Local Authorities the importance of freedom and diversity in education, so that they may recognize and aid various types of secondary schools, whether public or private; (4) to advocate the claims of efficient private schools for such recognition and aid, on grounds both of equity and of the economy of public money.

Various papers were also read and discussed. A desire was expressed by the Conference that information on the subject of co-education should be collected and circulated.

THE International Women's Congress at Berlin has paid considerable attention to education. Fräulein Schneider spoke strongly in favour of co-education. She was warmly supported by Frau Losper Housselle, who also urged that the social duties of women as teachers concern the children, girls who had left school, mothers generally, and, lastly, their own development. At Brandenburg a society had recently been formed for the purpose of educating children by special theatrical performances, concerts, and appropriate books. For girls who had left school the same society had, continued Frau Losper Housselle, a room for culinary classes and general instruction in practical work in the house, &c., while mothers were given elementary medical instruction in the care of children, &c. Lady Marjorie Gordon gave an account of the splendid schools in Scotland, and also of the beneficial influence exercised by women in educational matters there. She hoped that German women would also soon acquire the right to take an active part in all educational matters. Fräulein Blum demanded more practical instruction on sanitary matters, and on the great evils of alcohol and intemperance. She thought continuation schools of the highest importance for young girls. Frau Dr. Friburg (Finland) pleaded eloquently for co-education.

FROM a return presented to the House of Commons showing the total amount of the residue grant paid to Scotch Local Authorities, and the manner in which it has been allocated during the year ending May, 1903, it appears that the total amount of the residue grant paid to the County Councils and Town Councils of burghs and police burghs in respect of the year 1901–1902 was £69,491. 4s. 10d., of which £50,686. 10s. 4d. was allowed for purposes of technical education, and £17,304. 14s. 6d. was devoted to relief of rates, while in the case of one burgh the allocation of a sum of £1,500 remained in abeyance. The total amount available for purposes of technical education during the year 1902–1903 was £70,877. 19s. 9d., and the total amount expended was £55,685. 5s. 8d., of which £12,164. 13s. 9d. was handed over to the Secondary Education Committees.

THE Report of the Committee of Council on Education in Scotland says:—

Turning to the whole existing supply of teachers, we find that of 4,454 male teachers 81·01 per cent. had been students in training colleges or King's students, while of 7,626 female teachers 61·58 per cent. had received a similar training. It must not be forgotten, however, that of the minority, especially in the case of the male teachers, many have obtained, otherwise than in the training colleges, a training of a very valuable sort. Many of both sexes, who enter the examination as acting teachers, have acquired a knowledge of the duties of their profession, by serving as pupil-teachers, and afterwards as assistants, under teachers of large experience and skill. Of the whole number of teachers, again, we find that 1,247 are graduates (1,116 male and 81 female), while many have been partially educated at the Universities, and have also acquired experience by service in schools. . . . The training colleges, however, continue to constitute the chief source of the teaching supply, and we found it expedient in 1898 and 1900 considerably to increase the number of recognized students. These colleges, which are eight in number, are now recognized for 1,392 students. . . . We estimate very highly the plan of adding some attendance at University classes to the ordinary curriculum of the training colleges. This plan was first proposed by the Code of 1873, under which the fees of students, who, after giving proof of their qualifications, attended University classes, were admitted as part of the legitimate expenditure of training colleges. Advantage has been taken of the opportunity to a large extent. Statistics show that not a few of the future Scottish teachers are acquiring some higher culture in a sphere larger than that of any institution devoted to purely professional training, and we believe that this will greatly help in maintaining the high standard which has always been a traditional characteristic of Scottish education.

Seeing that the training colleges are the source from which most of our teachers are drawn, it is interesting to inquire whence the candidates for admission to the training colleges chiefly come. Last year there were 4,165 pupil-teachers of all years, 1,071 of whom were in the last year of their engagement. In December, 1903, 852 pupil-teachers and ex-pupil-teachers were presented at the examination for admission to the training colleges, of which number 445 passed the examination in the first or second class. There were also presented 167 candidates who had not been pupil-teachers, of whom 58 qualified for admission. In addition, 519 candidates (399 pupil-teachers and 120 non-pupil-teachers), having passed the qualifying examinations mentioned in Articles 70 (*d*) 6 (*a*), 70 (*d*) 6 (*b*), 95 (*a*) 2, 95 (*a*) 3, 96 (*a*), and 96 (*b*) of the Code, were eligible for admission without further examination. It appears that it is the pupil-teacher class from which the great majority of our students come, and the training and qualifications of the pupil-teachers must thus exercise a determining influence upon the future teachers who come from training colleges.

THE fifty-seventh annual report of the Friends' First-day School Association shows that the year has been one of great progress, thirty-nine adult schools having been added to the list, with nearly 6,000 adult members; besides an increase of nearly 700 in the members of children's schools. In the three years the number of adult scholars has increased from 29,000 to 40,000, and of children from 17,000 to 22,000. The schools are grouped according to the quarterly meetings within whose limits they lie; and an exhaustive list, with details of numbers of members, and clubs, and so on, is printed with the report.

PROF. REIN, of Jena, speaking at Manchester (June 15) on the use of a practising school, said:—

A hundred years ago Kant said: "First we must have practising schools and then we can have normal schools. That is to say, we must have schools in which we may seek new methods and try new theories." Kant's words were spoken to dull ears, but lately their importance was understood. Men were found in Germany who made Kant's words a reality, and through them the reforms had progressed. From those schools established at the different Universities thorough teachers, men and women, had gone forth—thorough because in their training theory was combined with practice. They would laugh at any man who put outside his house a notice: "Here swimming can be taught, but there is no water." That was what some of the Universities had done in the past. The importance of a practising school was two-fold. In the first place the practiser of education himself needed a practising school, so that his theories should not be unworkable. Secondly, the practising school was necessary for the training student. Without a school he (Dr. Rein) would not like to be a professor of education. He would say that he could not undertake the training of teachers, for it was in the school that they must encounter the difficulties of the subject. Natural aptitude differed in different beings, and depended upon the enthusiasm and the love of the teacher. The methods of training teachers which had been undertaken at Jena had been proved, and their importance had been recognized by the Government. When his predecessor, Herbart, died, the Government determined to maintain both the Professorship of Education and the practising schools, because they had gained experience that thorough teachers were trained in those institutions. In Jena they had first the *Theoreticum*, one day in the week, when the student must present some piece of independent work, to show that he had acquired the requisite knowledge; secondly, they had the *Practicum*, also held every week, and each member of the *Seminar* must show that he had sufficient practical knowledge of teaching; and, thirdly, they had the *Criticum*, in which the experimental lesson was discussed and criticized. It was not wished that the students should only retain what they had learned, but the object was to develop their independence of thought.

IN the course of a lecture at Owens College (June 15) on "Educational Ideals," Prof. Rein remarked:—

The aim of education [he said] was to make life worth living, to achieve some absolute standard of moral worth. He referred to the ideals of ecclesiastical culture, to the ideals of the State, and to the practical ideals of civilization. Ideals must not be delayed until a nation had found the wealth to indulge in them. The German people had been largely influenced by Greek ideals, which were not wholly in harmony with modern democratic conditions, and had been modified in popular opinion, and now by the State in the ideals of the industrial and scientific world. But science, whilst it had discovered much, had revealed some secrets beyond its gaze. Art had also offered its ideals, but æsthetics could not be severed from morals, a fact exemplified by the fate of Greek culture. In Germany to-day the neglect of art in earlier times had led to excessive devotion to art at the expense of the highest and noblest ideals. This highest and noblest lay in the moral life—here and not elsewhere—and was the test both for the individual and for the nation. The individual alone could only be an egotist; society could make him a moral being, for the common life demanded self-sacrifice, and from self-sacrifice sprang the highest type of life, creating a system of moral law which in all ages had controlled the moral life. No development of moral culture could set aside the Ten Commandments. The Christian State was only Christian when it cared for the whole society, and this was the merit of the social order in Germany: it cared for the whole in the interest of the individual. The old morality based on the needs of the common social life must always be supreme in spite of all attacks from schools of philosophy. He appealed to the audience, and especially to teachers, to ponder well upon the deeper tendencies of the age in the region of ethics, and to resolve whether Kant was right in prescribing the laws of the moral life as permanent elements in human existence.

A MEETING of the governors of the Trust for Education in the Highlands and Islands of Scotland was held (June 7) in Edinburgh, Sir William Turner presiding. The Education Committee recommended that a clause should be inserted in the Education Bill for Scotland providing bilingual teachers for schools in districts where Gaelic was the spoken language of the people. Principal Salmond did not think this was a matter for the Bill; it was really a question of administration, and the Secretary for Scotland should deal with the matter either in the Code or by special Act of the Education Department in the way of making a grant out of the Education (Scotland) Fund. The Rev. Dr. M'Phail said he had never felt any special concern about the language, but about the people whose misfortune it was that they did not know English. A resolution expressing the hope that measures would be taken without delay by the Scottish Education Department to provide a sufficient supply of Gaelic-speaking teachers in the Highlands was adopted. A committee was appointed to prepare a memorandum on the subject to the Secretary for Scotland.

MR. ALFRED WEBB writes in the *British Friend* (June) on the origin of the name "America":—

A group of scholars was brought together during the first decade of the sixteenth century in the little town of St. Dié in the Vosges, between Strassburg and Nancy. One of these was Martin Waldseemüller, who devoted himself specially to geographical studies and the preparation of maps. A text-book explaining the meaning of geographical terms and the symbolism of cartography was issued from the private press of the St. Dié Academy in 1507. Humboldt was the first to draw attention to this book and to the suggestion therein contained, which was destined so profoundly to effect nomenclature:—"Alia quarta pars mundi] per Americum Vesputium . . . inventa est, quam non video cur quis jure vetet ab Americo inventore, sagacis ingenii viro, Amerigen quasi Americi terram sive Americam dicendam; cum et Europa et Asia a mulieribus sua sortita sint nomina." Martin Waldseemüller was therefore, without doubt, the namer of America. The maps, which this text-book was meant to illustrate, have only lately been discovered by a Father Joseph Fischer, in search for

Digitized by Google

material for studying the early geographical history of Northern Europe, in the ancient castle of Wolfegg in Wurtemberg, and they have lately been published in a folio of 55 pages and 27 plates by Henry Stevens, Son, & Stiles, of London.

UNIVERSITIES.

(From our own Correspondent.)

Oxford.

THOUGH the term has not been particularly fine and the weather never particularly warm, we can certainly congratulate ourselves that we have fared respectably: we have not had, as in 1903, deluges of rain and inundated cricket grounds. With a single exception—the non-first-class fixture against the Authentics—the cricket matches have been played out. We had fair weather for the Eights, and we were spared oppressive heat in the "Schools" week; and, lastly, the holiday makers have had a very fine Commemoration. Consequently we have not had much cause for grumbling. In University business there has not been much of first-class interest, though the echoes of the thunder of the "clerical" debate have died away slowly.

A two or three days' excitement was raised by the notice issued by the examiners in the schools that candidates must wear *black* coats and white shirts. We believe that the examiners had consulted the Vice-Chancellor, and been assured that some reform in the rather lax method of undergraduate costume in the schools was desirable. At any rate, the *ukase* was issued without consultation with the proctors. It at once stirred up a storm of protest: it was denounced as *ultra vires*. The *subfusca vestis* of the Statutes was cited. A writer in the *Oxford Magazine* suggested that candidates should also bring, as permitted by the Statutes, "for purposes of innocent recreation," bows and arrows.

Whatever the rights and wrongs in the matter of costume, there seems no doubt that the examiners in the schools have only proctorial authority in the absence of the proctors; therefore, it would have been advisable to take the proctors into council, as in their presence at the schools the substituted authority of the examiners would disappear. The candidates themselves had not apparently studied the legal intricacies of the question, and therefore obeyed to a great extent the edict: consequently, we were edified by frock coats and evening suits. However, when the men arrived at the schools they found the proctors there in possession. Apparently the proctors had also consulted the Vice-Chancellor, and found that he disagreed with the terms of the edict. The eventual result was that the new requirements were not enforced, and the examiners found themselves checkmated. One cannot but sympathize with them in their efforts to make the undergraduates more orderly in their costume on official occasions, but such sweeping reforms as they attempted were not well advised.

We have had one University appointment of interest—that of Dr. Firth to succeed Prof. York Powell as Regius Professor of History. The appointment was in accordance with expectation, and was foreshadowed in these notes a month ago. We shall have to wait till next term to see what line the new Professor will take: he is, of course, in some or most respects an antithesis to Prof. York Powell.

Over another inside appointment we have had a little excitement: Dr. Payne has been the University representative on the General Medical Council for some time and was renominated again by the Hebdomadal Council: but, as a matter of fact, the actual election lies with the members of Convocation, and it appears that with the resident medical members of the University Dr. Payne's views on some subjects do not find favour. So Prof. Arthur Thomson was nominated in opposition to Dr. Payne. There was a question whether the latter would withdraw when he found that there was so much opposition: as a matter of fact, some correspondence between him and his nominator, Dr. Magrath, was circulated among members of Convocation, and Dr. Payne in his answer to Dr. Magrath expressed a willingness to withdraw if his nominator thought fit. However, he did not withdraw, but he was very easily defeated. Prof. Thomson is one of the best organizers up here and has done a very great deal in carrying through reforms at the Museum: he is unfortunate, perhaps, in not having any college backing, as like most of our Science Professors he is not in the accepted sense an Oxford man.

Commemoration has been a distinct success, and the function of the Encænia, though prolonged beyond the natural limits of endurance, was well organized. We had been led to expect that the new Chancellor would not be audible, but we were agreeably disappointed: after a certain pardonable hesitation at first, he warmed to his work—no slight matter when the number of honorary degrees (*i.e.*, 37), to be submitted separately, is taken into account—and as a frivolous graduate in the arena calculated with a stop watch he reduced his time for the submission of the name of a Doctor from 25 seconds to 9¼ seconds. Even then the proceedings lasted over three hours, and the unfortunate Doctors of Letters who came last had a weary wait in an adjoining hall. Dr. Goudy, in presenting the Doctors of Civil Law, was quite adequately ample; while in the cases of Science and Letters Dr. Love and Mr. Bywater were somewhat inaudible. A critic, after listening to Dr. Love, was of opinion that, in the interests of science, Latin should be abolished as well as Greek.

It would take too long to say anything about the recipients of the degrees. The French Ambassador, Lord Curzon, the Speaker, Sir John French, Signor Marconi, Mr. Howells, and Mr. Andrew Lang had perhaps the warmest receptions. Signor Marconi's youth came somewhat as a surprise. The Chancellor's addresses to each new Doctor were models of brevity, and the epithets very happily chosen. Of the rest of the proceedings it may be said that Dr. Merry, in his brilliant Creweian Oration, once more made Latin intelligible; while the Newdigate Poem, by its length and monotonous delivery, roused considerable impatience. Otherwise the behaviour of the undergraduates had been exemplary—almost too exemplary if traditions of Encænia wit are to be preserved—while the numerous ladies endured bravely to the end, munched chocolate, and did not faint. There was the usual official lunch afterwards at All Souls, and in the evening many of the new Doctors were guests at the Christ Church Gaudy.

(From our own Correspondent.)

Cambridge.

THE office of Vice-Chancellor for the coming year will be filled by Mr. E. A. Beck, the Master of Trinity Hall, and the University could not have a more popular or dignified representative. The Hall has for generations been noted for the devotion of masters and men alike to the college ideal. Men like Ben Latham and Mr. Beck may be survivals of older days, but they were good old days, when the interests of the college came first and the individual a bad last.

Mr. Roberts, Master of Caius, is the next on the list for the Vice-Chancellorship. People say he has made mistakes—he certainly has made Caius—in two years' time he will be able to spare some time from the government of his college to devote his energies to the task of University management.

The Department of Engineering has always been conducted on up-to-date principles; it has now resolved on a new departure. By the Coal Mines Regulation Acts of 1887 and 1903 certain qualifications are required from managers in coal mines; five years' practical experience has hitherto been required, but a course of two years at the University is now recognized as equivalent to two years of such practical training. A Syndicate has reported that the necessary subjects fall well within the limits of the curriculum of our Engineering School with the exception of the principles of mining, for which a special teacher will be required. Practical work in coal mines is to be required from all candidates, and this is to be obtained during portions of two Long Vacations under qualified mining engineers. The scheme seems thoroughly workable, and for University men will not entail the creation of any fresh examination except in the principles of mining. As we have a Department of Mineralogy, the subjects of metallurgy and assaying can also be taught for those whose work will be in metalliferous mines.

A novel idea has recently been started that the whole of the educational staff of the University should be remodelled on University, as opposed to college, lines. For the Honour work this has practically been done, but the extension of the idea to the colleges is suggested. The scheme does not seem to take into account one or two factors of Cambridge life: the ordinary Fellow of a college is tempted to stay in Cambridge by the comfortable addition to his means afforded by a lectureship. No one pretends that considerations of merit affect the appointments; poll lectures are a form of college discipline and give the college staff an opportunity of knowing some of their men by sight; the payment of fixed salaries to University teachers would certainly lead to perfunctory work; and the adjustment, which is now so easily arranged when a hitch occurs in college arrangements, would be very difficult in the case of University officers. At present the poll coach, harmless but necessary, fills a gap, and, if compulsorily abolished, he would spring up again

rejuvenescent in another form. In reading between the lines the real meaning of the reformers' manifesto can be detected; there is a growing feeling against the tuition charge, averaging £24 a year, which every man has to pay in addition to the £27 a year which he finds it expedient to pay to his coach for the purpose of getting taught.

One illustration may make the position clear. At a small college a man may be in for a subject in which no lectures are provided: he will attend two sets of lectures given under the auspices of a special Board by one of the recognized lecturers; the two guineas will be paid out by the college, and the balance of the college tuition fee—£5. 18s.—seems to the average man to be paid for nothing. Reforms will come some day, possibly in the form of the creation of a special Board of Studies for the full degree, with "recognized" lecturers as in the case of the other special Boards. By this means the more efficient public lecturers would obtain the patronage of those colleges which did not care to provide teaching for poll men. This, with the important addition of supervisors of studies in each college to advise the men as to their reading and to test their progress, would, at any rate, be an improvement on the present plan.

The Board of Military Studies has made preparations for the influx of work which will be entailed by the new regulations for University candidates for the Army. Lieut.-Colonel H. Dyke has been recognized as an instructor in military subjects, such recognition being a well deserved acknowledgment for conscientious and devoted work as a pioneer of military education in Cambridge.

A propos of the soldiering department, May Week this year was enlivened by a novelty in the shape of a gymkhana, arranged by the University Rifle Volunteers, under the management of a committee consisting of Colonel Edwards, Major Comter, and other officers. The sports afforded a delightful afternoon's amusement for a fairly large crowd of May Week sight-seers. On the river there was much excitement. Third Trinity remained head; but the surprise of the week was the deposition of Trinity Hall by First Trinity, who had lost the services of more than half their crew by an unfortunate outbreak of chicken pox.

The college balls were more numerous, and, if possible, more successful, than ever. The Hawks' Club followed up their new departure of last year by giving their ball during the Eights Week. It was one of the most enjoyable functions of all. The Masons', Trinity, and Trinity Hall balls were the largest of the dances; but there was much amusement to be had at the smaller gatherings in the more homely surroundings of the various colleges.

Cambridge is now empty for a while, and the gyps are masters of the situation.

London. It has been resolved:—(1) That recognition for a limited period be granted to teachers in cases where such recognition may seem desirable, and that such recognition be termed "probationary recognition." (2) That probationary recognition be not given in the first instance to any person over twenty-eight years of age. (3) That probationary recognition be, in the first instance, for a period of two years only; and that, at the end of this period, a fresh application be submitted if further recognition is desired in each case. (4) That probationary recognition be extended at the discretion of the Senate, in cases where such extension may seem desirable, for a further period of two years—but not beyond that period. Probationary recognition will carry with it, so long as it is in force, all the privileges of full recognition.

Manchester. Elsewhere (Notes) we refer to the memorial of the late Prof. Adamson. On the occasion of the unveiling of it, Prof. Sorley said:

Prof. Adamson was indifferent to the acts by which reputation was gained; but he was never forgetful of the end he set before him. He never lost sight of the ideal of knowledge which had filled his mind, and in early life he dedicated "his age as well as his youth, the later growth as well as the first fruits, at the altar of truth." Single-mindedness marked his whole philosophical work, whether in writing or teaching, or in that more intimate reflection of which both writing and teaching were the expression. Two strains not often found together met in him and produced the independent thinker. There was the scholar's strain. Without doubt, he was the man of the greatest philosophical learning of his own age and country. The long series of efforts after truth, which formed the systems of philosophy, ancient and modern, were lived through by him as part of his own intellectual striving. He had felt and faced the difficulties of philosophy as they presented themselves to every different type of mind, and had himself taken each step by which the world problem worked out its slow solution. With the strain of the scholar and historian there was united another strain—that of the man of science. In his mind there never was any opposition, such as was sometimes spoken of, between science and philosophy. The precision of method, the loyalty to fact, the strictness of reasoning which belonged, or ought to belong, to the man of science was his everyday attitude. But, more than this, he had a constant regard in his thinking to the conceptions and laws put forward by the special sciences. He saw in them the material in connexion with which philosophy must attempt its complete comprehension of the world of Nature and mind. Subtle intellect and comprehensive speculative power were united in him with a character of singular sweetness and charm. He did not live to see an independent University in Manchester, although he had no small share in the preliminary work which made the consummation possible. Beloved as colleague and teacher and trusted adviser, in academic affairs a practical administrator, sympathetic with the spirit of modern science, full of the result of intelligent learning, he was yet the representative of the most abstruse of studies, and followed them by the severest method.

Birmingham. A University scheme for the training of secondary teachers for the Secondary Teachers' Diploma has been drawn up by a committee consisting very largely of head masters and head mistresses of secondary schools. Subject to exceptions in favour of those actually engaged in teaching at present, a diploma will be granted only to candidates who have had a whole year's training as provided for by the scheme. Candidates for the diploma must have been admitted to a degree in the University of Birmingham or in some other University of the United Kingdom, or they must have obtained such other qualifications as shall be approved by the Senate. The course for candidates will extend over one academic year, and consist of regular attendance in an approved secondary school and at the prescribed courses of lectures at the University. It will be the business of the head master or head mistress of the school to make the candidate as thoroughly acquainted as possible with school methods, arrangements, and curriculum, and a satisfactory report from the head teacher will be necessary before the candidate can be admitted to the diploma examination. In addition to the courses set out in the regulations Sir Oliver Lodge will deliver a short course of lectures on teaching methods. In response to a first circular sent out by Prof. Hughes, the head masters and head mistresses of most of the important schools in the Midland District have expressed their willingness to accept candidates in their schools under the conditions set out in the regulations, and these schools have been approved by the University for the purposes of the scheme.

Edinburgh. The Senatus of the University of Edinburgh have sent a memorial to the House of Commons on the subject of the Education Bill. They express their general approval of the principles of the measure, and say that if it becomes law it will greatly conduce to the efficiency of national education in Scotland. They approve the establishment of Provincial Councils for education in Scotland, on which the four Universities are to be represented. The petitioners especially refer to Clause 52 of the Bill, in which it is provided that a specified majority of the governing body of any educational endowment may, with the consent of the Department, transfer such endowment and any school in connexion therewith to the School Board of the education district in which the school is situated, and the School Board, if they think fit, may accept the transfer, become the governing body, and administer the endowment. "At the present time," they go on to say, "the Universities are empowered by certain deeds and Provisional Orders to elect representatives on the governing bodies of various educational endowments, and to exercise thereby important administrative duties, especially in relation to the educational interests of these institutions. The Universities are not, however, represented on the School Boards, and the transference would sever the connexion between the Universities and the institutions in question. Whilst there are cases in which the powers conferred by this clause would be of service, your petitioners are of opinion that there are institutions in respect of which it is desirable to retain the administrative connexion with the Universities, and, therefore, that the exercise of the power of transference should be subject to some limitations. In particular, your petitioners would suggest that in the case of the Heriot Trust, in which the

Digitized by Google

University of Edinburgh is more immediately interested, a transference should not take place without separate legislation."

Glasgow. The University Court has decided to invite the University Courts of the other Scottish Universities to send representatives to a Conference which shall consider in their full extent the questions both of the three-term session and of the reconstruction of the curriculum in Arts.

The Court has confirmed the decision of the Senate against a general opening of the medical classes to women in co-education, leaving proposed rearrangements in any single department to be considered on their merits.

Aberdeen. The students' magazine, *Alma Mater*, contains in the last number of its "majority" volume a long article by A[lexander] M[ackie] on Dr. Bain's "Autobiography" (which we notice in another column). A. M. writes:

The issue of this book is an event of some importance to the Alma Mater of which Dr. Bain was an eminent product, and on which he exerted for many years a potent influence. Not only was he, in part, made by the University, but he repaid the debt by reacting on her destiny, and had much to do with the shaping of a certain period of her history. Even yet his influence is not exhausted, and this, the latest work from his pen, will preserve to posterity a permanent record of his academic career and the part he played in the teaching and administration of the University, as well as in the wider fields of philosophic thought. The book is one of exceptional interest, in so far as it details step by step the rise of a youth from the very humblest walk of life not only by distinction in his own country, but to fame outside his native land and to recognition as an original thinker of no mean order amongst the writers of his own day who were most entitled to speak. From the weaver's loom, through a twenty years' tenure of a Chair of Logic, to the dignity of the Lord Rectorship is, we believe, a unique elevation; and the remarkable thing is that these achievements were attained by no adventitious strokes of fortune, but were honestly earned by strenuous, persistent, and unremitted toil, by sheer force of will power combined with singular aptitude in learning. . . . The outstanding value of the book is its delineation of a man of unflinching energy of purpose, of one who crowned himself with the iron crown of duty, whose life was work—an impressive lesson alike to student and professor—a lesson that in this age of distraction and easy-going superficiality is very urgent.

The celebration of the quatercentenary of the University is postponed till 1906.

THE CLASSICAL ASSOCIATION OF ENGLAND AND WALES.

The feature of the Oxford meeting of the Classical Association of England and Wales was the brilliant oration which the Treasurer, Mr. Mackail, delivered on the place of Latin and Greek in human life. The introductory speeches of the Vice-Chancellor, Dr. Monro, and of the Master of the Rolls, the President of the Association, dealt with different aspects of the interests of classics, their importance as a field for the scholar's research, and their value as an instrument of education and culture, the President in addition emphasizing the character of the policy of the Association as one of defence and not of defiance. Prof. G. G. Ramsay, President of the Classical Association of Scotland, and Admiral Sir C. Bridge welcomed the foundation of the new body, the latter urging, from his own experience, the advantage of a classical training to the Naval officer.

The business meeting which followed was chiefly occupied with the organization of the society. Matters of more general interest were the decision, aftser ome discussion, to hold the next meeting in January, 1905, the place to be London; the fixing of the terms of subscription, viz., five shillings entrance fee and an annual payment of the same amount, those who join in the present year paying the entrance fee only; and the adoption of a resolution that a committee should be appointed to consider the rather thorny question of the spelling and printing of Latin texts, this committee to be instructed to confer with the Assistant Masters' Association upon the subject.

The educational discussion was opened by Mr. J. W. Headlam. His subject was the teaching of classics in schools. He laid down that the real issue as regards the school curriculum was not whether the education was to be in science or in classics, but whether the humanistic element was to take the form of classics or of modern languages, English, or other subjects grouped together as modern education. The chief weakness of our present classical teaching was the undue prominence given to its linguistic and especially to its grammatical side. Greek and Latin composition also had too much time allotted them. With less stress laid on these subjects, the thought and subject-matter of the classics would have a better chance. It should not be forgotten that the classics had the great advantage of compactness, offering all they had of educational value within a very narrow compass. Mr. Arthur Sidgwick insisted on the desirability of inquiry and experiment. Classics should not be taught to the wrong people. Methods of teaching could and should be improved and teachers should be trained. The Head Master of Birmingham (Mr. R. C. Gilson) held that the source of our difficulties was the truncation of the old classical course—good in itself, but needing more time than could now be spared. He would teach less Greek, less syntax, but hardly less composition. The Warden of Wadham thought something might be said for interlinear translations as an instrument of teaching. The Head Master of Haileybury hoped that the meeting would bring about a friendly conference between leading representatives of classics and science, a result of which might be a *modus vivendi* in secondary schools. Other speakers followed, but the time limit, which had to be applied, made the discussion rather desultory. Between seven and eight hundred have now joined the Association.

CANON DANIEL.

It is with deep regret that we record the death of the Rev. Canon Evan Daniel, who had for many years occupied a prominent position among English educationists. Trained as an elementary-school teacher at St. John's College, Battersea, he became Lecturer in English Literature, then Vice-Principal, and, finally, in 1866, Principal of that famous training institution, a position which he filled with great distinction for twenty-eight years. In 1873 he was elected a member of the School Board for London, on which he served for six laborious years. While thus more immediately connected with the training of teachers for public elementary schools, he took an active part in the discussion of subjects connected with the organization and improvement of secondary education, and a lucid and succinct setting out of the conditions of the problem will be found in an address delivered by him nine years ago at the College of Preceptors on the occasion of a public distribution of prizes at which he presided.

In 1880 Canon Daniel was appointed lecturer on the practice of education to the College of Preceptors, and for fourteen years he delivered most valuable courses of lectures which from first to last were attended by more than seven hundred students, the great majority of whom were engaged in teaching in secondary schools. From 1880 to the day of his death he was a member of the Council and of the Examining Board of the College of Preceptors, and for thirteen years one of the Vice-Presidents. Both as lecturer and examiner the thoroughly practical character of his mind was conspicuous. No trace of the doctrinaire was to be found in him, and no examinee could have reason to complain of want of consideration on the part of his judge.

Canon Daniel was ever the most affable and reliable of colleagues, the most dignified and impressive of chiefs, and, though a strict disciplinarian, the most tolerant and considerate of teachers. Yet those who knew him were aware that in matters of principle he was unbending, and he was always ready to break a lance with opponents on what he deemed to be essentials in educational controversy. An easy and graceful writer and a lecturer on educational subjects for nearly forty years, it is somewhat remarkable that his name is not found among the authors of books on educational methods and practice, and it is to be regretted that the body of educational doctrine which he so ably and sympathetically expounded in his lectures was never brought together by him in the form of a compendium for the benefit of present and future generations of teachers. Canon Daniel's preferment in 1899 to the Vicarage of Horsham necessarily withdrew him, to a large extent, from his previous activities in the field of education, and while teachers may regret the diversion of his energies to another field of action, the friends of the Church of England have also to lament that he was called away before his course was fully run.

PRIVATE SCHOOLS AND THE LOCAL AUTHORITY.

By A. Millar Inglis, Maidenhead College,
formerly President of the Private Schools' Association, Incorporated, and County Hon. Secretary of the Reading and County Branch.

[*From the "Maidenhead Advertiser."*]

The position of the private schools under the new Education Act is so little understood that it may now be of advantage to those interested to have some statement thereupon placed before them.

In recent years the Education Bills before Parliament have all been based more or less on the Report of the Royal Commission on Secondary Education, 1895. This Commission was composed of the following members:—Mr. Bryce (Chairman), Mr. Hibbert, Canon Lyttelton, Sir H. Roscoe, Dr. Maclure, Dr. Fairbairn, Dr. Jebb, Dr. Wormell, Mr. H. Hobhouse, Mr. M. Sadler, Mr. Llewellyn Smith, Mr. Cockburn, Mr. C. Fenwick, Mr. Yoxall, Lady F. Cavendish, Dr. Sophie Bryant, and Mrs. Sidgwick. Its composition silences any one disposed to raise a political quibble as to the findings. There was no minority Report.

The unfortunate religious controversy that has raged round elementary education has allowed one almost to forget that the Act of 1902 gives to Local Authorities important powers over secondary education—a fact that many will only recognize when face to face with an ever-increasing education rate.

To facilitate passing through Parliament the part of the new Act relating to secondary education was reduced to a skeleton—a blank cheque to be filled up by the Local Authority; who, however, are bound by the two sections quoted below. They are, moreover, morally bound to consider these sections in the light of the Report of the Royal Commission.

Perhaps the question will be best understood by quotations from authorities, the chief of which are: (1) the Report of the Royal Commission, (2) the Education Act of 1902, and (3) the Bedfordshire Scheme for Higher Education.

The first will show what was in the minds of those who framed the second, and the third will show how the Act has been interpreted by the Education Committee of a county of the highest rank in educational matters.

The Education Act of 1902 will be what the Local Authority in their wisdom or unwisdom make it.

An Unbiased Opinion.

The editor of *Education*, the official organ of the County Councils' Association, writes: "We hold no brief for private schools; but we strongly sympathize with them, and are bound to recognize the splendid service they have rendered to the nation, and the great work they have performed in the face of many difficulties." "It is not too much to say that the success of the secondary education work of the Authorities—at any rate, for some years to come—will depend almost entirely upon the manner in which they treat the private secondary schools."—*Education*, June, 1903.

I. From Report of the Royal Commission.

Opinion regarding Private Schools.

"There are private schools, too, of every degree of merit, from those which, conducted in excellent buildings by an excellent staff, are in the van of educational progress, to those which, carried on in ill-ventilated rooms by ignorant persons with no qualifications as teachers," &c.—*Report*, page 148.

"There is an almost universal agreement among our witnesses that it would be a misfortune if good private and proprietary schools were to cease to exist, that they are doing much good work, that they fill a place which cannot altogether be taken by public schools, and that they ought therefore to be reckoned as part of the educational supply of the country."—*Report*, page 148.

Undue Competition.

"So far from attempting to induce uniformity, we trust that a free and spontaneous variety, and an open field for experiment and enterprise of all kinds, will be scrupulously observed."—*Report*, page 257.

"Where it can be shown that private or proprietary schools sufficiently provide for any educational need of a district, the Local Authority should not compete with them."—*Report*, page 150.

Recommendation to Local Authority.

"We have already indicated an opinion that any school which is the property of and managed by a group of private persons, whether corporate or unincorporate, or is owned by one person and managed for his own profit, may properly be recognized by the Local Authority as contributing to the local supply of secondary education, whenever such a school can show that the instruction it gives is efficient of its kind. So far from desiring to displace, or even to weaken, such schools as these, we trust that some of the measures we recommend may tend to stimulate and improve them."—*Report*, page 292.

"The adhesion of such schools (private and proprietary) will tend to raise the general level of instruction: incompetent teachers will by degrees vanish away, and the legitimate rivalry of the most efficient private schools will lessen any risk there may be of stagnation or monotony in schools under public management."—*Report*, page 294.

"We accordingly recommend . . . that it shall be the duty of the Local Authority to make, with the proprietary or private schools, arrangements by virtue of which they will be recognized as supplying efficient education so long as they comply with certain prescribed conditions calculated to secure efficiency. These conditions . . . ought as far as possible to be uniform."—*Report*, page 274.

Continuity of Private Schools.

"This last objection (viz., 'the frequently ephemeral nature of private schools, which might be efficient one year and, owing to the death of the master, either have disappeared or become inefficient another') . . . is, we think, of little weight in the case of any private schools of whose continued efficiency the Local Authority satifies itself at suitable intervals, and we may observe that uninterrupted efficiency cannot be guaranteed even in the case of publicly managed schools . . . "—*Report*, page 152.

Private Profit.

"Schools of the latter two classes are currently characterized as 'schools conducted for private profit' or schools in which the head master has a pecuniary interest. The phrase is invidious, although it has a certain technical accuracy. The public school, whether endowed or rate-founded and supported, is the property of no man, and as a property does not yield profit to any man; but this cannot be so truly said of it when viewed as a school conducted by men who have made teaching the business of their lives. The head master of a public school may benefit, in his own way, quite as much as the master of a private school by the school's success."—*Report*, page 137.

Cost of Secondary Education.

The minimum cost of secondary education may be estimated at £10 per head for schools of 200 to 300 pupils. This estimate excludes rent or interest on capital for buildings (*vide* "Report," page 187). It follows that, if the numbers are smaller, and if allowance is made for rent, the cost must be greater; and in this lies the explanation why heads of private schools have sometimes been forced to conform in some respects with the wishes of those parents able to pay the higher fees.

II. Education Act, 1902.

"The Local Education Authority shall consider the educational needs of their area and take such steps as seem to them desirable, after consultation with the Board of Education, to supply or aid the supply of education other than elementary and to promote the general co-ordination of all forms of education . . . "—Section 2 (1).

"A Council, in exercising their powers under this part of the Act, shall have regard to any existing supply of efficient schools or colleges . . . "—Section 2 (2).

III. From the Bedfordshire Scheme for Higher Education.

"That no school or institution should be aided or recognized as efficient unless the accounts are presented in a form acceptable to the Local Education Authority, that form, in the case of proprietary or private schools, including only the salaries of assistant teachers and the expenditure of sums granted by the Local Education Authority.

"That, provided adequate inspection is secured, it is not essential that the Local Education Authority should be represented on governing bodies, and so become partially responsible for the existence of conditions the control and modification of which are within their functions.

"That, where possible, the Local Education Authority should make or refuse grants to schools which are conducted for private profit in the same way and on the same conditions as such grants are made or refused to schools conducted on a purely public basis."—*Bedfordshire Scheme*, page 17.

"They consider that the best proprietary or private schools have been, in the past, pioneers of educational improvement, and that their continued existence, efficiency, and rivalry will diminish the risk of stagnation or rigidity in the public management of schools. They do not therefore propose to exclude these proprietary or private schools which apply for recognition by the Local Education Authority from the advantages arising from the administration of local funds to which they are admitted under the Education Act, 1902. . . . The Committee are prepared to receive and consider from all recognized schools, public and private, applications for capitation grants, for the supply of teachers, and for capital grants for the supply and upkeep of fittings, apparatus, and appliances for instruction. In all cases where grants of the latter class are made no extra fees should be charged for instruction; the Education Authority should retain a lien upon the fittings, apparatus, or appliances to the cost of which they have contributed, and a contract should be entered into with the proprietors, governors, managers, or trustees, for their return in case the school ceases to be recognized as efficient."—*Bedfordshire Scheme*, page 18.

TEACHERS' REGISTRATION COUNCIL.

THE Report of the Teachers' Registration Council for 1903, with an appendix of pertinent documents, indicates considerable progress. During the year 2,634 schools were submitted for recognition, and 1,954 were dealt with, 459 failing to secure recognition. The arrears of 1902 were cleared off, and of course those submitted at a late date in 1903 necessarily stood over. The Council does well to press upon the Board of Education the inconvenience, and even hardship, of delays. In 1902 arrangements were made for the recognition of schools in Scotland; and now applications are being entertained from schools in Ireland, in the British Colonies, and even in India.

Column A at the beginning of 1903 was represented by some 80,000 names, to which over 5,000 would have to be added to bring the list up to the end of the year. This register is a card register. At the end of 1903 Column B contained 4,506—2,283 men and 2,223 women; 1,212 applications having been rejected, and 1,148 remaining not dealt with. Out of 5,229 applicants—2,249 men, 2,980 women—during the year 4,045 were registered—2,024 men, 2,021 women. The Council note that the 4,506 applicants registered in 1903 "cannot in any way be regarded as covering even one quarter of the number of head and assistant teachers who are qualified for registration."

The total number of applications received from 1,742 recognized schools in England and Wales, exclusive of those represented by the Head Masters' Conference, appears to yield an average of from two to three applicants per school. For a hundred schools represented by the Head Masters' Conference the corresponding average is from five to six. In each case the figures would seem well below the average number of the staff qualified for admission to Column B.

Finance is the Council's great difficulty—the general fate. However, they have managed to repay the £500 advanced to the Registration Fund by the Treasury in 1902; so that they have met the establishment charges out of revenue if they have not yet obtained any remuneration for their own services. "A request to sanction the payment of fees to members of Council for attendance at meetings—estimated at a maximum total of £500 per annum, and clearly contemplated under Section 13 of the Order—has been refused for lack of funds." The request seems very modest—£500 would not go far among a dozen participants—and the refusal is scarcely in the Imperial manner. Nor are funds forthcoming for the publication of the Register. The whole expenditure, in fact, is at present cast upon the revenue from Column B—a very limited column. Still, the cost of publication is sufficiently serious: "an estimated initial cost of £3,000 and an annual revision at £1,000." Even if this be "one of the main objects of Registration," one cannot but doubt whether its accomplishment is worth so much money, and whether the virtual publication by declaring the Register open to the public is not sufficient for practical purposes. Messrs. Swan Sonnenschein & Co. have solved the difficulty so far as concerns Column B.

The Council, experienced as they are, have been much exercised over the definition of a "head master" for the purposes of the last clause of Regulation 4, and evidently their differences with the Board on this point had better be settled, as they sensibly suggest, by an amendment of the Order. With regard to teachers in training colleges and at Universities, there appears to have been some "anomaly" arising out of the Council's interpretation of the Board's interpretation of the phrase "teaching other than of a purely elementary character" in Regulation 5 (2) (*b*). We learn that it "arose from a temporary misunderstanding, and that the policy adopted by the Council has since undergone revision," and presumably the "anomaly" is at an end. There is difficulty also over Regulation 3 (2) (i.) (*b*), which the Council propose to interpret as authorizing them to regard two terms of training together with one term of student-teachership in a school recognized for Regulation 3 (2) (ii.) as equivalent to a continuous year of teaching. Meantime, the Board regard this interpretation as inadmissible under the terms of the Order. However, the Cambridge Conference approved such a course of training, and here again an amendment of the Order seems called for. The Council further recommend that the combination of one term of training and two terms of student-teachership should be admitted as an equivalent—which is, perhaps, more debatable. The Supplemental Registers are not getting on, and no doubt the Council are right in suggesting that the classes that are easier to deal with had best be tackled first. The ascertainment of "ability to teach" is another thorny subject on which the Council offer very sensible suggestions.

We are not surprised to learn that the discretion granted under Regulation 5 (2) (*b*) "has had a wide effect. In removing the barrier to registration which excluded a number of efficient teachers of long standing who fell short of the academic qualifications necessary under the original Order, the Board has recognized the claims of a large and deserving class."

The Report, on the whole, is reasonably encouraging; and the discreet activity of the Council should lead to further relaxations of red tape.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—ED. *E.T.*]

THE POSITION OF PRIVATE SCHOOLS.

To the Editor of "The Educational Times."

SIR,—Your leading article last month dealing chiefly with the Easter Conference of the P.S.A.I. bears gratifying testimony to the devotion of private-school teachers to the cause of education. It seems to me, however, that it may in one respect give those who do not know much about the work of the Private Schools' Association a wrong impression. It is true that at Oxford educational subjects were more prominent than the present critical position of many private schools, but it would be a mistake to conclude from the report of these proceedings that the Association was not alive to the practical necessity for doing its utmost to secure fair treatment for the class of schools which it represents. A great deal of work has been done recently in the way of bringing the claims of private schools before members of Parliament and County and Borough Councillors. Deputations have been sent to the Consultative Committee, to the London County Council, and to other bodies, and, as the number of *Secondary Education* which contains the report of the Oxford Conference shows, numerous meetings in various parts of the country have been held, in which a strenuous endeavour has been made to enforce the claims of private-school teachers to fair consideration. There is no doubt that, as you say, "the private schools have to fight their own battle if it is to be fought successfully." What is sometimes forgotten is that through the Association they are fighting, and, as the Bedford County scheme and some other facts seem to show, not altogether unsuccessfully.

Your candid criticism and welcome testimony to "the high national value of the services of the conductors and teachers of private schools" ought to prove a stimulus and encouragement to those who are engaged in a momentous struggle for the preservation of the freedom and variety which distinguish our present provision for secondary education. I will not trespass further on your space, but hope you will allow me to add that, if any of your readers who are interested in knowing what work is being done by our Association will write to the Secretary, P.S.A.I., 9 Bedford Court Mansions, for particulars of Dr. Sibly's scheme and other papers, he will discover—if he does not already know—that the Association is alive to the difficulties and dangers of the present crisis, and is doing its best to enable private-school teachers to overcome them. This letter is in no sense an official communication, but I write as one who has been intimately acquainted with the work of the Association for many years, and who knows that with its "leading spirits" there is no tendency to neglect the practical work necessary for the defence of private schools.—I am, Sir, &c.,

THE EDITOR OF "SECONDARY EDUCATION."

TRY DENMARK.

To the Editor of "The Educational Times."

SIR,—For twelve years and more Denmark and her sister lands have been my happy hunting ground, and many of my results have, as you know, appeared for the first time in the columns of *The Educational Times*. But I have also urged that the things I have written about should be *seen* if they are to produce their full effect. And the opportunity of seeing most of them is provided this year for the third time by Miss Bulin, formerly of

Digitized by Google

Somerville College, Oxford. From August 9 to 19 inclusive, she has arranged with rare skill and great good fortune a rapid succession of lectures, discussions, visits, and excursions, which, in a higher degree than anything of the kind I ever heard of, give the students of one nationality the beginnings of a first-hand exact knowledge of what another nationality is doing in the way of social reform, municipal government, co-operation, education, and the like. Miss Butlin is a trained investigator of economic problems, feels how much she has learnt from her prolonged residences in Copenhagen, and wishes to share with her countrymen and countrywomen the advantages she has gained. And, having myself been a member of her course two years ago, I should like Englishmen to show their gratitude by mustering this year a hundred strong, as against the fifty of last year and the year before. I know no better opportunity for city or county councillors or for earnest teachers of any grade who are ready to welcome new and fruitful ideas. Everything is in English. The lecturers comprise some of the best University professors and *docents*, members of Parliament, high-school teachers, and leaders of social movements that Denmark can boast. As to the expense, if a man leave home on Saturday, August 6, and land in England again early on Monday, August 22 (travelling first-class on the steamer), he need not, Miss Butlin says, spend more than nine guineas (inclusive); and, if he has to study severe economy and is willing to do as I do in Denmark, I can show him how to do it for seven guineas. Those who wish for full printed particulars of every kind should address themselves to Miss F. M. Butlin, Old Headington, Oxford.

University College School, W.C. J. S. THORNTON.
June 21, 1904.

COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on June 18. Present: Sir Philip Magnus, Vice-President, in the Chair; Prof. Adams, Mr. Armitage-Smith, Mr. Barlet, Mr. Baumann, Rev. Canon Bell, Rev. J. B. Blomfield, Rev. A. W. Boulden, Mr. Bowen, Dr. Breul, Mr. Butler, Mr. Chettle, Miss Crookshank, Mr. Eve, Mr. Hawe, Mr. Holland, Rev. G. E. Mackie, Mr. Millar-Inglis, Mr. Pinches, Miss Punnett, Mr. Rule, Mr. Rushbrooke, Rev. Dr. Scott, Mr. Starbuck, Mr. Storr, and Mr. Vincent.

The minutes of the last meeting were read and confirmed.

The Secretary reported an increase of about 240 candidates entered for the Midsummer Certificate and Lower Forms Examinations, as compared with the last Midsummer Examinations.

He reported that the new Catalogue of the Library was nearly completed, and would, it was hoped, be sent out to the members before the Long Vacation.

Saturday, July 23, was fixed as the date of the next Ordinary General Meeting of the members of the College.

The report of the Special Committee appointed to consider proposals for the Federation of Associations of Secondary Teachers was considered, and the following resolution was unanimously adopted:—"That the Council are of opinion that, taken as a whole, the proposals submitted to them deserve their favourable consideration as tending to promote the objects for which the College was founded, under conditions likely to secure the union of those engaged in secondary education."

The draft report of the Council to the General Meeting was considered, and referred to the President, Vice-Presidents, and Dean for final revision.

Mr. J. L. Butler, B.A., The Douglas School, Cheltenham, was elected a member of the Council in place of Mr. Leetham, resigned.

The following persons were elected members of the College:—

Mr. H. Bendall, M.A, 37 Norfolk Street, Strand, W.C.
Miss H. G. Bowyer, 23 Kensington Square, W.
Rev. T. C. Fry, D.D., Berkhamsted School.
Mr. S. G. F. Wilson, 8 Oakhurst Grove, East Dulwich, S.E.

The following books had been presented to the Library since the last meeting of the Council:—

By E. ARNOLD.—Oman's Junior History of England; "Poets' Corner": a Book of Verses for Children.
By G. BELL & SONS.—Besant and Ramsey's Hydrostatics; Headlam's Translation of the Agamemnon of Aeschylus; Pendlebury's New School Arithmetic, Part I.
By MACMILLAN & CO., LTD.—Frazer's Le Théâtre à l'École.
By METHUEN & CO.—Methuen's Examination Series—Examination Papers on Horace, Vergil, and Thucydides; Junior Examination Series—Geography and German.
By RIVINGTONS.—Hassall's Tudor Dynasty.
By G. ROUTLEDGE & SONS, LTD.—Ludgate Nature-Study Readers (4 vols.); Ludgate Standard-Author Readers (4 vols.); Ludgate Story Readers (7 vols.); Sonnenschein's Reading in a Twelve-month (9 vols.); and Spelling and Dictation Book (3 vols.).
Calendar of Edinburgh University.

CURRENT EVENTS.

Fixtures.

The half-yearly General Meeting of the members of the College of Preceptors will be held at the College on Saturday, July 23, at 3 p.m.

* * *

Prof. J. Adams, M.A., B.Sc., F.C.P., will deliver a course of twelve lectures on "Practical Applications of the Art of Teaching" at the College of Preceptors, to commence on September 29.

* * *

A course of Nature Study will be held at the Horticultural College, Swanley, Kent, August 1–13. Introductory and valedictory addresses by Hon. Sir John Cockburn, M.D., K.C.M.G., and Mr. J. C. Medd, M.A. Three courses: (1) Studies in Common Country Animals (F. Finn, B.A., F.Z.S.); (2) Studies in Plant Life and Plant Economics (R. Tabor, F.L.S.); (3) Garden Lectures and Demonstrations (Miss Turnor, Outdoor Superintendent). Various other lectures. Fee (teaching, board, and lodging), £5. Apply to Miss Sieveking, Hon. Sec., 17 Manchester Square, London, W.

Honours.

The Oxford list of honorary degrees, on the first public appearance of the new Chancellor (June 22), was a very full one:

D.C.L.: His Excellency the French Ambassador (M. Paul Cambon), his Grace the Archbishop of Canterbury, the Bishop of Worcester, Lord Balfour of Burleigh, Lord Tennyson, Lord Curzon of Kedleston, the Speaker of the House of Commons, Mr. George Wyndham (Chief Secretary for Ireland), Mr. H. H. Asquith, K.C., M.P., the Master of the Rolls, Admiral of the Fleet Sir Frederick W. Richards, Lieut.-General Sir John D. P. French, K.C.M.G.; Prof. Pasquale Villari, Senatore del Regno, Mr. D. B. Monro, M.A. (the Vice-Chancellor, Provost of Oriel), Mr. John Singer Sargent, R.A., Mr. Charles Booth (President of the Royal Statistical Society).

D.Sc.: The Hon. Charles Algernon Parsons (St. John's, Cambridge), M. Pierre Curie (Professeur de Physique Générale de l'Ecole Municipale de Physique et de Chimie Industrielles), Sir William S. Church (President of the Royal College of Physicians), Sir Andrew Noble, Bart, K.C.B., Sir William Crookes, F.R.S., Sir David Gill, LL.D. (Astronomer Royal, Cape of Good Hope), Sir John Murray, F.R.S., Mr. Alfred Marshall (Professor of Political Economy, Cambridge), Mr. Joseph J. Thomson (Cavendish Professor of Experimental Physics, Cambridge), Mr. Horace Lamb, LL.D., F.R.S. (Professor of Mathematics, Victoria University, Manchester), Mr. Andrew R. Forsyth (Sadlerian Professor of Pure Mathematics, Cambridge), Mr. James Dewar (Fullerian Professor of Chemistry in the Royal Institution), Mr. Joseph Larmor (Secretary of the Royal Society, Lucasian Professor of Mathematics at Cambridge), Signor Guglielmo Marconi (Member of the Grand Cross of the Order of the Crown of Italy).

D.Litt.: Lord Reay (President of University College, London, and of the British Academy), Sir Spencer Walpole, K.C.B., Mr. William D. Howells (the American novelist), Mr. Lewis Campbell, LL.D. (Emeritus Professor of Greek in the University of St. Andrews), Mr. William L. Newman, Mr. Andrew Lang, Mr. John K. Laughton (Professor of Modern History at King's College, London), Mr. Walter Leaf (Fellow of London University).

* * *

The University of Oxford has conferred the honorary degree of M.A. on Mr. F. A. Bellamy, F.R.A.S., First Assistant at the University Observatory.

* * *

Cambridge University has conferred the honorary degree of LL.D. on Archimandrite Porphyrios Logothetes, Archbishop-elect of Mount Sinai.

Digitized by Google

THE University of Dublin has conferred the following honorary degrees:

Litt.D.—Miss Jane Barlow; Sophie Bryant, Principal of the North London Collegiate School for Girls; Thomas Rice Holmes; Prof. Friedrich Leo, Göttingen; Wallace Martin Lindsay, Professor of Humanity, St. Andrews.

Sc.D.—James Dewar, Jacksonian Professor of Experimental Philosophy, Cambridge, and Fullerian Professor of Chemistry at the Royal Institution; Prof. Jacobus Henricus Van 't Hoff, Berlin; Prof. Felix Klein, Göttingen; Major Ronald Ross, C.B., Professor of Tropical Medicine, Liverpool; Jethro Justinian Harris Teall, F.R.S., Director of the Geological Survey of the United Kingdom; Wm. Henry Thompson, King's Professor of the Institutes of Medicine.

LL.D.—Miss Isabella Mulvany; James H. Campbell, K.C., M.P., Solicitor-General for Ireland; the Hon. Hill Irvine, late Premier and Attorney-General of Victoria; Sir Thomas Wm. Snagge, of the County Court, Oxford.

* * *

MANCHESTER UNIVERSITY has conferred the honorary degree of D.Litt. upon Prof. Rein, of Jena.

* * *

THE University of Durham has conferred the honorary degree of D.C.L. on Sir Daniel Morris, K.C.M.G., and the honorary degree of Mus.Doc. on Dr. (now Sir) Edward Elgar.

* * *

THERE were a few educational names in the Birthday Honours list:

C.B.: H. M. Lindsell, Principal Assistant Secretary, Board of Education.

C.M.G.: Walter B. Spencer, M.A., President of the Professorial Board of the University of Melbourne.

Kaisar-i-Hind Medal of the First Class: Edalji Dorabji Talati, B.A., Head Master, Ahmedabad High School.

C.I.E.: Alexander Monro, M.A., B.C.L., Director of Public Instruction, Central Provinces; and C. W. Waddington, M.A., Principal of the Mayo College, Ajmer.

* * *

MR. H. GREGORIUS BROWN, master in physical training, Leeds, has been made Officier d'Académie.

Endowments and Benefactions.

MRS. PERCY SLADEN, of Northbrook Park, Devonshire, has given £20,000 in trust for the promotion of "any research or investigation in natural science, and more especially in the sciences of zoology, geology, and anthropology," in memory of her late husband, Mr. Walter Percy Sladen, sometime Secretary and Vice-President of the Linnæan Society.

* * *

KING'S COLLEGE appeals for £5,000 to provide new laboratories, reference library, and additional lecture rooms, in connexion with the Women's Department of the College, in Kensington Gore.

* * *

A PARENT of one of the present students at Girton College has offered to contribute £2,000 towards reduction of the debt on the new buildings on condition that an additional sum of £18,000 be raised before July, 1907. A strong appeal has been issued for the fulfilment of the condition. Subscriptions may be paid to the Bursar, Miss M. Pickton, 54 Abingdon Court, Kensington, W., or to the "Girton College" account at Barclay's Bank, Cambridge.

* * *

SIR JOHN JACKSON, LL.D., has promised to set aside £5,000 in 5 per cent. preference shares of Sir John Jackson, Ltd., as a permanent memorial to the late Prof. Tait, the income of which will be applied in promoting practical research in the physical laboratory of the University of Edinburgh.

* * *

THE working men of Sheffield are showing remarkable spirit in raising funds for the projected University.

THE Aberystwyth Town Council has made a grant of £30 a year to the University College for scholarships—not restricted to Aberystwyth.

* * *

THE Working Men's College, which is to signalize its jubilee by establishing itself in new buildings in Crowndale Road, St. Pancras, where the foundation-stone is to be laid by the Prince of Wales on July 16, wants some £8,000. Contributions may be sent to Prof. A. V. Dicey, the Principal, The Orchard, Oxford; Lionel Jacob, Vice-Principal, 43 Buckland Crescent, N.W.; R. J. Mure, Bursar, 7 New Square, Lincoln's Inn; or to the Secretary, Working Men's College, 46 Great Ormond Street.

Scholarship.

THE South Wales Institute of Engineers has instituted a scholarship, £70 a year for three years, at South Wales University College.

Appointments and Vacancies.

AT University College, London, Dr. Gregory Foster, Secretary to the College and Assistant Professor of English Language and Literature, has been appointed Principal as from September 1 next, in succession to Dr. Carey Foster.

Mr. C. P. Sanger has been appointed Assistant Professor in Economics; Mr. R. W. Chambers, B.A. (Librarian), Assistant Professor in English Language and Literature; Mr. Philip Wicksteed, Jevons Memorial Lecturer for 1905 and 1906; and

Mr. Tansley, Lecturer in Plant Anatomy for a term of three years.

* * *

MR. CHARLES HARDING FIRTH, M.A., LL.D., Fellow of All Souls, has been appointed Professor of Modern History in the University of Oxford, in succession to the late Prof. York Powell.

* * *

MR. E. A. BECK, M.A., Master of Trinity Hall, has been elected Vice-Chancellor of Cambridge University for 1904–05.

* * *

PROF. A. C. BRADLEY has been appointed Gifford Lecturer on Natural Theology in the University of Glasgow for 1906–7 and 1907–8.

* * *

PROF. G. TURNBULL LADD has resigned his Professorship of Mental Philosophy at Yale, and retires from active academic work.

* * *

MR. J. GILBART SMYLY has been appointed Professor of Ancient History in Trinity College, Dublin, in room of Dr. Tyrrell; and

Mr. W. A. Goligher has been appointed Professor of Latin, in room of Dr. L. C. Purser.

* * *

MR. JOHN WALTER GREGORY, D.Sc., F.R.S., Professor of Geology in the University of Melbourne, has been appointed to the Chair of Geology in the University of Glasgow. Prof. Gregory was geologist to Sir Martin Conway's Spitzbergen expedition.

* * *

MR. HUGH GUNN, M.A., has been appointed Director of Education for the Orange River Colony, in succession to Mr. E. B. Sargant.

* * *

MR. ROBERT BLAIR, M.A. (Edin.), B.Sc. (Lond.), Technical Instruction Secretary to the Department of Agriculture and Technical Instruction, Ireland, has been appointed by the Education Committee of the L.C.C. "Executive officer for the performance of duties in connexion with the work of education in London"; and

Mr. Henry John Mordaunt, M.A., Board of Education, has

Digitized by Google

been appointed Chief Clerk of the Education Branch of the Department of the Clerk of the Council.

* * *

Dr. James Young Simpson, M.A., D.Sc., F.R.S.E., has been appointed to the Chair of Natural Science in the Edinburgh and Glasgow United Free Colleges.

* * *

At Leeds University the following appointments have been made:—

Dr. W. Rhys Roberts, Professor of Greek in the University College of North Wales, to be a Professor of Classics;

Mr. B. M. Connal, M.A., Lecturer in Latin at the Yorkshire College, to be a Professor of Classics;

Mr. Percy F. Kendall, F.G.S., Lecturer in Geology at the Yorkshire College, to be Professor of Geology;

Mr. J. B. Cohen, B.Sc., Ph.D., Lecturer in Organic Chemistry at the Yorkshire College, to be Professor of Organic Chemistry; and

Mr. H. W. V. Temperley, B.A., of King's College, Cambridge, to be Assistant Lecturer in History.

* * *

At Cardiff University College, Mr. T. Raymont, Lecturer in Education, has been elected Professor of Education, and the following Lecturers, who are also heads of departments, have been appointed Associated Professors:—M. Barbier in French, Mr. Boulton in Geology, Dr. Trow in Botany, and Mrs. Millicent Mackenzie (wife of Prof. Mackenzie) in Education. Dr. Perman has been appointed Assistant Professor of Chemistry, and Mr. R. H. Pinkerton Assistant Professor in Mathematics.

* * *

Mr. W. F. Storr, University College, Oxford, has been appointed University Lecturer in the Philosophy of Religion at Cambridge.

* * *

Mr. Alexander Blacklaw, solicitor, has been appointed Clark Lecturer in Procedure, Evidence, and Commercial Law in the University of Aberdeen.

* * *

Mrs. Jessie White, D.Sc. (Lond.), has been appointed Vice-Principal of the Home and Colonial Society's Kindergarten Training College and Head Mistress of the High School for Girls at Highbury Hill House, N.

* * *

Mr. W. E. Urwick, M.A., Lecturer in the University of Durham, has been appointed Principal of the Manchester Pupil-Teachers' College.

* * *

Mr. C. F. Herdener, B.A., chief modern language master, Berkhamsted School, has been appointed Lecturer in French and German in Durham University.

* * *

Dr. T. Martin Lowry has been appointed Lecturer in Science at the Westminster Training College.

* * *

Mr. Christopher Darling, B.A., second master, Leeds Boys' Modern School, has been appointed Head Master of Mirfield Grammar School.

* * *

Mr. E. H. Crump, B.A., second master, Birkenhead Institute, has been appointed second master, Leeds Boys' Modern School.

* * *

Mr. W. J. Sharples, M.A., second master, St. Olave's Grammar School, has been appointed Head Master of Parmiter's School, in succession to Dr. R. P. Scott.

* * *

Mr. Charles W. Thomson, M.A., Grange Public School, Grangemouth, has been appointed Rector of Larkhall Academy.

Literary Items.

The *Record* (April–June) is an exceptionally good number. Mr. John Clarke gives an expository and suggestive review of the Education (Scotland) Bill; Mr. W. Mark Webb deals further with the progress and interpretation of Nature Study; the matter of the Mosely Commission Report is usefully classified so as to focus opinion upon the various points; and there is much serviceable matter on the Training of Teachers.

* * *

The forthcoming *Year-Book of Australia* will contain a special section dealing very fully with education in all grades throughout the Commonwealth.

* * *

Messrs. Bell will publish in autumn a collected edition of Dr. J. Holland Rose's essays and articles on the period 1795–1820, under the title "Napoleonic Studies." The volume will also contain three new essays—"The Idealist Revolt against Napoleon," "Pitt's Plans for the Settlement of Europe," and "Egypt during the First British Occupation." Several hitherto unpublished documents, including a new letter of Nelson's, will be given in an appendix.

Dr. Rose's "Life of Napoleon I." is about to be published in German by Messrs. Greiner & Pfeiffer, Stuttgart.

* * *

Historical students should see Sir Herbert Maxwell's article on "The Diary of Sir John Moore," by Sir J. F. Maurice, in the *Cornhill* for June.

* * *

An Analytical Index to the first 25 volumes of the *Educational Review* (January, 1891, to May, 1903, inclusive) has just been published (Columbia University; 3 dols., *plus* 12 cents for postage).

* * *

Mr. Fisher Unwin is adding to his thin-paper re-issue of the "Mermaid Series" "The Best Plays of George Chapman," edited by William Lyon Phelps, Instructor in English Literature at Yale.

* * *

The Oxford University Press has been awarded an ἀριστεῖον (equivalent to a Grand Prix) for its exhibit of books at Athens in connexion with the Hellenic Educational Congress.

General.

It has been resolved "that the memory of the late Cardinal Vaughan be perpetuated by the erection, in a locality as near as possible to the Westminster Cathedral, of a secondary day school for boys, of a character to meet all the requirements of the present day." It is expected that £25,000 will be required, and already £3,765 has been promised.

* * *

The movement for a proposed University memorial to the late Dr. Salmon, Provost of Trinity College, Dublin, is receiving active and influential support. The treasurers are Mr. Justice Madden, Vice-Chancellor of the University, and Lord Justice Fitzgibbon.

* * *

Prof. Wilhelm Rein, the famous Professor of Pedagogics in Jena University, has been delivering a series of lectures on the subject at Manchester University. Prof. Findlay is an old student of the eminent German educationist.

* * *

A considerable extension of the class-room accommodation at Hartley University College, Southampton, has just been completed, at a cost of about £2,500. The opening was celebrated by a *soirée* given (June 3) by the Duke of Wellington, President of the College.

Mrs. Bryant's staff at the North London Collegiate School presented her with the hood appropriate to her Litt.D. of the University of Dublin.

THE USES OF BOOKS FOR EDUCATIONAL PURPOSES.

By H. C. Bowen, M.A.

At the Evening Meeting of the members of the College of Preceptors on June 15, Mr. Francis Storr in the chair, Mr. H. C. Bowen, M.A., read the following paper:—

I shall take it for granted that not many of those present who have had some experience in the teaching of children are willing to accept seriously and completely the advice of that mad genius who would have us abolish all books for school use and march with Emile into the wilderness, or the hardly less one-sided and extravagant views of those who, setting great store by mental exercise and mental development, would seem largely to ignore the material of knowledge needed for the mind to work with, and without which its exercise is as the ineffectual beating of wings in empty space. There was a time when teaching was taken to mean compelling the young to read, to mark, and to learn by heart the contents of books only, with the birch as sole agent of persuasion. But for some years there has been a reaction to this, and I cannot but think that the pendulum has swung somewhat too far in the opposite direction. For my present purpose I shall take it that we all of us as teachers, while no longer looking upon books as the be-all and the end-all here in education, nevertheless regard the attempt to abolish them entirely, to set back the clock of time and begin the world afresh, as hopeless and unwise for the individual and for the race—from the point of view of social evolution, and indeed from that of all scientific thought; and that we hold that no one can live wisely or effectively *by* himself only and *for* himself; that, in short, we accept Locke's view that the experience—and, I would add, the original research—of an individual life can never suffice for the needs and the nurture of that life. We are all of us dependent on one another. We cannot stand single and self-sufficient if we desire to make ourselves and our work the best we can make it; and to do so is our manifest duty. We may not, even if we would, renounce our royal inheritance, cut ourselves off from humanity past and present, and ingloriously slink out of action to the monastery or the desert. We are what the centuries—and not only our own short spans of life—have made us and are making us; centuries of human and other environments, direct and indirect. We cannot escape, even if we would, the effects of the past, whether it be a far-off past or a near past. Believing this, we shall not seek to deprive the younger folk about us—among whom we move and in whom we have our happiest being—of the profit and privilege of conferring with the thinkers and the workers of our own days and of the old days before us. And this they can best do by means of books.

Educative Functions of Books.

But, though I take this much for granted, that we are agreed that in every department of education *some* books at least are necessary both for learner and for teacher, still I think it would be well for us at this juncture to take stock of, to discuss, and to make clear to ourselves what are the chief functions which books should discharge in the education of the young—what are the nature and the extent of these functions, and in what ways may we, as teachers, best enable them to fulfil their educational purposes.

As it seems to me, we have, in the first place, to consider the characteristics and the characteristic differences of the impressions on mental consciousness made by concrete objects directly, and those made by language; and, in the second place, we must discriminate, as clearly as we may, between the characteristic effects of oral teaching and those of learning from books. After this we should make applications of our results to our particular school subjects.

Interplay of Perception and Conception.

It will not be necessary for me to describe the formation of *sense-impressions*, and of re-presented sense-impressions which are called *sense-ideas;* nor to do more than state the fact that, when these are set in a background of perceived though subconscious particular relations, we get what we term a *percept* (a percept being essentially particular, not general); and, further, that when we have examined a number of more or less similar objects (plants, for instance) and have generalized our perceptions so as to arrive at general conceptions of the relationships which they involve—that is, "when we have not only analyzed some particular plant, so as to distinguish the particular parts, but have analyzed a number of plants into parts more or less similar and more or less related, and have further recombined the generalized products of this distinguishing analysis into a generalized plant—we reach a *concept*"; and may then apply our concept to particular percepts of like character, and so give them a conceptual import—perception and conception playing backwards and forwards as experience develops and widens. All this is familiar enough; though it is well to note that it is by this interplay of perception and conception, which renders each of them progressively wider, richer, more accurate, that we rise into the region of *thought*, and that it is from this interplay that there is produced what we term *knowledge*.

Description and Explanation.

When we consider the use of language in connexion with these processes, in connexion with perception and its particular relations, we get, as Prof. Lloyd Morgan has so well pointed out, *description;* and, in connexion with conception and its general relations, we get *explanation*. And, were we as careful to discriminate as Shakespeare was, we should speak of *apprehending* —forming clear percepts of—a description, and of *comprehending* —forming clear concepts of and so understanding—an explanation.* In making and in receiving or apprehending a description, the mind combines into some sort of construction the material or information provided; and in the latter case especially it is quite evident that the receiver is much assisted in his constructing by the presence or presentation of some familiar model or analogy the general lines of which he may follow in his work. This constructive or synthetic mental process, as you know, we term *imagination;* and its perfection plainly depends upon the perfection and clearness of the percepts introduced and upon the clear understanding and appreciation of the language which accompanies them or which calls them up into the focus of consciousness. Hence, in work which is mainly concerned with the making and the apprehending of descriptions, the need for constantly refreshing, rectifying, and clarifying percepts and for the use of language as far as may be indicative of particulars and their particular relations rather than suggestive of general relations, direct, picture-making language. On the other hand, in

* As Theseus says, be we madman or lover, our shaping fantasies
"apprehend
More than cool reason ever comprehends."

Digitized by Google

making and in receiving or comprehending an explanation, the mind, besides combining the material or information provided, is exercised in judging and reasoning about it, so as to make clear its general relations. The material or information consists partly of particulars (percepts) and partly of generals (concepts), and when we combine these so as to make clear the relation of the particular to the general we are said to explain it. The perfection of this mental process depends upon the perfection and clearness not only of percepts, but of concepts also, and of the comprehension of the relation between the percept and the concept which includes it and of the language used to express this relation. Hence, in work which is mainly concerned with the making and the comprehending of explanations, the need for constantly refreshing, rectifying, and clarifying concepts as well as percepts, and for the use of vocabulary and language which, besides being indicative of particulars and particular relations, is able to clearly express and describe generals and general relations, as, indeed, all civilized language does.

We see then—to put the matter as Prof. Lloyd Morgan does—"that in every stage of mental development observation, the apprehension of description, and the comprehension of explanation and, I would add, interpretation, should be made continually to play into each other's hands. If observation leads up to apprehension, apprehension, in return, quickens observation; if apprehension is the necessary precursor to comprehension, comprehension gives a new meaning to all that is apprehended, and a new zest to individual observation." As Sir W. Hamilton puts it—on the way from the un-unified facts of observation to unified knowledge there is a perpetual alternation of the processes of analysis and synthesis, by means of which the general ideas arrived at by the latter gradually become wider and wider and more and more abstract. As teachers, we should take care so to arrange our course of instruction as to afford frequent opportunities for the interaction of observation, apprehension, and comprehension, and not attempt to keep these three in separate successive compartments, nor endeavour to perfect one without the aid of the other two.

Information and Knowledge.

The pupil must not only observe, but also learn to describe what he observes, and to understand and appreciate the descriptions and explanations of others—in other words, he must learn the use of language. And here a caution is necessary. The pupil must not confuse information and knowledge. Knowledge is a closely related whole, all the parts of which are mutually interdependent. Information is the stuff which, in correlation with personal observation and personal generalization, contributes to the making of knowledge. If the learner desires to gain knowledge, he must submit such of his information as is derived from others to the tests of his own observation and his own generalization, and must see that in the information which he himself gathers the observations and generalizations are fresh, clear, and accurate.

Language as bearing on Thought and Memory.

But before going into this matter any further, let me consider awhile the use of language to the learner—its bearings on thought and memory. I shall not of course attempt to speak of more than a few of the chief points. Following the order of psychological developments, we have first a period of sense-impressions and sense-ideas and percepts of particular objects; and the language which accompanies these experiences is one indicative of particular sense-experiences—experiences actually present. Such attempt as there is to graphically record these experiences takes the form of pictures. Upon this closely follows the desire to communicate information and to describe. This induces attention to the relations to one another of particular objects or sense-experiences—their qualities of size, colour, action, &c. The accompanying language becomes less particular and more abstract and general in import; and the graphic record begins to find pictures too limited and ill-fitted to indicate even particular relations. The memory finds itself helped, but only to recall visual impressions. The time arrives whose predominant characteristics are perceptions of relation, analyzing, generalizing, attempts to explain and to comprehend the explanations of others. Language becomes descriptive, significant of ideas and generalizations. The graphic record exchanges pictures for written signs, written words, which stand for ideas and indicate relations; and the meanings of these words, oral or written, are learnt through association—the association of the mental state with the sound of the word and with the word's written sign. The memory finds itself able to pack its records better, and to recall ideas as well as visual images. It can do its work more quickly. But the mind finds that what it recalls, or what is newly presented by language, is not so effective, clear, and helpful to work with as, in their own particularizing way, pictures were. The statements are only partly comprehended, or not comprehended at all, unless the concepts involved in the ideas have been properly formed from the percepts in which they take their rise, and properly associated with the words or written signs which stand for them. Ideas by their very nature are generalizations; and hence the predominating tendency of language is to generalize. Even when we are describing a particular object, though the relations which we make prominent are relations of a particular *unknown* object to other particular *known* objects, the language we use is so full of *general* import that the description may be, and for adults usually is, set in a background of conceptions or generalized conceptual thought.

It is to this tendency and the liability of words and statements to bring with them many and varying associations that we must attribute the fact that even the best verbal descriptions are indefinite, indistinct, and disconnected—hard, especially for the young, to translate into accurate mental or graphic pictures. They need what is perceptual and particular, and language tends to the conceptual and general. They need to have the features presented to them simultaneously, and in their natural proportions and relations; and language, especially spoken language, presents them in succession and shadowed forth by comparisons which often bring in far more than was wanted or intended. Nevertheless, pictures are so particularizing and so limited in power to express generalizations, and things themselves present so much more than is helpful to the formation of a special single concept, that without language, oral and written, we can make no effective progress in thought—which essentially has to do with relations and generalizations, and therefore none in the acquisition of knowledge, which consists in bringing objects of consciousness into true relations with the general body of interrelated, assimilated experience.

Oral Language and Written Language.

We must now turn to the consideration of the differences between oral language and oral teaching on the one hand and written language and learning from books on the other.

To begin with, the effect of the spoken word is more transient. We cannot, as with written language, go back and ponder over the words and the statement, and, having made sure of the meaning, proceed at our own pace. If the meaning is not caught when the statement is made, we are liable to miss it altogether; and specially liable are we to miss the careful accuracy and exact limitations of the spoken statement and to trust to general impression, and the more so when its subject is not one with which we are intimately acquainted. In description, spoken language is even less able than written language to present all parts of the object simultaneously, and in their relative positions and proportions. And to some the very sound of the voice is a disturbance to thought. Moreover, it appeals to only one sense, that of hearing—a much less reliable means of information than sight, to which objects and pictures appeal—while written language derives advantage from speaking to the eye, though for the young it is apt to be weak in arousing and stimulating self-activity. On the other hand, speech is more flexible. We can change and twist and add to what we say, and say the same thing again and again—compelling renewed attention to particular points and aspects of it—in a way that would be intolerable in written language. Moreover, the look in the face, the tone, the gesture of the teacher give a meaning and an emphasis to what is said—set it in an atmosphere or on a background of emotional desire—which written words can never give. And, above all, it is only in oral teaching that we can have that constant interplay between the minds of the teacher and the learner which is the very soul and essence of true teaching. In written language one tends to think more of the subject than the learner, or to address the vague generalization of a learner—a concept which is liable to be very hazy when the learner is a child. In oral teaching one is drawn to think of the learner first and the subject second, and to adapt the subject to the learner. The spoken word, too, more readily excites curiosity and interest, and a sympathetic manner nerves the pupil to renewed effort. There is, however, always this danger, that the teacher may do all the mental activity and expression, while the child sits passive and listens. It will be seen that, to my mind, speech, through its liability to disconnectedness and rapid change of effect, its tendency to produce

Digitized by Google

impressions somewhat fleeting, indefinite, and indistinct, and through its appealing to an organ of sense less helpful to memory than sight, is less valuable than written language for conveying information which we desire to be accurate, clear, well defined, and connected; while for working up information into knowledge—for assimilation, that is—and for stirring, stimulating, and directing feeling and effort, and producing self-activity, speech is our more valuable educational means. It is clear to me that we need both books and oral teaching (including observation and experiment); and that the place of neither can be taken by pictures, as at times some would seem to think, nor by heuristic methods solely, as others have of late set forth.

How to work up Information.

I have already stated how the learner, in my opinion, should deal with information handed on to him, orally or in writing, by others, if he would work it up into knowledge. He should acquire a clear and personal acquaintance with the material and the ideas dealt with, should apprehend and comprehend these and the words and statements used in connexion with them, so that he may realize and appreciate their meaning. Some of his information he must gather for himself, some of his concepts he must form for himself and test for himself; but it is not necessary that this should be the case with all information. Life is too short, the outfit of the individual is too incomplete, and knowledge is too vast, for it to be wise for any single learner to ignore the accumulated knowledge of the human race, to strive to tread again the zig-zag paths and blind alleys of the past, and to accept nothing but what comes to him from direct experience through his own personal observation, perception and conception, judgment and reasoning. And, if in some matters—which some day he will completely master—his percepts and concepts must for a while remain *indirect*, he may, nevertheless, be comforted by the assurance that even these indirect percepts and concepts will be of value; for they will strike the right keynote, rouse the right kind of curiosity and interest, and turn them in the right direction, and so prepare him for more personal and direct work in the gaining of knowledge when the time and opportunity for this arrive.

The Beginning should be Informal.

It seems to me that in every subject used for educational purposes the beginning should be informal; that, as far as possible, during that stage, all should be actually present which is so far needed; and that the work should be *mainly* observational and experimental and the language chiefly oral. Then gradually the subject should be more formalized; and, during this stage, when more will be wanted than can readily be present, and when we shall constantly need reflection, imagination, and conception, then it will always be wise to call in the aid of written language and of books. These characteristics will of course differ slightly with different subjects and with the ages at which they are begun.

I had intended to pass on now to consider the use of books in connexion with various particular school subjects. But, on second thoughts, I have decided to deal instead with the possible educational purposes of school libraries and class-room libraries.

School Libraries.

It can never be wise, I think, to attempt to make a school library a rival of Smith's bookstall or Mudie's Library, and still less of the London Library and the British Museum. We have, for the most part, neither money nor space for anything very large. Our choice must be guided by the actual and most pressing needs of a school—the needs of its teachers and its pupils. For my present purpose, I shall restrict myself to the needs of a *day school*—a boarding school can amend and add to my proposals. Boys and girls at day schools, and, I may add, teachers at any school, have very little leisure for light literature during term time. At school, boys and girls are in the class-room or the playground. At home, they have their lessons to do and to prepare for, and the pleasure and duties of home life to attend to. In the main, we must leave their light literature to the holidays and the home. Nor would it be well to interfere with the only duties which, as far as I can see, godfathers and godmothers are left to perform nowadays—the giving of books. Nevertheless, under the head of "romances," "novels," "tales," "poetry and plays," a few books of established excellence, and of real and lasting interest to boys and girls, may well be included in the school library. The *chief* part of the library, however, should, I think, consist of "books of reference" for the teachers and the more advanced pupils. I should not attempt much in the way of pedagogy. Books on the theory and the history of education belong rather to the period before the teacher begins to teach at all. They are the concern of the training college, educational societies, and the teacher's own private library. For each class subject, however, there might well be in the school one good book (or part of a book) on the various methods of using that subject as a means of education. We shall want an encyclopædia of moderate size and cost, a bibliography (such as Sonnenschein's "The Best Books"), dictionaries, and larger grammars, larger books on science, and a gazetteer and larger atlases and maps. These I will class as (*a*) *books of reference*, specially so called. I will give the other classes with as little comment as possible: (*b*) history and biography; (*c*) geography, travels, and commerce; (*d*) Latin and Greek literature and archæology; (*e*) French and German literature; (*f*) English literature; (*g*) a few good books on political, civic, and social economy; (*h*) natural history of animals, birds, insects, and plants, and some of the larger books on physical science and mathematics—a rather full section, comprising both books, simple, rudimentary, and popular, and more advanced books on the sciences (zoology, botany, biology, physics, &c.); and, lastly, (*i*) a few good books on music, painting, and sculpture.

I follow, in the main, the headings of such libraries in France; and I estimate that, exclusive of the romances, novels, &c., there would be, for a school of four hundred pupils (and, say, fifteen teachers), two hundred separate works as a minimum. How many volumes I cannot say—that must depend upon the editions chosen, and on the number of duplicate copies found necessary. These would be books for teachers and more advanced pupils to consult, so as to amplify and deepen their knowledge. They should not as a rule be removed from the premises. Sixty pounds would go a long way towards providing them.

Class-room Libraries.

But there are other books, of a size and scope intermediate between these and ordinary class-books—smaller encyclopædias, for instance, and, in particular, small encyclopædias or dictionaries treating separately single groups of related subjects, which teachers and pupils will need to consult more, which should be more readily at hand, and which, moreover, many classes may need at the same time. These should form the class-room library with which each class-room should be supplied, and which should bear directly on the work of the class. The class-room library should contain, besides the smaller books of reference just mentioned, larger text-books on the class subjects than those in current use—books which, as a rule, are too expensive for teachers or pupils to buy for themselves. My list, accordingly, would embrace: (*a*) a small, handy encyclopædia, or encyclopædias; (*b*) a good, and fairly large, dictionary, and a similar grammar for each of the languages dealt with—including English; (*c*) good histories, including, for England, extracts from original sources, and middle-sized histories of Europe, Rome, Greece, France, Germany, and Italy; (*d*) a small book of biographies (*e.g.*, the epitome of the "Dictionary of National Biography"); (*e*) a good, and fairly large, political and historical geography, a physiography, and a commercial geography; and (*f*), if Latin and Greek are taken, a small dictionary of classical archæology and legend; (*g*) a good edition of the English literature subject studied—if it be a play, or plays, of Shakespeare, Abbott's "Shakespearean Grammar," and a commentary or two, such as those by Gervinus and Dowden, and a good history of literature, English and foreign; and (*h*) larger text-books for mathematical subjects and for scientific information—about forty separate books in all, or thirty as a minimum.

I do not speak of class-room libraries as a mere vision of what might be in Utopia or Atlantis. When I was a head master every one of my class-rooms had its library—not quite so full as I should have liked, but full enough to be serviceable, and especially fitted out in those one or two subjects which the class master took in other classes besides his own, and which, in a measure, he made his special subjects. For I held, and always have held, that a good class master, whilst having a general knowledge of all or most of his class subjects, should have a special knowledge of one or two, and should have a personal experience of the boys in at least two other classes besides his own. With carefully planned time-tables, I found this quite possible. On the other hand, except in the cases of the most advanced pupils, the teacher of only one subject—the specialist—I generally found a difficulty, and *qua* teacher somewhat narrow, and, for school purposes, seldom as satisfactory as one who taught several subjects and could keep them in correlation and in due

Digitized by Google

proportion. In fact, the specialist in only one subject is not wanted for pupils under the age of fifteen. But, however this may be, I did not provide him with a special library.

PUBLIC LIBRARIES.

I have no time left to speak of the uses of "Public Libraries" for educational purposes. But I think I may assume that we are all agreed that it would be a good thing to encourage, and to make it easier for, readers of serious inclination to make more use of our free libraries; which, I take it, were not intended to serve as mere caterers of novels for the lazy and dreamy-minded, but were intended to foster a somewhat nobler curiosity, a more strenuous desire to know. It may be that a "children's ticket" should be issued for children of from, say, ten to fifteen or sixteen years of age, and a special catalogue issued at a nominal price; or a "student's ticket" might be issued which would allow a *bona fide* student to have out three works (other than fiction) at a time. What has been done in Wrexham, and some few of our towns, can be done elsewhere. There seems, moreover, to be no good reason why the schoolmaster or the schoolmistress should not have his or her box of books delivered from the central library, for use in school; and why the free library should not form the school library. However this may be, the schools would be only too glad to augment the income of the library by grants and proceeds from entertainments got up by the scholars. The children would then take an interest in the library as a public institution, and the free library would be a reality and not, as it so often is, a machine for circulating fiction and a resting place for loafers.

The CHAIRMAN said that, the lecturer's subject being "Books," he had had to proclaim the virtues of books, but, in his (the speaker's) opinion, the English schoolmaster was still too far committed to the use of books. In the "Model School" at Brussels, except in literature lessons, neither master nor pupil had a book. Of the two philosophers, the one referred to by the lecturer who "would send the child out into the wilderness," and the other who said all that was necessary for the teaching of history was to turn the child loose in a big library, he thought Rousseau the nearer the truth. Socrates' famous tirade against books—dead things which could not teach him anything—was a plea for the heuristic method, about which much nonsense had been talked as a new discovery. Of course, when they reached a certain stage, they must have books, and one of the most essential functions of a teacher was to teach his pupil how to use a book. Failure to do this was apparent in his own recent experience in the inspection of schools, where in the lower forms a good deal of inability to note the right points had been noticeable, the pupils producing lamentable results from a simple English story read to them for reproduction. He did not consider an outlay of £60 on books for a school of four hundred boys a very liberal estimate. He himself would not be so particular as to the books he would admit; and he thought children could not be given too much of light literature so long as it was wholesome; and the lecturer had himself shown in an admirable compilation how novels could be worked in with history teaching. As to works on pedagogy, he would certainly, in his ideal school library, have a liberal supply of such books. The time when teachers most appreciated such books was not the time of preparation for an examination, but after they had got to know something of the real practical difficulties to be encountered, and desired to see how these difficulties had been met by others.

Mr. KING said he would be glad if the lecturer would give his opinion with regard to the new class-books which were now appearing with so many illustrations, and how they might best be used in class. There had been in the last two or three years some valuable editions of illustrated classics. He confessed he found his boys continually attending to the pictures, to the exclusion of the work set. With regard to the suggestions for a school library, he had noticed that this year the S.P.C.K. were offering their books at half price, including among them a good stock of historical novels, with the object of fostering school libraries. There was in these days of scrappy text-books in history and grammar an urgent need of some more comprehensive and complete works to which they could send their pupils for the settlement of points of difficulty.

Mr. BOWEN, in reply, said, with regard to the illustrated books referred to by Mr. King, he thought the idea as a whole was a good one, but the way in which it had been carried out was not by any means good, and in many cases the small books had been so overloaded with illustrations that the child might easily be led away from the text. What he had meant to plead for was some use of books for school purposes, not the substitution of books for oral work, and certainly not to advocate oral work to the exclusion of all other. In schools where the work was almost entirely oral he had found the results lamentable. He had meant his class-room library and school library to be educational, and had avoided swelling the number of books unduly. He was very much in earnest about school libraries and educational libraries, and was anxious not to pitch his programme too high but to state what was absolutely necessary. He would allow children to have wholesome books in any quantity, but at home, not at school. Let them not take from the home all the responsibilities of education; the home should have its share, and its share should lie in the direction of books of general knowledge. He quite agreed with the chairman that a good deal of good reading and information was to be got from tales, though he would not add to the school library an undue number of novels.

A vote of thanks to the lecturer concluded the proceedings.

REVIEWS.

THE HISTORICAL BASIS OF MODERN EUROPE.

Foundations of Modern Europe. By Emil Reich, Doctor Juris. (5s. net. George Bell.)

In this volume Dr. Reich publishes the substance of a series of twelve lectures delivered by him last year "at the request of the University of London." They form "a systematic course" in the sense of orderly arrangement, but they are rather "popular" than "academic" in treatment, and well calculated to stir an interest in the subject, which was probably their original purpose. The real study of the period is another matter.

The first lecture is concerned with the War of American Independence, though its essential connexion with the general subject is not strikingly apparent. Consoling himself for the "great difficulty" of taking "a fair view of all the factors in the war," Dr. Reich lays hold of "the just remark that, the larger, the more comprehensive, the waves of historical events, the smaller is the number of their controlling causes" (page 3). Yet we learn (page 195) that, "like all great historical facts, the unity of Germany was for generations prepared by general and vast causes embracing an infinite number of particular phenomena." However, the war was not "a matter pre-eminently of English or American history," but "in reality and *par excellence* a European, an international, event." Moreover, it was the French that were "the real victors in that great struggle." Well, we wish the French joy of their share of the spoils. It was a great achievement in 1781 for a country that in 1766 or 1767 was "no longer in a condition to either hurt or thwart the most ambitious hopes of Great Britain" (page 17). But, after all, was not the French co-operation at Yorktown the single direct and effective stroke that the French delivered? And is it not a somewhat singular historical judgment that assigns to one of the co-operating parties the honour of being "the real victors"? Dr. Reich himself is very severe upon those of us that patriotically claim that Waterloo was a British victory, although the British share of Waterloo may well compare with the French share of Yorktown. Apart from the French fleet, the European combination against Great Britain was a mere pious aspiration. As to the cause of the American revolt, Dr. Reich sneers at the notion that "the various measures of unconstitutional, or, at any rate, unwise, taxation" and alleged acts of high-handed autocracy "so exasperated the fine moral or legal fibre of the colonists as to drive them to rebellion" (page 7). "Such ethical shivers do not, as a rule, prove of long duration, unless supported by abiding considerations of material profit" (page 8). "There can be little doubt that the abiding, material, and yet, prospectively at least, also ideal cause of the deep-seated antagonism of the colonials to the British Government was caused by the fatally wrong policy of the Court of St. James's with regard to the vast *Hinterland* of the colonies" (page 9). But what policy would have been effective if "the colonials were, and had long been, but too well resolved to accept no other solution than that of a complete rupture" (page 11)? Dr. Reich, it seems to us, has still something to learn of the moral force of the Puritan character; and, if there are "inward callings given to men like Columbus, Richelieu, Napoleon, Bismarck, or to women like Jeanne d'Arc"—if such men know "that the voices are there, that they actuate, prompt, urge, and force them to do what in the end they do achieve" (page 100)—we may ask whether such voices might not have made themselves heard in the humbler bosoms of the colonists. And, if no English historian has yet got at the *vera causa* of the war by "feeling the real pulse of the time" in the "numerous legal and administrative documents in the Record Office in London," here is a fine chance for Dr. Reich to prove his theory and convict them. At the same time he will no doubt explain away the mass of evidence that fits in with the theory that he puts aside with undisguised contempt. If Dr. Reich be-

Digitized by Google

right, he renders obsolete many pages of the seventh volume of "The Cambridge Modern History," as well as of other histories.

So with the French Revolution. "The prevailing opinion ascribes the French Revolution to the intolerable anarchy and oppression degrading the people of France under the *ancien regime*." But then "the alleged misery of the people" was "very much less severe under Louis XVI. than under Louis XV.," and very much more severe under Louis XIII., when there were no revolutions. The misery was there, however, and it had its effects. Dr. Reich might also have pointed out the increased consideration shown by the nobles to the people before the outbreak. But, unless "the prevalent opinion" be the prevalent *historical* opinion, we take no count of it, and, in any case, Mr. Archibald Weir (whose comprehensive and well considered volume furnishes the heading to this notice) nearly twenty years ago anticipated Dr. Reich's criticism. Mr. Weir wrote:

> On the whole, it appears that, manifold as were their grievances, the French peasantry had not lost all patience, as they certainly had not lost all spirit, and the initiative to their insurrection is not to be found in their hardships, though these provided ample incitement to anarchy and revenge when once resignation and habit had been disturbed from without.

What, then, was the cause—or the causes? Why, the attainment of "a most remarkable homogeneity of the people," for one thing. Dr. Reich says (page 31):

> This homogeneity, then, had caused the mental attitude of most Frenchmen to be the same—at least, with regard to certain fundamental principles of politics, philosophy, and society. This homogeneity must, we take it, be admitted as the first and indispensable condition of the great event called the French Revolution. . . . For the first time in French history the French became conscious of their unity as a people and of their strength. Once the French people became conscious of their strength, it was only too natural that they should attempt to assert their rights against the Crown.

Well, we do not think that this point has been overlooked by historians. But what next? For Frenchmen are not less homogeneous now, and there are no more revolutions on the grand scale. We find nothing explicit; and yet the causes of such an event—"undoubtedly the most important event of modern history" (page 26)—would seem worthy of very careful examination. When Dr. Reich says that "the Great Powers were determined to force a war upon France," we must ask him to except Great Britain (Appendix I. to Dr. Holland Rose's edition of Carlyle's "French Revolution," Vol. III., pages 399–401. George Bell).

Napoleon occupies four lectures. Dr. Reich does well to emphasize the "immense and lasting work" of "the incomparable Corsican" in civil reorganization, and he narrates the campaigns with verve and with instructive comment. His acrid criticisms of the futility of the British arms on land rest on a perverse misconception of the situation. Where is the historical value of such a statement as that "in all the immense struggles between England and the French from 1793 to 1815 the English were able to secure not a single decisive victory on land single-handed"? What allied troops could possibly do so! Why, did the French themselves do it even at Yorktown? Again, what nonsense is it to tell us that "the victories of Wellington in the Peninsular War have been described with all the exaggeration and 'advertisement' natural in the case of smaller nations who succeed in securing a victory over a greater nation" No wonder that Dr. Reich's audience listened to such extravagance with amusement rather than with resentment. The description of the Waterloo campaign is slurred over under cover of the contradictions in the various reports, which are said to be "so great that no ingenuity and no research can ever hope to reconcile them," and by a repetition of the comfortable theories (1) of the impotence of "the Anglo-Dutch army" without the Prussians, and (2) of the vanity and exaggeration "of all small nations" when they gain a victory "over powerful nations." We may remark, in passing, that the first example of these contradictions has been sufficiently settled by M. Houssaye, to whose work Dr. Reich himself refers elsewhere, though he has apparently missed this particular point. In the lecture on "The Re-action," which treats of part of the social movements, the most striking thing is that Gibbon's "Decline" is bracketed with Robertson's "Charles V." as a work that "now appears obsolete and past," at any rate as regards "the middle ages and early modern times." In the sketches of the unity of Italy and of Germany, we need only note an unreserved admiration of Bismarck, which seems to us to divorce morals from politics as decisively as "the genuine Prussian brutality" of Wilhelm von Humboldt at the Congress of Vienna.

The circumstances of the delivery of these lectures appear to have led Dr. Reich to propound startling views without adequate scope for the exhibition of their historical bases, and the spoken word insisted on reproduction in print. We hope that he will drastically revise the book, and bring it into accord with his just reputation for erudition and ability.

A Strenuous Life.

Autobiography. By Alexander Bain, LL.D., Professor of Logic and English in the University of Aberdeen. (14s net. Longmans.)

A most characteristic volume at all points. Dr. Bain himself brings the narrative down to 1890, and Prof. Davidson, his successor in the Chair of Logic and his literary executor, completes it in the same spirit. The work is remarkably unlike the autobiography of Bain's old friend Spencer, or of Prof. Fraser, who is still happily with us. To readers that did not know the man—and know him with some intimacy—it will probably appear somewhat dry, and even lacking in substance; but to those that knew him it will speak eloquently from every page. The writer, in fact, has imposed on his pen his habitual masterful reticence, firmly restricting himself to facts bearing upon his mental growth, the development of his works, and his personal career. Even when he records his first marriage he dismisses the fact in six words—a clause of a sentence—without mentioning his wife's name, parentage, or connexions; nor does he state his mother's name. This is not a book of gossip.

A "preparatory note of explanation" of the objects of the volume characteristically gives the first place to an acknowledgment of "indebtedness for assistance rendered in numerous forms and by many individuals in the varying exigencies of my career." If there be any incompleteness in the execution of this object, it must evidently be set down to the forgetfulness of age: the purpose is highly honourable and strictly sincere. In the matter of his books, the main acknowledgment goes to some of his more distinguished pupils, partly to others—J. S. Mill, Grote, Graham, Clark, and less known names; but any such assistance was merely in detail or casual suggestion, and in no way affected the substance of the work. Another object, of course, was the delineation of mental growth, which is probably the most interesting element of all; and this portion includes a great deal of fact and criticism on educational institutions—schools, colleges, and Universities—and involves a historic, not to say antiquarian, interest. A third object—"to cast as well as reflect lights upon my surroundings, and thereby to impart particulars regarding personages that may have an interest in the public eye"—is carried out with the author's usual discretion. At the same time, interesting glimpses of historic names very frequently are afforded: John Mill, Grote, Carlyle, Comte, Edwin Chadwick, and so forth. Then there is a consecutive view of the author's published writings, and a very detached criticism upon them, with indication of the latest positions he had taken up. Indeed, the volume grows on the reader, in spite of his occasional delay in little known, and therefore less interesting, places.

The outstanding fact is the extraordinary persistence and energy wherewith a very poor and not particularly strong boy of a mean street forced his way against exceptional odds to the Lord Rectorship of the University of his native town, and to a world-wide fame in, perhaps, the most difficult of human studies. His father was a handloom weaver with a large family in a time of failing trade; but he displayed the masterful will of his famous son in his increasing difficulties. From thirteen to eighteen, Bain himself worked at the loom—"the period of my self-education." Getting a small bursary of £10, by grace of the authorities in recognition of his promise, he eked this out by private work and struggled on, finishing his college course as best man of his year, notably in mathematics. Then came assistantships and various other engagements, among them a period of service under the Metropolitan Sanitary Commission and the General Board of Health; but the special studies, which had gradually concentrated on philosophy, were arduously maintained. How he failed to obtain professorship after professorship, and how he at length was seated in the chair he made illustrious, is a record that may be commended to aspiring merit: from the public point of view it is sufficiently melancholy. Strange also it is to read how the austerity of an earnest father and the unintellectual presentations of religion by clergymen turned a well disposed mind away into the paths of agnosticism. The simplicity and frankness of statement on all personal matters of public interest will probably be regarded as a marked charm of

Digitized by Google

the volume. It affords a notable example of the strenuous life, and depicts a most honourable and distinguished career. There are four excellent portraits, representing Dr. Bain in 1854, 1876, 1882, and 1892, the 1882 one being from the fine University portrait painted by Sir George Reid, P.R.S.A.

The Literature of the Dark Ages.

"Periods of European Literature."—I. *The Dark Ages.* By W. P. Ker, Professor of English Literature in University College, London. (5s. net. Blackwoods.)

Though this is the first in order of the series of twelve volumes, it is all but the last to reach publication. But it was well worth waiting for: it is a most thorough piece of work—evidently the results of many years of close and wide study, presenting the outstanding matters in relief and in their literary connexions with remarkable power and freshness, and lit up throughout with a quiet but irrepressible glow of humour. It is marked by originality of treatment, and will exhibit its subject to most readers in a quite novel light—much to the advantage of the reputation of the literary workers of the period. For the present purpose, "the Dark Ages" are taken in a restricted meaning, fully justified by the author, as "the centuries of the barbarian migration, before the establishment of the Romance literatures, or the kind of civilization that is implied in them." The richest vernacular literature of the period is mainly, at all events for us, the older Teutonic poetry in the Teutonic alliterative verse. Then there is the Latin literature—Latin is the principal language of the Dark Ages—and Latin ideas and matters interpenetrate the vernacular literatures by adaptation and exposition of Latin knowledge, so that there is great scope for analysis. Further, there are Greek, Celtic, and Arabian authors that claim attention on various important grounds. The scope of the work is thus very wide, and the execution derives special value from the author's mastery of the several languages, his first-hand familiarity with the several writers, his firm command of just principles of criticism and of the most extensive area of comparison, and his unique knowledge of and delight in the sphere of Romance. After a most luminous and instructive general chapter on the "Elements," Prof. Ker handles the various literatures in order as enumerated. Among the Latin writers, the treatment of Boethius, Paul the Deacon (Warnefrid), and Luitprand may be selected as eminently sympathetic and distinctive; the popular Latin verse, which was so widely and deeply influential, is fully and acutely handled; and the educational developments—"the history of Latin is the history of education, and follows the great schools"—are carefully set forth. If it were compulsory to make a choice, one might decide that even still finer is the handling of the Germanic poetical remnants, chiefly in Icelandic and Anglo-Saxon. There is one danger to the volume, and that is its appearance in a popular series, which may lead to the wrong judgment that it is merely a popular compilation. Therefore, we insist the more upon the originality and thoroughness of the workmanship.

The Line Complex.

A Treatise on the Line Complex. By C. M. Jessop, M.A., Assistant Professor of Mathematics, Durham College of Science. (10s. net. Cambridge University Press.)

The subject of Mr. Jessop's new work is one which has hitherto occupied the attention of foreign rather than of English mathematicians, in so far at least as extensive original investigation is concerned, and it has been the object of the present author to bring within easy reach of the English student the important investigations of Continental writers in connexion with the subject. In a most interesting preface Mr. Jessop briefly sketches the past history of line geometry, recalling how the idea of taking the line as the element of space was first developed by Plücker, who, in his "Neue Geometrie des Raumes," created the notion of a complex, and who investigated in his works the leading properties of linear and quadratic complexes, establishing in the course of his research the existence of what is known as Kummer's surface. The labours of Plücker in line geometry would have been more fruitful in results if he had chosen a happier method of analysis, and it remained for Klein to introduce the more suitable and therefore more powerful mode of treatment. Klein's method is the one generally employed by Mr. Jessop throughout his work; yet he at times prefers to adopt synthetic rather than analytical processes as being better adapted for special purposes. In their turn, other Continental contributors to the subject are noticed by the writer.

With the object of aiding the student as far as possible in his work, the treatise (proper) on "The Line Complex" is preceded by an introductory discussion of those more elementary portions of synthetic geometry which bear on the main theme under consideration. The author clearly defines (1) the unrestricted line with its four independent co-ordinates; (2) the complex, or triply infinite series of lines between whose co-ordinates one equation exists; (3) the doubly infinite series forming a congruence, and obtained by imposing two conditions on the lines constituting it; and (4) the ruled surface, or singly infinite assemblage of lines between whose four co-ordinates there exist three relations. Although Mr. Jessop's work professes only to deal with the line complex and with congruences considered as the intersections of complexes, yet, for the sake of completeness and on account of the close connexion of the subject, he introduces some further chapters on congruences, including the special class so successfully treated by Kummer. It will be evident that the present author has made a very valuable contribution to the number of English mathematical treatises.

GENERAL NOTICES.

CLASSICS.

The Characters of Theophrastus. Edited by J. M. Edmonds, M.A., and G. E. V. Austen, M.A. (4s. 6d. Blackie.)

The text is practically that of the Philologische Gesellschaft of Leipzig; the notes, which are full and very instructive, are independent in tone, though the authors acknowledge a natural indebtedness to the various available sources, such as Prof. Jebb's edition and the commentaries of Casaubon and Duport; and the numerous illustrations, "all derived from ancient, if not absolutely contemporary, sources," and admirably reproduced, are most helpfully suggestive. An introduction deals elaborately with the life and times of Theophrastus, the origin and authorship of the book, the titles of the Characters, and the manuscripts. The work, though primarily intended for the sixth forms of public schools, will be welcomed by the general classical reader. It is a very painstaking edition, and it is substantially got up.

Ἡ Καινὴ Διαθήκη. (British and Foreign Bible Society.)

The Society publishes in connexion with its centenary a beautiful and valuable edition of the Greek New Testament, adopting the text of the fourth edition prepared by Prof. Eberhard Nestle, D.D., of Maulbronn, and issued by the Bible Society of Württemberg. The text is the resultant of the readings found in a majority of the three great recensions by Tischendorf, Westcott and Hort, and Weiss. The critical apparatus shows the differences between this text and the old received text on the one hand and the avowed or inferred readings of the English Revisers on the other hand. The effect is to provide a convenient conspectus of the results of modern New Testament scholarship. Parallel references are also given in sufficient amplitude on the margin. The text may be had either with or without the critical apparatus, and in various bindings (1s. 9d. to 3s. 6d.). The get-up is excellent. The edition will be widely prized.

MATHEMATICS.

Notes on Analytical Geometry. By A. Clement Jones, M.A., Ph.D. (6s. net. Clarendon Press.)

The volume presents to the fairly advanced student an interesting treatment of a lengthy series of propositions which are more or less miscellaneous in character and many of which are of great importance in the analytical development of the theory of the straight line, the conic, and the curves of the third degree. It appears likely that the student of mathematics will often be really glad to have the information at hand in its present compact form. Dr. Jones lays special stress on the value and importance of the use of the *single* variable and on the wide application of the equation of a straight line in the particular form $(x-a)/\cos\theta = (y-\beta)/\sin\theta = r$ (where the symbols have their usual interpretation). It may be noted that the substitution of these values for the ordinary Cartesian expressions for the variables in the equation to any curve is equivalent to a double transformation of co-ordinates, and yields in many cases a rigorous method of investigation. But the author hopes that his little book will do more than impart a knowledge of theory, however useful. He has tried so to arrange the text that the study of it may give to the reader an insight into the manner in which analytical research may be profitably undertaken and pursued.

An Elementary Treatise on Conic Sections. By G. Hale Puckle, M.A. (7s. 6d. Macmillan.)

Readers familiar with the earlier editions of Mr. Puckle's well known and able work will be specially interested in the new issue, which is not merely a reprint of the fifth edition, although the changes and additions are perhaps wholly confined to two chapters—the eighth, which deals with the reduction of the general equation of the second

Digitized by Google

degree; and the twelfth, in which the leading properties of the various loci included in that equation are directly derived from it in its unreduced form. The revised treatment of these portions of the treatise is very skilful and attractive. Essentially the substance of the chapters is to be found in earlier issues, but the whole has been most carefully reconsidered and rearranged, parts have been rewritten and enlarged, and the notation has undergone great alteration and improvement.

SCIENCE.

Theoretical Organic Chemistry. By Julius B. Cohen, Ph.D., Lecturer in the Victoria University. (6s. Macmillan. Science Class Books.)

Dr. Cohen sets himself "to maintain a careful balance between theory and practice"—an object specially important in so essentially practical a subject as organic chemistry. The exposition is very clear and the experiments (161) are judiciously chosen. There is no attempt "to give anything like a complete set of methods for preparing even the more important of the substances described; on the contrary, the number has been carefully restricted to those which have a theoretical importance or practical value." Such is undoubtedly the most rewarding method. Questions at the end of each chapter are largely drawn from University B.Sc. pass papers and from papers of the South Kensington examinations. The volume is evidently the work of an accomplished practical teacher.

Elements of Physics. By Ernest J. Andrews, Instructor of Science in the Robert A. Waller High School, Chicago, and H. N. Howland, Instructor in Physics in the South Division High School, Chicago. (6s. Macmillan.)

The authors base their work "on a few fundamental principles, seeking first to clearly express these principles, and then to refer back to them phenomena subsequently considered, so as to form, from beginning to end, a series of closely associated subjects." Special attention has been devoted "to those subjects which experience has shown to be particularly difficult for the students," and prominence is given to the practical bearings of physics. The treatment is marked by simplicity and clearness. Suitable exercises (without answers) follow the several sections, and a laboratory manual of select illustrative experiments (64) is appended. There are altogether 275 figures. The book is well printed and strongly bound, and it ought to prove very serviceable.

MODERN LANGUAGES.

(1) *Recueil de Locutions Françaises, proverbiales, familières, figurées, traduites par leurs Equivalents Anglais.* Par Armand-Georges Billaudeau, ancien professeur d'Anglais. (6s. Paris: Boyveau et Chevillet.) (2) *English Colloquialisms, with their French Equivalents.* By Arthur H. Smith, M.A. (Lond.), L. ès L. (Paris). (1s. 6d. Hachette.)

(1) This is, in fact, a dictionary (450 pages, double columns) of French idioms, sayings, and proverbs, with their English equivalents—some 50,000 phrases in all. The collection is a very laborious one, and it has been carefully revised by M. Antoine, of the Birkbeck Institute. The equivalents are idiomatic, showing a wide and firm grasp of English speech. The work errs, if at all, on the side of fullness. It will be found to be an extremely useful supplement to the ordinary dictionary. (2) Mr. Smith entirely excludes proverbs and proverbial expressions, and he has avoided slang, though not hesitating to include "those popular and energetic locutions which are heard daily around us." He, too, is idiomatic: *C'est le ton qui fait la chanson.* The collection is considerable, and well fitted for the use of more advanced pupils.

Elementary Phonetics: English, French, German: Their Theory and Practical Application in the Class-room. By W. Scholle, Ph.D., and G. Smith, M.A. 2s. 6d. net. Blackie.

The authors are merciful enough to express the opinion that "the details of phonetics should never appear in the schoolroom as a subject *per se*." They give a simple description of the speech organs and their functions, indicate the mode of production and the nature of the speech sounds, and bestow considerable attention on the practical application of phonetics in the class-room. Presumably directed to the teacher, much of the book seems somewhat elementary, if not superfluous; and probably the next edition will be modified in the direction of more scientific disposition, and some blunders will get corrected. No doubt, however, there are home teachers that will find it instructive at many points, and it does service in emphasizing the importance of better attention to pronunciation.

Dutch Self-taught. By Captain C. A. Thimm. (2s. 6d., cloth. Marlborough. Self-taught Series.)

The volume follows the well known plan of the series in materials and methods, with an exceptionally full outline of the grammar. It will be very serviceable, especially to those that require but a working acquaintance with the language for purposes of business or pleasure. The serious student will have to go deeper.

Gautier. *Voyage en Italie.* Edited by de V. Payen-Payne. (3s. Cambridge University Press. Pitt Press Series.)

The introduction sketches Gautier as man, author, and traveller, with useful references for further study; and the notes are very fully explanatory, on the basis of a wide variety of authorities. A good plan of Venice is prefixed. A thoroughly good school edition of a most interesting and charmingly written work.

EDUCATION.

London at School: the Story of the School Board, 1870–1904. By Hugh B. Philpott. (6s. Fisher Unwin.)

"Is it not a wonderful story—a worthy and memorable chapter in the history of London's government—which is now coming to an end?" To Mr. Philpott's question, after his review of the proceedings of the London School Board during the past generation, there can be but one answer. Mr. Philpott, himself a Board-school boy, has entered into his subject with zest and industry, and he has narrated the progress of events in considerable fullness and with critical discretion. The first chapter pictures the position before 1870, and successive chapters deal with the many various aspects of the Board's work. The treatment is popular, and a perusal of the work will prove strikingly instructive to such as may not have an inside acquaintance with the labours of the Board or of the schools. "The London Board schools stand for much more than education," says Mr. Philpott, very justly, "and, if we confined our attention to the educational work carried on in them, we should ignore some of their most interesting and most beneficent activities." It will be good for many people to see what this means, as well as to review the purely educational work. The main danger that Mr. Philpott sees ahead is the religious question, and it is very plain that "a settlement which all creeds can accept" is a consummation devoutly to be wished. There are 40 illustrations, besides frontispiece (Lord Lawrence, first Chairman). We hope this admirable volume will be widely read and pondered.

The School Manager's Handbook, 1904–5. By Joseph King, M.A., Barrister-at-Law. (1s. 6d. Edward Arnold.)

A concise, clear, and handy guide to the multifarious and important duties of managers of schools, with appendixes containing the Education Act, 1902, the Education (London) Act, 1903, pertinent extracts from other statutes, and a variety of other matters useful for reference.

Register of Teachers for Secondary Schools: being the List of Teachers Registered in Column B of the Teachers' Register. Compiled from Official Records by the Editor of the *Schoolmasters Yearbook and Directory.* (2s. net. Swan Sonnenschein.)

This enterprising publication is very welcome. The information, though cast in a more convenient form, is in all essentials the information of the Register itself. It is complete to March 31 of the present year. The Regulations for Registration are reproduced, and there is an instructive introductory note on the general subject. The volume is nicely got up and is sure to be very useful.

L'Education en Suisse: Annuaire des Universités, Ecoles, Pensionnats, &c. (Ch. Eggimann & Cie., Genève.)

If some 2,800 students from foreign parts attend the Swiss Universities and the Zurich Polytechnikum, to say nothing of the foreign population of the schools, this new annual ought to find a very wide field of usefulness. The stress has been laid upon the more important institutions, literary, scientific, and practical, the minor ones receiving mere mention or little more. M. Albert Gobat gives a brief sketch of "L'Education en Suisse," and then the educational resources of the 22 cantons are displayed in order, with a profusion of illustrations. Some guide-book information is also thrown in here and there. Experience will, no doubt, lead to considerable expansion of the main subjects, as well as to minor excisions. Still, the book makes a promising first appearance, and is sure to be useful as it is interesting. The get-up is handy and agreeable.

The Local Education Authorities appear to be labouring laudably to get their local institutions into good trim. The West Riding County Council *Report on Secondary Schools and Pupil-Teacher Centres (Existing Conditions)* and the *First Annual Report* of the Wimbledon Education Committee are excellent examples of spirited and energetic work.

ECONOMICS.

Some Economic Aspects of British Rule in India. By G. Subramania Iyer, B.A., Editor of *Swadesamitran* and of *United India.* (The Swadesamitran Press, Madras).

Readers of *United India*—and it would be well that this ably conducted paper should be more widely read in this country—will be tolerably familiar with the contentions of Mr. Subramania Iyer. We need not take too literally his admission that "there is no pretence to originality or scientific treatment"; but what is of much more importance is that most of his views "are those that are held by his educated countrymen in general." In twenty-two chapters he ranges over the length and breadth of the economic subjects that have recently been more to the front; and he writes with large knowledge and intense earnestness, and in an easy style. Generally, the work is instructive and suggestive. But when Mr. Subramania Iyer says: "to preserve the food grains and raw materials that she produces for

(*Continued on page* 310.)

MACMILLAN & CO., LIMITED, ST. MARTIN'S STREET, LONDON, W.C.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,147,020. Annual Income, £400,381.

Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

Digitized by Google

consumption in her own domestic markets by taxing their export, and to prevent the import of competitive manufactures by protective duties in view of the growth of indigenous industries—this is the policy that alone will save India"—then one naturally wishes to know how this great result is to be achieved by breaking the back of the rayats and letting native manufacturers go slack. This matter wants deeper consideration, together with the possibilities that lie in native education and enterprise.

The Citizens' National Union, "an Old Age Pension Scheme revised and brought into line with the Fiscal Question of To-day," by John Tullis (6d., Simpkin, Marshall, & Co.), though but a slight pamphlet, is a weightier contribution to the discussion of a pressing national question than many a more pretentious publication. Mr. Tullis is a large manufacturer in the East-end of Glasgow, with broad sympathy for the victims of industrial exigencies and of the poor laws, which has urged him to formulate a remedial scheme in outline. He would be better advised, however, not to involve himself with infractions of the principle of free trade. He is himself a free trader, but does not realize the force of the thin end of the wedge, and assumes that foreign goods, though taxed as proposed, would still be sent here in undiminished quantity. Like most other critics, he confines his outlook to the finding of money: why does he not look to the other side of the account—extravagant expenditure and policy? The general result is to impress a doubt whether the project is practicable except by instalments. But the suggestions are eminently worth consideration.

Mr. John Shanks deals with *Some Neglected Aspects of the Fiscal Question* (Glasgow: Bryce). He wants to "get rid of all restrictions on labour, trades-union or other"; he wants still more urgently "the introduction of proper commercial organization, of proper work-shop systems and methods, and of a proper understanding and thorough co-operation between employers and employees, as well as the adoption of economical power, production, and up-to-date labour-saving machinery and appliances."

MISCELLANEOUS.

The Care of Destitute, Neglected, and Delinquent Children. By Homer Folks. (Macmillan.)

Mr. Folks, who is now Commissioner of Public Charities of the City of New York, has passed through a large and varied experience of the working of charitable organizations in the United States, which eminently qualifies him to describe "the historical evolution through which the charities of the country have passed." The present small volume is one of a series intended to bring the known facts of the dispensation of charity in the past to bear upon the practical problems of the present and the future. It is "limited to the consideration of the case of children who have been removed from their earlier environment and from parental control, and the direction of whose lives and the burden of whose support has been directly assumed or provided for by public authorities or private charity." Mr. Folks excludes "movements that are primarily educational, such as day schools, kindergartens, and home libraries." These will, no doubt, find their place in another volume. The book seems to have been compiled with much care, and opinions are weighed with calm judgment. Those of us that are engaged with similar problems here may find instructive analogies in it.

"The Start in Life Series," edited by J. E. Hodder Williams (3s. 6d. each, Hodder & Stoughton), is attractive in form, and promises to be very helpful. (1) *The Guide to the Legal Profession*, by "A Lawyer," presents with great judgment all the preliminary information necessary for a man that means to be a barrister or a solicitor. The treatment of the inscrutable question of prospects is evidently based on close observation and experience; and all practical details are intelligently supplied in clear order and in agreeable style. (2) *The Guide to the Civil Service*, by John Gibson, M.A., furnishes "an interesting and yet a detailed and adequate account of the principal appointments in the various departments of the Home Civil Service," and indicates how to go about obtaining such a post. The principal appointments connected with the various British (not foreign) Government offices, and obtained through examination, whether the functions be discharged at home or abroad, are also briefly treated. The general observations are thoughtful and practical; the details of appointments (age, examination, salaries, &c., are fully given; and typical examination papers and questions are supplied. The work has been very competently executed. (3) Mr. Arthur Lawrence, who is responsible for *The Guide to Journalism*, has all the benefit of the benison of Dr. Robertson Nicoll, and of the collaboration of Sir Alfred C. Harmsworth, who contributes a chapter on "The Making of a Newspaper." The neophyte will not be suddenly called upon to "make a newspaper," but incidental remarks of Sir Alfred's may be useful to him. Mr. Lawrence's personal experience, being fortunate, prevents him from being depressed by the lessons of Fleet Street in the past ten or twenty years. However, the hopefulness of youth discounts difficulties; and it is enough that the book is fluently written from a point of view of some experience, with contributions from specialists on special departments.

NEAR THE BRITISH MUSEUM.

KINGSLEY HOTEL

HART STREET, BLOOMSBURY SQUARE, LONDON.

OPPOSITE THE BRITISH MUSEUM.

THACKERAY HOTEL

GREAT RUSSELL STREET, LONDON.

These well-appointed and commodious **TEMPERANCE HOTELS** will, it is believed, meet the requirements, at moderate charges, of those who desire all the conveniences and advantages of the larger modern Licensed Hotels. These Hotels have

PASSENGER LIFTS, ELECTRIC LIGHT THROUGHOUT, HEATED THROUGHOUT, BATHROOMS ON EVERY FLOOR, SPACIOUS DINING, DRAWING, WRITING, READING, AND SMOKING ROOMS.

Fireproof Floors. Perfect Sanitation. Telephone. Night Porter. The Kingsley Hotel has a good Billiard Room.

Bedrooms from 2s. 6d. to 5s. 6d. Inclusive Charge for Bedroom, Attendance, Table d'Hôte Breakfast and Dinner, from 8s. 6d. to 10s. 6d. per day.

Full Tariff and Testimonials on application.

ALSO UNDER THE SAME MANAGEMENT.

ESMOND HOTEL

1 MONTAGUE STREET, RUSSELL SQUARE, LONDON.

This **Temperance Hotel,** which has been carried on so successfully for the last nineteen years, adjoins the British Museum, and is exceptionally quiet and economical. Night Porter.

Bedrooms from 2s. to 3s. 6d. per night. *Full Tariff and Testimonials on application.*

MATHEMATICS.

9388. (Professor Nash, M.A.)—Show that (1) the foci of the conic $la^2+m\beta^2+n\gamma^2=0$ are given by the equations $la\mathrm{A}=m\beta\mathrm{B}=n\gamma\mathrm{C}$, where $\mathrm{A}=\beta\gamma+\alpha(\beta\cos\mathrm{B}+\gamma\cos\mathrm{C}-\alpha\cos\mathrm{A})$, ...; and hence (2), if the conic touch four fixed straight lines, the locus of the foci is a circular cubic passing through the six vertices of the quadrilateral formed by the lines and also through the feet of the perpendiculars of the harmonic triangle of the quadrilateral; and (3), if the conic pass through four fixed points, the locus of the foci is a bicircular sextic having double points at the vertices (acnodes) and at the feet of the perpendiculars (crunodes) of the harmonic triangle of the quadrangle.

[The foci can, of course, be obtained as the intersections of two conics, instead of two circular cubics, but apparently not in a symmetrical form.]

Solutions (I.) *by* H. Bateman, B.A.; (II.) *by* A. M. Nesbitt, M.A., *and* Professor Sanjána, M.A.

(1) Let (α,β,γ), (α',β',γ') be the foci; the tangential equation of the conic is

$$(\lambda\alpha+\mu\beta+\nu\gamma)(\lambda\alpha'+\mu\beta'+\nu\gamma')+k\{\lambda^2+\mu^2+\nu^2-2\mu\nu\cos\mathrm{A}-2\nu\lambda\cos\mathrm{B}-2\nu\lambda\cos\mathrm{C}\}=0.$$

If this is of the form $\lambda^2/l+\mu^2/m+\nu^2/n=0$,

$$\frac{\beta\gamma'+\beta'\gamma}{\cos\mathrm{A}}+\frac{\gamma\alpha'+\gamma'\alpha}{\cos\mathrm{C}}=\frac{\alpha\beta'+\alpha'\beta}{\cos\mathrm{C}}=2k=\frac{u\{\beta\gamma'+\beta'\gamma\}+v\{\gamma\alpha'+\gamma'\alpha\}+w\{\alpha\beta'+\alpha'\beta\}}{u\cos\mathrm{A}+v\cos\mathrm{B}+w\cos\mathrm{C}};$$

i.e., the foci are conjugate points with regard to any rectangular hyperbola circumscribing the triangle, *i.e.*, they are isogonal conjugate points with regard to the pedal triangle (this can also be easily proved geometrically).

Let $\alpha=(g+h)\sec\mathrm{A}$, $\beta=(h+f)\sec\mathrm{B}$, ...;

then $\alpha'=(1/g+1/h)\sec\mathrm{A}$, $\beta'=(1/h+1/f)\sec\mathrm{B}$, ...;

therefore

$$2k=\{[(g+h)(h+f)(f+g)]/fgh\}\sec\mathrm{A}\sec\mathrm{B}\sec\mathrm{C};$$

therefore the tangential equation of the conic is

$$\lambda^2\{2f(g+h)^2\sec^2\mathrm{A}+(g+h)(h+f)(f+g)\sec\mathrm{A}\sec\mathrm{B}\sec\mathrm{C}\}+\ldots$$

or

$$\lambda^2\{a^2(\beta\cos\mathrm{B}+\gamma\cos\mathrm{C}-\alpha\cos\mathrm{A})+a\beta\gamma\}+\ldots;$$

therefore $la\mathrm{A}=m\beta\mathrm{B}=n\gamma\mathrm{C}$.

(2) If the conic touch four fixed lines, we have $\lambda^2/l+\mu^2/m+\nu^2/n=0$; therefore the locus of the foci is the cubic

$$\lambda^2\{a^2(\beta\cos\mathrm{B}+\gamma\cos\mathrm{C}-\alpha\cos\mathrm{A})+a\beta\gamma\}+\ldots.$$

The cubic must be its own isogonal transformation with regard to the pedal triangle; therefore it passes through the angular points of this triangle. Also the circular points are the imaginary foci of a parabola touching the four lines; therefore it is a circular cubic. The other six points are obviously on the cubic.

(3) If the conic passes through the four points $\pm f$, $\pm g$, $\pm h$, we have $lf^2+\ldots+mg^2+nh^2=0$; therefore the locus of the foci is the sextic; therefore

$$f^2/[a^2(\beta\cos\mathrm{B}+\gamma\cos\mathrm{C}+\alpha\cos\mathrm{A})+a\beta\gamma]+\ldots=0.$$

In order that this sextic should be its own isogonal transformation with regard to the pedal triangle it is necessary that it should have double points at the corners of this triangle. The sextic also has double points at the corners of the triangle of reference; for the equation is of the form

$$a^2\mathrm{P}+a\beta\gamma\mathrm{Q}+\beta^2\gamma^2\mathrm{R}=0.$$

If ρ_1, ρ_2, ρ_3, ρ_4 be the distances of the focus from the four points; (x_1,y_1), (x_2,y_2), (x_3,y_3), (x_4,y_4), their co-ordinates referred to fixed axes, we have

$$\rho_1=\mathrm{P}x_1+\mathrm{Q}y_1+\mathrm{R},\quad \rho_2=\mathrm{P}x_2+\mathrm{Q}y_2+\mathrm{R},$$
$$\rho_3=\mathrm{P}x_3+\mathrm{Q}y_3+\mathrm{R},\quad \rho_4=\mathrm{P}x_4+\mathrm{Q}y_4+\mathrm{R};$$

therefore, eliminating P, Q, R, we have an equation of the form

$$\mathrm{A}\rho_1+\mathrm{B}\rho_2+\mathrm{C}\rho_3+\mathrm{D}\rho_4=0.$$

This represents a bicircular sextic having the four points as double foci.

If the four points are concyclic, the sextic breaks up into two cubics. In this case the axes of all conics through the four points are in fixed directions: accordingly, if we take the axes of reference parallel to them, we have either of the systems

$$\rho_1=ex_1+c,\quad \rho_2=ex_2+c,\quad \rho_3=ex_3+c,\quad \rho_4=ex_4+c;$$
$$\rho_1=e'y_1+\tfrac{1}{c},\quad \rho_2=e'y_2+d,\quad \rho_3=e'y_3+d,\quad \rho_4=e'y_4+d;$$

therefore $\rho_1(x_2-x_3)+\rho_2(x_3-x_1)+\rho_3(x_1-x_2)=0$, and similar equations. Therefore in this case the locus consists of the two circular cubics having the four points as foci. [Rest in *Reprint*.]

15457. (Rev. T. Roach, M.A.)—Show that, if the difference of two angles of a triangle is $\frac{1}{2}\pi$, the centre of the nine-point circle lies on the side adjacent to the two angles.

[Solutions far too numerous to allow of more than a few being published.—Editor.]

Solutions (I.) *by* R. Tucker, M.A.; (II.) *by* Rev. W. Anderson, M.A.; (III.) *by* S. C. Bagchi, B.A.

(I.) Let O and H be the circum-centre and orthocentre; therefore

$$\mathrm{AH}=a\cot\mathrm{A}=2\mathrm{O}\alpha,$$

where α is mid-point of BC; but

$$a\cot\mathrm{A}=a\tan 2\mathrm{B}=2b\sin\mathrm{A}\cos\mathrm{B}/\cos 2\mathrm{B}=2b\cos\mathrm{B}=2b\sin\mathrm{C}=2\mathrm{AD};$$

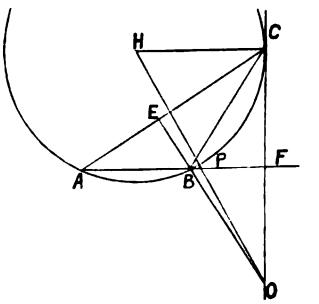
hence N lies on BD.

(II.) $\mathrm{ABC}=\frac{1}{2}\pi+\mathrm{BAC}$. H is centre of circum-circle. The perpendiculars CF and BE intersect at O. The angles OBF and CBF are each $90°-\mathrm{A}$; therefore

$$\mathrm{CF}=\mathrm{FO}.$$

$$\mathrm{BCF}=\mathrm{A};$$

therefore CF is the tangent to the circum-circle, and HC is parallel to AF; therefore the mid-point of OH, or nine-point centre of ABC, lies on AB.



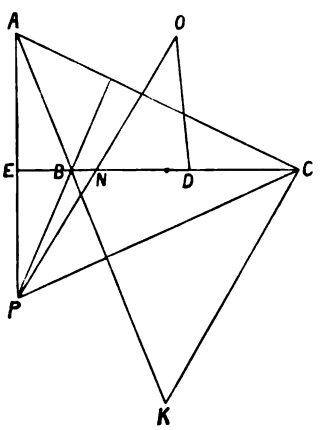
(III.) Let B > C. Draw CK perpendicular to AC to meet AB produced at K. Let P be the orthocentre, O the circum-centre. Join PO to cut BC in N. Then N will be the nine-point centre. Now $\mathrm{B}=90°+\mathrm{C}$; therefore

$$\angle\mathrm{CBK}=\angle\mathrm{BCK}=90°-\mathrm{C}.$$

But CP is perpendicular to AK; therefore

$$\angle\mathrm{BCP}=\mathrm{C}=\angle\mathrm{ACB}.$$

Also AP is perpendicular to BC produced; therefore E is the mid-point of AP. Since P is the orthocentre and O the circum-centre, therefore $\mathrm{AP}=2\mathrm{OD}$, where D is the mid-point of BC (by a well known relation between circum- and ortho-centres). But $\mathrm{AP}=2\mathrm{PE}$ (proved); therefore $\mathrm{OD}=\mathrm{PE}$, *i.e.*, $\triangle\mathrm{ODN}\equiv\triangle\mathrm{PEN}$; therefore $\mathrm{PN}=\mathrm{NO}$; therefore N is the nine-point centre (by a known theorem).



10772. (G. H. Bryan, M.A.)—A liquid film is supported on a framework in the form of an equilateral triangle of side a. If the difference of pressures (p) on the two sides of the film is so small that the surface of the film is nearly plane, prove that its equation may be written $z=\frac{4}{3}a^2(p/\mathrm{T})\,\xi\eta\zeta$, where z is the perpendicular distance of any point from the plane of the triangle, ξ, η, ζ the *areal* co-ordinates of the foot of this perpendicular, and T the surface tension.

Solution by Professor A. Anderson, M.A., LL.D.

It is easy to see that, since ξ, η, ζ vanish at the sides of the triangle, the equation of the surface of the film when z is small is of the form $z=m\xi\eta\zeta$, where m is a small linear magnitude. It is further evident, by symmetry, that, at the centre of the triangle, the surface is spherical. Hence $p/\mathrm{T}=2/\rho$, where ρ is the radius of this surface.

Let O be the centre of the triangle, and P a point near O on the perpendicular from one of the vertices, and let $\mathrm{OP}=s$. Then, for O, $z=\frac{1}{27}m$; and, for P, since $\xi=\frac{1}{3}-2s/a\sqrt{3}$, $\eta=\frac{1}{3}+s/a\sqrt{3}$, $\zeta=\frac{1}{3}+s/a\sqrt{3}$, the value of z is $m(\frac{1}{27}-s^2/3a^2)=z'$, say; therefore $z-z'=ms^2/3a^2$. But $2\rho(z-z')=s^2$; therefore $2/\rho=4m/3a^2$; and therefore $p/\mathrm{T}=4m/3a^2$. Hence the equation of the surface is $z=\frac{3}{4}a^2(p/\mathrm{T})\,\xi\eta\zeta$.

15491. (L. Isserlis.)—On a circle centre O are taken points p, q, r such that the arcs pq, qr are equal. Lines $p\mathrm{P}$, $q\mathrm{Q}$, $r\mathrm{R}$ are drawn parallel to a common tangent of the circle and a concentric conic meeting the latter in P, Q, R. Show that the tangent at Q to the conic is parallel to PR.

Solution by the Proposer *and* C. M. Ross.

Take the common tangent and the normal to the conic at the point of contact for axes, so that the equation of the conic may be written $ax^2+2hxy+by^2=2y$. Let θ be the angle which Op makes with the axis of y; then the co-ordinates of P are

$$x=1/c^2(c\sin\theta+h\cos\theta-h),\quad y=a/c^2(1-\cos\theta),$$

where

$$c^2=ab-h^2.$$

If ϕ is the corresponding angle for r, the m of PR is

$$\frac{a(\cos\phi-\cos\theta)}{c(\sin\theta-\sin\phi)+h(\cos\theta-\cos\phi)}=\frac{a\sin\frac{1}{2}(\phi+\theta)}{c\cos\frac{1}{2}(\phi+\theta)-h\sin\frac{1}{2}(\phi+\theta)},$$

Digitized by Google

which is the same as the m of the tangent at the point Q, since the θ of Q is $\frac{1}{2}(\phi+\theta)$. Hence PR is parallel to the tangent at Q.

15483. (Profsssor SANJÁNA, M.A.)—Find in positive integers all the solutions of $13k+21l+29m+37n=300$.

Solutions (I.) *by* JAMES BLAIKIE, M.A., *and* FRANK PORTER, M.A.; (II.) *by* Lt.-Col. ALLAN CUNNINGHAM, R.E., *and others.*

(I.) Since the coefficients of k, l, m, n are in arithmetic progression, it follows that, if a, b, c, d form one set of solutions, then other sets of solutions may be obtained in the following forms:—

$$a\pm r,\ b\mp r,\ c\mp r,\ d\pm r,\ \ldots\ \ldots\ldots(1),\quad a+r,\ b-2r,\ c+r,\ d,\ \ldots\ \ldots\ldots(2),$$
$$a,\ b+r,\ c-2r,\ d+r,\ \ldots\ \ldots\ldots(3),$$

where r is any integer so long as all the expressions are positive.

The equation may be written in the form

$$13(k+l+m+n)+8(l+2m+3n)=300.$$

Let $k+l+m+n=4x$, $l+2m+3n=y$, where it is evident that $12x>y$. We have now the equation $13x+2y=75$ to be solved in integers. It is evident that x is odd. If $x=1$, $y=31$, which is greater than $12x$, and therefore inapplicable. If $x=3$, $y=18$; and, if $x=5$, $y=5$. Taking the first of these, we get $k+l+m+n=12$, $l+2m+3n=18$, of which $k=l=m=n=3$ is clearly a solution.

Applying (1), we get the solutions 0, 6, 6, 0; 1, 5, 5, 1; 2, 4, 4, 2; 3, 3, 3, 3; 4, 2, 2, 4; 5, 1, 1, 5; 6, 0, 0, 6.

Applying (2), we also get 1, 4, 7, 0; 2, 2, 8, 0; 3, 0, 9, 0; 2, 3, 6, 1; 3, 1, 7, 1; 3, 2, 5, 2; 4, 0, 6, 2; 4, 1, 4, 3; 5, 0, 3, 4.

Applying (3), we obtain the same sets of numbers in inverted order, viz.:—0, 7, 4, 1, ... There are thus twenty-five sets of solutions when $x=3$. When $x=5$, we obtain $k+l+m+n=20$, $l+2m+3n=5$, from which we deduce $k-m-2n=15$, and one solution is clearly $k=15$, $l=5$, $m=0$, $n=0$.

Applying (2) and (3), we get 15, 5, 0, 0; 16, 3, 1, 0; 17, 1, 2, 0; 17, 2, 0, 1; 18, 0, 1, 1. There are thus thirty sets of solutions.

(II.) The equation may be written $13k+21l=300-29m-37n$. Numerical values 0, 1, 2, ..., may be assigned to each of m, n, thus yielding a series of equations $13k+21l=$ a given number, containing only two unknowns (k, l), which may be easily solved. There appear to be 30 different solutions, as below. It will be seen that $k+l+m+n=20$ or 12.

$k=$	15, 3, 6, ., .	., 18, 17	., 4 5, 2	4	16, 17
$l=$	5, ., ., 6, 9	7, ., 2	8, . ., 6	3	3, 1
$m=$	., 9, ., 6, .	4, 1, .	2, 6 3, .	.	1, 2
$n=$	., ., 6, ., 3	1, 1, 1	2, 2 4, 4	5	., .

$k=$	1, 2	1, 2, 3	1, 2, 3	1, 2, 3, 4	3, 4	5
$l=$	4, 2	5, 3, 1	6, 4, 2	7, 5, 3, 1	4, 2	1
$m=$	7, 8	5, 6, 7	3, 4, 5	1, 2, 3, 4	1, 2	1
$n=$	., .	1, 1, 1	2, 2, 2	3, 3, 3, 3	4, 4	5

15496. (R. F. DAVIS, M.A.)—Prove that

$$\sin\theta=2\sin\tfrac{1}{2}\theta-(2\sin\tfrac{1}{2}\theta\,2\sin\tfrac{1}{4}\theta\,2\sin\tfrac{1}{8}\theta)+(2\sin\tfrac{1}{2}\theta\ldots2\sin\tfrac{1}{32}\theta)-\ldots\text{ ad inf.}$$

Solutions (I.) *by* Rev. T. WIGGINS, B.A.; (II.) *by* R. F. WHITEHEAD, B.A., C. M. ROSS, *and* KELA DEVA RAU.

(I.) Call the terms of the dexter u_1, u_2, ...

$$\sin\theta=2\sin\tfrac{1}{2}\theta\,(1-2\sin^2\tfrac{1}{4}\theta)=u_1-u_2\,(\cos\tfrac{1}{8}\theta)=u_1-u_2+u_2\,2\sin^2\tfrac{1}{16}\theta$$
$$=u_1-u_2+u_2\,2\sin\tfrac{1}{16}\theta\,2\sin\tfrac{1}{32}\theta\cos\tfrac{1}{32}\theta=u_1-u_2+u_3\,(1-2\sin^2\tfrac{1}{64}\theta);$$

therefore $$\sin\theta=u_1-u_2+u_3-u_4+\ldots.$$

(II.) $$\sin\theta=2\sin\tfrac{1}{2}\theta\cos\tfrac{1}{2}\theta=2\sin\tfrac{1}{2}\theta\,(1-2\sin^2\tfrac{1}{4}\theta)$$
$$=2\sin\tfrac{1}{2}\theta-2^3\sin\tfrac{1}{2}\theta\sin\tfrac{1}{4}\theta\sin\tfrac{1}{8}\theta\cos\tfrac{1}{8}\theta$$
$$=2\sin\tfrac{1}{2}\theta-2^3\sin\tfrac{1}{2}\theta\sin\tfrac{1}{4}\theta\sin\tfrac{1}{8}\theta\,(1-2\sin^2\tfrac{1}{16}\theta)$$
$$=2\sin\tfrac{1}{2}\theta-2^3\sin\tfrac{1}{2}\theta\sin\tfrac{1}{4}\theta\sin\tfrac{1}{8}\theta$$
$$+2^5\sin\tfrac{1}{2}\theta\sin\tfrac{1}{4}\theta\sin\tfrac{1}{8}\theta\sin\tfrac{1}{16}\theta\sin\tfrac{1}{32}\theta-\ldots.$$

15541. (Rev. T. ROACH, M.A.)—Sum the series

(1) $\frac{1}{1.2}-\frac{1}{5.6}+\frac{1}{9.10}-\ldots$, (2) $\frac{1}{2}-\frac{2}{5}+\frac{3}{8}-\frac{4}{11}+\ldots$.

Solutions (I.) *by* Professor HUDSON, M.A.; (II.) *by* Professor SANJÁNA, M.A., *and* C. M. ROSS.

(I.) (1) Write S for the sum; then

$$S=1-\frac{1}{2}-\frac{1}{5}+\frac{1}{6}+\frac{1}{9}-\frac{1}{10}-\ldots;$$

therefore $$4S=\frac{1}{\sqrt{i}}\log\frac{1+\sqrt{i}}{1-\sqrt{i}}+\frac{1}{\sqrt{(-i)}}\log\frac{1+\sqrt{(-i)}}{1-\sqrt{(-i)}}+i\log\frac{1+i}{1-i}.$$

Expressing this free from i, we obtain

$$S=\tfrac{1}{8}[2\sqrt{2}\log(\sqrt{2}+1)+\pi(\sqrt{2}-1)]=\cdot4742,\text{ approximately.}$$

(2) Write S for the series, and suppose that the number of terms is even; then $$3S=\frac{1}{2}-\frac{1}{5}+\frac{1}{8}-\frac{1}{11}+\ldots$$

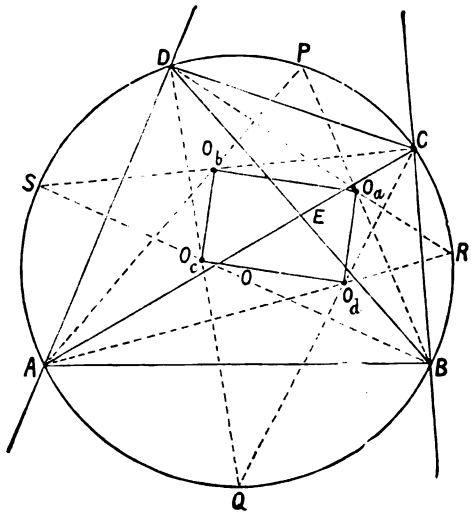
$$=-\frac{1}{3}[\log(1+1)+\omega\log(1+\omega)+\omega^2\log(1+\omega^2)].$$

Expressing this free from ω, we obtain

$$S=\tfrac{1}{27}(\pi\sqrt{3}-\log 8)=\cdot1245,\text{ approximately.}$$

If the number of terms is odd, add ·3333... to this. [Rest in *Reprint.*]

15115. (R. TUCKER, M.A.)—ABCD is a cyclic quadrilateral; (O_a, r_a), (O_b, r_b), (O_c, r_c), $O_d, r_d)$ are the in-centres and the in-radii of the tri-



angles BCD, CDA, DAB, ABC respectively. Prove that $O_aO_bO_cO_d$ is a rectangle and $r_a+r_c=r_b+r_d$. Find also $\Sigma(OO_a^2)$ where O is the circum-centre.

Solutions (I.) *by* J. H. TAYLOR, M.A., *and* J. BLAIKIE, M.A.; (II.) *by the* PROPOSER *and others.*

(I.) Let the angles subtended by AB, BC, CD, DA at C, D, A, B respectively be 2α, 2β, 2γ, 2δ. Let Q, R, P, S be the middle points of the arcs AB, BC, CD, DA respectively. Then

$$\angle CDO_b=\alpha+\beta,\quad \angle PDO_b=\angle PDC+\angle CDO_b=\alpha+\beta+\gamma,$$
$$\angle DPO_b=\angle DBA=2\delta;\quad\text{therefore}\quad \angle PO_bD=\angle PDO_b;$$

therefore $$PO_b=PD=PC=PO_a.$$

Hence PQ bisects O_aO_b at right angles; therefore also QP bisects O_cO_d at right angles, and SR bisects O_cO_b and O_aO_d at right angles.

$$\angle SPQ=\angle SCQ=\alpha+\delta,\quad \angle PSR=\angle PAR=\gamma+\beta;$$

therefore PQ, SR intersect at right angles. Hence

$$O_aO_bO_cO_d\text{ is a rectangle}\ \ldots\ldots\ldots\ldots(1).$$

$\angle PAC=\gamma=\angle PBD$; therefore the parallels to AC and DB through O_b, O_a intersect, in p, on PQ. Hence $sprq$ is a rhombus, and its area

$$=(r_a+r_c)\,pr=(r_b+r_d)\,pq;$$

therefore $$r_a+r_c=r_b+r_d\ \ldots\ldots\ldots\ldots(2).$$

By a well known trigonometrical formula, in the triangle CDB, $OO_a^2=R^2-2Rr_a$; therefore

$$\Sigma(OO_a^2)=4R^2-4R(r_a+r_c)\ \ldots\ldots\ldots\ldots(3).$$

(II.) Since AO_cO_dB is cyclic, therefore $\angle AO_cO_d=\pi-\frac{1}{2}ABC$. Also $\angle AO_cO_b=\pi-\frac{1}{2}ADC$; therefore $\angle O_bO_cO_d=2\pi-(2\pi-\frac{1}{2}\pi)=\frac{1}{2}\pi$; therefore, &c. Let $\angle ADB=\theta$, $\angle BDC=\theta$, $\angle ABD=\phi$, $\angle DBC=\phi$; then $r_a=4R\sin\frac{1}{2}\phi'\sin\frac{1}{2}\theta'\sin\frac{1}{2}BCD$, $r_a=4R\sin\frac{1}{2}\theta\sin\frac{1}{2}\phi\cos\frac{1}{2}BCD$; whence $$r_a+r_c=R(\cos\theta+\cos\phi+\cos\theta'+\cos\phi'-2)=r_b+r_d;$$

Digitized by Google

whence $\Sigma(OO_n)^2 = 4R^2[3-(\cos\theta+\cos\phi+\cos\theta'+\cos\phi')]$
$= 4R^2[3-(\cos\theta+\cos\phi'+\cos E')-(\cos\theta'+\cos\phi+\cos E)]$.

14754. (Rev. J. Cullen.)—Prove that the six sides of Tucker's triangles touch a conic the locus of whose centre is a cubic passing through the symmedian point and the centroid, having a double point where it cuts Euler's line again, and touching the S-point axis at the centroid.

Solution by G. N. Bates, M.A.

The co-ordinates of the angular points of D'E'F' with respect to FDE are
$D' -\sin\theta\sin(A-\theta)$, $\sin\theta\sin(B+\theta)$, $\sin(A-\theta)\sin(B+\theta)$;
$E' \sin(B-\theta)\sin(C+\theta)$, $-\sin\theta\sin(B-\theta)$, $\sin C\sin(C+\theta)$;
$F' \sin\theta\sin(A+\theta)$, $\sin(C-\theta)\sin(A+\theta)$, $-\sin\theta\sin(C-\theta)$.
The conic touching the six lines is
$$\sqrt{[a^2\sin(B+\theta)\sin(C-\theta)\,\alpha]}+\sqrt{[b^2\sin(C+\theta)\sin(A-\theta)\,\beta]}+\sqrt{[c^2\sin(A+\theta)\sin(B-\theta)\,\gamma]}=0.$$
The "α" co-ordinate of its centre is proportional to
$$bc[c\sin(A+\theta)\sin(B-\theta)+b\sin(C+\theta)\sin(A-\theta)]$$
or $4R\sin B\sin C+(b\cos C-c\cos B)\,t-2R\cos A\,.\,t^2\ (t=\tan\theta)$.
The "α" co-ordinate of the centre referred to ABC is, in terms of the old co-ordinates, $\alpha+[(a\cos B+\gamma)/\sin B]\,t$; therefore the locus of the centre is found by eliminating between
$$\alpha/[4R\sin B\sin C+3at+4R(\cos B\cos C-\cos A)\,t^2-at^3]=\ldots=\ldots.$$
The locus is thus a cubic passing through G ($t=0$), K ($t=\infty$), having a double point on the line OH ($t=\pm\sqrt{3}$), while its tangent at G is $\Sigma a(b^2-c^2)\,\alpha=0$ or GK.

9537. (Professor Plamenewski, M.A.)—The rate of interest increases gradually, the rate of increase at any time varying as the rate of interest. Interest being paid every instant, the principal and the rate of interest are both doubled in p years. Find the initial rate per cent. per annum.

Solution by Clement V. Durell.

Let r = rate of interest on £1 at time t (unit = 1 year),
k = constant of variation, P = principal at time t.
$dr/dt = kr$; therefore $r = Ae^{kt}$. If r_0 = initial rate of interest, *i.e.*, at time $t=0$, $r_0 = A$; therefore $r = r_0e^{kt}$; also $dP = Prdt$; therefore $dP/P = r_0e^{kt}dt$; therefore $\log P = r_0e^{kt}/k + B$. If P_0 = principal at time $t=0$, $\log P/P_0 = r_0(e^{kt}-1)/k$: but $r = 2r_0$ and $P = 2P_0$, when $t=p$; therefore $e^{kp}=2$ and $r_0(e^{kp}-1)/k = \log 2$; therefore $k = \log 2/p$; therefore $r_0 = (\log 2)^2/p$; therefore initial rate of interest per cent. per annum $= 100(\log 2)^2/p$.

QUESTIONS FOR SOLUTION.

15587. (A. R. Richardson.)—$\phi(x)$ is a continuous function of x. When does $\int_a^b f(x)\,\phi(x)\,dx$ exist either as a proper or as an improper integral?

15588. (H. MacColl, B.A.)—What is the chance that xy is greater than 5: firstly, on the assumption that x and y are each taken at random between 1 and 5; secondly, on the assumption that x is taken at random between 1 and 5, and then y at random between 1 and x?

15589. (R. Chartres.)—Express $m^n/(mr-1)$ as a radix fraction in scale r.

15590. (Robert W. D. Christie.)—(1) Solve generally in terms of a, n the equation $X^2-pY^2=-1$, when $p=(2na\pm1)^2+(2n)^2$ [a, n, arbitrary] = form $nm+1$. (2) Extend the theorem to all primes of form $4m-1$; and (3) give the general value of $\pm r^m$ where r is a prime root for all primes whatsoever.

15591. (Lt.-Col. Allan Cunningham, R.E.)—Excluding $m=X^4+1$, state the forms of m for which $X^{12}+1\equiv0\pmod m$. Show how to find X when m is given. *Ex.*, $m=99961$.

15592. (*Communicated by* James Blaikie, M.A.)—Lewis Carroll in his diary under date December 19, 1897 (less than a month before his death), says: "Sat up last night till 4 a.m. over a tempting problem sent me from New York, 'To find three equal rational-sided right-angled triangles.' I have found *two* whose sides are 20, 21, 29; 12, 35, 37; but could not find *three*." Find the three triangles; also find another pair of equal triangles, it being given that no side exceeds 125.

15593. (Rev. F. H. Jackson.)—Find a product expression for the series in Question 15535 when $(x)_n = \dfrac{1}{x(x-1)(x-2)\ldots(x-n+1)}$.

15594. (J. J. Barniville, B.A.)—Having
$u_1=2b^2-a^2$, $u_2=a^2+4ab+2b^2$,
$u_3=a^2+8ab+14b^2$, $u_4=7a^2+36ab+46b^2$, ...,
and $v_1=a^2+2ab+2b^2$, $v_2=a^2+6ab+10b^2$, $v_3=5a^2+26ab+34b^2$, ...,
the scale of each series being x^3-3x^2-3x+1, prove that $u_n^2+u_{n+1}^2=2v_n^2$.

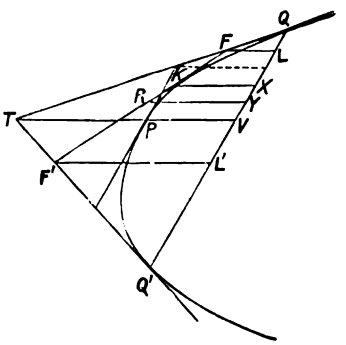
15595. (Professor Sanjána, M.A.)—Prove that
$\cosh\frac{1}{2}u\cosh\frac{1}{4}u\cosh\frac{1}{8}u\ \ldots$ ad inf. $=(\sinh u)/u$.
Hence deduce the sums of the series, ad inf.,
(1) $\dfrac{x}{1+x}+\frac{1}{2}\dfrac{x^2}{1+x^2}+\frac{1}{4}\dfrac{x^4}{1+x^4}\ldots$, (2) $\dfrac{1}{1+x}+\frac{1}{2}\dfrac{1}{1+x^2}+\frac{1}{4}\dfrac{1}{1+x^4}\ldots$.
[The first result corresponds to Euler's formula for the circular functions; in the two series x may be less or greater than unity.]

15596. (Professor Nanson.)—Find the analogue in space of n dimensions of Gauss's theorem that the middle points of the diagonals of a complete quadrilateral are collinear.

15597. (Professor Cochez.)—Construire les courbes:—
(1) $\rho=\cos\omega/(\omega+\frac{1}{4}\pi)$; (2) $\rho=(\sin\omega+\cos3\omega)/\tan\frac{1}{2}\omega$.

15598. (R. Tucker, M.A.)—PSQ is a fixed focal chord of a parabola, and R a variable point on the curve. Find (i.) the locus of the orthocentre (K) of the triangle PRQ, and (ii.) the envelope of the locus of K, supposing the chord to vary in position.

15599. (A. M. Nesbitt, M.A.)—Two tangents drawn from a point T to a parabola meet any third tangent in F and F'. If the diameter through T meet the curve in P, prove that the tangent at P bisects FF'.



[Solution by elementary geometrical conics required.]

15600. [*Communicated by* Rev. T. Roach, M.A.]—Four pennies are placed flat on a table so that each touches two of the others. Find when the space enclosed between them is a minimum or maximum.

15601. (Professor Neuberg.)—Soient A' le milieu du côté BC d'un triangle ABC; B' et B'' les points où AC est rencontré par la bissectrice intérieure et la bissectrice extérieure de l'angle B; C' et C'' les points de rencontre de AB avec les bissectrices intérieure et extérieure de l'angle C. Les circonférences A'B'C', A'B''C'' peuvent-elles toucher le côté BC sans que l'on ait AB = AC?

15602. (L. Isserlis.)—The corners ab, bc, cd, da of a quadrilateral whose sides are a, b, c, d are joined by lines p, q, r, s to the corners $\alpha\beta$, $\gamma\delta$, $\delta\alpha$ of a quadrilateral whose sides are α, β, γ, δ, aa meets in pq, $b\beta$ in qr, $c\gamma$ in rs, and $d\delta$ in sp. The lines rs, sp and qr, pq meet in pr; rp, rb, and a meet in bp; and rs, qr and sp, pq in qs. Prove that the lines qs, ba and ps, bp meet on c.

15603. (I. Arnold.)—A straight line and two circles being given, it is required to find a point in the line such that the sum of two tangents drawn from it to the two circles shall be a minimum, first when the line is external to the two circles, and second when the line cuts the circles.

15604. (Professor Lauvernay.)—Construire un triangle rectangle connaissant en position une droite Δ sur laquelle se trouve l'hypoténuse, le centre Ω du cercle enveloppant les cercles ex-inscrits au triangle ainsi que son rayon ρ.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

8937. (Asparagus.)—In a tetrahedron OABC, the lengths of the edges OA, BC are given; the sum of the lengths of OB, CA, and the difference of the lengths of the edges OC, AB are also given. Prove that (1) the volume will be a maximum when the dihedral angles opposite OB, CA are equal, and those opposite OC, AB supplementary; also (2), under the given conditions, the difference of the dihedral angles opposite OB, CA is a maximum (or minimum) for any variation of OC, AB, and the sum of the dihedral angles opposite OC, AB a maximum for any variation of OB, CA.

9308. (Professor Nilkantha Sarkar, M.A.)—A uniform rod rests in a horizontal position, being supported by two smooth pegs equidistant from its centre. If the distance between the pegs $=1/\sqrt{3}$ times the length of the rod, prove that, if one of the pegs be suddenly removed, the pressure on the other will be initially unaltered.

10360. (D. Biddle.)—A square one-storied building, having an entrance door in the middle of one of its walls, is divided into nine square rooms, each of which communicates with those adjoining it by doors in the middle of the partitions. A person entering the building begins a tour of inspection, selecting the several doors at random; but each door, once passed, is locked, and becomes no longer open to selection. Prove that the odds are 3 to 1 against his completing the tour; also find the chance of his finding himself at the end in a particular room.

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

PRACTICAL APPLICATIONS OF THE ART OF TEACHING.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Principal of the University of London Training College.

The Second Course of Lectures (Thirty-second Annual Series) will commence on Thursday, September 29th, at 7 p.m.

The course is intended for teachers in actual practice. Its purpose is to give assistance, so far as this can be accomplished by means of lectures, in the ordinary work of the schoolroom. While, therefore, the Lecturer will neglect no opportunity of indicating how the present state of affairs in schools may be improved, he will concern himself mainly with the most likely ways of making the best of things as they are.

SYLLABUS.

I. *Organization.*—Relation between curricula and organization. Organization by "sides." The "form" system. The specialist system. The synchronous system. Combination of systems. Various bases of classification of pupils. Co-education. Staff and size of classes. Visiting masters. Prefects.

II. *Time Tables.*—Length of whole school day: relation between class work and preparation work. Arrangements of the major divisions of the day. Theory of fatigue and its application to (*a*) rest intervals, (*b*) sequence of studies, (*c*) length of study periods at different stages and for different subjects, (*d*) relation between physical exercise and mental effort. Form in which time tables should be drawn up—rigidity and elasticity.

III. *Method.*—Meaning and philosophical bases of method. Universal method and special methods. Induction and deduction in their bearing upon method. Methodologists. The "formal steps" and their application to the ordinary work of the school. The Socratic, heuristic, concentric, and other methods.

IV. *English Composition.*—Vocabulary and construction. Relation between knowledge and expression. Imitation and precept. Analytic and synthetic methods of teaching composition. Relation of matter to form, and dangers of the undue prominence of either. The problem of correction. The various kinds of composition found in school, and their relative merits.

V. *English Literature.*—Fallacy of the "Manual of English Literature." Need of first-hand acquaintance with works of authors studied. Problem of "storing" literature in the minds of the pupils till they are ripe for it. Difficulty of finding materials for young classes. World literature the best beginning. Literary "readers." Place of appreciation and criticism in the literature class.

VI. *Language Teaching.*—The inductive and deductive methods of language teaching. The relative merits and the proper spheres of the various methods of teaching modern languages. How far the ancient classics may be taught on the same lines as modern languages. The value of accurate pronunciation and the possibility of teaching it. Phonetics and phonetic text-books. The place of the English master in teaching foreign languages.

VII. *History.—Science* of history beyond the range of school pupils. Place of biography and "drum and trumpet" history in school. Need for materials for future study. Common mistake in the size of text-book. Discussion of the value of the accuracy aimed at in history. Place of fiction and the use of the imagination in the study of history. Use of pictures and other illustrations.

VIII. *Geography.*—Various views of the aim of geography teaching. Consequent differences in the method of approaching the subject. Topography. Physical geography. Mathematical geography. Fundamental importance of direction and distance. Misunderstandings connected with maps. The concentric method. Geography as a science, and its relation to the sciences on which it is based.

IX. *Mathematics.*—The relation of arithmetic to school mathematics. Necessity for a re-arrangement of present distribution of work. Two types of mind, corresponding to algebra and geometry respectively. Mensuration a suitable subject to illustrate various forms of mathematics. Beginnings of algebra for ordinary pupils. Proofs. New methods of teaching geometry. Successors of Euclid. Use of paper-folding and other forms of the concrete, including mathematical instruments.

X. *Science.*—Object of study to cultivate scientific spirit and accurate method. Relative merits of the classificatory sciences and the physical sciences in education. Dangers of observation. Application of the laws of inductive logic. The place of *purpose* or *end* in science teaching. The nature of apparatus: difference in its use at early stages and at later stages: home-made apparatus.

XI. *Drawing.*—Undue prominence of the æsthetic side. Value as (*a*) practice in manual dexterity, (*b*) a training in observation—relation of perspective to observation, (*c*) means of expression. Drawing ought to rank along with writing. Free expression at early stages of school life. Free arm and ambidexter drawing. Rudimentary design and brush-work. Teacher's use of drawing on blackboard.

XII. *Examinations.*—Kinds of examinations and their purpose. Preparation of test papers and examination papers. Method of marking papers. Dominant influence of external examination. The case for "cram." Personal equation of examiner, of pupil, and of teacher. Best method of preparing pupils for external examination. Possibility of obtaining good examination results without sacrificing the pupil.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to all the Courses of Lectures.

C. R. HODGSON, B.A., *Secretary.*

School Prizes. MIDSUMMER, 1904.

The Greatly Enlarged Showrooms

OF THE

EDUCATIONAL SUPPLY ASSOCIATION

afford every facility for those considering the question of SCHOOL PRIZES to inspect an immense Stock of Selected Books suitable for Rewards.

THE PRIZE CATALOGUE,

arranged on a novel plan, lightens the labour of selection.

The Association have a **Good Assortment of Medals** (Gold, Silver, and Bronze) in various designs suitable for all purposes.

The Special Prize Boxes of English-made Instruments will be found most suitable for Mathematical Prizes.

The following Catalogues now ready :—

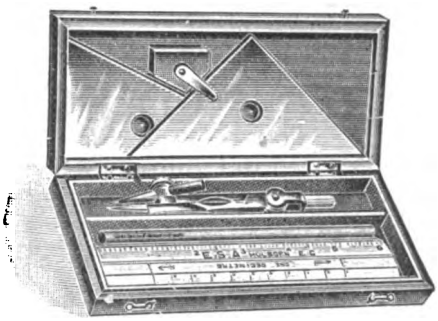
Catalogue of Cloth Bound Books,
Catalogue of Leather Bound Books,

will be sent post free on application to

FOR THE LOCALS.

THE "CAMBRIDGE" BOXES OF ENGLISH-MADE INSTRUMENTS.

Suitable for Geometrical Drawing.



Containing every Instrument required by Candidates entering for the Local Examinations :—

No. 10A.—A Strong, Sliding, Cloth-covered Box, 6½ inches by 3½ inches by ¾ inch, containing :—

1 **Brass Bow Pencil Compass** to take any size of Pencil up to full size.
1 **Black Lead Pencil** ("H") and 1 **Compass Pencil.**
1 **Boxwood Rule, 6-inch,** graduated in inches, tenths of an inch, centimetres, and millimetres, and marked on the reverse side as a **Protractor.**
1 **Nickel Set Square** (unbreakable), 45°.
1 **Nickel Set Square** (unbreakable), 60°.

Price 1s. 9d. per Box. { Price for orders of 6 dozen, **1s. 7½d.** per Box ; „ „ 12 dozen, **1s. 6d.** per Box.

No. 11A.—Containing Instruments identical with above, but in a Strong, Polished Wood Box fitted with divisions.

Price 2s. 3d. per Box. { Price for orders of 6 dozen, **2s. 1½d.** per Box ; „ „ 12 dozen, **2s.** per Box.

Every Instrument in these Boxes is thoroughly reliable, having been specially made, and the Compass is a patent one.

A Specimen Box will be sent post free on receipt of stamps for the advertised price.

Economic Geology	E. J. GARWOOD, M.A.
Mathematics	M. J. M. HILL, M.A., F.R.S.

Fee for the full three-year Diploma Course in Engineering, including the Course for graduation (B.Sc.) in the Faculty of Engineering, 115 guineas (£10. 10s. Entrance Fee and £36. 15s. per annum).

The College contains spacious Mechanical and Electrical Engineering Laboratories, Workshops, Drawing Office, Museum, and Lecture Theatres.

SCHOOL OF ARCHITECTURE,
Professor F. M. SIMPSON, F.R.I.B.A.

The Session of the School of Architecture will begin on Tuesday, October 4th.

A full Diploma Course occupies three years. There is also a Certificate Course of two years.

Fee for the full three-year Course, 115 guineas (first year, 45 guineas; second and third years, 35 guineas).

Particulars of the Courses and of the Matriculation Examinations in Engineering and in Architecture may be obtained on application to the SECRETARY.

T. GREGORY FOSTER, *Secretary.*

MEDICAL AND SCHOLASTIC ASSOCIATION,
8 KING STREET, MANCHESTER.

Principals and Assistants of Schools are requested to send their requirements early. Prospectuses filed and transfers negociated.

W. P. EVANS, *Secretary.*

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.
Rector: The Right Hon. Sir ROBERT BANNATYNE FINLAY, K.C., M.P., LL.D., M.D., &c.
Principal and Vice-Chancellor: Sir WILLIAM TURNER, K.C.B., D.C.L., LL.D., D.Sc., M.B., &c.
Secretary of Senatus: Prof. Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The ***Winter Session*** begins about the middle of October, and closes about the end of March; the ***Summer Session*** extends from the beginning of May to the end of July.

The University embraces ***Six Faculties,*** viz.: ***Arts, Science, Divinity, Law, Medicine and Surgery, and Music,*** in all of which full instruction is given and Degrees are conferred. There are many different avenues to the ***Arts Degrees,*** the graduation subjects embracing English History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The widening of the Arts curriculum permits to a greater extent than formerly the combination of Arts, Science, Medical, Legal, or special studies: and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Lit., D.Phil., and D.Sc. are conferred. A Schoolmaster's Diploma of two Grades is conferred: viz., a ***Secondary School Diploma*** for Masters of Arts with Honours, and for Graduates in Pure Science, and a ***General Diploma*** for those who have taken the ordinary Degree of M.A., or the Degree of B.Sc. Degrees in ***Science*** (B.Sc. and D.Sc.) may be taken in ***Pure Science, Engineering,*** and in ***Public Health,*** and the Degree of B.Sc. in ***Agriculture.*** There are fully equipped Science Laboratories, and other necessary appliances in all these Departments. The curriculum in ***Divinity*** affords a thorough training in theological subjects, and in Hebrew, Arabic, and Syriac. The ***Law*** Faculty, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and History, Roman Law, and Political Economy, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Faculty of ***Medicine*** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.), and these degrees qualify for practice through His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A University Certificate in ***Tropical Diseases*** is conferred on qualified Medical Practitioners who have attended Courses in the University on Practical Bacteriology and Tropical Diseases. In ***Music*** also there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 41 Professors, 43 Lecturers, and about 50 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £18,000. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in Arts, Science, Divinity, and Music; and they are admitted to graduation in Arts, Science, Medicine, and Music, the Training for Degrees in Medicine for Women being afforded by well equipped Extra-academical Schools.

Information regarding Matriculation, the Curricula of Study for Degrees, the Examinations for Fellowships, Scholarships, &c., may be obtained from the DEANS OF THE FACULTIES, or from the CLERK OF SENATUS; and full details are given in the University Calendar, published by JAMES THIN, 55 South Bridge, Edinburgh. Price by post, 3s. 6d.

The Preliminary and Degree Examination Papers in each of the Faculties are also published by Mr. JAMES THIN, viz.: Arts and Science Preliminary Papers and Bursary Papers, 1s.; Medical Preliminary Papers, 6d. Degree Papers: Arts, 1s.; Science, 9d.; Divinity, Law, Medicine, and Music, 6d. each.

By Authority of the Senatus,

July, 1904. L. J. GRANT, *Secretary of Senatus.*

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

PRACTICAL APPLICATIONS OF THE ART OF TEACHING.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Principal of the University of London Training College.

The Second Course of Lectures (Thirty-second Annual Series) will commence on Thursday, September 29th, at 7 p.m.

The course is intended for teachers in actual practice. Its purpose is to give assistance, so far as this can be accomplished by means of lectures, in the ordinary work of the schoolroom. While, therefore, the Lecturer will neglect no opportunity of indicating how the present state of affairs in schools may be improved, he will concern himself mainly with the most likely ways of making the best of things as they are.

SYLLABUS.

I. *Organization.*—Relation between curricula and organization. Organization by "sides." The "form" system. The specialist system. The synchronous system. Combination of systems. Various bases of classification of pupils. Co-education. Staff and size of classes. Visiting masters. Prefects.

II. *Time Tables.*—Length of whole school day: relation between class work and preparation work. Arrangements of the major divisions of the day. Theory of fatigue and its application to (*a*) rest intervals, (*b*) sequence of studies, (*c*) length of study periods at different stages and for different subjects, (*d*) relation between physical exercise and mental effort. Form in which time tables should be drawn up—rigidity and elasticity.

III. *Method.*—Meaning and philosophical bases of method. Universal method and special methods. Induction and deduction in their bearing upon method. Methodologists. The "formal steps" and their application to the ordinary work of the school. The Socratic, heuristic, concentric, and other methods.

IV. *English Composition.*—Vocabulary and construction. Relation between knowledge and expression. Imitation and precept. Analytic and synthetic methods of teaching composition. Relation of matter to form, and dangers of the undue prominence of either. The problem of correction. The various kinds of composition found in school, and their relative merits.

V. *English Literature.*—Fallacy of the "Manual of English Literature." Need of first-hand acquaintance with works of authors studied. Problem of "storing" literature in the minds of the pupils till they are ripe for it. Difficulty of finding materials for young classes. World literature the best beginning. Literary "readers." Place of appreciation and criticism in the literature class.

VI. *Language Teaching.*—The inductive and deductive methods of language teaching. The relative merits and the proper spheres of the various methods of teaching modern languages. How far the ancient classics may be taught on the same lines as modern languages. The value of accurate pronunciation and the possibility of teaching it. Phonetics and phonetic text-books. The place of the English master in teaching foreign languages.

VII. *History.—Science* of history beyond the range of school pupils. Place of biography and "drum and trumpet" history in school. Need for materials for future study. Common mistake in the size of text-book. Discussion of the value of the accuracy aimed at in history. Place of fiction and the use of the imagination in the study of history. Use of pictures and other illustrations.

VIII. *Geography.*—Various views of the aim of geography teaching. Consequent differences in the method of approaching the subject. Topography. Physical geography. Mathematical geography. Fundamental importance of direction and distance. Misunderstandings connected with maps. The concentric method. Geography as a science, and its relation to the sciences on which it is based.

IX. *Mathematics.*—The relation of arithmetic to school mathematics. Necessity for a re-arrangement of present distribution of work. Two types of mind, corresponding to algebra and geometry respectively. Mensuration a suitable subject to illustrate various forms of mathematics. Beginnings of algebra for ordinary pupils. Proofs. New methods of teaching geometry. Successors of Euclid. Use of paper-folding and other forms of the concrete, including mathematical instruments.

X. *Science.*—Object of study to cultivate scientific spirit and accurate method. Relative merits of the classificatory sciences and the physical sciences in education. Dangers of observation. Application of the laws of inductive logic. The place of *purpose* or *end* in science teaching. The nature of apparatus: difference in its use at early stages and at later stages: home-made apparatus.

XI. *Drawing.*—Undue prominence of the æsthetic side. Value as (*a*) practice in manual dexterity, (*b*) a training in observation—relation of perspective to observation, (*c*) means of expression. Drawing ought to rank along with writing. Free expression at early stages of school life. Free arm and ambidexter drawing. Rudimentary design and brush-work. Teacher's use of drawing on blackboard.

XII. *Examinations.*—Kinds of examinations and their purpose. Preparation of test papers and examination papers. Method of marking papers. Dominant influence of external examination. The case for "cram." Personal equation of examiner, of pupil, and of teacher. Best method of preparing pupils for external examination. Possibility of obtaining good examination results without sacrificing the pupil.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to all the Courses of Lectures.

C. R. HODGSON, B.A., *Secretary.*

The Educational Times.

The State and the Universities.

"THE Universities must wait." Whatever may be the claims of University education to some further State assistance, they must wait for the fulfilment "until the Government finance is in easier condition, and until the revenue has recovered its elasticity, or other urgent and unavoidable demands have ceased to press upon the Government." Such was the declaration of the Chancellor of the Exchequer to what the Prime Minister had just called the "august and representative" deputation from the Universities and other learned institutions which went to Westminster on July 15 in quest of increased means of national usefulness. This year the Government propose to ask Parliament to double the modest grant now made to the University colleges, and hold out some hope that next year they may be able to perform the doubling operation again. At this rate the most clamorous of colleges would soon be gorged; but then the hope is but a pious aspiration. So the Universities must wait: they are neither battleships nor battalions.

The deputation was appropriately organized and introduced by Sir Norman Lockyer as President of the British Association, and as propounder of the most striking of the recent expositions of the needs of the higher learning in this country. To his appeal came prompt and cordial response from some four hundred men of outstanding position in connexion with the Universities (without exception), educational organizations, associations devoted to science and art, municipalities, county councils, and labour interests; though there was opportunity for the attendance of barely more than one in three. A more impressive deputation could hardly have been gathered together. No less impressive was their argument: it rose to the height of national concern; indeed they said pointedly "the gravest national concern." In fact, it is getting to be an old story: that our commercial and industrial supremacy is menaced by the educational methods of other civilized States, notably by the United States and Germany; that the University, the laboratory, and the workshop, no less than the primary school, are the battlefields of this new struggle; that the scientific spirit must not be confined to the workshop, but must be utilized, as other nations utilize it, in all branches of the administration and the executive; that, in sum, the question involves an important change of front, requiring us to find a new basis of stability for the Empire in face of the new conditions. The representation will not be regarded as over-coloured, except by such as do not trouble to get at the facts, or lack imagination to discern the significance of the facts. Nor did Mr. Balfour seek to minimize its importance; on the contrary, in spite of his analytical examination of certain points, he explicitly placed the question on a broader basis than any of the speakers of the deputation, except Sir Richard Jebb.

Different speakers naturally put forward different aspects. The representatives of Oxford and Cambridge, which ask nothing for immediate specific needs of their own (for very good reasons and with capable strategy), merely demonstrated in sympathy, though enforcing the main contention with excellent effect. The Chancellor of Birmingham, embroidering business methods with new-found academic experience in a wealthy industrial centre, was clear for the urgency of supersession of rule-of-thumb by scientific knowledge, and for the necessity of national grants in aid of local effort. And undoubtedly local contribution ought to be encouraged, if not laid down as a peremptory condition; yet the capacity of the locality must always be a moderating factor, and there is not a little virtue in the spontaneous liberality of local men to local institutions wherever there exists a local public spirit. But the weight of the case was laid upon the scientific aspects. For this there is obviously very large reason, not only from the importance of scientific method and of the multifarious applications of science throughout the practical work of the nation, but also particularly because of the exceptional expense of laboratory machinery and materials. It may be that some distribution of subjects may be arranged to obviate this; for, if the ambition of a University for completeness within itself is most laudable, yet it hardly expresses a national necessity, and may in select cases be left to grow to fulfilment by municipal or personal rather than by direct national agency.

But man does not live even by science alone, and this was explicitly and forcibly insisted on by Mr. Balfour. "No University," he said, "does, and no University ought to, confine its attention merely to the education of what have been described as captains of industry; that would be a deplorable limitation of the functions of the highest teaching centres in the country." Sir Richard Jebb, speaking for the younger Universities, had just emphasized the importance of literary studies.

"On the other hand," said Mr. Balfour, "it is vain to suppose that by any mere organization or subvention of University teaching you can produce original talent." Well, but nobody does suppose anything of the kind; no such function has ever, so far as we are aware, been attributed to, or expected of, a University. But, if "mere endowment of Universities will not greatly increase the output of original work of the very first quality," what will it do? "It will," says Mr. Balfour, "or might, help to do what is now more and more required—the education, the rendering fit for industrial work, of persons who, without University education, would enter into that work ill-equipped indeed." Certainly; and, if Mr. Balfour had not been at the moment looking more specially at the main aspect presented by the deputation, he would readily enough have seen other things that it will, or might, do. We are entitled, as he himself pointed out, to look a very long way beyond the improvement of industrial work. A man can hardly go through a University course in these days without a great and permanent expansion of outlook, capacity, and usefulness in whatever department of action. And, if a University cannot produce "original talent" or "original work of the very first quality," it may, at any rate, gather and co-ordinate materials and open up vistas such as may afford original talent opportunities that otherwise would not be available. It is the fairly able man, less than a genius —the plodding, fetching-and-carrying man—that needs most to be cultivated for the ordinary work of the world. "One other thing," said Mr. Balfour, "I feel that we want, and want enormously—namely, a position which shall enable a man who has exceptional gifts of originality in science to devote his life to that for which Nature qualified him, and that he shall not be driven to some other career for which he is hardly less qualified, but in which he is able to do much less service to his country and humanity at large." This is well said if "science" be taken comprehensively, and not in the narrow sense of convention. Nor less timely was his hint to employers, who have certainly not awakened here, as they have awakened in America and Germany, to the superior commercial value of the employee of trained intellect.

To the Chancellor of the Exchequer was left the "much less grateful task" of explaining what the Government could do and what the Government could not do in the existing circumstances. His anxiety not to check the flow of private liberality was at least respectable, especially in view of the rather distant day when employers shall have adequately realized the value of brains that have not grown from an office stool or from polishing the handles of the front door. Otherwise, the argument would have been no more than a pitiful signal of distress. His more elaborate question—how far the Universities would be willing to sell themselves to the State, or how far they would submit to State direction or influence in regard to their teaching—need hardly be considered. If the Universities are wise, they will keep their hands free: the State may well be satisfied with results. On this point, the example of Germany and France is a warning rather than an encouragement: we have outgrown the drill-sergeant here. "No control, no money" is a good maxim in its place, but it needs to be applied with discretion. Altogether, the Universities may take courage from the demonstration, and hope for better things in times of less expensive policy and a fuller treasury. For, as Sir Arthur Rücker justly pointed out at Bangor, "neither private beneficence nor municipal aid can suffice to place the English Universities in the position they ought long ago to have attained. The want of equipment, the low salaries, the entire absence, or inadequate supply, of pension funds, the large sums needed to make good the neglect of the past—all these cannot be provided by individuals or by rates which can barely cope with the needs of elementary and secondary education."

NOTES.

The Board of Education have issued a report, presented to them by the Consultative Committee, containing proposals for a system of School Certificates. They have already circulated it to the English Universities, to professional bodies, and to individuals interested; and copies may be obtained on application to the Secretary, Board of Education, Whitehall, S.W. The Board are anxious to obtain an expression of the views of all parties interested, and meantime refrain from giving any indication of their own opinion. The inquiry was started by the Head Masters' Conference, which in 1901 addressed to a number of professional bodies a memorial drawing attention to "the grave inconvenience and waste of time caused by the multiplicity of examinations for entrance into professions," and suggesting "the institution of a single examination, to be held at centres three times a year; also that, if possible, a list of equivalents to this examination should be arranged for, to be adopted in common by all the bodies." This memorial the General Medical Council forwarded to the Board, and the Board referred the correspondence to the Consultative Committee for their advice. Last year and this year the Committee held five conferences with representatives of five sets of institutions interested, and heard the evidence of Mr. J. Struthers as to the working of the Leaving Certificate of the Scotch Education Department. On this elaborate basis of investigation, together with careful survey of the present circumstances of the secondary schools, they framed the scheme now submitted for consideration.

The Consultative Committee approve of "a general system of school certificates" granted on examinations not "conducted by means of papers set for the whole country from a single central organization," but "controlled by a recognized examining body." This examining body "should

Digitized by Google

be either (1) a University, or (2) a combination of Universities, or (3) an Examination Board representative of a University or Universities and of the Local Authorities which are prepared to co-operate with them"; and "it is desirable that, whatever the examining body may be, teachers of schools should, where possible, be represented, and, with regard to (3), that every such Board should contain a large academic element." Then "recognition of these examining bodies should mean recognition by the Board of Education, acting on the advice of the Consultative Committee." It is proposed to require from every school presenting candidates for school certificates two conditions: (1) submission to periodical inspection (whether by officers of the Board of Education or by a University or other organization recognized under Section 3 of the Board of Education Act, 1899), the report being communicated to the examining body; and (2) the communication of the course of studies pursued in the school to the examining body. In order to secure a uniform standard, practically sufficient, the Committee advise the establishment of a Central Board for England (excluding for the present Wales and Monmouth) "consisting of representatives from the Board of Education and from the different examining bodies, whose duty should be to coordinate and control the standards of these examinations, and to secure the interchangeability of certificates, and to consider and as far as possible to adjust the relations of the examining bodies and their spheres of external action." The examination, they think, "should be conducted in each school by external and internal examiners, representing respectively the examining body and the school staff; and the school record and report of the examiner should be available for reference. There should be a Senior and a Junior Certificate. Teachers should see the proposals in detail. They have manifestly cost much labour and thought. The Northern Universities, which have been considering the distractions caused by multifarious examinations in secondary schools, may obtain some hints here.

THE election of Prof. John Morris Jones to a Research Fellowship of modest value and for a limited period at Jesus College, Oxford, seems a remarkably sensible and opportune act of the governing body of his old college. Nowadays it is understood that a professor's duty includes the advancement of learning as well as the labour of teaching. In the University colleges, however, the salary—when there is a salary—is rarely calculated to cover the part of the duty that is fundamentally the more important, and Prof. Jones's college—the University College of North Wales—is no exception. Prof. Jones, we learn, is accumulating materials for a comprehensive scientific treatise on Celtic grammar. Here, then, is a work that cries to be done, and a scholar that is eager and competent to do it; and fortunately the materials are contained within a comparatively small geographical area, and not scattered over a continent. Yet even the generosity of Welshmen does not volunteer to the scholar, though a native and a worker for the honour of the country as well as for the advancement of scientific knowledge, a gratuitous provision of railway and wagon fares, or of local bread and cheese. That is the prosaic concrete fact, which the popular imagination seems unable to realize when it demands scholarly investigations from professors. Again, here is a research endowment for a scholar that has shown his ability to use it to the best advantage. And that suggests the question whether the numerous research scholarships now awarded to young students on mere University examinations might not secure very much more valuable results if they were applied in aid of the investigations of mature scholars—a question that claims, we are disposed to think, more thoughtful consideration than it yet seems to have received.

YET another congress has established itself—the English and Welsh Students' Congress, which means to be a permanent organization "to promote the general interests of the students and to advance social and academic unity." No doubt it was a "felt want"; at any rate, it is a new development—on this side of the Border: on the other side, the Scottish Universities have long had their several Students' Representative Councils, and these have met in common deliberation. Moreover, it is a laudable development; the students have their own importance in the University system, apart from the contribution of fees, and apart from the experimental operations of professors; and, whatever their views of academic affairs may chance to be, it is all to the good that they should find formal constitutional expression. It would be easy enough to poke fun at the institution: a contemporary, for instance, says "a code of ethics might be formulated for the guidance of students who attend ceremonies when degrees are conferred." It might; indeed, it probably will: for the extravagances of some are not to be taken as the characteristic conduct of all. The Aberdeen Students' Representative Council, for example, though they may not yet have succeeded in devising measures likely to secure that a single sentence of their Lord Rector's address should be heard, yet have admittedly done excellent service to the University authorities in the investigations of that ugly episode of the Alake. Institutions need time to grow, and they should be encouraged in their aspirations to grow straight. We wish the new Congress every success. But people that are not students—what have they to do with the business? Let them keep to their own galleys.

THERE is quite enough to say against examinations without saying the wrong thing. Prof. Schuster—if one may trust a condensed report of his remarks to the Students' Congress at Manchester—seems to have been on the verge of saying the wrong thing, or at least suggesting it by implication. He is represented as having condemned the publicity given to school successes, on the ground that it leads to the neglect of the chief work of a school—the building up of the average student. That the building up of the average student is the chief work of a school may be readily admitted, seeing that the bright scholars and the duffers are probably in a small minority. But the struggle for superiority is in the blood, and the declaration of examination results has an exhilarating effect both on students and on parents. If the attainment of distinguished results is in any case proved to have been secured by neglect of the main body of the school, then there is room for complaint, but not

Digitized by Google

till then: there is no *a priori* ground for the suggestion of such unfairness. The examination, and the publication of results, may be—and ought to be—an impetus to the students and to the teachers and to the cause of education: the possible evils attendant on examinations are to be gibbeted apart; they are not inherent in the system, and ought not to be used speculatively to prejudice the system. On the other hand, if you abolish examinations and publication of results, or issue your degree and other lists without division into classes, is there not the risk of a positive check to honourable ambition and even to reasonable diligence, as well as a remarkably good chance for a dull uniformity of inconsiderable attainment?

THE puzzlements of military organization would appear to extend to the new scheme of entrance examinations. An early effect of these, as Dr. Glazebrook recently pointed out in the *Times*, will be that "the great majority of English officers in the future will be without any tincture of the language which has hitherto been the basis of all liberal education"—"a revolution which is the fruit not of policy, but of miscalculation," for "the avowed intention of the Army Board, supported by the strong representations of eminent soldiers, is to retain Latin as part of the normal training of an officer." The perverted operation of the scheme is thus explained by the Head Master of Clifton:

> In the "qualifying" examination, besides the compulsory subjects, each candidate has to choose two out of the following:—(1) Latin or Greek; (2) French or German; (3) Science. Since every boy takes either French or German, and not one in a hundred offers Greek, the real choice is between Latin and Science. In making that choice, boys are naturally determined by the consideration of what will pay in the later and more important stages. For admission to Woolwich and Sandhurst the two subjects count alike; but at Woolwich in the all-important competition which decides whether a boy is to be an Engineer or an Artillery officer, and assigns his seniority in either service, Science counts heavily and Latin not at all. Consequently every Woolwich candidate with a particle of ambition will prefer Science from the first. At Sandhurst knowledge counts for so little, in comparison with drill and athletics, that the choice is less important. Still, Science does count for something, while Latin goes for nothing. For this and other reasons a majority of Sandhurst boys will undoubtedly prefer Science.

Undoubtedly; and Dr. Glazebrook has ascertained "that at several of the principal schools which prepare for the Army it has already been decided that all candidates for Woolwich, and a large proportion of candidates for Sandhurst, shall drop Latin after the present school term." So, by an accident of miscalculation, in the teeth of the avowed intentions of the Army Board, Latin ceases to be compulsory, becomes voluntary, and proceeds to disappear from "the normal training of an officer." Perhaps Dr. Glazebrook's protest will not lack support, and may yet prove not ineffective.

IN this country we have heard but little of the transference of the Government's activity in educational reform to the other side of St. George's Channel. The Irish, however, appear to have obtained indications of a design to break up the National Board of Education and to put in its place a brand-new Department of Education. Upon this alleged project the archbishops and bishops, in annual conclave at Maynooth, have pronounced an unambiguous opinion:

> A Department of Education may be well enough in England, where society is socially and politically in a normal condition, but in Ireland it would mean another outwork of Dublin Castle and a further opportunity of practical ascendency for a favoured sect. To say the least of it, it is suspicious to see the Chief Secretary, who refuses the great educational reform that nine-tenths of the Irish people earnestly and persistently demand, pressing upon us changes which the country does not ask for, and which run counter to all our religious sentiments.

We must await developments. Strong reasons indeed would be necessary to justify "changes which the country does not ask for and which run counter to all our religious sentiments." On the other hand, it is anything but clear why "the great educational reform that nine-tenths of the Irish people earnestly and persistently demand" should not be carried out—assuming that the Irish correspondent of the *Manchester Guardian* interprets it aright. He says this:

> The demand for a Catholic University has been long since given up. This demand was only made before the Test Acts, when the existing Universities were exclusively Protestant. There are at present two Universities in Ireland—Trinity College, Dublin, and the Royal University, which is only an examining body. The reform recommended by the Royal Commission on University Education in Ireland in 1903 is that the Royal University should be turned into a teaching University consisting of four colleges—namely, the three Queen's colleges in Belfast, Cork, and Galway, and a fourth college to be founded in Dublin. The Catholics of Ireland are satisfied with this, and the present income of the Royal University can be utilized for the support of the scheme without resorting to the Treasury . . . The proposed new University and its federal colleges would be non-sectarian. The expression "Catholic University" is now used only by the enemies of popular education; the Irish Catholics no longer ask such a thing. They merely ask for a University or University college which would be equipped and conducted on modern lines, like the new Universities of England and Wales, and which would be free from the control of an offensive ascendency.

If this diagnosis of Irish opinion be correct, there ought to be little difficulty in effecting a satisfactory settlement of an unnecessarily troublesome question.

NOW is the time for the sea-serpent, the big gooseberry, and paterfamilias's grumble about the excessive length of holidays at public schools, and inferentially at other schools that follow the times and seasons of the public schools. For example, a correspondent of the *Morning Post*, presumably a long-suffering paterfamilias, writes all the way from Dresden—no doubt at some risk to the enjoyment of his well earned holiday—setting forth elaborate calculations and inconclusive arguments. He finds that a sample public-school prospectus announces vacations totalling fifteen weeks a year; he finds also that the holidays at the Gymnasien and the Realschulen in Prussia and Saxony total twelve and a half weeks. There are other pertinent differences, which he neglects, probably not appreciating the relevance of them; but is the time-difference really worth half a column of a London morning daily, or even half a "stick"? If there "prevails in some of our public schools a custom of granting an extra week's holiday on some trivial pretext," then such custom, unless very specially justified, should, we agree, "be strenuously resisted by parents." But that is another story. How "the present system makes the actual cost of public-school education much in excess of the nominal cost" is an administrative and financial problem of complexity beyond our grasp. Evidently such complainants little appreciate the case for the schoolmaster, or for the pupil either.

UNIVERSITY ORGANIZATION.

THE FUTURE OF THE FEDERAL SYSTEM.

Sir Arthur Rücker, Principal of the University of London, delivered the annual academical address at the close of the session at University College, Bangor. After referring to the older Universities, he dealt with the federal system and the problems of the future connected with it. It seemed possible that the country might ultimately be covered with a network of federal Universities, each large enough to be of national rather than of merely local importance. Oxford, Cambridge, and London stood, for obvious reasons, outside the general scheme. Unlike the colleges of Oxford and Cambridge, the colleges of the federal Universities were not supported by ancient endowments, but depended for financial support upon public opinion. The University colleges were unquestionably local in character, and the feeling grew that the University with which each college was associated should be local also. They were founded by local benefactors, controlled by local ability, and supported by local funds. Nevertheless, more money was needed, and at last the Government had begun to make moderate grants to University colleges. With Government help came Government inspection, and of late small committees of experts had been appointed at short intervals to report upon the needs and the efficiency of University colleges. This supervision was now extending its range. The money had been given to and the right of inspection exercised over colleges. Such inspection would be exercised not merely at long intervals by means of Statutory Commissions, appointed when organic changes were required, but regularly and systematically as part of a uniform official routine. A newspaper paragraph had lately conveyed the impression that elsewhere a city council would inspect a local University in exchange for an annual grant. Doubtless the relation between a local University and the Local Educational Authority must be intimate, and thus there would be exchanges of opinion on matters hitherto reserved for the exclusive consideration of the University authorities. If the Municipal Authorities were willing to give financial help to the local Universities without attempting to reduce them to the condition of mere departments of their educational offices; if the Universities were willing to receive friendly hints as to public opinion from the Authorities, and were able to relieve them of some of their overwhelming duties by inspecting for them, by carrying on educational work for them, and the like, the alliance of the two must be entirely beneficial. But there could be no doubt that neither private beneficence nor municipal aid would suffice to place the English Universities in the position they ought long ago to have attained. The want of equipment, the low salaries, the entire absence, or inadequate supply, of pension funds, the large sums needed to make good the neglect of the past, all those could not be provided by individuals or by rates which can barely cope with the needs of elementary and secondary education. There was in this respect considerable confusion. We could not in this country pass from a purely national to a purely local University system. Oxford and Cambridge must remain, as they had always been, national Universities. The University of London has been deliberately re-organized under the authority of Parliament. It was of a non-local character and yet had local powers and duties. Our University system was not, therefore, directly correlated with the local character of our educational authorities. Similar complications existed elsewhere. There were wide differences of opinion as to the method of conferring degrees. The highest existing authority had within four years laid upon the University of London the duty of providing for external students; but he would stand aghast at the prospect of half-a-dozen Universities all holding such examinations in competition with each other. The present system might lead to an unseemly rivalry between different Universities competing either for fees or for influence. Yet not only was there room for differences, but there must be differences, between our Universities. But when all allowance was made there were a number of questions of general import which ought to have been answered before a policy of University expansion was decided on. Such questions were: the limitation in the number of Universities; the conferring of degrees without attendance at local lectures; the degree of liberty allowed to carry out local and school examinations and to recognize subordinate institutions; the endowments of the Universities and the colleges, and the recognition of the University as distinct from its component colleges; and the question as to the amount and methods of inspection. At present, while these problems were unsolved and a number of bodies were being created with overlapping powers and jurisdictions, except to a believer in the infallible virtues of competition, this overlapping seemed dangerous to the future of many sides of University work.

SUMMARY OF THE MONTH.

Elsewhere we refer to the important deputation to the Prime Minister on the question of State-aid for the Universities. (See leading article.)

The holiday course, mainly in modern languages, initiated by the Teachers' Guild and carried out with the co-operation of the University of London, opened (July 18) in the University buildings at South Kensington. Some two hundred foreign teachers attended. The course embraced lectures on different aspects of English education, literature, and institutions, by Prof. Walter Rippmann (director of the holiday course), Mr. Graham Wallas, L.C.C., Prof. Hall Griffith, Mr. F. Storr, Dr. H. F. Heath, and Dr. R. D. Roberts. The introductory address was given by Sir Arthur Rücker, who welcomed the students to London, and gave a short account of the different types of University in this country, sketching the gradual change from the residential system of Oxford and Cambridge to that of the newer types of University situated in great centres of population. It was now felt (he said) that the teaching of modern languages was too important a matter to be left entirely to private initiative. Some of the teachers present had been sent or aided to come to London by the Governments or Education Departments of their respective countries, and it was hoped that the present meeting might in future be looked back to as one of the earlier stages of a great movement.

Sir Arthur Rücker distributed the prizes at University College, London (July 5), congratulating the College on a successful year's work. The subject in all their minds, he said, was their forthcoming incorporation with the University of London. It was no slight matter for an institution like their college, with a past behind it, and with such great names associated with it, to be willing to throw in their lot with the University of London, which, though he believed it had a great future, was, nevertheless, comparatively young in its present form. He did not think that the University should be the sole teaching body in London, nor did he think it wise that it should control all the teaching in the medical schools. There were other institutions which should be carried on independently by their own officers, but co-ordinated with the University. Lord Reay expressed the regret of the College at their losing the services of Principal Carey Foster, by retirement. The staff of the College had put upon record an expression of their gratitude for the benefits which Dr. Carey Foster had conferred on the College, and this was embodied in an address, which was then presented to him.

Sir John Wolfe Barry, distributing prizes and certificates at King's College, London (July 6), said that, though the College had now reached a respectable age, yet it was young in vitality and showed every sign of vigorous youth and manhood. They might, he thought, look forward to still greater developments in consequence of its association with the University of London, from which it had already gained much. They recognized progress in every branch. It was most satisfactory to learn that the Far East was claiming the attention of the College. How little they knew of the great literatures of China and Japan! The more they learned of Eastern literature the more they recognized that the origin of all knowledge was under the rising sun. In the Faculty of Science there had been great developments. The amount of time given to science now was immensely greater than it was when he was a boy, and it was a matter for congratulation that that was so. What was being done in that College was being done elsewhere, and we were sending a great scientific army into the world such as was not dreamed of thirty or forty years ago. But they could not help recognizing that very much remained to be done. It was, in the first place, very desirable that more money should be furnished for the pursuit of science; in the second place, more time ought to be devoted to the subject, and those who were about to pursue it should come up to the colleges with better preparation. He had no hesitation in saying that a great part of the first year of a man's life in a college was lost in repairing deficiencies which

ought to have been obviated in the secondary school. He hoped the secondary schools of the country would recognize that matter and would rise to the occasion. Sir John also referred to the urgency of the engineering problems involved in coping with the enormous traffic of the Metropolis.

A CONGRESS of students from the Universities of England and Wales was held at Manchester on June 30–July 2. Every University sent representatives, and the delegates (some fifty in number) were cordially welcomed by the Vice-Chancellor of the Victoria University, Dr. Hopkinson. During the session messages of good will were received from the Prince of Wales, the Duke of Devonshire, Lord Rosebery, Mr. Chamberlain, and Lord Ripon, as Chancellors respectively of the Universities of Wales, Cambridge, London, Birmingham, and Leeds. Mr. W. G. Fuller, Chairman of the Manchester Students' Council, which took a leading part in promoting the congress, was elected President. A number of resolutions were adopted: (1) that greater freedom should be given in degree courses, so as to allow more time for private study and research, and that the division of degree lists into classes should be abolished; (2) that an Inter-University Volunteer Corps should be established; (3) that a British Students' Song-Book should be published; (4) that the principle of University settlements was worthy of approval; (5) that the extension and development of residential halls was a matter of great importance to University students, and that a Committee should be appointed to report on University residential arrangements at home and abroad; and (6) a resolution "urging the encouragement of inter-University athletics."

THE Board of Education have set out their regulations, old and new, as to training colleges in a separate and compact form. In summary thus:—

In the first place, the Exchequer grants in respect of day students who reside in approved hostels will be on the same scale as the grants made in respect of residential students.

Secondly, much greater liberty is given in the conditions under which students who have reached a satisfactory standard of general education may obtain a one year's course to be mainly devoted to professional training.

Thirdly, a fixed grant of £3 per student per annum is substituted for the variable science and drawing grants which have hitherto been paid to training colleges.

Fourthly, a new type of training college may be recognized, which, though not in connexion with a University or University college, need not on that account be a residential college, as has hitherto been the case.

Lastly, the arrangements for the inspection of the colleges and for the examination of students are considerably modified. A great variety of examinations alternative to that held by the Board are now recognized, but the privilege of taking such examinations and of exemption from the Board's examination will in future only be granted to such colleges as fulfil certain important educational conditions.

THE Education Council of the Congregational Union has prepared a statement to the effect that any system of schools—primary, secondary, or technical—established, maintained, or subsidized by public funds, must, if it is to be acceptable to the constituents for whom the Congregational Union is entitled to speak, embody and apply the following principles:—

1. That the sole object aimed at in such schools should be the efficient preparation and equipment of the scholars for the future performance of the duties incumbent upon citizens of the British Commonwealth, and that this object should never be subordinated to the interests of a religious denomination or a political party.

2. That the curriculum of such schools should be comprehensive and thorough, so that the scholar may receive as complete an education as his or her capacity and opportunity will allow; and that this curriculum should be so framed as not to permit of sectarian instruction, or in any way to violate the principles of religious equality.

3. That, in order to secure efficient teaching, the public authorities should be required by statute to provide for the training of teachers in classes or colleges open on equal conditions to all candidates for the teaching profession; and that no one in any training class or college supported from public funds should be favoured or prejudiced in consequence of his or her faith or church.

4. That every school dependent on public funds should be managed by a Public Authority, this Authority to be representative of the whole community in each district concerned.

THE report presented at the first annual meeting of the University Extension Guild (July 6) stated that, although it was not twelve months since the Guild had been established, the work accomplished and the influence exerted had been considerable, and gave the best hopes of success in the future. The Committee had made an unsuccessful effort to obtain accommodation at the National Gallery for the delivery of lectures; but privileges had been granted by the Trustees of the British Museum. Mr. Mark H. Judge, Chairman of the Committee, said that thus far they had been engaged with the organization of the Guild; but next year they would be able to devote themselves to the work the Guild had been established to promote. Dr. R. D. Roberts, Vice-President, who presided, said the plan of special classes and supplementary lectures had proved most satisfactory. He suggested that an effort should be made to induce the local centres not yet affiliated to the Guild to become corporate members of it, and thus make the Guild a more powerful metropolitan organization for promoting the University Extension movement. The report was adopted unanimously.

SPEAKING at Carmarthen Training College on the occasion of the distribution of prizes, the Bishop of St. David's praised highly the success of the Welsh colleges, and especially of that at Carmarthen. He was particularly pleased that this year ten places had been added for non-resident students irrespectively of their opinions. Of all the aspects of the education question none was of more far-reaching importance than the training of teachers; and, therefore, to the friends of education nothing was more encouraging than to find that and similar colleges in such a satisfactory condition. They were specially bound to keep steadily in mind the vital importance of religious training for those who had, he hoped, generally to give religious instruction to children in their future work. In view of present controversies, he would emphasize the value and strength of patience. He thought he saw signs of improvement in the relations of Local Education Authorities to Church schools in Wales, and it was important for them, while they firmly stood to the principles of which they were trustees as Church-people in these days, at the same time to take care that they did not lose sight of the great common interests in education, which very often in days of controversy were apt to be neglected.

AN influential deputation representing the medical profession presented to Lord Londonderry (July 11) a petition in favour of the teaching of hygiene in schools. The petition stated that the signatories (14,718 registered medical practitioners), having constantly before them the serious physical and moral conditions of degeneracy and disease resulting from the neglect and infraction of the elementary laws of hygiene, urged the Educational Authorities to consider whether it would not be possible to include in the curricula of public schools such teaching as might lead all the children to appreciate at their true value healthful bodily conditions as regards cleanliness, pure air, food, drink, &c. Dr. Farquharson, M.P., introduced the deputation, and the petition was explained and supported by Sir William Broadbent, Dr. Drysburgh Griffiths, Sir Thomas Barlow, Sir Lauder Brunton, Dr. Mary Scharlieb, and Sir Victor Horsley. Lord Londonderry, in reply, said that, though there were certain difficulties which would prevent his giving them any very definite answer to their very definite proposals, they must not therefore think he was not in sympathy with them. For one thing, properly trained teachers of hygiene did not exist at present, but the Department was endeavouring to secure the training of such teachers. He would also have to wait for the report of the Commission appointed by the Duke of Devonshire on the physical condition of the people before knowing exactly what remedies were necessary, and there might be other Departments with which it would be necessary to co-operate. His Department had not only endeavoured to secure the training of teachers in this matter, but they were also about to issue a volume containing practical instruction in the subject.

THE foundation stone of the new buildings of the Working Men's College, in Crowndale Road, St. Pancras, was laid (July 16) by the Prince of Wales, who was accompanied by the Princess. Prof. Dicey, the Principal, read an address, and then spoke briefly, calling attention to two ideas of the founder (F. D. Maurice): (1) that a collegiate or University education could, and ought to, be offered to working men; and (2) that success in the project required the combination of self-help and social sympathy. The Prince expressed his cordial sympathy with the aims of the institution, and hoped that the appeal for funds

would meet with a liberal response, and that his presence there would be accepted as a proof of the interest he took in all that affected the well-being of the working classes.

THE Admiralty has issued a circular to officers of the Royal Navy with the view of encouraging the study of foreign languages. The number of officers allowed to study abroad on full pay at any one time is increased to twenty. Full pay will be granted without any condition as to subsequent qualification in the language studied, and the period for which it is granted will count as service. Gratuities will be paid for qualifying in the various languages after study abroad, a distinction being drawn between officers who qualify in the higher standard and those who qualify in the lower standard. Prizes to the increased value of £130 annually will be awarded to midshipmen who attain proficiency in French, German, Italian, or Spanish. Special arrangements are made to assist officers in studying the Japanese language.

THE London Teachers' Association, which now comprises all Certificate-holders in provided and non-provided schools within the area of the London Education Committee, held its first quarterly meeting at the Memorial Hall on July 4. Sir William J. Collins said he and his colleagues fully recognized the value of such an association, and were anxious to obtain and to utilize the matured views of those upon whom rested the practical administration of the Act.

MEMBERS of the St. Marylebone Natural Science Society, which has been in existence for the past six years, have just celebrated the opening of a new museum and lecture hall, 444 Edgware Road. The work of the Society is made the more interesting by the fact that it is carried out entirely by working people, and is self-supporting. The materials and labour for the new building have been provided by the members themselves. The lectures, which embrace all manner of scientific subjects, are delivered free of charge. There is no paid official.

WE record with regret the death of the Rev. Henry Hayman, D.D., Hon. Canon of Carlisle, at the age of eighty-one. After holding several minor head masterships, he succeeded Dr. Temple at Rugby, where he fell into serious difficulties, which ended unfortunately for him. He was soon appointed to the rectory of Aldingham, however, and this he held for some thirty years. He was an active literary worker and a spirited controversialist. His most ambitious achievement was an elaborate and interesting commentary on the "Odyssey," in three substantial volumes.

WE regret to announce the death of Mr. James Stuart Laurie, M.A., Barrister-at-law, at the age of seventy-three. Mr. Laurie had a long and distinguished educational career. He was sometime an Inspector of Schools, but resigned the office, in protest against Mr. Lowe's Revised Code. He was entrusted by Government on various occasions with educational investigations of a special character—as Special Commissioner to the African Settlements; Assistant Royal Commissioner, Ireland; and Director-General of Public Instruction, Ceylon. A man of very independent character, he conducted much controversy in the public prints against educational measures that he regarded as retrograde.

London. NEW regulations for degrees in Laws have been adopted both for internal and for external students. These have been framed on a wider and more comprehensive scale than the regulations they will supersede.

The Senate have resolved to add Sociology to the list of optional subjects for the B.A. Honours degree in Philosophy and for the B.Sc. Honours degree in Economics for both internal and external students. For the Arts degree the special aspect of the subject will be "The Comparative Study of Social Institutions," and for the degree in Economics the same, together with "Psychology" and "Ethnology."

The Board to promote the Extension of University Teaching have submitted to the Senate a scheme drawn up by the Board of Studies in Pedagogy for the training of teachers who are not studying for a University degree. The course extends over two years, of which the first is devoted to general education and the second to professional education. The Senate have approved the scheme, subject to possible modification in detail.

The negotiations between the Universities of Oxford, Cambridge, and London, with a view to the establishment of a system of mutual recognition of entrance examinations and certificates exempting from entrance examinations, have resulted in a report by a committee of representatives appointed by the three bodies. London and Cambridge approve the suggested scheme. Oxford is thinking about it.

In connexion with the scheme recently promulgated by the Army Council for the appointment of University candidates to commissions in the regular forces, the Senate have resolved to appoint Instructors in Tactics and Strategy, in Military History, in Military Engineering and Military Topography, and in Military Law and Administration.

The Senate have adopted the recommendation of the Board to promote the Extension of University Teaching that the School-leaving Examination should in future be called the School Examination (Matriculation Standard), and that the examination conducted in any subject by what is now called a Special Advanced Paper should be called School Examination (Higher Standard) in that subject; also the recommendation that a candidate who has passed at one and the same time an examination in papers either of the Matriculation Standard or of the Higher Standard in the subjects and combinations of the subjects required by the regulations for Matriculation should, if the other conditions for the School-leaving Certificate were satisfied, receive on leaving school a School-leaving Certificate They have also approved the proposal that pupils at a school qualified to present candidates for the School-leaving Certificate who, having matriculated before 1903, offer themselves for examination in one or more special advanced papers, be entitled, if they otherwise satisfy the conditions, to receive on leaving school a School-leaving Certificate as if they had passed the examination after the regulations for that certificate had been approved by the Senate; and also that in schools presenting candidates for the School-leaving Certificate General Elementary Science be accepted as an alternative Science subject, provided that the school possesses adequate facilities for practical work and that a practical examination in the subject is held in addition to the paper work.

Manchester. THE University of Manchester has just issued the first prospectus of the Faculty of Commerce and Administration, containing the regulations relating to degrees in Commerce (B.Com. and M.Com.) and the syllabus of classes for the session 1904–5. The degree of Bachelor of Commerce is granted to matriculated students who have attended classes and satisfied the examiners in political economy, the organization of commerce and industry, modern history, geography (economic, political, and physical), commercial law, accounting, two modern languages (or one modern language carried to an advanced stage), and one or two special subjects. The degree of Master of Commerce will be conferred on Bachelors of Commerce of not less than three years' standing who have pursued more advanced studies in connexion with the Faculty of Commerce and Administration and have presented a dissertation which has been accepted by the Faculty. It will be seen that the design of the curriculum is that a broad basis should be laid for the studies of those who desire to qualify themselves for these degrees. It is hoped that the training provided will develop and discipline the minds of those who go through it. It is not intended as a substitute for experience. Classes in the Faculty of Commerce and Administration are held both in the day and in the evening, and it is hoped that some students who do not desire to take the whole course will attend some of the classes.

Liverpool. THE University of Liverpool Bill, introduced by Sir John Brunner, and backed by Mr. Haldane and all the Liverpool members (except Mr. Austin Taylor), is in the common form, extending to graduates of the University the same eligibility to office and the same privileges and exemptions as are enjoyed (under Act of Parliament or regulation of any public authority) by graduates of Oxford, Cambridge, London, or Manchester.

Leeds. ALTOGETHER £51,000 has been either promised or received towards the University extension fund, which it is proposed shall reach £100,000. The Lord Mayor of Leeds (Mr. Arthur Currer Briggs) is taking a leading part in the promotion of the fund, having issued an appeal to the citizens in the form of a circular; but it is intended that the appeal shall not be confined to Leeds.

Digitized by Google

Wales. THE establishment of a Rectorship of the University is mooted. The Rector would undertake duties at present performed by the Senior Deputy-Chancellor and by the Vice-Chancellor, and be, in fact, the working head of the University. Some of the chief officials, and especially the unpaid officials, naturally find the claims on their time and energy somewhat exacting.

One of the most remarkable results of the establishment of the University of Wales is the great impetus given to the study of Hebrew in the Principality. About fifty candidates from the three colleges sat in Hebrew at the recent Arts examination. The pioneer work was done by Dr. Ethé, of Aberystwyth, and the Rev. D. Tyssil Evans, of Cardiff. Then Bangor took up the study, and Dr. Witton Davies was appointed Professor of Hebrew and Arabic. A step forward in the study of the Semitic languages in Wales is about to be taken by making a course in Arabic compulsory for all candidates for Honours in Hebrew.

Wales—Bangor. THE University College of North Wales Building Fund stands at present at £27,121, of which old students of the College have contributed £1,373 and the staff £1,019. With the estimated value of the site presented by the town of Bangor, the fund represents an aggregate total of £42,000. The amount required is £200,000.

Wales—Cardiff. SIR ALFRED THOMAS, the President, proposes to give a *conversazione* in the beginning of October next to celebrate the twenty-first anniversary of the opening of the College. The celebrations, indeed, will probably take a wider form.

Aberdeen. LORD STRATHCONA, the Chancellor, was installed with great ceremony on July 20. It is some forty years since the instalment of his predecessor, the late Duke of Richmond and Gordon.—A bronze tablet in memory of the late Field-Marshal Sir Donald Stewart, Bart., was unveiled by General Sir Peter Lumsden, G.C.B., at King's College, and accepted for the University by the Chancellor.

St. Andrews. THE General Council of the University of St. Andrews, while expressing general approval of the principle of the Education (Scotland) Bill, and regarding the proposals in Clauses 43 to 45 (to establish Provincial Councils for Education in Scotland on which the four Universities are to be represented) as greatly tending to promote the cause of higher education, yet "deeply regrets to find that the division of Scotland for educational purposes indicated in the Bill is a departure from that which has prevailed for generations, and was formally established by Parliament in the Parochial and Burgh Schoolmasters (Scotland) Act of 1861. In that division the University of St. Andrews has a province attached to it—namely, the counties of Clackmannan and Kinross, Fife, Forfar, and Perth—a province nearly equal in population to the province attached to the Universities of Edinburgh and Aberdeen, and considerably larger as regards population than the province to be connected with Aberdeen. If, as under the Bill, there is to be a province attached to Inverness, the General Council is strongly of opinion, not only on sentimental grounds, but on grounds of historical continuity, and to avoid what it fears may be injurious alike to the University and to education, that the old division should be more closely followed. The General Council has no objection to Inverness also being the centre of a province, should this be thought desirable. Whether, however, there be four or five provinces, it is of opinion that one of them should bear the name of St. Andrews and should include the counties already named. The General Council fears that the amendment by the Secretary for Scotland on Clause 39, the sanctioning by or with the approval of the Department of training colleges for teachers, may not be so beneficial as is intended. The General Council considers that, as the Bill does not deal adequately with the training of teachers, it would be better to leave this matter, which urgently calls for attention, to separate legislative treatment as a whole in the near future."

For the St. Andrews L.L.A. there entered this year 960 candidates, as against 902 last year; 306 for the first time, as against 231 last year. 1,400 papers were written, and passes were obtained in 746 and Honours in 214. The most popular subject was French; then English, History, Geography, Physiology, Comparative Religion, Education. "In Latin 9 passed and 1 obtained Honours; in Greek 2 passed."

MR. MURRAY'S LIST
OF NEW SCHOOL BOOKS.

THE INTERMEDIATE FRENCH READER.

Based on SIR WILLIAM SMITH'S FRENCH PRINCIPIA, Part II.

Edited, with Historical, Biographical, and Grammatical Notes, by

MAURICE A. GEROTHWOHL, B.Phil., L.-ès-L., F.R.S.L.,

Examiner to the Oxford and Cambridge Schools Examination Board.

Crown 8vo, 2s. 6d.

AN INTRODUCTION TO METAL WORKING.

By J. C. PEARSON,

Technical Assistant to H.M. Inspector of Reformatory and Industrial Schools; Author of "Manual Instruction—Woodwork."

With 12 full-page Plates and nearly 100 Illustrations in the Text. Foolscap 8vo, 2s.

AN INTRODUCTORY HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TILL THE YEAR 1832.

By O. R. L. FLETCHER, M.A.,

Fellow of Magdalen College, Oxford.

Part I. From the Earliest Times to the end of the Middle Ages. With Maps. Demy 8vo, 7s. 6d.

This book is an attempt to place before boys who will think for themselves, and not merely learn by rote, a somewhat unconventional view of the leading events and personages in English History, unfettered by traditional judgments, and yet resting upon nothing beyond the ordinarily received authorities. The form and scope of it has been suggested by many years' practical experience of teaching History.

A PRIMER OF PHILOSOPHY. By A. S. RAPPOPORT, Ph.D. With an Index. Fcap. 8vo, 1s.

The purpose of this book is to supply the beginner in Philosophy with a kind of Student's Guide to the problems of the science and the solutions which have been proposed.

THE USE OF WORDS. The Accidence of Grammar as it explains the Parts of Speech. By Miss GEORGINA KINNEAR. Fcap. 8vo, 1s.

The aim of this book is to teach grammar, and at the same time to stimulate an intelligent appreciation of the final end which is served by grammar-study, namely, to increase the power of expression and to ensure a correct use of the English tongue.

To be published shortly :—

A PRIMER OF PHYSIOLOGY. By Prof. E. H. STARLING, F.R.S. Illustrated. Fcap. 8vo, 1s.

A PRIMER OF BOTANY. By Prof. J. B. FARMER, F.R.S. Fcap. 8vo, 1s.

HANDBOOKS FOR CIVIL SERVICE EXAMINATIONS.

Edited by JOHN KEEFE,

Principal of the Civil Service Academy, Liverpool and Manchester.

DIGESTING RETURNS INTO SUMMARIES.

Exercises and Examples suitable for Candidates preparing for Civil Service Examinations, and also for Students in Technical and Commercial Classes. Royal 8vo, 2s. 6d.

Though mainly designed for Civil Service candidates, this book will be found very useful to all who are engaged in Statistical Calculation.

CIVIL SERVICE SPELLING & DICTATION BOOK.

The work contains copious Lists of Words, ranged according to their number of syllables, likely to be mis-spelled, together with nearly ninety Dictation and Orthographical Exercises for Juniors and Seniors set in recent years by H.M. Civil Service Commissioners. Revised and Enlarged Edition. Crown 8vo, 1s. 6d.

A List of the Series, together with other Books suitable for Civil Service Candidates, will be sent post free on application.

LONDON: JOHN MURRAY, ALBEMARLE STREET, W.

Nature Studies and Fairy Tales for Infant Schools and Lower Classes.

By CATHERINE I. DODD,
Lecturer in Education
at the University of Manchester.

With Special Introduction by
W. SCOTT COWARD,
Late H.M. Inspector of Training Colleges.

☞ This book contains a CORRELATED PROGRAMME OF WORK for Infant Classes, embracing FAIRY TALES, POETRY, NATURE STUDY, DRAWING, &c. Full theoretical explanation of principles is given; but the important fact for most Teachers is that it contains a Course of LESSONS WORKED OUT IN FULL DETAIL, and with complete correlation between the Stories and the Nature and other Studies, as well as between the consecutive Lessons in each branch. It forms the BEST PRACTICAL MANUAL OF HERBARTIAN METHOD applied in accordance with the teaching of Froebel.

The Studies in the pages of this book are more than theoretical lessons. They have originated in the **Kindergarten** and **Class-room**, and have formed the plan of lessons given in Spring by Students and Teachers to the little ones in the Primary School and Kindergarten, Manchester.—(*Extract from Introduction.*)

The work specially meets the need of

First Year Students in Training Colleges,

And will be found invaluable to

All Teachers in Infant and Junior Schools.

Fully Illustrated in Black and White, and 15 *Coloured Plates.* Price **3s. 6d.**

THOMAS NELSON & SONS,
35 and 36 Paternoster Row, London, E.C.; Edinburgh and New York.

CURRENT EVENTS.

Fixtures.

Besides the announced sociological and ethnological courses of Dr. Westermarck and Dr. Haddon under the Martin White Benefaction (University of London) next session, a course on Comparative Ethics will be given by Mr. Leonard Hobhouse.

* * *

The Third International Congress of Mathematicians will be held at Heidelberg, August 8–13. Hon. Sec.: Prof. Dr. A. Krazer, Karlsruhe-i.-B., Westendstrasse 57.

Honours.

The University of Edinburgh has conferred the honorary degree of LL.D. on Mr. Samuel Henry Butcher, Litt.D., LL.D., lately Professor of Greek in the University; the Hon. Sir Walter Francis Hely-Hutchinson, G.C.M.G., Governor and Commander-in-chief, Cape of Good Hope; Mr. John Morley, M.P.; Sir George Reid, LL.D., D.L., lately President of the Royal Scottish Academy; and Mr. William Thomson, M.A., B.Sc., Registrar of the University of the Cape of Good Hope.

* * *

Durham University has conferred the honorary degree of Litt.D. on Mr. Joseph Hall (editor of *King Horn*); and of D.Sc. on Mr. R. A. Sampson, F.R.S., Professor of Mathematics, Durham College of Science, Newcastle-on-Tyne.

* * *

The Victoria University of Manchester has conferred the honorary degree of LL.D. on Alderman Joseph Thompson, formerly Treasurer of Owens College; and the honorary degree of D.Sc. on Dr. Bohuslav Brauner, Professor of Chemistry in the University of Prague, and a former student of Owens, Mr. Ludwig Mond, F.R.S., and Mr. W. H. Perkin, sen., Ph.D., LL.D., F.R.S.

* * *

The University of Liverpool has conferred the honorary degree of LL.D. upon Lord Derby, the Chancellor.

* * *

The University of Aberdeen has conferred the honorary degree of LL.D. on Mr. C. T. Ritchie, M.P., Lord Rector; Mr. Robert George Elsmie, C.S.I.; and Dr. Wyndham R. Dunstan, M.A., F.R.S., V.P.C.S., Director of the Imperial Institute.

* * *

Bowdoin College has conferred the honorary degree of Doctor of Literature on Mrs. Kate Douglas Wiggin, the well known American author.

* * *

On the occasion of the visit of the British Medical Association to Oxford the honorary degree of D.Sc. will be conferred upon Prof. Clifford Allbutt, F.R.S., Mr. Andrew Clark, F.R.C.S., Dr. T. D. Griffiths, Mr. Jonathan Hutchinson, F.R.S., Sir William Macewen, F.R.S., Sir Patrick Manson, F.R.S., Sir J. W. Moore, M.D., Dr. William Osler, F.R.S. (Johns Hopkins University), and Dr. T. G. Roddick, M.P. (Canada).

* * *

The Dean of Ely (Dr. Stubbs) and Principal Griffiths (Cardiff) have been elected Honorary Fellows of Sidney Sussex College, Cambridge.

Digitized by Google

PROF. J. MORRIS JONES, M.A., of Bangor University College, has been elected to a supernumerary research fellowship at Jesus College, Oxford, where formerly he was a scholar. There is more than compliment in this: there is encouragement to Prof. Jones to complete an exhaustive Grammar of the Welsh Language, on which he has long been engaged.

* * *

THE KING has granted permission to Mr. G. W. Smith, English Professor in the Nobles' School, Tokio, to accept and wear the insignia of the fifth class of the Order of the Sacred Treasure, conferred upon him by the Emperor of Japan in recognition of valuable services rendered by him to His Majesty.

Endowments and Benefactions.

THE BISHOP OF WINCHESTER appeals for £30,000 to form a fund to assist the managers of Church schools in the diocese to meet the demands of the Educational Authorities for improvements and repairs to school buildings.

* * *

AN anonymous donor has promised £10,000 to found a Chair of English Language in the University of Liverpool.

* * *

THE firm of Sir W. G. Armstrong, Whitworth, & Co., Elswick, will contribute £1,000 a year for five years to the Newcastle College of Science.

* * *

SIR FREDERICK MAPPIN, M.P., being "an old man, with uncertain health," and anxious not "to place his trustees in a difficulty," has paid over the £5,000 he had promised to the Endowment Fund of the proposed University of Sheffield on the grant of a charter.

* * *

THE Goldsmiths' Company have generously provided £5,000 to enable London University to carry on the Institute at New Cross during 1904–5.

* * *

GEORGE HERIOT'S TRUST, Edinburgh, has received from an anonymous donor £200 to found prizes in the trade classes of Building Construction, Carpentry and Joiner Work, Masonry and Brick Work, Drawing, and Sanitary Science; and in the commercial classes.

Scholarship.

AT Hartley University College, Southampton, a scholarship has been established in memory of the late Mr. T. G. Rooper, H.M.I.S. It will be worth £24 a year, and will be first awarded, by competition, in September.

Appointments and Vacancies.

PROF. WALTER RALEIGH, who has held the Chair of English Language and Literature in Glasgow University since 1900, has been appointed Professor of English Literature in the University of Oxford. He has also been elected a Fellow of Magdalen.

* * *

IN the University of London, Dr. Edward Westermarck, formerly Lecturer on Sociology in the University of Finland, Helsingfors, has been appointed University Lecturer in Sociology (in connexion with the Martin White benefaction); Mr. W. Legge Symes, M.R.C.S., University Demonstrator in Physiology; and Miss Beatrice Edgell, Ph.D., M.A., Demonstrator in Experimental Psychology.

* * *

AT King's College, London, Sir Walter C. Hillier, K.C.M.G., has been appointed Professor of Colloquial and Documentary Chinese, to act conjointly with Sir Robert K. Douglas, Professor of Literary Chinese; Mr. J. K. Fotheringham, M.A. of Merton College, Oxford, Lecturer in Classical Literature; the Rev. C. H. W. Johns, M.A. Queens' College, Cambridge, Lecturer in Assyriology; Mr. Arthur Stratton, A.R.I.B.A., Lecturer, and Mr. R. P. Jones, M.A., Assistant Lecturer, in the division of Architecture; Mr. Harold A. Wilson, B.A., D.Sc., Senior Lecturer, and Mr. S. C. Laws, B.A., B.Sc., Junior Lecturer, in Physics; and the Rev. F. J. Inskip, M.A., has been appointed to give a special course of lectures in Pastoral Theology next session.

* * *

AT Birmingham University, Señor Fernando de Arteaga y Pereira, graduate of Madrid University and Hon. M.A. Oxon., Taylorian Teacher of Spanish at Oxford (an office he will continue to hold), has been appointed Lecturer in Spanish and Italian; Mr. Frank Tillyard, B.A. Oxon., Barrister-at-Law, Lecturer in Commercial Law; Mr. Guy Ricketts, M.A. Cantab., Assoc. R.S.M., Assistant Lecturer and Demonstrator in Metallurgy; Mr. John H. Watson, M.B., B.S., F.R.C.S., Second Demonstrator in Anatomy; and Mr. Edmund S. Millar, Student Demonstrator in Brewing.

Prof. E. B. Poulton, F.R.S., has been invited to accept the Huxley Lectureship for 1905, and Dr. James Kerr, medical officer to the London School Board, the Ingleby Lectureship for the same year.

* * *

MR. C. H. RILEY, of King's College, London, succeeds Prof. Simpson in the Chair of Architecture in Liverpool University.

* * *

IN the University of Glasgow, Mr. A. H. Charteris, LL.D., has been appointed Lecturer in Public and Private International Law, in succession to the late Mr. W. Galbraith Miller; and Mr. James A. M'Callum, M.A., LL.B., Lecturer in Jurisprudence.

* * *

AT South Wales University College, Mr. D. G. Taylor, M.A., has been appointed Assistant Lecturer in Mathematics; Dr. R. D. Abell, D.Sc., Administrator and Assistant Lecturer in Chemistry; Mr. J. H. Shaxby, B.Sc., Administrator and Assistant Lecturer in Physics; Mr. F. W. Lamb, B.A., M.D., Administrator and Assistant Lecturer in Physiology; Miss Mary E. Phillips, B.Sc., Administrator and Assistant Lecturer in Botany.

* * *

PROF. W. CARLETON WILLIAMS has resigned the Firth Chair of Chemistry in University College, Sheffield, which he has held for twenty-one years.

* * *

THE following appointments have been made at the new Agricultural College, Aberdeen:—Mr. R. B. Greig, to be Lecturer on Agriculture, Economic Science, and Engineering Field Work; Mr. James Hendrick, to be Lecturer on Agricultural Chemistry; Mr. J. M'Lauchlan Young, to be Lecturer on Veterinary Hygiene; and Prof. James Trail, to be Lecturer on Botany and Zoology. Mr. W. M. Findlay, Mr. T. H. Gibson, Mr. Profeit, M.A., B.Sc. (Agr.), and Mr. W. A. Davie, B.Sc. (Agr.), have been appointed departmental assistants.

* * *

MISS MARGARET ALFORD, Lecturer at Girton College and at Westfield College, has been appointed Lecturer in Latin at Bedford College for Women (University of London).

* * *

MISS S. MARJERY FRY, Librarian of Somerville College, Oxford, daughter of Sir Edward Fry (late Lord Justice), has been appointed Warden of the new hall of residence for women students at Birmingham University.

* * *

MR. J. MILLINGTON SING, M.A., has been appointed Warden of St. Edward's School, Oxford, in succession to the Rev. T. W. Hudson. Mr. Sing has been an assistant master in the school since 1886.

Digitized by Google

THE REV. H. A. RHODES, M.A., of Christ's Hospital School, Horsham, has been appointed Head Master of St. Saviour's College, Ardingley, in succession to the Rev. F. H. Hilton, M.A.

* * *

MR. F. H. HAYWARD, D.Lit., B.Sc., has been appointed Principal of the new Pupil-Teacher Centre for Torquay and district.

* * *

THE REV. R. W. MENNEER, M.A., Head Master of Bovey Tracey School (Devon), has been appointed Head Master of Newton College.

* * *

Mr. JOHN ALISON, Rector of the United Free Church Training College, Glasgow, has been appointed Head Master of George Watson's College for Boys, in succession to Mr. Carrie.

* * *

Mr. HENRY T. WYSE, art master, Arbroath High School, has been appointed art master in the Edinburgh Ladies' College.

* * *

MR. ROBERT H. MASSON, M.A. (Aberd.), has been appointed Principal of Aliwal North School, in Cape Colony.

Literary Items.

THE first volume of Prof. G. G. Ramsay's "Latin Prose Composition" will be published immediately by the Oxford University Press in three small volumes. The first part will contain the earlier exercises, the second will form a second year's course, and the third will consist of syntax and an appendix. Considerable additions have been made to Parts I. and II., new passages for translation into Latin prose being given.

* * *

MR. HENRY FROWDE announces a new series of "Standard Oxford Editions" of English works in poetry and prose —"The Florin Series," each volume being priced at 2s. Four volumes are now ready, and eight more will be completed by September. The get-up is liberal and tasteful.

* * *

MESSRS. SMITH, ELDER, & CO. will soon issue a collection of "Errata" in "The Dictionary of National Biography," compiled by Mr. Sidney Lee—in two forms, either bound or in sheets (suitable for insertion in the various volumes). Mrs. Murray Smith intends to present copies to such subscribers as apply for them.

* * *

MESSRS. METHUEN announce a new sixpenny series of reprints, "containing both books of classical repute which are accessible in various forms and also some rarer books of which no satisfactory edition at a moderate price is in existence," under the title of "Methuen's Universal Library," edited by Sidney Lee.

* * *

MR. HEINEMANN announces a new series of reprints under the title of "Heinemann's Favourite Classics," in sixpenny cloth volumes—convenient size, large print, special paper, flexible but durable binding, a photogravure frontispiece plate, a pure text, and introductions by the first critics of the day. The series begins with "The Works of Shakespeare," each play forming one volume.

* * *

MESSRS. P. S. KING & CO. announce a considerable volume of "Select Documents illustrating the History of the Middle Ages and Modern Times," by Dr. Emil Reich. The collection forms the basis of the relative parts of the author's "General History," which is to appear in two volumes towards the end of the year.

* * *

CLASSICAL readers will be interested in four excellent papers in the July *Monthly Review:* Mr. J. W. Mackail's address to the Classical Association on "The Place of Latin and Greek in Human Life"; Admiral Sir Cyprian Bridge's article on "Classical Education and the Navy"; and two accounts of recent excavations—at Carthage (by Miss Mabel Moore), and in Ægina (by Baroness Augusta von Schneider).

* * *

HISTORICAL readers will find the Hon. Bertrand Russell's paper "On History" in the *Independent Review* for July piquantly suggestive. "Of all the studies by which men acquire citizenship of the intellectual commonwealth no single one is so indispensable as the study of the past."

* * *

THE "Technological Scientific Dictionary," edited by G. F. Goodchild, B.A., and C. F. Tweney, is making steady and solid progress. Part III. brings it down to "Electric Lighting" (1s. net, Newnes).

* * *

MR. EDWARD ARNOLD has removed from 37 Bedford Street, Strand, to new premises at 41 and 43 Maddox Street, a few doors from Bond Street.

General.

THE Board of Education have issued an Order naming October 1 the appointed day for the purposes of such portion of the London Education Act as did not come into operation on May 1.

* * *

THE Board of Education have published "Regulations for the Instruction and Training of Pupil-Teachers" (August 1, 1904, to July 31, 1905), with prefatory memorandum (Cd. 2140, 2½d.); and "Syllabus for the Examination of Candidates for Admission as Pupil-Teachers, 1905." Also a Circular to H.M. Inspectors on "certain questions which have recently arisen as to the approval of time-tables in voluntary schools in respect of the allotment of a portion of the school hours to religious instruction, as to the practice of taking children to church during school hours, and incidentally as to the time or times for the marking of the registers." Attendance at church (with special exceptions) is not attendance at school.

* * *

THE University of Aberdeen has fined six of the Alake's aggressors £10 each, and one £5, "the fines to be devoted to some charitable object." "The names of the delinquents are not to be divulged"! Further investigations are being conducted. A very melancholy business!

* * *

A NEW science degree in Agriculture—D.Sc.(Agr.)—has been established in the University of Aberdeen.

* * *

THE CHEVALIER LONDINI, D.C.L., Registrar of the University College, Liverpool, since 1881, has become Bursar of the Liverpool University. In recognition of his services as Registrar, the University Association entertained him at dinner (July 1), and presented him with a purse and an illuminated address (in Prof. Strong's best Latin).

* * *

THE Oxford Local Examinations last month were held at 262 centres—an increase of 51 centres in comparison with last year. In each division there is a large increase, the Seniors rising from 2,757 to 3,293, the Juniors from 6,059 to 6,838, and the Preliminary from 4,113 to 4,340.

* * *

THE average attendance in the L.C.C. schools during the year ended March 25, 1904, was 485,343—an increase of 10,193 on the preceding year. It is proposed that the staff be augmented by 105 assistants, 33 ex-pupil-teachers, 12 senior pupil-teachers, and 18 junior pupil-teachers.

* * *

YET another universal language! This time an adaptation of Latin without, or almost without, inflexions. The inventor is Prof. Peano, of Turin.

A QUATRAIN that went the rounds when Dr. Hayman was suspended has been revived on his death:

When Rugby, spite of priest and layman,
Was falling fast away,
The Governors suspended Ha(y)man
For fear of more decay (Mordecai).

* * *

THE University of Paris (says the Paris correspondent of the *Times*) has placed at the disposal of ten students, five from the Faculty of Letters and five from the Faculty of Law, the sum of 350 fr. each in order to enable them to attend the summer vacation courses at London University for instruction in the English language.

* * *

A MEDALLION in honour of the late Sir G. G. Stokes, executed by Mr. Hamo Thornycroft, was unveiled in Westminster Abbey (July 7).

* * *

A COMMITTEE has been formed at Manchester University to procure portraits of Prof. Osborne Reynolds, LL.D., F.R.S., and Prof. A. S. Wilkins, Litt.D., LL.D., as memorials of their connexion with Owens College.

COLLEGE OF PRECEPTORS.

HALF-YEARLY GENERAL MEETING.

THE ordinary half-yearly General Meeting of the Members of the Corporation was held at the College on Saturday, July 23.

The SECRETARY having read the advertisement convening the meeting, Dr. WORMELL was appointed Chairman.

The Report of the Council was laid before the meeting, and was taken as read, a copy having previously been sent to every member. It was as follows:—

REPORT OF THE COUNCIL.

THE Council beg to lay the following Report of their proceedings for the past half-year before the members of the College:—

1. They have to report that the number of candidates entered for the Midsummer Examination for Certificates is about 4,430, while the number of entries for the Lower Forms Examination is about 1,340. These figures show an increase of about 240 as compared with the entries for the corresponding Examinations last year.

2. The Professional Preliminary Examination for intending Medical Students and others was held, as usual, in the first week in March, and was attended by 344 candidates, an increase of 42 as compared with the previous March Examination.

3. During the past half-year, the Diploma of Fellow has been conferred on one candidate, that of Licentiate on 27, and that of Associate on 165, who had passed the required examinations. The next Examination for Diplomas will be held in the first week in September, which will, it is considered, be a more convenient date for candidates than July.

4. In compliance with the request of the Teachers' Registration Council, the Council of the College have undertaken on behalf of the Registration Council the testing of the teaching capacity of applicants for registration under the ten years rule [Reg. 5 (2) (*b*) of the Order in Council], and 20 teachers have been examined accordingly.

5. The Council have conducted during the past half-year the Examination of 5 Schools by Visiting Examiners.

6. The Thirty-third Annual Series of Lectures to Teachers on "The Science and Art of Education" commenced on the 25th of February with a Course of Twelve Lectures on "The Psychological and Logical Foundations of Intellectual Education," by Mr. W. E. Johnson, M.A.; and a Course of Twelve Lectures on "Practical Applications of the Art of Teaching" will be given in the Autumn by Prof. J. Adams, M.A., B.Sc., F.C.P.

7. At the Members' Meetings held during the past half-year, the following Lectures have been given:—"On the Teaching of the Mother Tongue," by Prof. J. W. Adamson, B.A.; "How to be Interesting in Teaching," by Prof. J. Adams, M.A.; "On the Part played by Books in the Education of the Individual," by H. C. Bowen, M.A. At the Meeting in May, Mr. W. C. Brown, M.A., and Mr. R. J. Shankland gave practical demonstrations of the Teaching of Elementary German and of French Reading. At another Meeting (arranged for in conjunction with the Assistant Masters' Association) Dr. Emil Reich delivered a Lecture on "The Introduction of the Study of General History into Secondary Schools." Reports of the Lectures and Demonstrations have been published, as usual, in *The Educational Times*.

8. The Council desire to call the attention of the members of the College to a movement for the federation of Associations of Secondary Teachers, which has been initiated outside the College, and has recently assumed definite shape. Proposals for federation, which provide for the reconstitution of the College and the incorporation with it of various educational Associations, have been laid before the Council, and it is hoped that they may afford a basis for a comprehensive union of secondary teachers, and result in a further development of the objects for which the College was founded. These proposals have been submitted to the Council, who have decided that, taken as a whole, they deserve their favourable consideration. They have not yet been discussed in detail, but a Committee has been appointed for that purpose, and the results of their deliberations, if approved by the Council, will as soon as possible be submitted to the consideration of a Special General Meeting of the members of the College.

9. The Council have had under their consideration the question of substituting electricity for gas as the means of lighting the College building. They have made careful enquiries, and have come to the conclusion that under the most improved methods of incandescent gas-lighting an equal illuminating power can be secured at a considerably less annual cost than that of electric light. Having regard to this and to the large initial outlay involved in the installation of electric light, they have decided to adopt incandescent gas fittings throughout the building. They have also decided to carry out extensive decorative repairs and to improve the ventilation of the lecture hall.

10. During the past half-year, 30 new members have been elected, and notice has been received of the withdrawal of eight. The Council regret to have to report the death of the following members:—The Rev. Canon Daniel, F.C.P. (formerly one of the Vice-Presidents), J. Eley, J. King, T. Margerison, A.C.P., and W. Wood, A.C.P.

Mr. GUTTERIDGE asked whether any further information could be afforded as to the action of the Consultative Committee with regard to School-leaving Certificates.

Mr. PINCHES said the Consultative Committee had spent more than twelve months in taking evidence, and in preparing a report which had been referred by the Board of Education to a number of educational authorities for the purpose of eliciting expert opinion on the recommendations of the Committee. The College was one of the bodies which had been requested to express their opinions on the matter, and the subject was brought under the notice of the Council at their meeting that day. The question would be fully considered after the holidays, and the views of the Council would be submitted to the Board of Education in due time.

With reference to paragraph 4, Mr. GUTTERIDGE said it was satisfactory to note that the College had been included among the bodies recognized for the testing of applicants for registration under Reg. 5 (2) (*b*); but he desired to call attention to the fact that the Register was virtually limited to teachers in schools, and that university professors and teachers of special subjects, as well as private tutors and governesses, were at present only admissible under the ten years rule. He hoped that when the rules for the supplemental registers came to be considered this anomaly would be removed.

With reference to paragraph 8, the CHAIRMAN remarked that the question raised in this paragraph was certainly of very great importance, but he doubted whether the time had yet arrived for properly considering it. The question of the federation of associations of secondary teachers had first been mooted outside the College, and it had been represented by the originators that the influence of the College might be largely increased if the College lent its assistance to carry out the scheme. The Council could not but listen to proposals which had for their object the increase of the influence of the College; it was their duty to examine and criticize these proposals, and if they thought favourably of them to report to the members. A committee had been appointed to examine the details, and when the paragraph was drafted it was thought that such progress might have been made with the inquiry as would admit of an outline of the scheme being submitted to this meeting. Unfortunately, however, the Dean, who was the chairman of the committee, had been taken seriously ill, and was unable to attend to business, so that little more than a beginning had been made. Under the circumstances he would suggest that it would be premature to take the very meagre information in the report as a ground for discussion, and that the matter had better be left for consideration by the next General Meeting or by a Special General Meeting which might be convened when the question had been examined by the Council in all its bearings, and definite conclusions on it had been come to.

The Report of the Council was then adopted.

In the absence of the Dean, the TREASURER then presented the Dean's Report, which was as follows:—

THE DEAN'S REPORT.

IN addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Re-

Digitized by Google

port of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Midsummer Examination of candidates for Certificates took place on the 28th June to the 2nd July at 162 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Abingdon, Anerley, Arnside, Aylesbury, Bangor, Bath, Belfast, Birmingham, Blackburn, Blackpool, Boston Spa, Brecon, Brewood, Brighton, Bristol, Broxbourne, Bruff, Camelford, Cardiff, Carlisle, Carnarvon, Cheltenham, Cheshunt, Coleraine, Croydon, Douglas (Isle of Man), Dublin, Dumfries, Durham, Ealing, East Grinstead, Eccles, Edinburgh, Epsom, Exeter, Eye (Suffolk), Falmouth, Faversham, Felixstowe, Forest Hill, Fraserburgh, Goudhurst, Greenwich, Grimsby, Hanley Castle, Harpenden, Hastings, Hatfield (Herts.), Hawkhurst, Hexham, Hornsea, Horsmonden, Huddersfield, Hunstanton, Hutton (Preston), Hythe, Inverurie, Ipswich, Iron Bridge, Kirkby Stephen, Lampeter, Launceston, Leamington Spa, Leeds, Lisburn, Liskeard, Liverpool, London, Long Sutton, Ludlow, Maldon, Malvern, Malvern Link, Manchester, Margate, Market Bosworth, Market Harborough, Marlow, Mayfield, Merthyr Tydfil, Middlesbrough, Mountmellick, Muswell Hill, Newcastle-on-Tyne, Newtownards, Northwich, Nottingham, Oswestry, Paisley, Pencader, Plymouth, Porthcawl, Portsea, Portsmouth, Ramsgate, Richmond (Surrey), Richmond (Yorks), Ripley (Surrey), Rochester, Ruabon, Ruthin, Rye, St. Asaph, St. Leonards-on-Sea, Sevenoaks, Shebbear, Sheffield, Snettisham, Southampton, Southend, Southport, Southwell, Stamford Hill, Stonyhurst, Stroud, Sunderland, Taplow, Taunton, Tavistock, Tenby, Tettenhall, Thorne, Tonbridge, Tunbridge Wells, Uckfield, Warrington, Waterford, Westcliff-on-Sea, West Hartlepool, West Norwood, Weston-super-Mare, Weybridge, Wirksworth, Wisbech, Woodstock, Worthing, York, Youghal. The Examination was also held at Lagos, Gibraltar, Johannesburg, Chefoo (N. China), Constantinople, Ghent, and Namur.

The total number of candidates examined (not including candidates examined at Chefoo, Johannesburg, and Lagos) was 4269—2919 boys and 1350 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined during the year ending Midsummer, 1904 (not including those who attended the supplementary examinations in March and September), has been 10591.

The following table shows the proportion of the candidates at the recent Midsummer Examination who passed in the class for which they were entered:—

	Examined.	Passed.	Percentage.
First Class [or Senior].....	461	225	49
Second Class [or Junior]...	1781	894	50
Third Class	1775	1429	81

The above table does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered, nor of those (252 in number) who entered for certain subjects required for professional preliminary purposes.

The number of candidates entered for the Lower Forms Examination was 1315—717 boys and 598 girls. Of these 973 passed, or 74 per cent.

At the Professional Preliminary Examination for First and Second Class Certificates, which was held on the 1st to 3rd of March, in London and at seven Provincial Centres, viz., Birmingham, Bristol, Cardiff, Fraserburgh, Leeds, Liverpool, and Manchester, 344 candidates presented themselves.

Practical Examinations for Certificates of Ability to Teach were held in February, May, and June. At these Examinations 25 candidates presented themselves, and 23 were successful.

The Report was adopted.

Mr. RULE said he thought it would be appropriate for the meeting to express its regret at the illness of the Dean, and the earnest hope that he might soon be restored to health and strength.

The proposal was unanimously agreed to.

The CHAIRMAN then called upon the Treasurer to propose the following resolution, standing in the name of the Council:—

> That the following words be substituted for par. 1, Section I., of the By-laws: "All persons whose names are on Column B of the Teachers' Register, and all others who are engaged in education and have passed an examination satisfactory to the Council, are admissible as members of the College of Preceptors.

Mr. PINCHES said the effect of the substitution would be to render eligible for membership of the College persons who had not passed an examination but whose names were on Column B of the Teachers' Register, and who were therefore recognized as persons possessing ability to teach. When the Order in Council first appeared, more than two years ago, it was seen that after a certain time it would be necessary that all persons desiring to come on the Register should give evidence of having passed an examination of higher standard than the lowest of those at present required for the membership qualification. It was also found that under clause 4 certain persons might come on the Register without possessing one or other of the specified examination qualifications—*e.g.*, heads of schools which were recognized by the Board of Education. The matter was discussed in that room twelve months ago, when attention was called to the hardship entailed on teachers who were not heads of schools, who had been engaged in teaching for a great number of years, and had undoubtedly shown professional skill. The members were then told that the Council had not overlooked the matter, and that they had made a representation to the Board of Education, and that other bodies had done the same. The result was the issue of a modification of the Order in Council by the introduction of a clause known as Reg. 5 (2) (*b*), according to which persons who had been engaged in teaching for at least ten years and were in a position to give satisfactory evidence of ability to teach could have their names placed on Column B. The duty of ascertaining the applicants' fitness was performed by the Registration Council in no perfunctory manner, and in cases where the evidence was not considered satisfactory the testing of the candidates' ability to teach was referred to a recognized examining body such as this College, and on the result of the test depended admission to the Register. It would be seen that, under these circumstances it was unlikely that persons who had not the essential qualities for teaching could come on the Register, and the Council of the College considered that it would hardly be reasonable to refuse admission to their membership to those who had been teaching for many years and had shown their capacity.

In answer to Dr. BELL, Mr. PINCHES said that applicants for admission to membership under the proposed new by-law would, of course, have to comply with the conditions which other members had to satisfy, including the payment of the annual subscription.

The resolution was carried unanimously.

Mr. GUTTERIDGE then moved the following resolution:—

> That it would be in accordance with the well-established custom of other corporations and societies, if printed lists of the attendances of members of the Council, both at Council and Committee meetings, were circulated in the hall for the general convenience of members at the January General Meeting.

He called attention to what had taken place on two previous occasions when a similar resolution had been brought forward, and which showed a growing opinion in favour of it. He knew that there was a pretty general disinclination to continue to re-elect from time to time members of the Council who showed by the infrequency of their attendance a want of interest in the affairs of the College. He could appreciate the reasons there were for keeping on the Council certain members who could not attend regularly, and that allowance should be made for members residing at a distance from London. The resolution would, he believed, strengthen the hands of the Council. He gave instances of the practice of other bodies in regard to the publication of attendances.

Mr. RULE doubted how far the resolution, if carried, would be operative. He himself saw no reason why the attendances should not be published, but he thought that further information was required if no injustice was to be done to individual members of the Council.

Dr. BELL said he had had considerable experience of this matter in the case of vestry meetings where a similar resolution had been brought forward, but it had always been found impossible to carry the desired object into effect. The value of a man could not be estimated simply by the number of his attendances, and, if the resolution were carried, he was convinced that it would be found to be unworkable.

Dr. MOODY said that he was unable to vote for the resolution, as he did not consider it to be in accordance with the established custom of societies like the College to publish such a list. Moreover, it was unnecessary, for if any one wished to know the number of attendances made by individual members of the Council the information could always be obtained from the reports of the meetings which were published in *The Educational Times*.

The resolution was then put to the meeting, and declared to be carried.

A vote of thanks to the Chairman concluded the proceedings.

ADJOURNED MEETING OF THE COUNCIL.

AN adjourned meeting of the Council was held on July 23. Present: Dr. Wormell, Vice-President, in the Chair; Rev. J. O. Bevan, Rev. J. B. Blomfield, Dr. Breul, Mr. Butler, Miss Crookshank, Miss Dawes, Rev. R. Lee, Mr. Pinches, Miss Punnett, Mr. Starbuck, and Mr. Vincent.

The Secretary reported that, owing to the illness of the Dean, it

Digitized by Google

had been found necessary to interrupt the meetings of the Joint Conference Committee appointed to consider the proposals for federation.

He submitted the report of the Consultative Committee on the question of School-leaving Certificates, on which the opinion of the Council had been invited, and it was decided that the consideration of the proposals should be deferred till the September meeting.

COLLEGE OF PRECEPTORS.

PRACTICAL EXAMINATIONS FOR CERTIFICATES OF ABILITY TO TEACH.

The following is a list of successful candidates at the Examinations held in May and June, 1904:—

MAY.

Class I.

Butcher, F. E.
Cahill, Miss M.

Class II.

Arnold, Miss E. J.
Bandulska, Miss H.
Blunt, J. H.
Bridge, P. S. R.
Irvine, J. B.
Jones, M.
Lock, Miss A. J.
Vincent, Miss V. E.

JUNE.

Class I.

Moffatt, Miss E.

Class II.

Semmens, W. H.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—ED. *E.T.*]

THE PUFF EDUCATIONAL.

To the Editor of "The Educational Times."

SIR,—On Wednesday, the 15th inst., honour was done—and rightly done, too—by the Manchester University to a distinguished German Professor of Education. But can anything justify the extraordinary deviation from—let me say—accuracy which marked the opening proceedings of that meeting, in which Prof. Rein was described as being "throughout the English speaking world," by "his writings and his *personality*, a power for good"? Feeling somewhat surprised at this statement in regard to the "English-speaking world," I took the first opportunity of inquiring of several English teachers, graduates and others, what they knew about Prof. Rein. In neither instance did they know anything of him, excepting that they had just heard of him through the Manchester newspapers. I then called on several of our local leading school and schoolmaster booksellers. Only one of them had previously heard of his name, did not keep his books in stock, and had to refer to London catalogues to ascertain the titles of his works and which of them had been translated into English. I also looked cursorily through several recent volumes of our leading educational journals, seeking—in vain—either to find the name of Prof. Rein or evidence of his great influence over the "English-speaking race." What can be the object of such a misleading mode of announcement? Prof. Rein's chief work, as I understand it, consists in his able advocacy and exposition of Herbartianism. The two leading principles of this system of education, as laid down by Prof. Herbart, are his insistence on morals as a fundamental part of real education and his insistence on what he termed the "many-sided interest" principle of education. But the late George Combe treats these subject-matters with even greater force and lucidity, and from a more pracictal and philosophical standpoint, than did Prof. Herbart. The Right Honourable John Morley, M.P., in his "Life of Richard Cobden," speaks of George Combe's "Constitution of Man" as "that memorable book," and "as a startling revelation when published" (1828). George Combe, probably more than any other modern writer, contributed to the practical development, on a natural, scientific, and philosophical basis, of the true modern theory and practice of education in England; yet how few of the teachers so mechanically and academically trained in our present schools and Universities could give his history, either who he was or what he did or wrote! Yet probably no candidate, man or woman, who has passed one of our formal secondary-school teachers' examinations in "Theory and Practice of Education" but can tell you all about that naughty old man Jean Jacques Rousseau.—Yours faithfully,

JOHN ANGELL, F.I.C., F.C.S.

Manchester, *June* 21, 1904.

[Unavoidably held over last month.—ED. *E.T.*]

LONDON UNIVERSITY EXAMINATION PAPERS.

To the Editor of "The Educational Times."

SIR,—A candidate whom I have prepared in mathematics for the Intermediate Science Examination of the London University now being held writes me that she failed to prove. as asked, that "the tangents to the circle $x^2+y^2-2x-4y=0$ from (3, 4) are given by $x-4y+13=\pm\sqrt{15}(y-4)$."

Now the tangents from (3, 4) are not given by this equation, but by $x+4y-19=\pm\sqrt{15}(y-4)$.

If after mathematical papers have been set by one examiner a second would read them through and calculate afresh any problem in which a mistake might occur, errors like the above might surely be avoided.—I am, &c., W. P. GOUDIE.

Irvine House, Derby,
July 16, 1904.

REVIEWS.

COMPARATIVE POLITICS.

Outlines of Comparative Politics. By B. E. Hammond, University Lecturer in History, Cambridge. (7s. 6d. Rivingtons.)

The volume takes its impulse from the seminal period of Seeley and Henry Sidgwick, but it has been worked out in detail with thorough independence and with patient industry. It contains the outline of the author's lectures during half a generation, and "is intended to serve as a text-book for beginners in comparative politics." The chief fault we are inclined to find with it is that Mr. Hammond has imposed on himself somewhat severe restrictions. The text implies a wide knowledge of history—and often a deep knowledge—either gained beforehand or else supplied by the teacher concomitantly with his prelection; and occasionally the author contents himself with an indication where one would expect an exposition. However, it is only the impatient class of reader that will make much difficulty about this, and Mr. Hammond may one day provide a remedy by filling out his chapters at the more compressed points. The work, if somewhat over-refined, is markedly careful and well weighed throughout, and it will be welcomed as an instructive and cautious guide in tangled paths.

Mr. Hammond, in the meantime, gives up the question of the origin of political communities and their governments. He does not derive trustworthy assistance from the attempts that have been made to solve it from observation of ancient customs embedded in the institutions of peoples that have later attained to various degrees of civilization. In an appendix he handles Maine's researches and conclusions so far as they bear on the origin or form of governments, but much more tenderly than McLennan—who, by the way, is not among his references. "Some kind of subjection of adult sons to their fathers"—this, though apparently a concession to Maine, is really a rejection of his theory; and examples are to be found nearer home than India or Slavonic Russia, without trace of Maine's distinctive requirements. However, Mr. Hammond gets away from Maine on the German side; for the Germans had no such *patria potestas* as the Romans, and therefore among them there was no patriarchal origin of government, and yet "the chief States of mediæval and modern times were founded by Germans." And, "if so much is established," says Mr. Hammond, "I do not care to discuss origins of government in other States." At the same time, a tentative examination of the subject would be a useful introduction to a second edition of the volume.

Mr. Hammond first deals with Tribes, or "small societies of men bound together by kinship, by religion, and by interest"—simple, undivided societies: poor, rich, aggressive, and federated. Then with Cities: "A tribe grew into a city by concentrating itself within walls"—at maturity "the most compact and in-

Digitized by Google

divisible States known to history"—the great examples in ancient times being Athens and Rome; and here Mr. Warde Fowler's admirable volume on the City-State should be studied in connexion. Mr. Hammond shows how these simple communities—tribes and cities—all conform to a few definite types, each type having its organ of government constituted in a certain way peculiar to itself. This regularity, he thinks, "seems to prove that their development is controlled by natural laws rather than by man's contrivance, and that in some way or other each simple State has its government allotted to it by Nature." There is something hard in the saying, and perhaps a firmer analysis needs to be applied. However, that is a deeper process, and in any case the results will not affect Mr. Hammond's classification and exposition. Next come Composite States, including "(1) unions of cities such as that which formed the Roman Republic, (2) unions of small and similar rural communities such as those which made the mediæval kingdoms, (3) unions of unlike peoples such as constituted the Roman Empire of Charlemagne, and lastly (4) those unions made by voluntary consent which are known as federal States." These do not conform to a few defined types, but seem capable of indefinite variation; yet there are some similar groups among the heterogeneous empires and the federal States. The differences arising from artificial construction (conquest or otherwise) and from natural growth are specially instructive. The outline of subjects will at once suggest how wide a field the volume covers and how difficult the treatment must be. Mr. Hammond has met the difficulties by assiduous and patient study, and his work will be extremely helpful to all students of this branch of historical-scientific investigation.

A Preliminary Ethical Survey.

An Introductory Study of Ethics. By Warner Fite. 6s. (Longmans.)

The volume is introductory in the best sense: that is to say, it handles the subject from the point of view of the educated man without undue technicality of statement or of method, and yet with full regard to the requirements of science. It embodies a discussion that will be extremely valuable to students entering upon ethical study, and it will not fail to interest such as are already familiar with ethical problems. Having explained the scope and method of ethics, and reviewed in outline the ethical problem, Mr. Fite finds that "there appears to be a contradiction between moral ideals and the conditions of practical attainment," and that "an emphasis laid upon the side of ideals or of conditions gives rise respectively to the theories of Idealism and Hedonism." Accordingly, he subjects these theories to a critical analysis, which occupies the main portion of the work, with this result: "Our analysis of the two theories has shown them to be the expressions of fundamentally opposite ways of looking at things—of fundamentally opposite temperaments and systems of philosophy; and our criticism has shown that, while each has a certain range of application, neither is able to fulfil all the requirements of an ethical and psychological system." "Idealism offers a relatively comprehensive but vague conception of the self and of social relations, hedonism a clear but relatively narrow conception." Mr. Fite then proceeds to attempt a co-ordination of the alternative views from some common standpoint; for it is impossible, both theoretically and practically, to rest in the mere contemplation of differences and contradictions. Yet he has to acknowledge that "a complete solution of the ethical problem is quite out of the question: we cannot fit the different sides of the problem together, term for term, and detail for detail, in such a manner as to form a completely articulated system; nor can we even, in any completely adequate manner, define a method for putting them together." All that he aspires to is the construction of "a reasonably satisfactory working hypothesis—a *critical* adjustment of the opposing theories, such as will enable us to take a practical attitude towards the aspects of life which they severally represent, without closing our eyes to the fact that we are not yet able to unite these aspects in all their concrete detail."

He examines the situation first from the metaphysical standpoint and then from the evolutionary standpoint; and he finds, first, that the conceptions of a world determined by mechanical forces, and of a world determined by reason and consciousness, are not logically contradictory, but only empirically irreconcilable, while the difficulty of bringing them together may be due only to the limitations of our human consciousness; and, next, that both ideals and conditions are but transitional aspects of the evolutionary process, and "their apparent contradiction represents the difficulty of passing from the point reached in the organization of our world to a point of further and more comprehensive organization." The difficulty, then, is probably permanent: there will always be a moral problem. But the adjustment? "It is the instability of our moral life which is the chief source both of retarded development and of unhappiness." Accordingly:

> I believe that the demands of morality will be best satisfied (remembering that morality demands both progress and happiness, and assuming that neither demand can be fully satisfied without some sacrifice of the other) by a course of behaviour regulated with a view to the maximum of sustained progress. By "sustained" progress is meant a course of progress not interrupted by periods of degeneration, in which enthusiasm does not alternate with despair, courage with cowardice. Somewhere between a futile striving after the immediately impossible and an ignoble submission to pain and difficulty, there must be a state of control in which we may keep progress toward higher ideals at a constant maximum rate of sustained efficiency. The life which maintains such control will always be the ideal life under the existing circumstances.

The value of the survey lies in the calm and open-minded treatment, in the free play of reasonable consideration around the main points of interest. The book is well thought out, and soberly and lucidly written. It is very suitable for the general reader as well as for the student.

A New Commercial Series.

Macmillan's Commercial Series.—*The Geography of Commerce.* By Spencer Trotter, M.D., Professor of Biology and Geology in Swarthmore College, Pennsylvania. (5s. net.)

The present volume is the first of a series of text-books "designed to cover ultimately the whole field of commercial education." Three other works will deal respectively with commercial products, commercial affairs, and commercial history. These four books "will serve as the backbone of the series, and the other books to be published will be articulated with them." There is no idea of springing upon the educational world anything startling: the aim is to hold fast to all that is good in experience, while seeking fresh applications and new elements of probable value. Both authors and editor are practical teachers; experimenting and planning as the work proceeds. The series looks especially to the commercial classes in "public high schools," and the present volume, at any rate, will be very useful for instruction and for guidance in fairly advanced commercial teaching on this side of the water.

The object of the volume, then, is "to describe commercial life as it is influenced and determined by geographical conditions." The author explains further:

> To understand the relations of geography and commerce, the various industries and occupations of men must be studied in the light of their dependence upon physiographic surroundings. "Physiographic," as distinct from "geographic," is taken to include the physical environment, as climate, soil, topography, and the distribution of resources. Geography, as distinct from physiography, includes not only the physical environment, but the human element as well. Geography is used in the following pages in its broad meaning, and includes an account of man and Nature, and the interactions which are an outcome of their relationship to each other. Commerce grows out of the adjustment of men to their physical environment. The study of regions, it has been well said, passes naturally into what regions produce, and, similarly, the study of men leads to what men make. Thus the geography of commerce includes what is coming to be understood as economic geography—the production and distribution of raw commodities—and industrial geography—or the location of manufactures and the distribution of their products.

After preliminary exposition of the basal considerations, the United States is treated with much fullness (133 pages)—regional geography, resources (mineral, vegetable, and animal products), internal commerce, foreign trade, and outlying possessions. Prof. Trotter points out that the export trade has sprung naturally from the home activity, and that "the demand for American goods in foreign markets is due to their cheapness and excellence." Among other factors in the growth of American commerce abroad he mentions the excellence of the consular service; from which it would appear that American manufacturers pay more attention to consular reports than their competitors in certain other countries, and notably in England, seem to do. He remarks that "the attempt to force competitors out of the market in every department of trade is of doubtful advantage: its tendency in the long run would be to destroy markets rather

Digitized by Google

than to build them up." The rest of the countries of the world are treated much more briefly; the United Kingdom, for example, receiving a bare dozen pages. There are six inserted maps, sixteen plates, and about a hundred maps and diagrams in the text.

A New Chemistry Series.

"Text-books of Physical Chemistry."—*The Phase Rule and its Applications.* By Alex. Findlay, M.A., Ph.D., D.Sc., Lecturer and Demonstrator in Chemistry, University of Birmingham. Together with *An Introduction to the Study of Physical Chemistry*, by Sir William Ramsay, K.C.B., F.R.S. (5s.; "Introduction" separately, 1s. Longmans.)

This new series has been suggested by the wide and widening sphere of physical chemistry, and by its rapid progress—at any rate, in certain branches. Each department, or aspect, being separately expounded, can thus be frequently revised independently of others and pretty steadily kept up to date, so that "a statement of what is known on each subject" at any given period "will be made accessible to students and investigators." Undoubtedly that is a very important consideration for all persons that are likely to have recourse to such text-books. Sir William Ramsay, the editor of the series, furnishes a general "Introduction," sketching the historical evolution of the science in its various important aspects. The handling, if brief, is lucid and precise; and it opens up, without pursuing, numerous vistas of great interest. The fuller significance of the sketch will be supplied from study of the various volumes of the series.

The first volume expounds the Phase Rule, first enunciated by Prof. Willard Gibbs of Yale (1874–8), and presently shown to be practically applicable to the study of chemical equilibria by Roozeboom (1887). After sufficient preliminary explanations, Dr. Findlay handles typical systems of one "component," showing how the phase rule can be applied to the elucidation of them; and then, in succession, systems of two, three, and four components—the two-component systems most fully, the number and more especially the complexity of the others limiting the investigation to the more important classes and the more important points in connexion with the behaviour of such as are selected for description. The treatment is most careful and lucid, judiciously proportioned, and effective; and the author shows himself completely familiar with the literature of the subject, as well as with the details of experimental illustration. The volume, while presenting much not readily accessible material in a very convenient form, will not only be useful to the student, but also stimulating to the investigator. It is a most able, laborious, and opportune piece of work, and it sets a high standard to the succeeding volumes of the series. There are 118 figures in the text; paper and type are excellent, and the binding is alike tasteful and serviceable.

The Social Side of British History.

Social England. A Record of the Progress of the People in Religion, Laws, Learning, Arts, Industry, Commerce, Science, Literature, and Manners, from the Earliest Times to the Present Day. Edited by H. D. Trail, D.C.L., and J. S. Mann, M.A. Illustrated Edition. Vol. V. (14s. net. Cassell.)

The present volume of this elaborate work practically covers the eighteenth century (1714–1815)—the Georgian era of British history. The political events are adequately outlined so as to furnish a framework for the setting of the other aspects of the period, which are the main objects of the editors' care. These are enumerated in the sub-title, and they are treated in considerable fullness by scholarly specialists in the several departments. The distinctive characteristics are generally singled out and displayed with good judgment and conspicuous ability; and the style is plain, sound, and attractive. Though the period is separated from the present by so narrow a space, yet one soon gets impressed with the extraordinary advance that the nation has made in every respect—a sense of contrast of stages of historical development that is not awakened so vividly by any other record that we remember. The educational effect of the spacious narrative (nearly 900 pages) is markedly heightened by the liberality and excellence of the illustrations (over 450) and coloured plates (10), which have been laboriously selected and justly distributed among the various subjects. The work should be placed in all public and school libraries: it will clothe the dry bones of the ordinary history with ample and fair flesh, and stimulate a real historical and social interest.

GENERAL NOTICES.

CLASSICS.

Corpus Poetarum Latinorum, a se aliisque denuo recognitorum et brevi lectionum varietate instructorum edidit Iohannes Percival Postgate. Fasc. IV. (9s. net. Bell.)

The *fasciculus* contains the "Bucolica" of Calpurnius Siculus, the Tenth Book of the "Res Rustica" of Columella, the "Punica" of Silius Italicus, and the "Thebais," "Siluae," &c, of Statius—430 handsome pages in double columns, closely but clearly printed, with textual variations in footnotes. The scholars associated with Dr. Postgate are H. Schenkl, W. C. Summers, A. S. Wilkins, and G. A. Davies. The preface, written very gratuitously in Latin, explains the procedure of the editors, with full statement of the codices used. Why should Dr. Postgate trouble himself to write a page upon "nonnullorum in cauillando industria curiosa"? He has abundant precedents, no doubt, but it seems a task of supererogation. The work is plainly on the level of the best modern scholarship, every page bearing witness to assiduous care and labour.

Longmans' Latin Course. Complete Edition. (3s. 6d.)

The aim is to present simply and lucidly the essentials of Latin grammar, enforced by an adequate number of exercises, *viva voce* sections being added in the earlier stages to make sure of sufficient practice at points where practice is too often insufficient. The more prominent topics are very fully and practically handled, notably the accusative and infinitive construction. The examples are almost wholly drawn from authors that are usually read by beginners—with more or less modification; and the materials are well graduated. Devices of type are freely used for emphasis. The book embodies a serious attempt to simplify the beginner's difficulties, and indeed it promises to be very successful in doing so. It is well printed and substantially got up.

MATHEMATICS.

Euclid: His Life and System. By Thomas Smith, D.D., LL.D. (3s. 6d. T. & T. Clark.)

Mr. Oliphant Smeaton has been well advised to add this racy volume to his series of "The World's Epoch-Makers." The book "is not designed for mathematicians," though mathematicians will no doubt take interest in it. It is thoroughly popular in treatment and strikingly attractive, with a great deal of curious lore discursively interspersed. The "Life" is necessarily after the manner of the snakes in Iceland; but the "System" is very fully handled, not only directly, but in its applications in other sciences, and historically as well as scientifically. Dr. Smith stands up manfully for Euclid:—"While it is freely admitted that in the technical education of the mathematician of the future, and of all who are to be engaged professionally or otherwise in the sciences of applied mathematics, the non-Euclidean geometry must occupy a large place, we trust it shall never hold an exclusive one. The non-Euclidean is safe only in the hands of him who has drunk in the spirit of the Euclidean. The former is the motive power, potent and irresistible; the latter is the guiding principle, potent also and salutary. . . . If there are any defects in Euclid, they are in his definitions and axioms"—a round assertion more or less qualified afterwards; but substantially Dr. Smith champions Euclid, and criticizes some of his critics with much verve. A strong play of humour is always bubbling up through the severities of the subject; and this, together with the inveterate discursiveness of the author, renders the book delightful throughout. As Mr. Smeaton remarks, "it is not the least interesting feature of this volume that it has been produced after its venerated author had reached his eighty-fifth year."

Graphs and Imaginaries. By J. G. Hamilton, B.A., and F. Kettle, B.A. (1s. 6d. Edward Arnold.)

By a series of very ingenious and interesting geometrical constructions, the authors show how the principles of graphical representation may be applied to the solution of quadratic equations with *imaginary* roots, and, further, they employ similar means to make it possible to display to the eye the relations between the *imaginary* intersections of various lines and curves. The object is effected by the use of what are called *shadow* curves, whose magnitude and position are in every case perfectly definite. Interesting and instructive as the constructions which are given are in themselves, the chief value of the tiny volume lies perhaps in its suggestiveness; for more than likely it will serve to encourage fresh effort, and it may thus lead to even more important results.

Mathematical Papers for Army Classes. By H. S. Brabant, B.A. (1s. 6d.; with Answers, 2s. 6d. Relfe.)

A useful collection of problems, very many of which are of a practical character. The questions are arranged in sets suitable for examination papers of two and three hours' length, and each such series is further divided into sections capable of being utilized separately in the form of one-hour papers.

MODERN LANGUAGES.

(1) *Aperçu comparatif des Cinq Langues Germaniques (Anglais, Allemand, Hollandais, Danois, Suédois).* (2) *Le Dano-Norvégien.* Both by J. Berjot, Professeur Agrégé de l'Université. (Paris: H. le Soudier, 174 Boulevard Saint-Germain.)

(1) The "Aperçu" is very handy for purposes of comparison. But Prof. Berjot hopes by means of it to facilitate the acquisition of the languages for practical use, primarily through private study, as apparently "l'enseignement public" cannot teach everything—not even in Germany. Now, "Selbstunterricht"—"l'enseignement par le livre et sans maître"—has developed enormously in Germany ("ce développement vraiment merveilleux"), with remarkable commercial results, and so "pourquoi donc la France ne suivrait-elle pas ici l'exemple de l'Allemagne?" Why not, indeed? Prof. Berjot's *brochure*, however, is not exactly a grammar, "mais un *précis*, assez *succinct* pour être appris en un temps relativement court, assez *complet* pour permettre à qui le possédra bien d'aborder promptement et avec fruit les exercices pratiques: traduction, correspondance commerciale, &c." It is good as far as it goes, but we confess we do not like the idea of a beginner's trying to ride five horses at once. As it is limited "au tracé des grandes lignes, à *l'ossature* générale et comparée des cinq langues," he is preparing three modest supplements—Dutch, Danish, and Swedish. Already we have one of these: (2) *Le Dano-Norvégien*, which is practically a brief grammar, giving the main points efficiently. Prof. Berjot thinks that Danish should be learnt on his method in not more than a year. To our mind, a man that cannot make his way in Danish in three months on whatever system had better leave it alone.

Rabelais. *Selections from Gargantua.* Edited by C. H. C. Wright, A.B. (Harv.), M.A. (Oxon.), Assistant Professor of French in Harvard University. (3s. 6d. Macmillan.)

The enterprise has a questionable look, but the editor has been discreetly selective, and has confined himself to the First Book. The text is based on that of Burgaud des Marets and Rathery, which is "scientifically constructed to be consistent throughout," and thereby least likely to present unnecessary difficulties of spelling to the young student. The introduction treats the pertinent literary considerations adequately and judiciously; and the notes, which are liberally reinforced from Cotgrave and Urquhart, seem to be generally helpful and sufficient. There is a "Vue de l'Abbaye de Thelème" (d'après Ch. Lenormant). An excellent edition, well printed, and in strong binding.

ENGLISH LANGUAGE.

The Making of English. By Henry Bradley, Hon. M.A. Oxon., Hon. Ph.D. Heidelberg, sometime President of the Philological Society. (4s. 6d. Macmillan.)

Dr. Bradley's object is "to give to educated readers unversed in philology some notion of the causes that have produced the excellences and defects of modern English as an instrument of expression," the history of the language being dealt with only so far as it bears on this special problem. By way of introduction, the author compares and contrasts German and English, and sets out the characteristics of Old English; then he reviews the grammar, noting the progressive simplification of accidence and the accession of some fresh grammatical material, and balancing profit and loss. The successive chapters on Foreign Importations, Word-making, Changes of Meaning, and Some Makers of English, are full of most instructive expositions of tendency, illustrative examples, and singular curiosities. The presentation is remarkably attractive both in method and in style; and, if we miss some familiar specimens as well as some unfamiliar points that seem to call now for the attention of those that can speak with acknowledged authority, yet this regret is overwhelmed by the mass of new material adduced and effectively worked up. The volume will, no doubt, grow. It is a book that will be read with avidity when the ordinary grammar is rebelliously rejected; and, if a boy get hold of it in a quiet corner, one need not seriously care about the spurned grammar—so far as concerns "the making of English." By the way, however, "English" here means merely "English vocables"; so that Dr. Bradley's phrase "Modern English as an instrument of expression" must be taken in that limited sense.

A Handbook of Modern English Metre. By Joseph B. Mayor, Hon. Litt.D. of Dublin. (2s. Cambridge University Press.)

By "Modern" Dr. Mayor means that he does not go back, except incidentally, beyond the time of Henry VIII. In eight of his eleven chapters he gives "a methodical and uncontroversial statement of the principles which are alike the foundation and the outcome of his former work on English metre"; and in the later chapters he goes on to treat of metre from the æsthetic side, and offers suggestions as to the connexion of sound and sense in poetry. Dr. Mayor holds by the theory that the foot is the unit of verse. The main point, however, is that he has provided "a clear and simple guide to metre, not hampered by the rigid rules of Pope and Johnson, but elastic enough to embrace the careless measures of the old ballads or drama, as well as the latest experiments of the twentieth century." He very properly insists on the value of training in imagination, and his exposition will be very useful not only for general students, but also in schools, and especially in schools of the more modern type where the pupils have had no practice of Greek or Latin versification. Like all Dr. Mayor's work, it is thoroughly independent, scholarly, and judicial.

HISTORY AND GEOGRAPHY READERS.

The *Senior Globe Geography Reader*, by Vincent T. Murché, F.R.G.S. (2s. 6d., Macmillan), treats of "Our World-wide Empire." "The chief aim has been to impress the young reader with a sense of the vastness, the variety, the wealth, the future prospects, and the mighty power for good that are all summed up in the three words—the British Empire; to trace the marvellous growth of these wide-spread dominions from the humblest beginnings as the result of the commercial and colonizing enterprise of our people; and to encourage in every possible way the forging of a strong and indissoluble bond of brotherhood between Britishers everywhere throughout the world." The matter (which is not unfrequently historical) is simply and attractively presented, and the book is lavishly and admirably illustrated.

Chambers's Twentieth Century Geography Readers, Books IV., V., and VI.A (1s. 6d., 1s. 6d., and 2s.), are substantial and most interesting additions to a capital series. The first covers Scotland, Ireland, British North America, and Australasia; the second, Europe; the third, the World outside Europe. They are full of good matter, well written, and liberally and judiciously illustrated. The same may be said of *Asia and Africa* (1s. 6d.) in the excellent series of "Chambers's Geographical Readers of the Continents." Many of the illustrations are in colour; and there is a useful summary at the end of each of the four volumes.

Messrs. Nelson's new series of *Excelsior History Readers* is designed to suit elementary-school classes ranging from Standard III. to Standards VI. and VII. The concentric plan is adopted. The *Junior* volume is not quite ready; but we have the other three—*Intermediate*, *Senior*, and *Advanced* (1s. 4d., 1s. 6d., 1s. 6d.). They are graduated with much care and judgment, and written in simple and lucid style. In the first two poetical pieces are appended. They are all liberally illustrated—maps, plans, portraits, &c., and they are excellently got up The series is bound to be popular.

AGRICULTURE.

The Soil: an Introduction to the Scientific Study of the Growth of Crops. By A. D. Hall, M.A. (Oxon.), Director of the Rothamsted Station. (3s. 6d. Murray.)

Agriculture is old in practice, but young in scientific method; indeed, science has not yet been able to explain fully the best farming practice. It is making rapid progress, however, and this volume will prove very instructive to farmers as well as to agricultural students, for whom it is primarily intended. It is readily intelligible to the non-technical reader. Mr. Hall examines the soil, and the part it plays in the nutrition of the plant, in chemical, physical, or mechanical and biological aspects, with a view to obtain such a knowledge of its constitution and action as will make clear the cause of the inferiority of any given piece of land, and ultimately enable the farmer to correct it. The problems are more complex than the uninitiated bargain for; but Mr. Hall makes an able and interesting contribution to the solution of them. There are sixteen figures—diagrams, photographs, &c.

The Essex Education Committee publish two *brochures* of interest to cultivators (County Technical Laboratories, Chelmsford): (1) *Agricultural Education in Essex*, being a description of the County Technical Laboratories, and prospectus of educational work carried on at or in connexion with them; and (2) *Market-Day Lectures*, being abstracts of eleven addresses delivered to farmers at the laboratories during the winter months 1903-04.

The Midland Agricultural and Dairy Institute issues several fresh Bulletins, being *Reports* (1) of Experiments with Barley; (2) of Experiments on the Manuring of Swedes; (3) on the Sand Land Rotation Trials at Carburton, Notts; and (4) on Tests of Varieties of Mangels and Swedes—all of which are instructive.

FICTION.

Angelo Bastiani: a Story of Modern Venice. By Lionel Cust. (6s. Constable.)

A tragic story, based on insensate jealousy, and worked out to its natural issues. Angelo Bastiani, a *facchino* (shore porter) of Venice, sustains a compound fracture of the leg by an accident, and during his illness his wife goes to work at a fashionable tailor's establishment, under circumstances that arouse his jealousy. A lying letter from the tradesman leads Angelo to stab him to the heart, for which he has to dree his weird for a dozen years in the galleys at Naples. All the rest of the calamity naturally follows, and its continuing operation is indicated in the second generation. In some ways the details are inevitably repellent, though handled with discretion. The treatment is sympathetic and discerning; and, if the author is not yet an expert at story-telling, he still contrives to maintain the interest of the reader. There are numerous illustrations by Frank H. Mason, R.B.A.

Digitized by Google

Mrs. Hugh Fraser combines in a single attractive volume five tales of the Far East under the title of one of them—*The Slaking of the Sword* (6s., Methuen). They are all Japanese or Central Asian stories; but the first has nothing to do with the present war. Three of them have already appeared in different periodicals; but, good as they are, especially two of them, they do not seem to us to equal the two that are new. Finest of the bunch, to our mind, is "The Story of Chagra Barghat," which is singularly fresh, vigorous, and true to life. The volume will be a delightful companion on holiday.

Elizabeth in search of a Husband (1s., White): a crude title, suggestive of a forwardness foreign to Elizabeth, who is a lady teacher. What the story portrays is simply the natural emotions of a young woman chafing against the walls that hem in a teacher's life. Elizabeth has her adventures, which are so disposed as to illustrate dangers that a solitary young lady may ignorantly and unguardedly fall into, especially in a city like London. She might, indeed, have been more careful, without any special tuition.

The Don't-know Family, "a story for everybody," by Noel Hope (1s. 6d., John Hogg), has already appeared as a serial in the *Young Soldier* (Salvation Army weekly). It well deserves the more permanent form of an independent volume. The author presents much greatly needed practical teaching on matters bearing closely upon health, strength, and comfort in a lively and piquant form, suitable to people that are little likely to be reached by manuals of physiology and hygiene.

Mr. Joseph Hocking presents *Esau* and *St. Issey*, two stories of equal length, in a single volume (3s. 6d., Ward, Lock, & Co.), both in his usual vein. A bit of mystery, a dash of adventure, plenty of rapid conversation, the stories will while away an idle hour harmlessly and pleasantly enough.

MISCELLANEOUS.

Mr. J. A. Spender has reprinted from the *Westminster Review*, with a few omissions and verbal alterations, "The Diary of Greville Minor for the Year of Agitation 1903-1904," under the title of *A Modern Journal* (3s. 6d. net, Methuen). "The main concern is of course with the fiscal question, which has dominated all domestic politics for more than a year and is likely to do so for an indefinite time longer." The variations of hopes, fears, speculations, and rumours are treated with much insight and cleverness, and the sketches are amusing and suggestive.

Mr. William Bell Robertson and Mr. Frederick Walker, Clock- and Watch-maker to H.M. King Edward VII. and to H.M. the King of Italy, have produced a most interesting account of *The Royal Clocks* in Windsor Castle, Buckingham and St. James's Palaces, and Hampton Court, with abundant and excellent illlustrations (2s. 6d. John Walker, Ltd., 63 New Bond Street, W.).

In view of the holiday season, the Health Development Association publish handy and pretty guides to (1) *Deal*, (2) *Broadstairs*, and (3) *Llandrindod Wells*, edited by the Director, Mr. G. W. May. A copy of any of them will be sent free in answer to a post-card request forwarded to the Town Clerk.—We mention elsewhere ("First Glances") a useful "Seaside and Inland Holiday Guide for the United Kingdom," issued by the Wentworth Publishing Company.

NEW EDITIONS AND REPRINTS.

Messrs. Macmillan have reprinted, with corrections, Sir Oliver Lodge's very attractive and stimulating volume *Pioneers of Science* (6s.). There are numerous portraits and other illustrations, and the get-up suggests a prize or a gift. The book should be widely read, and not by science students only.

Messrs. Seeley have issued in their "Sixpenny Series" (1) Mrs. Emma Marshall's delightful book, *Winchester Meads in the time of Bishop Ken* — well printed, and bound to be popular; and (2) *In Lincoln Green*, by Edward Gilliat, a very lively and entertaining story.

Mr. Fisher Unwin issues a "complete popular edition" of Prof. Villari's classical work, *The Life and Times of Nicolo Machiavelli*—more than a thousand close-packed pages, well printed and tastefully bound—at the incredible price of 2s. 6d. net. A companion volume to the similar edition of *Savonarola* recently issued. Both volumes should be in all libraries of modern history.

Mr. Henry Frowde opens the new "Florin Series" with *The Poetical Works of Longfellow*—"Oxford complete copyright edition"—878 pages in double columns, with engaging portrait of the poet (about 1877). It is beautifully printed on good paper, and the binding is flexible and tasteful.

The Unit Library has done no better service than to publish a handsome "new and revised edition" of the admirable *Common Thoughts on Serious Subjects* (2s. 6d. net)—"plain words for boys," addressed for the most part during the years 1887-89 to the elder boys of the Rajkumar College at Rajkot, in Kathiawar, by the late Chester Macnaghten, the honoured Principal of that institution for a quarter of a century (1870-96). Mr. Robert Whitelaw furnishes a finely sympathetic biographical introduction. Frontispiece (portrait), and arms of college on cover.

FIRST GLANCES.

CLASSICS.

Examination Papers: (1) on Horace, by T. C. Weatherhead, M.A.; (2) on Thucydides, by T. Nicklin, M.A.,; (3) on Vergil, by W. G. Coast, B.A. 2s. net each. Methuen.

[Judicious, comprehensive, and suggestive. Most serviceable alike to teachers and to pupils.]

Latin Composition, Sentences for. By the Rev. A. Jamson Smith, M.A. 6d. Edward Arnold.

["Based upon the exercises in Mr. A. D. Godley's 'Fables of Orbilius, Part II.'" Pointed suggestions; careful and instructive examples.]

MATHEMATICS.

Arithmetic, New School. By Charles Pendlebury, M.A., F.R.A.S. assisted by F. E. Robinson, M.A. Part I. With or without Answers. 2s. 6d. George Bell.

["The basis of the book is the sixteenth edition of my existing text-book." Much new matter.]

Determinants, The Theory of, and their Applications. By Robert Forsyth Scott, M.A. Second edition, revised by G. B. Mathews, M.A., F.R.S., University Lecturer in Mathematics, Cambridge. 9s. net. Cambridge University Press.

Geometry, Constructive: First Year. By John G. Kerr, LL.D. 1s. 6d. Blackie (Science Handbooks for Laboratory and Class-room).

["Steps in the synthesis of ideas regarding the properties and relations of geometrical figures."]

Mensuration, Elementary. By G. T. Chivers. 5s. Longmans.

["For students whose knowledge of Algebra does not extend beyond Algebra and Trigonometry." Over 1,400 examples.]

Trigonometry, Beginner's: with a chapter on Logarithms. By M. S. David, B.A. 2s. Black.

[Concrete handling. Assumes familiarity with graphic methods.]

Weights and Measures, English, Decimalization of. By Thomas A. Barber, British Vice-Consul, Oran, Algeria. Heintz (Oran).

SCIENCE.

Bacteria, Yeasts, and Molds in the Home. By H. W. Conn, Ph.D., Professor of Biology in Wesleyan University, Middleton, Conn. 4s. 6d. Ginn.

["For all interested in household affairs."]

Chemical Analysis, Qualitative, A Manual of. By J. F. McGregory, Professor of Chemistry and Mineralogy in Colgate University. 4s. 6d. Ginn.

[Tested in author's classes. Good selection and explanation.]

Chemistry, Experimental, A Safe Course in. By W. T. Boone, B.A., B.Sc. 2s. Clive (University Tutorial Series).

[Simple experiments; clear directions; very useful for students working by themselves. 53 figures.]

Chemistry, Practical. Part II. By William French, M.A., F.I.C., and T. H. Boardman, M.A. 1s. Methuen (Text-books of Technology).

[Lucid and practical. 56 figures. Numerous questions.]

Evolution, Reasons against the Theory of. By Thomas Woods, M.D., M.R.C.S.I., &c. Russell.

Flowering Plants, The Classification of. By Alfred Barton Rendle, M.A., D.Sc., F.L.S. Vol. I.: Gymnosperms and Monocotyledons. 10s. 6d. net. Cambridge University Press (Cambridge Biological Series).

[187 illustrations. Vol. II. in advanced preparation.]

Radium, and all about it. By S. R. Bottone. 1s. net. Whittaker.

[Popular exposition — historical, practical, and theoretical. Several illustrations.]

FRENCH AND GERMAN.

Black's Cours Élémentaire: (1) Petites Comédies. By Mrs. J. G. Frazer. Edited by F. B. Kirkman, B.A. 9d. (2) Premières Lectures, with Reform Exercises. Written and edited by F. B. Kirkman, B.A. 1s.

[(1) Sprightly and attractive. (2) Practical; illustrated.]

Blackie's Little French Classics: (1) Graziella (Lamartine), three chapters. Edited by Alfred T. Baker, M.A., Ph.D., Professor of French at University College, Sheffield. 4d. (2) La Poudre aux Yeux (Labiche-Martin). Edited by W. G. Hartog. 8d.

[(2) In supplementary series; brief introduction; pointed notes.]

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,194,485. Annual Income, £398,982.

Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

MATHEMATICS.

14735. (Professor Morley.)—Given five planes a_1, ..., a_5, and a quadric Q, let a quadric Q_n pass through the intersection of Q and a_n ($n = 1, \ldots, 5$) and the four intersections of the four other planes. Then Q_n intersects Q in a second plane β_n, whose polar as to Q is a point a_n. Prove that the line a_1a_2 passes through the point (a_3, a_4, a_5); or, reciprocally, that the line a_1a_2 lies in the plane $a_3a_4a_5$. Also prove that, if one of the points a lies on Q, then all the points a lie on Q. Arrange the proof so as to hold for the analogous theorem in n dimensions. [The theorem in two dimensions that, given four lines and a conic C, and conics C_n being passed through the three intersections of three lines and the intersections of C and the fourth line, then, if one C_n touches C, all C_n's touch C, is M. Humbert's, *Comptes Rendus*, Vol. cxxix.; and an elegant elementary proof is given by M. Bricard, *Nouv. Ann.*, Sér. 3, Vol. xix., p. 369.]

Additional Solution by Professor Nanson.

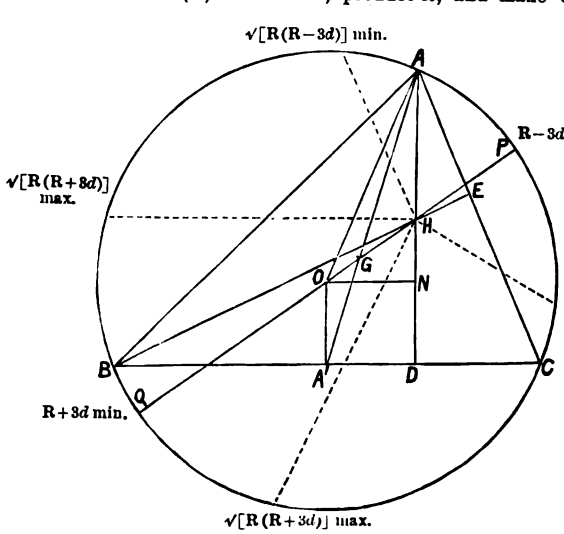
The planes a are connected by an identical relation, which may be taken to be $\Sigma a_r = 0$, and in virtue of it Q may be expressed in the form $\Sigma Q_{rs}a_ra_s$, where Q_{rs} ($= Q_{sr}$) is a constant, and $Q_{rr} = 0$. Now, any quadric through (a_1, Q) is $Q = \alpha_1\Sigma\lambda_{1r}a_ra_r$, where $\lambda_{11} = 0$; and, expressing that it goes through the meets of $a_2, a_3, \ldots, a_n$, we get $\lambda_{1r} = Q_{1r}$; so that $\beta_1 \equiv \Sigma Q_{1r}a_r$. Now, we have to show that the polar line a_1a_2 of $\beta_1\beta_2$ goes through the point $(a_3, a_4, \ldots, a_n)$, or, what is the same thing, that the polar plane of $a_3a_4\ldots a_n$ goes through $\beta_1\beta_2$, and this is obvious, because this plane is $a_1'\Sigma Q_{2r}a_r + a_2'\Sigma Q_{1r}a_r = 0$ or $a_1'\beta_2 + a_2'\beta_1 = 0$, where a_1', a_2' are the values of a_1, a_2 at the point $(a_3, a_4, \ldots, a_n)$.

If the point a_n is on Q, then the plane β_n touches Q. Hence, since $Q \equiv a_n\beta_n + \Sigma Q_{pq}a_pa_q$, where $p, q = 1, 2, \ldots, n-1$, it follows that β_n touches $\Sigma Q_{pq}a_pa_q = 0$, and the bordered determinant condition for this is $|Q_{rs}| = 0$, the symmetry of which shows that all the points a are on Q.

15542. (D. Biddle.)—A triangle is inscribed in a circle of given radius, and has its centroid at a given distance from the centre. (1) Define the limits of area of inscribed triangles whose centroids are thus placed; and (2), given any area within those limits, inscribe a second triangle having this area, and whose centroid occupies the same position as that of the former or one equidistant from the centre of the circle.

Solution by Professor Sanjána, M.A.

Let R be the given radius, and d the given distance from the centre (O) of the centroid (G). Join OG, produce it, and make GH = 2OG;



then H is the orthocentre of the triangle. Taking any point of the circumference A as vertex, the inscribed triangle may be thus obtained:—Join AH, draw OA′ parallel to and half of AH, through A′ draw BC at right angles to OA′ and AH produced; then ABC is the required triangle. Thus, H being fixed, the variable area may be taken as a function of AH. Let AH = $2x$, so that OA′ = x; then BC = $2\sqrt{(R^2-x^2)}$. Also HN = $(R^2-4x^2-9d^2)/4x$; hence

$$AD = 2x + HN + x = (8x^2 + R^2 - 9d^2)/4x.$$

Therefore four times the area of the triangle

$$= 2 \cdot BC \cdot AD = (8x^2 + R^2 - 9d^2)\sqrt{(R^2-x^2)}/x = f(x) \text{ suppose.}$$

It is found that $f'(x) = (9d^2R^2 - R^4 + 8x^2R^2 - 16x^4)/\{x^2\sqrt{(R^2-x^2)}\}$.

Equating the numerator to zero, we get $4x^2 = R^2 \pm 3dR$. Taking positive values only, we have, if $2x < \sqrt{(R^2-3dR)}$, $f'(x)$ negative; if $2x > \sqrt{(R^2-3dR)}$ and $< \sqrt{(R^2+3dR)}$, $f'(x)$ positive; if $2x > \sqrt{(R^2+3dR)}$, $f'(x)$ negative. Hence $4x^2 = R^2 - 3dR$ determines a minimum value, viz., $\frac{3}{4}\sqrt{3}\,(R-3d)^{\frac{1}{2}}(R+d)^{\frac{1}{2}}$, for the area; and $4x^2 = R^2 + 3dR$ determines a maximum value, viz., $\frac{3}{4}\sqrt{3}\,(R+3d)^{\frac{1}{2}}(R-d)^{\frac{1}{2}}$.

Again, when $2x = R-3d$, $\frac{1}{4}f(x) = \frac{3}{4}\sqrt{3}\,(R+3d)^{\frac{1}{2}}(R-d)^{\frac{1}{2}}$, the above maximum; and, when $2x = R+3d$, $\frac{1}{4}f(x) =$ the above minimum. The maxima and minima values are obtained therefore for six alternate positions of A as marked in the figure. The reason why $2x = R \pm 3d$ is not obtained from $f'(x) = 0$ is that x is not a perfectly independent variable, but has itself maxima and minima values at P and Q, the extremities of the diameter through O and G; see Edwards, *Diff. Cal.*, § 492.

If any given value of the area A, between the limits

$$\tfrac{3}{4}\sqrt{3}\,(R-3d)^{\frac{1}{2}}(R+d)^{\frac{1}{2}} \quad \text{and} \quad \tfrac{3}{4}\sqrt{3}\,(R+3d)^{\frac{1}{2}}(R-d)^{\frac{1}{2}},$$

be taken, to find the triangle we have to solve $f(x) = 4\Delta$, and obtain $4x^2$, *i.e.*, $2x$; with this as radius, describe about H as centre a circle cutting the given circumference in two points, either of which will serve for A′ the apex of the second triangle; the triangle A′B′C′ is then easily constructed, with A′ as vertex, H as orthocentre, and O as circum-centre. The diameter OG may be fixed in direction without altering the generality of the problem; the same triangle will always be obtained, though the position may change by taking G on the circumference of a circle about O as centre.

15554. (J. J. Barniville, B.A.)—Having $u_n + u_{n+3} = 3u_{n+1} + 3u_{n+2}$, prove that

$$\left(\frac{5}{-1.7}\right)^2 - \left(\frac{13}{7.17}\right)^2 + \left(\frac{53}{17.73}\right)^2 - \left(\frac{193}{73.263}\right)^2 + \ldots = \frac{1}{2},$$

$$\left(\frac{5}{1.7}\right)^2 - \left(\frac{17}{7.23}\right)^2 + \left(\frac{65}{23.89}\right)^2 - \left(\frac{241}{89.329}\right)^2 + \ldots = \frac{1}{2},$$

$$\left(\frac{13}{-7.17}\right)^2 - \left(\frac{25}{17.31}\right)^2 + \left(\frac{109}{31.51}\right)^2 - \left(\frac{389}{151.529}\right)^2 + \ldots = \frac{1}{98},$$

$$\left(\frac{17}{-7.23}\right)^2 - \left(\frac{37}{23.47}\right)^2 + \left(\frac{151}{47.217}\right)^2 - \left(\frac{565}{217.769}\right)^2 + \ldots = \frac{1}{98}.$$

Solution by Professor S. Sircom.

We have

$$\left(\frac{5}{-1.7}\right)^2 - \left(\frac{13}{7.17}\right)^2 = \left(\frac{5}{-1.7} - \frac{13}{7.17}\right)\left(\frac{5}{-1.7} + \frac{13}{7.17}\right) = \frac{98.72}{1^2.7^2.17^2}$$

$$= \frac{144}{1^2.17^2} = \frac{1}{2}\frac{288}{1^2.17^2} = \frac{1}{2}\left(1 - \frac{1}{17^2}\right).$$

Similarly $\left(\frac{53}{17.73}\right)^2 - \left(\frac{193}{73.263}\right)^2 = \frac{1}{2}\left(\frac{1}{17^2} - \frac{1}{263^2}\right)$,

and the sum of the first series is $\frac{1}{2}$. The other results are obtained in the same manner: thus

$$\left(\frac{13}{7.17} - \frac{25}{17.31}\right)\left(\frac{13}{7.17} + \frac{25}{17.31}\right) = \frac{228.578}{7^2.17^2.31^2} = \frac{456}{7^2.31^2}$$

$$= \frac{1}{2}\left(\frac{1}{7^2} - \frac{1}{31^2}\right),$$

and the sum of the third series is $\frac{1}{98}$.

To prove the property upon which the summation depends we have to show that

$u_{n-2}v_n - u_{n-1}v_{n-2} = 2v_{n-1}^2$, $u_{n-2}v_n + u_{n-1}v_{n-2} = \frac{1}{2}(v_n^2 - v_{n-1}^2)$ (n being even),

where $u_0, u_1, u_2, \ldots$ is the series 5, 13, 53 .....(1),

and $v_0, v_1, v_2, \ldots$ is the series −1, 7, 17 .....(2).

The generating function of (1) is

$$\frac{5-2x-x^2}{(1+x)(1-4x+x^2)} = \frac{1}{1+x} + 2\frac{2-x}{1-4x+x^2},$$

$$\frac{2-x}{1-4x+x^2} = \frac{2-\alpha^{-1}}{1-\alpha^{-2}}\frac{1}{1-\alpha x} + \frac{\alpha-2}{\alpha^2-1}\frac{1}{1-\alpha^{-1}x}$$

(where $\alpha = 2+\sqrt{3}$, $\alpha^{-1} = 2-\sqrt{3}$

$$= \frac{2\alpha-1}{\alpha-\alpha^{-1}}\frac{1}{1+\alpha x} + \frac{1-2\alpha^{-1}}{\alpha-\alpha^{-1}}\frac{1}{1-\alpha^{-1}x} = \frac{1}{2}\frac{\alpha}{1-\alpha x} + \frac{1}{2}\frac{\alpha^{-1}}{1-\alpha^{-1}x},$$

whence $u_{n-2} = \alpha^{n-1} + 1 + \alpha^{-n+1}$; $u_{n-1} = \alpha^n - 1 + \alpha^{-n}$. The generating function of (2) is $\frac{10x-x^2-1}{(1+x)(1-4x+x^2)} = \frac{1+x}{1-4x+x^2} - \frac{2}{1+x}$,

and, proceeding as before,

$$v_n = \tfrac{1}{2}(\sqrt{3}+1)\alpha^n - 2 + \tfrac{1}{2}(\sqrt{3}-1)\alpha^{-n},$$

$$v_{n-1} = \tfrac{1}{2}(\sqrt{3}+1)\alpha^{n-1} + 2 + \tfrac{1}{2}(\sqrt{3}-1)\alpha^{-n+1},$$

$$v_{n-2} = \tfrac{1}{2}(\sqrt{3}+1)\alpha^{n-2} - 2 + \tfrac{1}{2}(\sqrt{3}-1)\alpha^{-n+2},$$

which gives the required results on substitution.

15575. (R. Chartres.)—If $mx - 1 = r \cdot s$, $x > 3$, then, if (1) r and s are consecutive integers, r the greater, $1/x$ will give six recurring (*bona fide*)

Digitized by Google

figures in the scales $\left(nx\begin{smallmatrix}+r\\-s\end{smallmatrix}\right)$, and three recurring (*bona fide*) figures in the scales $\left(nx\begin{smallmatrix}+s\\-r\end{smallmatrix}\right)$; (2) but, if $r = s$, $1/x$ will give four such figures in the scales $(nx \pm r)$. Proof required without the modern theory of numbers.

Solution by the Proposer.

$$r^6 - 1 = (r-1)(r+1)(r^2+r+1)(r^2-r+1).$$

Omitting the first three factors, which give only 1, 2, 3 recurring figures respectively, then $1/x = 1/(r^2-r+1) = 1/(rs+1)$, where $r = s+1$ gives six recurring figures in the scales $\left(nx\begin{smallmatrix}+r\\-s\end{smallmatrix}\right)$ (Question 15462), and, if $mx - 1 = rs$, $1/x$ will therefore give six recurring figures. Similarly we get three recurring figures in the scales $\left(nx\begin{smallmatrix}+s\\-r\end{smallmatrix}\right)$, and four if $r = s$ in the scales $(nx \pm r)$.

(1) Since $3 \cdot 19 - 1 = 8 \cdot 7$, therefore $\frac{1}{19}$ will give six figures in the scales $\left(19n\begin{smallmatrix}+8\\-7\end{smallmatrix}\right)$, and three figures in the scales $\left(19n\begin{smallmatrix}+7\\-8\end{smallmatrix}\right)$.

(2) If $x = r^2+1$, then $1/x = \cdot\dot{0}0\,(r-1)(r-\dot{1})$. Hence, if we might use an irrational radix, $\frac{1}{19} = 1/[(\sqrt{18})^2+1] = \cdot\dot{0}0\,(3\sqrt{2}-1)(3\sqrt{2}-\dot{1})$, or four figures in the scale $(3\sqrt{2})$.

15276. (*θ. β.*)—Let x, y be circular co-ordinates, and let the equations to three lines be $xt_s + y = x_s t_s$ $(s = 1, 2, 3)$, where $|t_s| = 1$ and $x = x_s$, $y = x_s t_s$ is the reflection of the origin in the line. Verify that, for the triangle formed of these lines, the centroid is given by $x = a_1 - \frac{1}{3}a_2 p$, the orthocentre by $x = a_1 - a_2 p$, and the Simson-line of the point $x = a_1 - a_2 t$ by

$$xt^2 - yt = -\tfrac{1}{2}a_2 t^3 + (a_1 - \tfrac{1}{2}a_2 p)t^2 - (b_1 - \tfrac{1}{2}a_2 q)\,t + a_2 r,$$

where

$$a_1 = \Sigma x_1 t_1^2/(t_1-t_2)(t_1-t_3), \quad a_2 = \Sigma x_1 t_1/(t_1-t_2)(t_1-t_3),$$

$$b_1 = r\Sigma x_1/(t_1-t_2)(t_1-t_3),$$

$$p = t_1+t_2+t_3, \quad q = t_2t_3+t_3t_1+t_1t_2, \quad r = t_1t_2t_3.$$

[For notation and methods, see Morley, *Transactions of the American Mathematical Society*, Vol. I., p. 97.] From this expression for the Simson-line we obtain immediately the well known result that its envelope is a hypocycloid of class 3, with the nine-point circle as its vertex-circle.

Solution by G. N. Bates, M.A.

The intersection of the lines (ii.) and (iii.) is given by

$$x = \frac{x_2t_2 - x_3t_3}{t_2-t_3} = a_1 - a_2t_1, \quad y = -\frac{t_2t_3(x_2-x_3)}{t_2-t_3} = b_1 - \frac{ra_2}{t_1};$$

therefore the circum-centre of the triangle formed by the three lines is $x = a_1$, while $|a_2|$ is the circum-radius. The centroid is therefore $x = a_1 - \frac{1}{3}a_2 p$, and the orthocentre $x = a_1 - a_2 p$.

The angle θ between the two lines

$$x\lambda_1 + y = \text{constant} \quad \text{and} \quad x\lambda_2 + y = \text{constant}$$

is given by $e^{2\theta i} = \lambda_1/\lambda_2$. Now the angle between the Simson-line of P and BC is the complement of half the angle subtended at O by the arc PA of the circum-circle, and the Simson-line also passes through the mid-point of PH. Its equation is therefore

$$xt - y = a_1 t - \tfrac{1}{2}a_2 t\,(t+p) - b_1 + ra_2/2t + \tfrac{1}{2}a_2 q \quad \ldots\ldots\ldots\ldots\ldots\ldots\text{(i.)}$$

or

$$xt^2 - ty = -\tfrac{1}{2}a_2 t^3 + (a_1 - \tfrac{1}{2}a_2 p)\,t^2 - (b_1 - \tfrac{1}{2}a_2 q)\,t + \tfrac{1}{2}ra_2 \quad \ldots\ldots\text{(ii.)}.$$

We may now either obtain the (xy) equation of the envelope by differentiating (ii.) with respect to t, or the (xt) equation of the envelope by differentiating (i.) with respect to t. We have then, on differentiating (i.),

$$x = a_1 - \tfrac{1}{2}a_2 p - a_2 t - ra_2/2t^2 \quad \text{or} \quad x - a_1 + \tfrac{1}{2}a_2 p = -a_2 t - ra_2/2t^2,$$

which is found to agree with the equation of a three-cusped hypocycloid whose centre is at the point $a_1 - \frac{1}{3}a_2 p$ (the N.P. centre).

[*Cf.*, for the more general theorem when lines inclined at θ to the sides are taken, a paper "On a System of Hypocycloids of Class 3 inscribed in a given 3-line, &c.," by Dr. H. A. Converse, *Annals of Mathematics*, April, 1904.]

N.B.—My equation (ii.) differs from the equation of the Simson-line in Question in having $\frac{1}{2}ra_2$ for ra_2.

15563. (R. F. Davis, M.A.)—Given a hyperbola whose eccentricity = 2, prove that the circle described upon any focal chord as diameter passes through the further extremity of the transverse axis.

Solutions (I.) *by* R. Tucker, M.A., (II.) *by* C. M. Ross.

(I.) Referring to A′ as origin, the equation to the curve is

$$x^2/a^2 - 2x/a = y^2/b^2 \quad \ldots\ldots\ldots\ldots\ldots\ldots\text{(i.)}.$$

Let the equation to PQ be

$$mx = a\,(m-y)(1+e) \quad \ldots\ldots\ldots\ldots\ldots\ldots\text{(ii.)};$$

then the equation to the two straight lines A′P, A′Q will be

$$a^2m\,(1+e)(x^2/a^2 - y^2/b^2) = 2x\,[mx + ay\,(1+e)],$$

whence

$$b^2m\,[(1+e)-2]\,x^2 \ldots - a^2m\,(1+e)\,y^2 = 0.$$

These lines are at right angles if $b^2(e-1) - a^2(1+e) = 0$, *i.e.*, if $e^2 - e - 2 = 0 = (e-2)(e+1)$. Hence, &c.

(II.) The equation of the hyperbola is

$$3x^2 - y^2 = 3a^2 \quad \ldots\ldots\ldots\ldots\ldots\ldots\text{(1)},$$

and the equation of a focal chord is

$$y = m\,(x-2a) \quad \ldots\ldots\ldots\ldots\ldots\ldots\text{(2)}.$$

(2) cuts (1) in the points whose abscissæ are given by

$$(m^2-3)\,x^2 - 4am^2x + a^2(4m^2+3) = 0.$$

If x_1 and x_2 are the roots of this equation,

$$x_1 + x_2 = 4am^2/(m^2-3), \quad x_1x_2 = a^2(4m^2+3)/(m^2-3).$$

Again, if y_1 and y_2 are the ordinates of ends of the focal chord,

$$y_1 + y_2 = 12am/(m^2-3) \quad \text{and} \quad y_1y_2 = 9a^2m^2/(m^2-3).$$

Hence the equation of the circle on focal chord as diameter is

$$(m^2-3)(x^2+y^2) - 4am\,(mx+3y) - a^2(5m^2-3) = 0.$$

This circle plainly passes through the point $(-a, 0)$, which is the further extremity of the transverse axis.

15539. (Lt.-Col. Allan Cunningham, R.E.)—For what forms of m is $X^3 \pm 1 \equiv 0 \pmod m$? Show how to find X when m is given. Ex.—$m = 99991$.

Solution by the Proposer.

(i.) Excluding the obvious divisor $m = X \pm 1$, all *prime* divisors must be of form $p = 6w + 1$, and all *composite* divisors must be a product of such primes, so that $m = A^2 + 3B^2$.

(ii.) When m is *given*, let m be expressed in the form $m = A^2 + 3B^2$. Then

$$m = \frac{(A-B)^3 - (2B)^3}{(A-B) - (2B)} = \frac{x^3 - y^3}{x - y} \quad \text{(suppose)}.$$

Here $x = A - B$, $y = 2B$;

$$x^3 - y^3 \equiv 0 \pmod m;$$

therefore

$$(x \pm km)^3 \equiv y^3 \pmod m.$$

Now find k such that $x \pm km \equiv 0 \pmod m$, so that

$$(x \pm km)/y = \text{integer} = X.$$

Then X (when positive) is a solution of $X^3 - 1 \equiv 0$, and X (when negative) is a solution of $X^3 + 1 \equiv 0 \pmod m$.

Ex.—$m = 99991 = 278^2 + 3 \cdot 87^2 = A^2 + 3B^2$. Therefore $x = A - B = 191$, $y = 2B = 174 = 2 \cdot 3 \cdot 29$, and $191^3 \equiv 174^3 \pmod m$. Taking $k = 17$, $191 + 17m = 1700038 = 2 \cdot 29 \cdot 29311$; therefore

$$(2 \cdot 29 \cdot 29311)^3 \equiv (2 \cdot 3 \cdot 29)^3, \quad \text{and} \quad 29311^3 \equiv 3^3 \pmod m;$$

therefore

$$(29311 - m)^3 \equiv -70680^3 \equiv 3^3, \quad \text{and} \quad 23560^3 \equiv -1 \pmod m.$$

Thus m is a divisor of $(23560^3 + 1)$; and therefore also of $(23559^3 - 1)$.

Note.—The writer's *Tables of Quadratic Partitions* (now in the press) give the partitions $p = A^2 + 3B^2$ for all primes $p \not> 100{,}000$; so that the roots of $x^3 \pm 1 \equiv 0 \pmod p$ can be found by these tables up to

$$p \not> 100{,}000.$$

15375. (Professor Nanson.)—Prove that

$$(a_1X_2Y_3Z_4)\,(f_1X_2Y_3Z_4) + b_1(X_2Y_3Z_4)(g_1X_2Y_3Z_4) + (c_1X_2Y_3Z_4)(h_1X_2Y_3Z_4) = 0$$

where $X_p,\ Y_p,\ Z_p = h_py - g_pz + a_pw$; $f_pz - h_px + b_pw$; $g_px - f_py + c\ w$.

Solution by the Proposer.

The determinant aggregate is, with sign changed, manifestly half the seven-line determinant

$$\begin{vmatrix} (\lambda_{pq}) & X_p & Y_p & Z_p \\ X_q & . & . & . \\ Y_q & . & . & . \\ Z_q & . & . & . \end{vmatrix} \quad \ldots\ldots\ldots\ldots\ldots\ldots\text{(1)},$$

where (λ_{pq}) is the compound of the four-row arrays

$$(a_rb_rc_rf_rg_rh_r),\ (f_rg_rh_ra_rb_rc_r) \quad \ldots\ldots\ldots\ldots\ldots\ldots\text{(2)},$$

and therefore vanishes because (1) is the compound of the deficient arrays obtained by placing under the arrays (2) respectively the arrays

$$\begin{matrix} . & -z & y & w & . & . \\ z & . & -x & . & w & . \\ -y & x & . & . & . & w \end{matrix}; \quad \begin{matrix} w & . & . & . & -z & y \\ . & w & . & z & . & -x \\ . & . & w & -y & x & . \end{matrix} \quad \ldots\text{(3)}.$$

It is obvious that this result may be generalized by replacing the arrays (2) by any two arrays A, A′, and the arrays (3) by any two arrays B, B′ whose compound is an array of zeros, provided that all the arrays A, A′, B, B′ have the same number of columns and that there are as many rows in A′ and B′ as in A and B. It is manifest that this generalization includes as a very special case the result of Question 15426; *cf.* Vol. v., New Series, p. 75.

Calcul des côtés (1) *du triangle et hexagone réguliers;* (2) *des décagones.*

By Professor L. Catalá.

(1) Soient des arcs $AB = BC = CD = \frac{1}{6}\pi$; alors $AB = \lambda_6$ et $BD = \lambda_3$. Le triangle rectangle ABD donne

$$\lambda_6^2 + \lambda_3^2 = 4 \quad \ldots\ldots\ldots\ldots\ldots\ldots\text{(i.)}$$

Digitized by Google

et le quadrilatère cyclique ABCD,

$$\lambda_6^2 + 2\lambda_6 = \lambda_3^2 \quad \text{.....(ii.).}$$

Éliminant λ_3 entre (i.) et (ii.), $\lambda_6^2 + \lambda_6 - 2 = 0$. Des deux racines $+1$ et -2 de cette équation, la racine positive seule convient, et l'on a $\lambda_6 = 1$. L'élimination de λ_6 entre (i.) et (ii.) conduit à l'équation $4\lambda_3(\lambda_3^2 - 3) = 0$. L'unique racine admissible est $\lambda_3 = \sqrt{3}$. On trouve ainsi la valeur du côté du triangle équilatéral, sans supposer connu celle du hexagone.

(2) Soient les arcs $AB = BC = CD = DE = EF = \frac{2}{10}\pi$. Dans le triangle rectangle ADF, $\lambda_{5,1}^2 + \lambda_{10,3}^2 = 4$ .....(i.), et dans le quadrilatère cyclique ACDF,

$$\lambda_{10,3}^2 = \lambda_{5,1}^2 + 2\lambda_{10,1} \quad \text{.....(ii.).}$$

De (i.) et (ii.), $\lambda_{10,3}^2 = 2 + \lambda_{10,1}$ .....(iii.).

D'ailleurs, M étant le point d'intersection de FC et DE, des triangles isoscèles MFE et COM, $\lambda_{10,3} - \lambda_{10,1} = 1$. De cette équation et (iii.),

$$\lambda_{10,3}^2 - \lambda_{10,3} - 1 = 0.$$

Tirant d'ici $\lambda_{10,3}$, puis substituant dans (iii.),

$$\lambda_{10,3} = \tfrac{1}{2}(\sqrt{5}+1), \qquad \lambda_{10,1} = \tfrac{1}{2}(\sqrt{5}-1),$$

en ne considérant que la racine positive de la dernière équation.

15517. (C. M. Ross.)—Eliminate x, y, z from the equations

$$ax^2 + by^2 + cz^2 + 2fyz + 2gzx + 2hxy = 0,$$
$$a'x^2 + b'y^2 + c'z^2 + 2f'yz + 2g'zx + 2h'xy = 0,$$
$$a''x^2 + b''y^2 + c''z^2 + 2f''yz + 2g''zx + 2h''xy = 0,$$

expressing the eliminant as the equation of a determinant to zero.

Solution by the Proposer.

Let
$$u \equiv ax^2 + by^2 + cz^2 + 2fyz + 2gzx + 2hxy = 0 \quad \text{.....(1),}$$
$$v \equiv a'x^2 + b'y^2 + c'z^2 + 2f'yz + 2g'zx + 2h'xy = 0 \quad \text{.....(2),}$$
$$w \equiv a''x^2 + b''y^2 + c''z^2 + 2f''yz + 2g''zx + 2h''xy = 0 \quad \text{.....(3).}$$

Then $\partial u/\partial x = 2(ax + hy + gz) = 0$, $\partial u/\partial y = 2(hx + by + fz) = 0$,
$\partial u/\partial z = 2(gx + fy + cz) = 0$, ...

Hence

$$J \equiv \begin{vmatrix} ax+hy+gz, & hx+by+fz, & gx+fy+cz \\ a'x+h'y+g'z, & h'x+b'y+f'z, & g'x+f'y+c'z \\ a''x+h''y+g''z, & h''x+b''y+f''z, & g''x+f''y+c''z \end{vmatrix} = 0.$$

The Jacobian is evidently of the third degree; it is therefore of the form

$$J \equiv Ax^3 + By^3 + Cz^3 + 3Fx^2y + 3Gxy^2 + 3Hy^2z + 3Kyz^2 + 3Lz^2x + 3Mzx^2 + 6Nxyz = 0.$$

Again
$$\partial J/\partial x = Ax^2 + Gy^2 + Lz^2 + 2Nyz + 2Mzx + 2Fxy = 0 \quad \text{.....(4),}$$
$$\partial J/\partial y = Fx^2 + By^2 + Kz^2 + 2Hyz + 2Nzx + 2Gxy = 0 \quad \text{.....(5),}$$
$$\partial J/\partial z = Mx^2 + Hy^2 + Cz^2 + 2Kyz + 2Lzx + 2Nxy = 0 \quad \text{.....(6).}$$

Hence, eliminating $x^2, y^2, z^2, 2yz, 2zx, 2xy$ from equations (1), ..., (6), the required eliminant is

$$\begin{vmatrix} a & b & c & f & g & h \\ a' & b' & c' & f' & g' & h' \\ a'' & b'' & c'' & f'' & g'' & h'' \\ A & G & L & N & M & F \\ F & B & K & H & N & G \\ M & H & C & K & L & N \end{vmatrix} = 0.$$

9700. (Professor Hanumanta Rau.)—Prove that, if n be even,

$$\sec^2 a + \sec^2(a+\pi/n) + \sec^2(a+2\pi/n) + \text{... to } 2n \text{ terms} = 2n^2 \operatorname{cosec}^2 na.$$

Solution by Professor G. B. M. Zerr.

From trigonometry we get

$$\sin a \sin(a+\pi/n) \sin(a+2\pi/n) \ldots \sin\{a+(n-1)\pi/n\} = \sin na/2^{n-1} \quad (1).$$

Put $a = \pi + a$ in (1); then, if n be even,

$$\sin(\pi+a) \sin\{a+(n+1)\pi/n\} \sin\{a+(n+2)\pi/n\} \ldots \sin\{a+(2n-1)\pi/n\} = \sin na/2^{n-1} \ldots (2).$$

The product of (1) and (2) gives

$$\sin a \sin(a+\pi/n) \sin(a+2\pi/n) \ldots \sin\{a+(2n-1)\pi/n\} = \sin^2 na/2^{2n-2} \ldots (3).$$

Put $a = a + \frac{1}{2}\pi$ in (3), and we get, if n be even,

$$\cos a \cos(a+\pi/n) \cos(a+2\pi/n) \ldots \cos\{a+(2n-1)\pi/n\} = \sin^2 na \cos^2 \tfrac{1}{2}n\pi/2^{2n-2} = \sin^2 na/2^{2n-2} \ldots (4).$$

Differentiate (4) with respect to a, and we get

$$\sin^2 na/2^{2n-2}\{\tan a + \tan(a+\pi/n) + \tan(a+2\pi/n) + \text{... to } 2n \text{ terms}\} = -(2n \sin na \cos na)/2^{2n-2};$$

therefore

$$\tan a + \tan(a+\pi/n) + \tan(a+2\pi/n) + \text{... to } 2n \text{ terms} = -2n \cot na \ldots (5).$$

Differentiating (5) with respect to a,

$$\sec^2 a + \sec^2(a+\pi/n) + \sec^2(a+2\pi/n) + \text{... to } 2n \text{ terms} = 2n^2 \operatorname{cosec}^2 na.$$

Note by A. M. Nesbitt, M.A.

I do not know whether the following point has hitherto escaped attention; at any rate I have never seen it noticed.

In solving the equations

$$\frac{x}{a+\lambda} + \frac{y}{b+\lambda} + \frac{z}{c+\lambda} = 1, \qquad \frac{x}{a+\mu} + \frac{y}{b+\mu} + \frac{z}{c+\mu} = 1,$$
$$\frac{x}{a+\nu} + \frac{y}{b+\nu} + \frac{z}{c+\nu} = 1,$$

the usual method adopted is to show that the "cubic" in θ,

$$\frac{x}{a+\theta} + \frac{y}{b+\theta} + \frac{z}{c+\theta} - 1 = \frac{(\lambda-\theta)(\mu-\theta)(\nu-\theta)}{(a+\theta)(b+\theta)(c+\theta)},$$

is satisfied by the *four* values $\lambda, \mu, \nu, \infty$ for θ, and is therefore an identity.

Now, in actual fact, the terms independent of θ vanish at once; for there are $bcx + cay + abz - abc$ on the left-hand side, and $\lambda\mu\nu$ on the right-hand side; while, since λ, μ, ν are the three roots of any one of the three proposed equations, we get at once $\lambda\mu\nu = \Sigma bcx - abc$. Thus, the "cubic" has a root 0, and the resulting "quadratic" still has the three roots λ, μ, ν. The "infinite root" has never seemed entirely satisfactory to me.

QUESTIONS FOR SOLUTION.

15605. (James Blaikie, M.A.)—A. and B. play at lawn-tennis, and A.'s chance of winning each point is to B.'s chance as m to n. Find A.'s chance of winning the game (1) when the score stands at "deuce," (2) when it stands at A.'s vantage, (3) at B.'s vantage.

15606. (Rev. J. Cullen.)—Given four vectors $\alpha, \beta, \gamma, \delta$, show that, if $\phi(t) = V(\alpha + t\beta)(\gamma + t\delta)^{-1}$, then $\Sigma UV\phi(t_2)\phi(t_3)$ is invariable for all values of t_1, t_2, t_3, provided $t_1 > t_2 > t_3$. Hence obtain the equation of the plane formed by the intersection of the reciprocal cone (whose vertex is the origin) with the cylindroid determined by two given screws (σ, ω) and (σ_1, ω_1).

15607. (G. H. Hardy, M.A.)—Prove the formulæ

$$\int_0^\infty \frac{\sin(ax - b\sin x)}{x}\,dx = \tfrac{1}{2}\pi\left\{1 - \int_0^b J_0(b)\,db - \int_0^b J_1(b)\,db\right\} \quad \text{.....(1);}$$

$$\frac{1}{2a^2} - \frac{J_0(x)}{1^2+a^2} + \frac{J_0(2x)}{2^2+a^2} - \ldots = \frac{\pi J_0(aix)}{2a \sinh a\pi} \quad \text{.....(2);}$$

$$\int_0^{\frac{1}{2}\pi} \cos(x\sin\phi) \log\cos\phi\,d\phi = \tfrac{1}{2}\pi[Y_0 - J_0 \log 2x] \quad \text{.....(3).}$$

In the first formula $0 < a < 1$, in the second $0 < x < \pi$. What do the formulæ become when these restrictions are removed?

15608. (Lt.-Col. Allan Cunningham, R.E.)—Factorise into *prime* factors $N = (2^{64} \mp 2^{32} + 1)^2 + 1$. (This number contains 39 figures.)

15609. (Robt. W. D. Christie.)—P being a prime of form $4m-1$, and $p_n^2 - Pq_n^2 = N_n$ (p_n, q_n convergents), prove the equation

$$a^2 \pm N_n = q_n[(P - i^2)q_n - 2ai].$$

E.g., $P = 139$, $N_n = 1$, 2, or 3, a = an integer to be found, and i = integer of $\sqrt{P}$; then

$$5196131^2 - 1 = 6578829(18 \times 6578829 - 2 \times 5196131 \times 11),$$
$$590^2 + 2 = 747(18 \times 747 - 2 \times 590 \times 11),$$
$$15^2 + 3 = 19(18 \times 19 - 2 \times 15 \times 11).$$

15610. (C. M. Ross.)—Eliminate x, y, z from the equations

$$x^2 + y^2 + z^2 = l^2, \quad x^3 + y^3 + z^3 = m^3, \quad x^4 + y^4 + z^4 = n^4, \quad xyz = p^3 \quad (1, 2, 3, 4).$$

15611. (J. J. Barniville, B.A.)—Having $u_n = 4u_{n-1} - 4u_{n-2} + u_{n-3}$, prove that

$$\frac{1}{2^2} + \frac{4}{3^2} + \frac{11}{6^2} + \frac{29}{14^2} + \frac{76}{35^2} + \ldots = \frac{5}{4},$$
$$\frac{1}{3^2} + \frac{4}{4^2} + \frac{11}{7^2} + \frac{29}{15^2} + \frac{76}{36^2} + \ldots = \frac{13}{16},$$
$$\frac{1}{6^2} + \frac{4}{7^2} + \frac{11}{10^2} + \frac{29}{18^2} + \frac{76}{39^2} + \ldots = \frac{11}{36} + \frac{1}{11},$$
$$\frac{1}{2.3} + \frac{4}{3.4} + \frac{11}{6.7} + \frac{29}{14.15} + \ldots = 1.$$

15612. (Professor Langhorne Orchard, M.A., B.Sc.)—Sum to n terms the series

$$2 + \frac{5}{2} + \frac{24}{7} + \frac{61}{14} + \frac{122}{23} + \frac{213}{34} + \ldots.$$

15613. Professor Nanson.)—If $a, b, \ldots$ are the n roots of $f(x)$, prove that $\Sigma \frac{a}{b} \frac{f'(a)}{f'(b)} = n(n-1)$, provided that $\Sigma a^r = 0$, where r has the values 1, 2, ... up to $\frac{1}{2}n$ or $\frac{1}{2}(n-1)$ according as n is even or odd.

15614. (C. E. Youngman, M.A.)—Discuss the curve $AP^2 = BP.CP$, showing that it can be obtained by the intersection of a pair of orthogonal circles belonging to two coaxal systems (one to each) which have the circle ABC in common, and whose radical axes bisect at right angles the bisectors of the angle A. Construct the normal at P, the asymptote,

—— ***The Prologue.*** School Edition. Paper boards. 1s.

—— ***The Prioresses Tale, Sir Thopas, The Monkes Tale, The Clerkes Tale, The Squieres Tale, &c.*** 4s. 6d.

William Langland's Piers the Plowman. 4s. 6d.

Select Plays of Shakespeare. Edd. CLARK and WRIGHT. ***Coriolanus,*** 2s. 6d. ***Hamlet,*** 2s. ***Richard the Second, As You Like It,*** and ***Tempest,*** 1s. 6d. each.

Marlowe's Dr. Faustus and ***Greene's Friar Bacon and Friar Bungay.*** Ed. A. W. WARD. 6s. 6d.

Bacon's Essays. Ed. S. H. REYNOLDS. 12s. 6d.

Sir Thomas More's Utopia. Ed. J. CHURTON COLLINS. 3s. 6d.

Milton.—Paradise Lost. Book I. Ed. H. C. BEECHING. 1s. 6d. Book II. Ed. E. K. CHAMBERS. 1s. 6d. Together, 2s. 6d.

Selections from Dryden. Edd. W. D. CHRISTIE and C. H. FIRTH. 3s. 6d.

Selections from Addison's Papers in the Spectator. By T. ARNOLD. 4s. 6d.

Pope.—Satires and Epistles. Ed. M. PATERSON. 2s.

Selections from Gray. Ed. E. GOSSE. 3s. With additional Notes by F. WATSON. 1s. 6d.

Johnson.—Rasselas, and Lives of Dryden and Pope. Ed. A. MILNES. 4s. 6d. ***Lives,*** separately, 2s. 6d.

Cowper.—The Task, &c. Ed. H. T. GRIFFITH. 3s.

Burke.—Thoughts on the Present Discontents; the Two Speeches on America. Ed. E. J. PAYNE. 4s. 6d.

Byron.—Childe Harold. Ed. H. F. TOZER. 3s. 6d.

Shelley.—Adonais. Ed. W. M. ROSSETTI and A. O. PRICKARD. 3s. 6d. and 5s.

Les Œuvres Complètes de Molière. 5s. Also, on India Paper, 9s. 6d.; and Miniature Edition, Four Volumes, 14s.

Molière.—Le Misanthrope. By H. W. G. MARKHEIM. 3s. 6d. ***Les Femmes Savantes.*** By G. MASSON. 2s. and 1s. 6d. ***Les Fourberies de Scapin,*** with Voltaire's ***Life of Molière.*** By G. MASSON. 1s. 6d.

Machiavelli.—Il Principe. Ed. L. A. BURD. With an Introduction by Lord ACTON. 14s.

EDITIONS BY C. A. BUCHHEIM.

Goethe.—Egmont, 3s. ***Hermann und Dorothea.*** With an Introduction by EDWARD DOWDEN. 3s.

Lessing.—Minna von Barnhelm, 3s. 6d. ***Nathan der Weise,*** 4s. 6d.

Schiller.—Maria Stuart, 3s. 6d. ***Wilhelm Tell,*** 3s. 6d. School Edition, 2s.

Cicero.—In Catilinam. By E. A. UPCOTT. 2s. 6d.

—— ***In Q. Caecilium Divinatio and in C. Verrem Actio Prima.*** By J. R. KING. 1s. 6d.

—— ***Pro Marcello, Pro Ligario, Pro Rege Deiotaro.*** By W. Y. FAUSSET. 2s. 6d.

—— ***Pro Milone.*** By A. B. POYNTON. 2s. 6d.

—— ***Pro Roscio.*** By ST. GEORGE STOCK. 3s. 6d.

—— ***Select Orations,*** viz. ***in Verrem Actio Prima, De Imperio Gn. Pompeii, Pro Archia, Philippica IX.*** By J. R. KING. 2s. 6d.

—— ***Select Letters*** (the Text only of the Large Edition). By ALBERT WATSON. 4s.

Horace.—Odes, Carmen Seculare, and Epodes. By E. C. WICKHAM. 6s. ***Odes,*** Book I, 2s.

—— ***Satires, Epistles, and De Arte Poetica.*** 6s.

Juvenal (Thirteen Satires). By C. H. PEARSON and H. A. STRONG. 9s.

Livy.—Books V-VII. Edd. A. R. CLUER and P. E. MATHESON. 5s. Separately, Book V, 2s. 6d.; Book VI, 2s.; Book VII, 2s.

—— ***Books XXI-XXIII.*** By M. T. TATHAM. 5s. Separately, Book XXI, 2s. 6d.; Book XXII, 2s. 6d.

Plautus.—Captivi. By W. M. LINDSAY. 2s. 6d.

—— ***Rudens, editio minor.*** By E. A. SONNENSCHEIN. 4s. 6d.

—— ***Trinummus.*** By C. E. FREEMAN and A. SLOMAN. 3s.

Tacitus. Edited, with Introductions and Notes, by H. FURNEAUX. ***Annals.*** Books I-VI, 18s.; Books XI-XVI, 20s.
Books I-IV, 5s.; Book I, limp, 2s.; Books XIII-XVI (abridged from Furneaux's 8vo edition). By H. PITMAN. 4s. 6d.

—— ***De Germania. Vita Agricolae.*** 5s. 6d. each.

Terence. Ed. A. SLOMAN. ***Adelphi and Phormio.*** 3s. each.

Virgil. By T. L. PAPILLON and A. E. HAIGH. 2 Vols., 6s.; or 3s. 6d. each.

—— ***Aeneid.*** Books I-III, IV-VI, VII-IX, X-XII. Same Editors. 2s. each Part. Book IX. By A. E. HAIGH. 1s. 6d. In Two Parts, 2s.

LONDON ARTS EXAMINATIONS—*continued.*

Virgil.—Bucolics and Georgics. Same Editors. 2s. 6d.

—— ***Bucolics,*** 2s. 6d. ***Georgics,*** Books I, II, 2s. 6d. ***Georgics,*** Books III, IV, 2s. 6d. ***Aeneid,*** Book I, limp cloth, 1s. 6d. All by C. S. JERRAM.

Aeschylus.—Persae. Ed. A. SIDGWICK. 3s. ***Prometheus Bound.*** Ed. A. O. PRICKARD. 2s.

Aristophanes. By W. W. MERRY. ***Acharnians, Birds, Clouds, Frogs, Knights,*** 3s. each. ***Peace*** and ***Wasps,*** 3s. 6d. each.

Demosthenes. By E. ABBOTT and P. E. MATHESON. ***Orations against Philip.***
Vol. I.—Philippic I, Olynthiacs I-III. 3s.
Vol. II.—De Pace, Philippic II, de Chersoneso, Philippic III. 4s. 6d.
Philippics I-III (reprinted from above). 2s. 6d.

—— ***On the Crown.*** Same Editors. 3s. 6d.

—— ***Against Meidias.*** By J. R. KING. 3s. 6d.

Euripides.—Alcestis. By C. S. JERRAM. 2s. 6d. ***Bacchae.*** By A. H. CRUICKSHANK. 3s. 6d. ***Cyclops.*** By W. E. LONG. 2s. 6d. ***Hecuba.*** By C. B. HEBERDEN. 2s. 6d. ***Helena.*** By C. S. JERRAM. 3s. ***Heracleidae.*** By C. S. JERRAM. 3s. ***Ion.*** By C. S. JERRAM. 3s. ***Iphigenia in Tauris.*** By C. S. JERRAM. New Edition, Revised. 3s. ***Medea.*** By C. B. HEBERDEN. Second Edition. 2s.

Herodotus.—Book IX. By E. ABBOTT. 3s. ***Selections.*** By W. W. MERRY. 2s. 6d.

Homer.—Iliad. By D. B. MONRO. Books I-XII, 6s. Book I, 1s. 6d.

—— ***Odyssey.*** Ed. W. W. MERRY. Books I-XII, 5s.

Aristotle.—Ethica Nicomachea. Ed. I. BYWATER. 6s. On 4to paper for marginal notes, 10s. 6d. Crown 8vo, paper covers, 3s. 6d.

Sophocles. By CAMPBELL and ABBOTT. Two Vols. Vol. I, Text, 4s. 6d.; Vol. II, Notes, 6s. Or, singly, 2s. each (Text and Notes), Ajax, Antigone, Electra, Oedipus Coloneus, Oedipus Tyrannus, Philoctetes, Trachiniae.

Xenophon.—Anabasis. Book I. By J. MARSHALL. 2s. 6d. Book II. By C. S. JERRAM. 2s. Book III, 2s. 6d. Book IV, 2s. Books III and IV, together, 3s. And Vocabulary to the Anabasis. By J. MARSHALL. 1s. 6d.

OXFORD CLASSICAL TEXTS. Upwards of 34 Volumes have now been published. *LIST ON APPLICATION.*

Adamnani Vita S. Columbae. Ed. J. T. FOWLER. 8s. 6d. net. With Translation, 9s. 6d. net.

Baedae Opera Historica. Ed. C. PLUMMER. 2 Vols. 21s. net.

Select Charters and other Illustrations of English Constitutional History. By Bishop STUBBS. 8s. 6d.

Locke's Essay concerning Human Understanding. Ed. A. C. FRASER. 2 Vols. 32s.

Selections from Berkeley. Same Editor. 7s. 6d.

OXFORD LOCAL EXAMS., 1905.

BOOKS NEWLY ANNOUNCED AS SUITABLE.

Select Plays of Shakespeare. Edd. CLARK and WRIGHT. ***Julius Caesar,*** 2s. ***King Lear,*** 1s. 6d. ***Merchant of Venice,*** 1s.

Scott.—Ivanhoe. Ed. C. E. THEODOSIUS. 2s.

Second Middle English Primer. Extracts from Chaucer, with Grammar and Glossary. By H. SWEET. 2s. 6d.

Tales of the Roman Republic. Parts I and II. Adapted from Livy by J. B. ALLEN. 1s. 6d. each.

Cicero.—In Q. Caecilium Divinatio and in C. Verrem Actio Prima. By J. R. KING. 1s. 6d.

Euripides.—Hecuba. By C. B. HEBERDEN. 2s. 6d.

Herodotus.—Book IX. By E. ABBOTT. 3s.

Sophocles.—Ajax. Edd. L. CAMPBELL and E. ABBOTT. 2s.

Scenes from Sophocles.—Ajax. Ed. C. E. LAURENCE. With Illustrations. 1s. 6d.

Xenophon.—Anabasis. Book I. By J. MARSHALL. 2s. 6d. Book II. By C. S. JERRAM. 2s.

Easy Greek Reader. By E. ABBOTT. 2s.

Niebuhr's Griechische Heroen-Geschichten. Ed. E. S. BUCHHEIM. 2s. and 1s. 6d.

COMPLETE LIST ON APPLICATION.

COLLEGE OF PRECEPTORS, 1905.

SPECIAL SUBJECTS.

Shakespeare.—Julius Caesar. Edd. CLARK and WRIGHT. 2s.

Caesar.—Gallic War. III-V. Ed. C. E. MOBERLY. 2s. 6d.

Virgil.—Aeneid. I-III. Edd. PAPILLON and HAIGH. 2s.

Tales of the Roman Republic. From Livy. By J. B. ALLEN. Part I. 1s. 6d.

Euripides.—Hecuba. Ed. C. B. HEBERDEN. 2s. 6d.

Xenophon.—Anabasis. Book I. Ed. J. MARSHALL. 2s. 6d.

MACMILLAN & CO.'S

TEXT-BOOKS SUITABLE FOR THE COLLEGE OF PRECEPTORS EXAMINATIONS, 1905.

LATIN AND GREEK.

Welch and Duffield's Exercises in Unseen Translation in Latin 1 6
Alford's Latin Passages for Translation 3 0
Caesar's Gallic War. Book IV. CLEMENT BRYANS. (*First and Second Class*) 1 6
—— **Gallic War.** Book V. C. COLBECK. (*First Class*) 1 6
Virgil's Aeneid. Book III. T. E. PAGE. (*First and Second Class*) ... 1 6
Horace's Odes. Book III. T. E. PAGE. 1s. 6d.; Edited by the same... 2 0 (*First Class.*)
Xenophon's Anabasis. Book I. A. S. WALPOLE. (*First and Second Class*) 1 6
—— **Anabasis.** Book I. E. A. WELLS. (*First and Second Class*) ... 1 6
Euripides's Hecuba. J. BOND and A. S. WALPOLE. (*First Class*) ... 1 6
Peacock and Bell's Passages for Greek Translation 1 6

ENGLISH LANGUAGE, HISTORY, AND GEOGRAPHY.

Shakespeare's Julius Caesar. K. DEIGHTON. With Appendix. (*First and Second Class*) 1 9
Poems of England. B. GEORGE and A. SIDGWICK. (*Third Class and Lower Forms*) 2 6
Saintsbury's Short History of English Literature 8 6
Nesfield's Outline of English Grammar. (*Second and Third Class*) 1 6
KEY, 2s. 6d. net.
—— **Oral Exercises in English Composition.** (*Third Class*) ... 1 6
—— **Junior Course of English Composition.** (*Second and Third Class*) 1 6
—— **Senior Course of English Composition.** (*First Class*) ... 3 6
KEY, 1s. net.
—— **Manual of English Grammar and Composition.** (*First Class*) 2 6
KEY, 2s. 6d. net.
Buckley's History of England for Beginners 3 6
Green's Short History of the English People 8 6
Green and Tait's Analysis of English History 3 6
Thompson's History of England 2 6
Tout's Short Analysis of English History 1 0
Bosworth's Short Geography of the World 1 6
Mill's Class Book of General Geography 3 6
Geikie's Geography of the British Isles. (*Third Class and Lower Forms*) 1 0
Tarr and McMurry's Home Geography and the Earth as a Whole. Book II. (*Second Class*) 4 6
Sime's Geography of Europe. (*Third Class*) 2 0

FRENCH AND GERMAN.

Macmillan's French Course. G. E. FASNACHT. First Year, 1s.; KEY, 4s. 6d. net. Supplementary Exercises, 1s. Second Year, 2s.; KEY, 4s. 6d. net. Third Year, 2s. 6d.; KEY, 4s. 6d. net.
Poiré's French Course. First Year, 1s.; Second Year, 1s. 6d.
Siepmann's Primary French Course (First Part). Comprising a First Reader, Grammar, and Exercises, with Questions for Oral Practice, and an Alphabetical Vocabulary 2 6
—— **Primary French Course** (First Term). Lessons in Colloquial French based on the Transcript of the Association Phonétique, with a Chapter on French Sounds and their Phonetic Symbols, List of Words for Practice in Pronunciation, and Complete Vocabularies 1 6
—— **German Primer** 3 6
KEY, 3s. 6d. net.
Macmillan's German Course. G. E. FASNACHT. First Year 1 6
KEY, 4s. 6d. net.

SCRIPTURE HISTORY.

The Acts of the Apostles—Authorised Version. With Notes by T. E. PAGE, M.A., and Rev. A. S. WALPOLE, M.A. 2 6
—— **The Greek Text.** With Notes. T. E. PAGE, M.A. 3 6

ARITHMETIC AND ALGEBRA.

Macdonald's School Arithmetic 2 6
Loney's Arithmetic for Schools. With and without Answers, 4s. 6d. Or in 2 Parts, 2s. 6d. each. Answers, 6d. Examples, 3s.
Smith and Hudson's Arithmetic for Schools 4 6
Lock's Arithmetic for Schools 4 6
Examples, 3s. Answers, 1s. KEY, 10s. 6d.
Hall and Knight's Elementary Algebra for Schools. With a Chapter on GRAPHS. Without Answers, 3s. 6d. With Answers, 4s. 6d. KEY, 8s. 6d. Answers, 1s.
Hall's Introduction to Graphical Algebra 1 0
Todhunter and Loney's Algebra for Beginners. With a Chapter on GRAPHS. Without Answers, 3s. 6d. With Answers, 4s. 6d. KEY, 8s. 6d. net.
Charles Smith's Elementary Algebra 4 6

BOOK-KEEPING.

Thornton's Junior Book-keeping Examiner. Containing the most recent papers of Oxford, Cambridge, and College of Preceptors, with NOTES. Sewed 0 6
KEY to the above. Sewed, 3s. 6d.
—— **First Lessons in Book-keeping**... ... ... 2 6
KEY, 10s. 6d.
—— **Exercise Books to First Lessons in Book-keeping.** No. 1, for Lessons I.-IX., 9d. No. 2, for Test Exercises, 9d. No. 3, for Test Exercises, 1s. 6d. No. 4, for Lessons XIII. and XIV., 1s. 6d. Case to contain all the above, 6d. Complete Set with Case, 5s. No. 5, Condensed Edition for Working out a Selection on all the Lessons, 2s. No. 6, Journal, 6d. Examination Papers in Book-keeping, 9d. KEY to Examination Papers. 2s.
—— **Primer of Book-keeping** 1 0
KEY, 2s. 6d.
Exercise Books to Primer of Book-keeping. Part I., LEDGER. Part II., JOURNAL. The Set, 1s.
—— **Easy Exercises in Book-keeping** 1 0
KEY, 10s. 6d.
—— **A B C D Series of Book-keeping Exercise Books.** In 4 Parts, 3d. each, or 1s. the Set.
Ireson's Text-Book of Book-keeping 4 6
Macmillan's Book-keeping Exercise-Books. Set A, containing Journal, Ledger. Price 10d. Set B, containing Cash Book, Journal, Ledger. Price 1s.
Adgie's Modern Book-keeping and Accounts. Part I., 1s. 6d. Part II., 2s. Part III., 2s. 6d. KEYS, 2s. 6d. net each.
Adgie's Facsimile Worked Exercises from Modern Book-keeping and Accounts 0 6

EUCLID AND GEOMETRY.

Hall and Stevens's Text-Book of Euclid's Elements. Complete, 4s. 6d. Or Book I., 1s. Books I. and II., 1s. 6d. Books I.-III., 2s. 6d.; sewed, 2s. Books II. and III., 2s. Books I.-IV., 3s. Books III. and IV., 2s. Books III.-VI., 3s. Books IV.-VI., 2s. 6d. Books V., VI., XI., and XII., Props. 1-3, 2s. 6d. Book XI., 1s. (KEY to Books I.-IV., 6s. 6d. KEY to Books VI. and XI., 3s. 6d. KEY to Books I.-VI. and XI., 8s. 6d.)
Todhunter and Loney's Elements of Euclid. 4s. 6d. Book I., 1s. Books I. and II., 1s. 6d. Books I. and IV., 3s.
Eggar's Practical Exercises in Geometry 2 6
Hall and Stevens's School Geometry. Parts I. and II. Part I.—Lines and Angles, Rectilineal Figures. Part II.—Areas of Rectilineal Figures (containing the substance of Euclid, Book I.). 1s. 6d.
Part III.—Circles (containing the substance of Euclid, Book III., 1-34, and part of Book IV.). 1s. Parts I., II., and III., 2s. 6d.
Part IV.—Squares and Rectangles, Geometrical Equivalents of certain Algebraical Formulæ (containing the substance of Euclid, Book II. and Book III., Props. 35-37). Sewed, 6d. Parts I.-IV., 3s.
Part V.—Containing the substance of Euclid, Book VI., with additional Theorems and Examples. 1s. 6d. Parts I.-V., 4s. 6d.
Parts IV. and V., containing the substance of Euclid, Book II., Book III., 35-37, and Book VI. ... ... [*Shortly.* 2 0
Part VI., containing the substance of Euclid, Book XI., 1-21, together with Theorems relating to the Surfaces and Volumes of the Simpler Solid Figures ... ... [*Nearly ready.*
Barnard and Child's New Geometry for Schools. (*First Class*) 4 6
—— **New Geometry for Junior Forms** 2 6
This volume contains all the Practical and Theoretical Geometry required for Second and Third Class Candidates.
—— **New Geometry for Senior Forms.** [*Ready immediately.*
Allcock's Theoretical Geometry for Beginners. Parts I., II., and III., 1s. 6d. each. Part IV. (*in preparation*).
Foster and Dobbs's Practical Geometry for Beginners 2 6
Croome Smith's Primer of Geometry 2 0
Smith and Bryant's Euclid's Elements of Geometry. Complete, 4s. 6d. Book I., 1s. Books I. and II., 1s. 6d. Books III. and IV., 2s. Books I.-IV., 3s. Books VI. and XI., 1s. 6d. KEY to complete, 8s. 6d.

SCIENCE.

Perkin and Lean's Introduction to Chemistry and Physics. In 2 Vols. ... ... each 2 0
Gregory and Simmons's Experimental Science (PHYSIOGRAPHY, Section I.) 2 6
—— **Elementary Physics and Chemistry.** In 3 Parts ... each 1 6
—— **Exercises in Practical Physics.** In 2 Parts ... ... each 2 0
Simmons and Jones's Elementary General Science... ... ... 3 6
Gregory's Elementary Practical Physics 2 6
Rintoul's Introduction to Practical Physics 2 6
D. E. Jones's Heat, Light, and Sound 2 6
Robson's Practical Exercises in Heat 2 6
Edser's Heat for Advanced Students 4 6
—— **Light for Students** 6 0
Clay's Practical Exercises in Light 2 6
Munby's Course of Simple Experiments in Magnetism and Electricity 1 6
Sanderson's Electricity and Magnetism for Beginners 2 6
Hadley's Magnetism and Electricity for Beginners 2 6
—— **Practical Exercises in Magnetism and Electricity** ... 2 6
L. M. Jones's Introductory Chemistry for Intermediate Schools 2 0
Remsen's Elements of Chemistry 2 6
Parrish's Chemistry for Organized Schools of Science 2 6
Roscoe and Lunt's Inorganic Chemistry for Beginners 2 6
Roscoe and Harden's Inorganic Chemistry for Advanced Students 4 6
Simmons's Physiography for Beginners 2 6
Watts's Geology for Beginners 2 6
Foster and Shore's Physiology for Beginners 2 6
Evans's Botany for Beginners 2 6
Davenport's Introduction to Zoology 6 0
Stenhouse's Introduction to Nature Study 3 6

CAMBRIDGE UNIVERSITY PRESS.

BOOKS SUITABLE FOR COLLEGE OF PRECEPTORS' EXAMINATIONS, JULY AND DECEMBER, 1905.

PITT PRESS SHAKESPEARE.

SHAKESPEARE. — JULIUS CAESAR. Edited, with Introduction, Notes, Glossary, and Index. By A. W. VERITY, M.A. Extra fcap. 8vo. Eighth Edition. 1s. 6d.

Guardian.—"Another of Mr. Verity's admirable school editions of Shakespeare's plays."

PITT PRESS SERIES.

AUTHOR.	WORK.	EDITOR.	PRICE. s. d.
Caesar	De Bello Gallico, Books IV.-V.	A. G. Peskett	1 6
Vergil	Aeneid, Book III.	A. Sidgwick	1 6
Horace	Odes, Book I.	,,	2 0
Euripides	Hecuba	W. S. Hadley	2 6
Xenophon	Anabasis, Book I.	A. Pretor	2 0

CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES.

THE FIRST BOOK OF KINGS. Edited by the Rev. J. R. LUMBY, D.D. 2s. net.

GOSPEL ACCORDING TO ST. MARK. By Rev. G. F. MACLEAR, D.D. 2s. net.

The same in the **SMALLER CAMBRIDGE BIBLE FOR SCHOOLS.** 1s. each.

ENGLISH GRAMMAR.

THE ELEMENTS OF ENGLISH GRAMMAR. By A. S. WEST, M.A., Trinity College, Cambridge. New and Enlarged Edition. Fifty-sixth to Seventieth Thousand. Extra fcap. 8vo, 2s. 6d.

Guardian.—"It is far and away the best of its class hitherto published for boys of thirteen to sixteen years of age, and, if we mistake not, will soon become a standard text in secondary schools, and mark a new epoch in the teaching of English grammar."

AN ENGLISH GRAMMAR FOR BEGINNERS. By A. S. WEST, M.A. Seventy-sixth to Hundredth Thousand. 1s.

Schoolmaster.—"It is a capital little work, which we can heartily recommend."

Educational Review.—"A marvellous shillingsworth."

A KEY TO THE QUESTIONS CONTAINED IN WEST'S ELEMENTS OF ENGLISH GRAMMAR AND ENGLISH GRAMMAR FOR BEGINNERS. By A. S. WEST, M.A. 3s. 6d. net.

School World.—"This Key will supply a real want to the majority of teachers.... It is well arranged, and the answers are carefully drawn up."

THE CAMBRIDGE PHYSICAL SERIES.

ELECTRICITY AND MAGNETISM: An Elementary Text-Book. Theoretical and Practical. By R. T. GLAZEBROOK, M.A., F.R.S. Crown 8vo, 7s. 6d.

HEAT AND LIGHT. An Elementary Text-Book, Theoretical and Practical, for Colleges and Schools. By R. T. GLAZEBROOK, M.A., F.R.S. With numerous Figures. Crown 8vo, 5s. Also separately: **HEAT,** 3s.; **LIGHT,** 3s.

MECHANICS AND HYDROSTATICS. An Elementary Text-Book, Theoretical and Practical, for Colleges and Schools. By R. T. GLAZEBROOK, M.A., F.R.S. Crown 8vo, 8s. 6d. Also in separate Volumes: Part I. **DYNAMICS,** 4s.; Part II. **STATICS,** 3s.; Part III. **HYDROSTATICS,** 3s.

CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

School Guardian.—"We can imagine nothing better for a first acquaintance with any of these authors than such simple and complete editions as the Cambridge Series offers to the student. . . . We heartily commend these books to the notice of teachers of elementary classics in whatever kind of school. It will be a long time before any more suitable edition will appear."

The following editions have Complete Vocabularies:—

AUTHOR.	WORK.	EDITOR.	PRICE. s. d.
Caesar	De Bello Gallico, Books IV., V.	E. S. Shuckburgh	ea. 1 6
Xenophon	Anabasis, Book I.	G. M. Edwards	1 6

*** **Cambridge Editions of Caesar, Vergil, and Xenophon.**—The attention of Schoolmasters is called to the fact that there are now two editions of some of the works of these authors, in the **Pitt Press Series** and the **Cambridge Series for Schools and Training Colleges.** The editions in the **Cambridge Series for Schools and Training Colleges** have **Complete Vocabularies.** If, in ordering, the Edition required is not specified, the **Pitt Press Edition,** without Vocabulary, will be sent.

WORKS ON GEOMETRY.

ELEMENTARY GEOMETRY (PRACTICAL AND THEORETICAL). By C. GODFREY, M.A., Senior Mathematical Master at Winchester College, and A. W. SIDDONS, M.A., Fellow of Jesus College, Cambridge, Assistant Master at Harrow School.

Now Ready (1) Complete in One Volume, Third Impression, large crown 8vo, pages xi + 355. 3s. 6d.

Or (2) in Two Volumes, Vol. I. (Experimental Course, and Books I. and II.), 2s.; Vol. II. (Books III. and IV.), 2s.

Or (3) in Five Parts:—

Part I. Experimental Geometry. 1s.
Part II. Theoretical Geometry. Book I. 1s.
Part II. ,, ,, Book II.—Area. 1s.
Part II. ,, ,, Book III.—The Circle. 1s.
Part II. ,, ,, Book IV.—Similarity. 1s.

ANSWERS TO THE EXAMPLES, 4d., post free.

A Key is in preparation.

Guardian, January 13, 1904.—"A most admirable text-book for the beginner.... The experimental part, which occupies the first sixty pages, is of the simplest character. . . . In the theoretical part the treatment is eminently satisfactory. . . . The book has every claim to a wide recognition."

GEOMETRICAL DRAWING. With Notes and Examples. By W. H. BLYTHE, M.A., Jesus College, Cambridge. Part I. Plane and Elementary Solid. 2s. 6d. Part II. Solid or Descriptive Geometry. 2s.

GEOMETRY FOR YOUNG BEGINNERS. An Introduction to Theoretical and Practical Geometry. By F. W. SANDERSON, Head Master of Oundle School. 1s. 4d.

EUCLID.—ELEMENTS OF GEOMETRY. Edited by H. M. TAYLOR, M.A., Trinity College, Cambridge. [*Pitt Press Mathematical Series.*

Books I.-II. 1s. 6d. Books III.-IV. 1s. 6d. Books V.-VI. 1s. 6d.
Books XI.-XII. 1s. 6d. Books I.-IV. 3s. Books I.-VI. 4s.
Books I.-VI., and XI., XII. In one Vol. complete. 5s.

SOLUTIONS TO THE EXERCISES IN TAYLOR'S EUCLID. By W. W. TAYLOR, M.A. Books I.-IV. 6s. Books VI. and XI. 6s. Books I.-IV., VI., and XI. Crown 8vo, 10s. 6d.

PITT PRESS MATHEMATICAL SERIES.

THE ELEMENTS OF HYDROSTATICS. By S. L. LONEY, M.A. 4s. 6d.

ELEMENTS OF STATICS AND DYNAMICS. By S. L. LONEY, M.A. Eighth Edition. 7s. 6d. Part I. Elements of Statics. 4s. 6d. Part II. Elements of Dynamics. 3s. 6d.

MECHANICS AND HYDROSTATICS FOR BEGINNERS. By S. L. LONEY, M.A. Sixth Edition. 4s. 6d.

ARITHMETIC FOR SCHOOLS. By C. SMITH, M.A. With or without Answers. Stereotyped Edition. 3s. 6d. Or in Two Parts: Part I. Chaps. i.-viii., Elementary, with or without Answers, 2s. Part II. Chaps. ix.-xx., with or without Answers, 2s.

ELEMENTARY ALGEBRA. By W. W. ROUSE BALL, M.A. 4s. 6d.

ELEMENTARY PLANE TRIGONOMETRY. By E. W. HOBSON, Sc.D., F.R.S., and C. M. JESSOP, M.A. 4s. 6d.

London: C. J. CLAY & SONS, Cambridge University Press Warehouse, Ave Maria Lane.

CLASS LIST

OF CANDIDATES WHO HAVE PASSED THE CERTIFICATE EXAMINATION OF THE COLLEGE OF PRECEPTORS.—MIDSUMMER, 1904.

The list of successful candidates at the Chefoo, Johannesburg, and Lagos Centres will be published in the October number of "The Educational Times."

[*Throughout the following List, bracketing of names implies equality.*]

PRIZES.

General Proficiency.

FIRST CLASS [or SENIOR].

1. Gray, F. H. (*Isbister Prize.*) — Rev. L. H. Pearson, Market Bosworth Grammar School.
2. Potter, G. C. (*Pinches Prize.*) — Mr. Chettle, Stationers' Company's School, Hornsey.
3. Eggington, A. T. — Rev. L. H. Pearson, Market Bosworth Grammar School.
4. Jacques, H. — Rev. L. H. Pearson, Market Bosworth Grammar School.

SECOND CLASS [or JUNIOR].

1. Williams, H. F. — Mr. Gardner, The College, Weston-super-Mare.
2. Wakefield, N. — Messrs. Butler and Brown, Tollington Schools, N.
3. Bunting, H. L. — Rev. L. H. Pearson, Market Bosworth Grammar School.
4. Merchant, H. G. — Mr. Berridge, Wirksworth Grammar School.

THIRD CLASS.

1. Phelan, A. E. — Mr. Francis, People's College, Nottingham.
2. Easom, A. — Mr. Francis, People's College, Nottingham.
   Mercer, S. — Rev. A. J. Cooper, Brewood Grammar School.
   Swain, E. R. — Mr. Francis, People's College, Nottingham.

English Subjects.

1. Eggington, A. T. — Rev. L. H. Pearson, Market Bosworth Grammar School.
2. Westall, N. Y. — Mr. Henderson, University School, Southport.

Mathematics.

1. Hibbert, F. — Mr. Walmsley, Grammar School, Eccles.
2. Gray, F. H. — Rev. L. H. Pearson, Market Bosworth Grammar School.

Modern Foreign Languages.

1. [Not awarded.]
2. Garavaglia, L. — Rev. Brother Attale, St. Joseph's College, Beulah Hill, S.E.

Classics.

1. Loseby, Miss E. M. — Rev. L. H. Pearson, Market Bosworth Grammar School.
2. [Not awarded.]

Natural Sciences.

1. Lawton, H. F. — Mr. Blay, Technical Day School, Walsall.
2. Gray, F. H. — Rev. L. H. Pearson, Market Bosworth Grammar School.

Taylor-Jones Prize for Scripture History.

Edwards, W. W. — Mr. Harte, Sir James Smyth's Grammar School Camelford.

Pitman Medals for Shorthand.

1. Shaw, W. R. (*Silver Medal.*) — Mr. Sheehan Dare, Dagmar House School, Hatfield.
2. Rigby, P. J. (*Bronze Medal.*) — Rev. Brother Siebelink, St. Aloysius' School, Hornsey Lane, N.

SCHOLARSHIP FOR INTENDING TEACHER.

Wallace, Miss D. V. — Mrs. and the Misses Piper, The Hollies, Malvern.

The following is a List of the Candidates who obtained the FIRST and SECOND PLACES in each Subject on FIRST CLASS PAPERS. (Only those who obtained Distinction are included.)

Scripture History.

1. Westall, N. Y. — Mr. Henderson, University School, Southport.
2. Edwards, W. W. — Mr. Harte, Sir James Smyth's Grammar School, Camelford.

English Language.

1. Freeborn, J. G. — Mr. Henderson, University School, Southport.
2. Westall, N. Y. — Mr. Henderson, University School, Southport.

English History.

1. Potter, G. C. — Mr. Chettle, Stationers' Company's School, Hornsey.
2. Eggington, A. T. — Rev. L. H. Pearson, Market Bosworth Grammar School.

Geography.

1. Quayle, F. — Mr. Grundey, Douglas Secondary School.
2. Eggington, A. T. — Rev. L. H. Pearson, Market Bosworth Grammar School.
   Jervois, Miss F. — The Pupil-Teachers' College, Everton Valley, Liverpool.

Arithmetic.

1. Potter, G. C. — Mr. Chettle, Stationers' Company's School, Hornsey.
2. Hibbert, F. — Mr. Walmsley, Grammar School, Eccles.

Algebra.

1. Hibbert, F. — Mr. Walmsley, Grammar School, Eccles.
2. Loseby, Miss E. M. — Rev. L. H. Pearson, Market Bosworth Grammar School.

Geometry.

1. Gray, F. H. — Rev. L. H. Pearson, Market Bosworth Grammar School.
2. Loseby, Miss E. M. — Rev. L. H. Pearson, Market Bosworth Grammar School.

Trigonometry.

1. Wood, D. — Rev. C. N. Nagel, St. Mark's School, Windsor.

Mechanics.

1. Budgen, S. N. — Private tuition.
   Mercer, B. — Rev. A. J. Cooper, Brewood Grammar School.
   Powell, T. — Mr. Jones, Tutorial School, Penarth.
   Roots, P. W. — Mr. Tonkin, University School, Rochester.

Book-keeping.

1. Bottomley, G. F. — Mr. Sheehan-Dare, Dagmar House School, Hatfield.
   Howie, F. — Messrs. Butler & Brown, Tollington Schools, N.

Mensuration.

1. Quayle, F. — Mr. Grundey, Douglas Secondary School.
   Williams, H. F. — Mr. Gardner, The College, Weston-super-Mare.

French.

1. Cailliau, M. — Rev. Brother Attale, St. Joseph's College, Beulah Hill, S.E.
   Perbost, Miss J. M. R. — The Misses Hebb & Briggs, Llanberis, Ealing.

German.

1. Barrington, Miss G. E. — Miss Willoughby, Upper St. Leonards Ladies' College.
   McConnell, Miss M. — Miss Tannahill, Gordonville Ladies' School, Coleraine.

Italian.

1. Garavaglia, L. — Rev. Brother Attale, St. Joseph's College, Beulah Hill, S.E.

Spanish.

1. Urandurraga, A. — Rev. Brother Mark, St. Joseph's Academy, Kennington Road, S.E.
2. Avendano, L. — Rev. Brother Mark, St. Joseph's Academy, Kennington Road, S.E.

Latin.

1. Constable, J. C. B. — Mr. Blakeney, Sir William Borlase's School, Marlow.
   Wallace, Miss D. V. — Mrs. & the Misses Piper, The Hollies, Malvern.

Greek.

1. Wallace, Miss D. V. — Mrs. & the Misses Piper, The Hollies, Malvern.
2. Loseby, Miss E. M. — Rev. L. H. Pearson, Market Bosworth Grammar School.

Sound, Light, and Heat.

1. Ballard, A. L. — Mr. Hardy, Dunheved College, Launceston.
   Dawson, Miss E. M. — Miss Ivens & Mrs. Adlard, Leigh Bank College, Leamington Spa.
   Gray, F. H. — Rev. L. H. Pearson, Market Bosworth Grammar School.

Magnetism and Electricity.

1. Ball, H. S. — Mr. Blay, Technical Day School, Walsall.
   Brugière Miss F. — Private tuition.

Chemistry.

1. Walker, C. — Private tuition.
2. Teare, L. H. — Mr. Grundey, Douglas Secondary School.

Natural History.

1. Copas, E. A. C. — Mr. Rollison, Kent House College, Anerley.

Drawing.

1. Hollaway, B. E. — Mr. Telfer, Wreight's School, Faversham.
2. Hibbert, F. — Mr. Walmsley, Grammar School, Eccles.

Shorthand.

1. Shaw, W. R. — Mr. Sheehan-Dare, Dagmar House School, Hatfield.
2. Rigby, P. J. — Rev. Brother Siebelink, St. Aloysius' School, Hornsey Lane, N.

CLASS LIST — BOYS.

N.B.—The small italic letters denote that the Candidate to whose name they are attached was distinguished in the following subjects respectively:—

a. = Arithmetic.
al. = Algebra.
b. = Botany.
bk. = Bookkeeping.
ch. = Chemistry.
d. = Drawing.
do. = Domestic Economy.
e. = English.
f. = French.
g. = Geography.
ge. = German.
geo. = Geology.
gm. = Geometry.
gr. = Greek.
h. = History.
he. = Hebrew.
i. = Italian.
l. = Latin.
m. = Mechanics.
ma. = Magnetism & Electricity.
ms. = Mensuration.
mu. = Music.
nh. = Natural History.
p. = Political Economy.
ph. = Physiology.
phys. = Elementary Physics.
s. = Scripture.
sc. = Elementary Science.
sd. = Sound, Light, and Heat.
sh. = Shorthand.
sp. = Spanish.
tr. = Trigonometry.
z. = Zoology.

The small figures [1] and [2] prefixed to names in the Second and Third Class Lists denote that the Candidates were entered for the First and Second Classes respectively.

In the addresses, Acad. = Academy, C. or Coll. = College, Coll. S. = Collegiate School, Comm. = Commercial, End. = Endowed, Found. = Foundation, H. = House, Inst. = Institute, Int. = International, Inter. = Intermediate, Prep. = Preparatory, S. = School, Tech. = Technical, Univ. = University.

EDUCATIONAL WORKS by A. K. ISBISTER, M.A., LL.B.

(LATE DEAN OF THE COLLEGE OF PRECEPTORS.)

New Edition. 12mo, price 1s. 6d.

LESSONS IN ELOCUTION AND EXPRESSIVE READING FOR BOYS, based on Grammatical Analysis; with a choice Selection of Extracts for Reading and Repetition, classified, of Goldsmith's "Deserted Village," set out into Principal and Subordinate Sentences, illustrating the theory of Emphasis and Pauses.

New Edition. 12mo, price 1s. 6d.

LESSONS IN ELOCUTION AND EXPRESSIVE READING FOR GIRLS, based on Grammatical Analysis; with a choice Selection of Extracts for Reading and Repetition, classified, under heads for practice in various styles of Reading, and annotated for Expression, Emphasis, and Pauses, and the Analysis of Sentences, with the figure [of a *Girl*] showing the proper attitude in Reading.

Ninth Edition. 12mo, price 1s.; or, with Answers, 1s. 6d.

UNITARY ARITHMETIC. Embodying the First Book of Arithmetic of the Irish National Board. With numerous additional Examples, and selections from recent Examination Papers; and a full exposition of the "Unitary" System, or Method of Working Arithmetic *without rules*.

*** In this Edition, Questions in Proportion, Practice, Interest, Stocks, Partnership, Profit and Loss, &c., are, by the "Unitary" Method, solved by a single rule.

Sixth Edition. 12mo, price 3s. 6d.

THE COLLEGE EUCLID: Comprising the First Six and portions of the Eleventh and Twelfth Books read at the Universities. Chiefly from the Text of Dr. SIMSON. With a new arrangement of the Figures and Demonstrations; the Enunciations of the Propositions separately for Self-Examination, apart from the Text; Notes and Questions on each Book; and a Series of Geometrical Problems for Solution, from the most recent University Examination Papers.

Fifteenth Edition. 12mo, price 2s. 6d.

THE SCHOOL EUCLID: Comprising the First Four Books. With Questions, Geometrical Exercises, &c.

THE SCHOOL EUCLID, BOOKS I. & II. With Questions, Exercises, &c. 12mo, price 1s. 6d.

THE SCHOOL EUCLID, BOOK I. With Questions, &c. 12mo, price 1s.

New Edition. 12mo, price 9d.

THE COLLEGE AND SCHOOL EXAMINER IN EUCLID, containing the Enunciations of all the Propositions in the College and School Editions, Questions on the Definitions, Arithmetical and Algebraical Demonstrations of the Propositions in Books II. and V., and a large collection of Geometrical Problems for Solution. Designed for Class and Self-Examination, and adapted to all Editions of Euclid.

Fifth Edition. Two Quarto Copy Books, price 6d. each.

THE GEOMETRICAL COPY-BOOK. Arranged for writing out the Propositions of Euclid in the Abbreviated and Symbolical Form adopted in the Universities and Public Schools.

Third Edition. 12mo, price 1s. 6d.

FIRST STEPS TO EUCLID: Comprising the Propositions of BOOK I., prepared for writing out, with a recapitulation of the steps of the Demonstration appended to each. Forming a Text-book for the above.

Sixteenth Edition, with Map. 12mo.

CÆSAR'S COMMENTARIES on the GALLIC WAR.

BOOKS I.–V. With Notes Critical and Explanatory, a Vocabulary of all the Words in the Text, and Easy *Reading Lessons for Beginners* ..... price 3s. 6d.

BOOKS I.–VII. do. do. 4s. 6d.

Do. (without the Reading Lessons) ..... 4s. 0d.

Twenty-fifth Edition.

BOOK I. (with Vocabulary, Reading Lessons, &c.) ..... 1s. 6d.

Fourteenth Edition. 12mo, price 3s. 6d.

XENOPHON'S ANABASIS, Books I. to III. With Notes, Vocabulary of all the Words in the Text, and *a Series of Easy Reading Lessons for Beginners*. Designed as a First Greek Reading Book in Schools.

Nineteenth Edition. 16mo, 1s. 6d.; or in Two Parts, price 9d. each.

THE ELEMENTS OF ENGLISH GRAMMAR AND COMPOSITION, including the Analysis of Sentences, simplified for Beginners.

Tenth Edition. 12mo, price 6d.

A FIRST BOOK OF ENGLISH GRAMMAR, GEOGRAPHY, AND ENGLISH HISTORY. With Arithmetical Tables, Dates, &c.

Eleventh Edition. 12mo, price 1s. 6d.

FIRST STEPS IN READING AND LEARNING: a Reading-Book for Beginners, designed to utilize the time of those learning to read, by presenting, in a series of Easy Reading and Writing Lessons, a First Course of Scripture and English History, Geography, English Grammar, Spelling, and Arithmetic, interspersed with Moral Lessons and Simple Poetry for Repetition.

New Edition. 18mo, price 9d.

THE ELEMENTS OF BOOK-KEEPING, by SINGLE and DOUBLE ENTRY; with Practical Explanations and Exercises on the most useful Forms for Business.

4to, 1s. each.

ENGRAVED ACCOUNT BOOKS. Ruled and Interleaved for Copying, adapted to the above.

No. I. Business Forms. 1. Bills of Parcels and Book Debts. 2. Invoices. 3. Account Sales. 4. Receipts. 5. Promissory Notes and Drafts. 6. Bills of Exchange.

No. II. Day-Book and Cash-Book.

No. III. Ledger, Index, and Balance Sheet.

Tenth Edition. 12mo, price 3s. 6d.

THE ILLUSTRATED PUBLIC SCHOOL SPEAKER AND READER, based on Grammatical Analysis, comprising a choice Selection of pieces for Reading and Recitation, annotated for Expression, Emphasis, and Pauses, and illustrated by Diagrams and Figures exhibiting to the eye the appropriate gestures and positions; to which is added a selection of Greek, Latin, French, and German Extracts, suitable for "Speech Days" at Public Schools.

LONDON: LONGMANS & CO., PATERNOSTER ROW.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A., LL.D.

Next Session begins October 4th, 1904. The College Courses are arranged with reference to the Degrees of the University of Wales, and include most of the subjects for the B.A. and B.Sc. Degrees of the London University. Students may pursue their first year of Medical study at the College. There are special Departments for Agriculture and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional Fee for Ordinary Arts Course, £11. 1s.: Ditto for Intermediate Science Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students in Upper Bangor. Fee, Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than Twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses, apply to

JOHN EDWARD LLOYD, M.A.,
Secretary and Registrar.

UNIVERSITY COLLEGE, BRISTOL.

ENGINEERING EDUCATION.

Courses for CIVIL, MECHANICAL, MINING, and ELECTRICAL ENGINEERS, also for ARCHITECTS and SURVEYORS.

Professor—R. M. FERRIER, B.Sc., M.Inst.C.E.

Special facilities are offered in the way of College Scholarships and Engineering Works Scholarships, favourable arrangements being made with firms in or near Bristol for practical training to be obtained in works concurrently with the College Course.

Mining Engineering (including Assaying), Surveying, and Geology form prominent features of the Civil Engineering Scheme.

The Hydraulic Laboratory is provided with all appliances for the experimental study of the flow of water, and for the testing of Centrifugal Pumps and Turbines.

A Diploma is awarded to Students who pass the qualifying Examinations. The Associateship of the College is conferred on those Students who obtain a First Class Senior Diploma.

The Institution of Civil Engineers accepts the Preliminary Certificate of the College in lieu of its Entrance Examination.

Applications for vacancies in October to be made as early as possible to the undersigned, from whom Prospectus and particulars of residence in Clifton may be obtained.

JAMES RAFTER,
Registrar and Secretary.

THE VICTORIA UNIVERSITY OF MANCHESTER.

The Session will commence on 4th October next. A Prospectus and all information can be obtained on application. Special Prospectuses are also issued for the following Departments:—Engineering, Chemistry, Education, Theology, Commercial Education and Law. These, together with Prospectuses of the MEDICAL FACULTY, DENTAL, PHARMACEUTICAL, and PUBLIC HEALTH DEPARTMENTS, will be forwarded on application to the REGISTRAR.

ABERDARE HALL, CARDIFF.—RESIDENCE FOR WOMEN STUDENTS OF THE UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE.

Principal—Miss KATE HURLBATT.

Fees, £42. 10s., £36, and £32 per annum. College tuition fees, £10 per annum. Scholarships of £40, £25, and Exhibitions of £10 will be awarded on the result of Scholarship Examination to be held on September 19th. A Medical School and Department for Secondary, Elementary, and Kindergarten Training are attached to the College. Residents can attend Dispensing Classes at Cardiff Infirmary. Apply to the PRINCIPAL.

HOME AND COLONIAL SCHOOL SOCIETY.

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

Training College (non-Government Branch) for KINDERGARTEN TEACHERS and LOWER FORM MISTRESSES IN HIGH SCHOOLS.

HIGHBURY HILL HOUSE, N.

Principal—Rev. D. J. THOMAS, M.A.

Vice-Principal—Mrs. J. WHITE, D.Sc. (Lond.).

Students trained for the Examinations of the National Froebel Union.

Two Scholarships will be awarded to Students who have matriculated before entrance.

BEDFORD COLLEGE FOR WOMEN (UNIVERSITY OF LONDON), YORK PLACE, BAKER STREET, W.

The Session 1904-5 will open on Thursday, October 6th.

Students are requested to enter their names on Wednesday, October 5th.

Lectures are given in all branches of General and Higher Education. Taken systematically, they form a connected and progressive course; but a single course in any subject may be attended.

Courses are held in preparation for all Examinations of the University of London in Arts and Science, for the Teachers' Diploma (London), and for the Teachers' Certificate (Cambridge); and also a Special Course of Scientific Instruction in Hygiene.

Six Laboratories are open to Students for Practical Work.

Two Entrance Scholarships will be offered for competition in June, 1905. The Early English Text Society's Prize will be awarded in June, 1905.

Students can reside in the College.

Full particulars on application to the PRINCIPAL.

BEDFORD COLLEGE FOR WOMEN (UNIVERSITY OF LONDON), YORK PLACE, BAKER STREET, W.

ST. THOMAS'S HOSPITAL,
ALBERT EMBANKMENT, S.E.
(UNIVERSITY OF LONDON.)

The WINTER SESSION will commence on Oct. 3rd.
The Hospital occupies one of the finest sites in London, and contains 602 beds, of which about 540 are in constant use.
Entrance and other Scholarships and Prizes (twenty-six in number), of the value of more than £500, are offered for competition each year.
Upwards of 60 resident and other appointments are open to Students after qualification.
A Students' Club forms part of the Medical School buildings; and the Athletic Ground, nine acres in extent, situated at Chiswick, can be reached in 40 minutes from the Hospital.
A Prospectus, containing full particulars, may be obtained from the Medical Secretary, Mr. G. RENDLE.

J. H. FISHER, B.Sc. Lond., *Dean.*

ST. BARTHOLOMEW'S HOSPITAL
AND COLLEGE.
(UNIVERSITY OF LONDON.)

The WINTER SESSION will begin on Monday, October 3rd, 1904.
Students can reside in the College within the Hospital walls, subject to the Collegiate regulations.
The Hospital contains a service of 750 beds. Scholarships and Prizes of the aggregate value of nearly £800 are awarded annually.
The Medical School contains large Lecture Rooms and well appointed Laboratories for Practical Teaching, as well as Dissecting Rooms, Museum, Library, &c.
The Club Ground of the Students' Union (10 acres) is at Winchmore Hill, within easy reach of the Hospital.
For further particulars apply, personally or by letter, to the WARDEN of the College, St. Bartholomew's Hospital, E.C.
A handbook forwarded on application.

ROYAL HOLLOWAY COLLEGE.
(UNIVERSITY OF LONDON.)

The MICHAELMAS TERM begins on October 3rd, 1904. The College prepares Students for the London Degrees in Science and Arts, and for the Oxford Honour Examinations.
Ten Entrance Scholarships, from £50 to £60 a year, tenable for three years, will be offered for competition in July, 1905.
For further particulars apply to the SECRETARY, Royal Holloway College, Englefield Green, Surrey.

LONDON COUNTY COUNCIL.

TRAINING OF TEACHERS FOR SECONDARY SCHOOLS.

A POST-GRADUATE COURSE for the Training of Teachers for Secondary Schools is conducted under the direction of the London County Council at the London Day Training College. The Course is confined to Students who have taken a University Degree or passed Examinations equivalent to those required for a Degree. The next Course will commence in October, 1904. The fee for the year's Course is £20. In the case of Students who reside within the County of London, the London County Council is prepared to remit the fee in special cases, if it is satisfied that Students are unable to go through the Course without financial assistance. The Lectures and Practical Work are arranged under the general supervision of Professor ADAMS, the Principal of the College, 9 Southampton Street, High Holborn, W.C., to whom early application should be made by intending Students.

G. L. GOMME,
Clerk of the Council.

CHERWELL HALL, OXFORD.
A TRAINING COLLEGE FOR WOMEN TEACHERS.

A RESIDENTIAL COLLEGE providing a year's Professional Training for Secondary Teachers.
The Course includes preparation for the Oxford Teachers' Diploma and the Cambridge Teachers' Certificate, and the Teachers' Diploma of the University of London.
For instruction in the Theory and History of Education, the Students attend the Lectures of the University Reader in Education. The practical work in Teaching in Schools and Demonstration Lessons, &c., is under the supervision of the Principal and Staff of the Hall.
Particulars as to qualifications for admission, Scholarships, &c., may be obtained by application to the Principal, Miss MACKENZIE-SMITH, Cherwell Hall, Oxford, or the Hon. Sec., Miss MARGARET BERNARD, High Hall, Wimborne.

ST. MARY'S HOSPITAL MEDICAL SCHOOL,
PADDINGTON, W.
(UNIVERSITY OF LONDON.)

The WINTER SESSION will begin on OCTOBER 3rd, when an Introductory Address will be delivered by Professor A. E. WRIGHT, Lecturer on Pathology in the Medical School.
The HOSPITAL is close to Paddington Station (G.W.Ry.), Marylebone (G.C.Ry.), Edgware Road and Praed Street (Met. and Dist. Ry.), and Lancaster Gate (Cent. Lond. Elec. Ry.).
CLINICAL PRACTICE. All Dresserships and Clerkships (In-Patient and Out-Patient) are of four months' duration, so that each student serves as Surgical Dresser and Medical Clinical Clerk for a period of eight months, besides holding office in the various Special Departments.
The Resident Medical Officers (18 annually) are appointed by competitive examination; each appointment being of six months' duration.
ENLARGEMENT OF THE HOSPITAL. With the opening of the New Wing, now almost completed, the number of beds will be increased to 350, and two additional Operating Theatres, a Clinical Theatre, an enlarged X-Ray Department, and new Clinical Laboratories will be provided.
UNIVERSITY COURSES. The Medical School as one of the Schools of the University of London provides complete courses for its Medical and Surgical Degrees, under Recognized Teachers of the University.
SPECIAL TUITION is also provided for the Medical Examinations of the Universities of Oxford, Cambridge, and Durham, for the Primary and Final F.R.C.S., and for the D.P.H.
ENTRANCE SCHOLARSHIPS. Four Open Scholarships in Natural Science, value £145 to £52. 10s., and Two University Scholarships, value £63 each, will be competed for on September 20th and 21st next.
Calendar and full particulars on application.

H. A. CALEY, M.D., F.R.C.P., *Dean.*
B. E. MATTHEWS, B.A., *Secretary.*

Messrs. Methuen's New Educational Books

AUTUMN, 1904.

CLASSICS.

LATIN HEXAMETER VERSE. An Aid to Composition. By S. E. Winbolt, M.A., Assistant Master at Christ's Hospital. Crown 8vo, 3s. 6d. Key, 5s. net.

"We may express at once our hearty approval of the method and our faith in its efficacy. The book is so good that the sixth-form master will be unable to dispense with it. To do so will be to handicap himself seriously in the race for scholarships."—*Journal of Education.*

"A work of singular exhaustiveness and care."—*Pall Mall Gazette.*

"We feel sure that the book, carefully used, will increase the young composer's taste and marks with rapidity."—*Athenæum.*

"An admirably thorough piece of work."—*Preparatory Schools Review.*

EXAMINATION PAPERS ON HORACE. By T. C. Weatherhead, M.A. Crown 8vo, 2s.

EXAMINATION PAPERS ON VIRGIL. By W. G. Coast, B.A., Assistant Master at Fettes College, Edinburgh. Crown 8vo, 2s.

EXAMINATION PAPERS ON THUCYDIDES. By T. Wicklow, M.A., St. John's College, Cambridge, Head Master's Assistant at Rossall School. Crown 8vo, 2s.

Each volume contains pieces for translation and comment, together with lines or phrases requiring explanation on points of metre, historical and mythological allusion, and grammar. A judicious use of these papers as *test* papers after careful preparation, and not as mere adjuncts of a system of "cram," will help the student towards a real acquaintance with the authors thus treated. Each book extends to from 100 to 150 pages. A specimen volume will be sent post free to any teacher on receipt of one shilling.

DIVINITY.

OLD TESTAMENT HISTORY FOR USE IN SCHOOLS. By W. F. Burnside, M.A., Assistant Master at Cheltenham College. Crown 8vo, 3s. 6d.

"His book seems to us a valuable one. It assumes critical methods and results; but there is nothing we need fear to teach a child, and nothing that will have to be unlearnt later. Due stress is laid on the most important parts of the Biblical narrative, and the great fundamental lessons which underlie the details are clearly exhibited. The sense of proportion throughout is excellent, just what it should be in a school history. We may describe the attitude of the book as reverent, fearless, and honest. We hope the book will be widely used."—*Guardian.*

"We have no hesitation whatever in recommending this volume as the best of its kind now in use."—*School World.*

"We have tested the book, and cordially recommend it."—*Preparatory Schools Review.*

THE GOSPEL ACCORDING TO ST. MATTHEW. Edited by E. Wilton South, M.A. With 3 Maps. Crown 8vo, 1s. 6d.

"A really good school-book, and puts a great deal of elementary information in a new way. The introduction is most readable and thoroughly practical. The notes which divide the pages with the text are reasonably full and clearly expressed, and refreshing common sense is displayed in many of them."—*School World.*

Uniform with the above.

THE GOSPEL ACCORDING TO ST. MARK. Edited by A. E. Rubie, M.A., Head Master of Eltham College. 1s. 6d.

THE ACTS OF THE APOSTLES. Edited by A. E. Rubie, M.A., Head Master of Eltham College. With 3 Maps. 2s.

MATHEMATICS.

EASY EXERCISES IN ARITHMETIC. Containing 5,000 Examples. By W. S. Beard. Fcap. 8vo, cloth. With Answers, 1s. 3d. Without Answers, 1s.

A JUNIOR GEOMETRY. By Noel S. Lydon, Owen's School, Islington. With 239 Diagrams and numerous Exercises. 2s.

"A good course. The exercises are plentiful and well chosen, especially the graphical ones."—*Journal of Education.*

GEOMETRY ON MODERN LINES. An Elementary Text-book. By E. S. Boulton, M.A., Lecturer on Mathematics at Merchant Venturers' Technical College, Bristol. Crown 8vo, 2s.

"The general arrangement is distinctly good."—*School World.*

JUNIOR ALGEBRA EXAMINATION PAPERS. By S. W. Finn, M.A., Head Master, Sandbach School. With or without Answers. Fcap. 8vo, 1s.

"Contain ample practice, both from their variety and careful selection."—*Guardian.*

"Contains seventy-two papers extending as far as the binomial theorem. They are designed for candidates for the Local Examinations, but are worthy of a wider circulation."—*Journal of Education.*

TECHNICAL ARITHMETIC AND GEOMETRY. By C. T. Millis, M.I.M.E., Principal of the Borough Polytechnic Institute. With 154 Diagrams. Crown 8vo, 3s. 6d.

"By a careful study of the new work the reader will be placed in a position to derive full benefit in the shortest possible time from the more technical portion of his training."—*Educational Times.*

"Can be heartily commended."—*American Machinist.*

TECHNOLOGY.

BUILDERS' QUANTITIES. By H. C. Grubb, Lecturer on Quantities to the Beckenham Technical Institute, First Honourman City and Guilds of London Institute. With 73 Diagrams. Crown 8vo, 4s. 6d. [*Text-Book of Technology.*

"The author may certainly be congratulated on the plan and execution of a book that will prove a boon to all who desire a better acquaintance with the principles and practice of quantity surveying."—*Building World.*

SCIENCE.

ELEMENTARY EXPERIMENTAL SCIENCE. Physics. By W. T. Clough, A.R.C.S.; **Chemistry.** By A. E. Dunstan, B.Sc., Assistant Masters at Owen's School, Islington. With 2 Plates and 154 Diagrams. Crown 8vo, 2s. 6d.

"This useful work includes the elements of general physics, heat, and chemistry, which are treated with commendable simplicity, clearness, and accuracy. Some of the tips are especially good. The diagrams are clear, the worked examples are typical, and the set of tables very convenient."—*University Correspondent.*

PRACTICAL CHEMISTRY. Part I. By W. French, M.A., Director of Education and Principal of the Storey Institute, Lancaster. With 57 Diagrams. Second Edition, Revised. Crown 8vo, 1s. 6d. Part II. By W. French, M.A., and T. H. Boardman, M.A., Science Master at Christ's Hospital. With 56 Diagrams. Crown 8vo, 1s. 6d.

"*As a text-book for the more advanced classes in experimental chemistry this small manual deserves the highest praise.* It contains, within the compass of 124 pages, a series of well-arranged experiments, with clear, simple directions, and some excellent explanatory diagrams. These have for their object the encouragement of accurate observation within a limited area—*surely worthy of high commendation* in these days of diffuseness and cram. The names of its authors and sponsors warranted the belief that such would be its character. A copious list of questions for examination gives additional value."—*Education.*

"The authors have done their work well."—*Journal of Education.*

MODERN LANGUAGES.

A JUNIOR FRENCH GRAMMAR. By L. A. Sornet and M. J. Acatos, Modern Language Masters at King Edward's School, Birmingham. Crown 8vo, 2s.

A complete Grammar and Exercise Book in one volume.

"In addition to the grammar section, in which the rules are clearly stated, there are numerous exercises with complete vocabularies and copies of some recent examination papers. The book is well adapted to the needs of the lower and middle forms of our public schools, and for the preparation of candidates for the Local Examinations."—*Morning Post.*

"Altogether, the compilation is creditably finished, and the publishers are to be congratulated on the lightness and neatness of the setting in which it is offered to the public."—*Guardian.*

JUNIOR GERMAN EXAMINATION PAPERS. By A. Voegelin, M.A., Assistant Master at St. Paul's School. Fcap. 8vo, 1s. [*Junior Examination Series.*

GEOGRAPHY.

JUNIOR GEOGRAPHY EXAMINATION PAPERS. By W. G. Baker, M.A. Fcap. 8vo, 1s. [*Junior Examination Series.*

A HISTORICAL GEOGRAPHY OF THE BRITISH EMPIRE. By H. B. George, M.A., Fellow of New College, Oxford. Crown 8vo, 3s. 6d.

The purpose of this work is two-fold—to describe in outline the British Empire, with its component parts so grouped as to show forth the diversity of their relations to the mother country—and to point out the nature of the relations between the geography and the history in the British Islands from the beginning, elsewhere from the time of their becoming British possessions, or so much earlier as may be necessary for a clear understanding of the present conditions.

THE STORY OF THE BRITISH EMPIRE FOR CHILDREN. By F. M. Anderson. With many Illustrations. Crown 8vo, 2s.

This is not a text-book, but the story, told simply, of the British Empire. The book falls into two parts. Part I. gives a rapid survey of the Colonies, and other Dependencies of the Empire, with the especial purpose of showing the unity of the whole under the British crown. Part II. deals more extensively with the history and description of India and the four greater States of the Empire—Canada, Australia and Tasmania, New Zealand, and British Africa. The book's aim is to present to the minds of young Britons all over the world a clear and definite picture of their great heritage.

GENERAL KNOWLEDGE.

JUNIOR GENERAL INFORMATION EXAMINATION PAPERS. By W. S. Beard. Fcap. 8vo, 1s.

"The knowledge required to answer them is invariably useful, and most of it can be obtained by personal information or recourse to quite ordinary sources of reference, and the compiler has steered free of the temptation to set mere puzzles."—*Guardian.*

"Well arranged."—*Schoolmaster.*

"A useful collection."—*School World.*

MESSRS. BELL'S MATHEMATICAL BOOKS

To meet the Modern Requirements.

JUST PUBLISHED. With or Without Answers. 4s. 6d. Or in Two Parts, 2s. 6d. each.

NEW SCHOOL ARITHMETIC.

By **CHARLES PENDLEBURY, M.A.,** Senior Mathematical Master at St. Paul's School;
Assisted by **F. E. ROBINSON, M.A.,** Assistant Master at St. Paul's School.

The New School Arithmetic is to a great extent a new book, and not merely a revision of the present work. The original Arithmetic will also be kept in print, and will be revised and kept up to date with each new edition, as hitherto.

NEW SCHOOL EXAMPLES IN ARITHMETIC. Extracted from the above. With or without Answers. 3s.
Or in Two Parts, without Answers: Part I., 1s. 6d.; Part II., 2s. The Answers separately, 6d.

JUST PUBLISHED. Complete. With or without Answers. 4s. 6d.

ELEMENTARY ALGEBRA.

By **W. M. BAKER, M.A.,** Head Master of the Military and Civil Department at Cheltenham College; and
A. A. BOURNE, M.A., Head Mathematical Master on the Classical Side at Cheltenham College.

Or in Two Parts:—Part I. To Quadratic Equations. With Answers, 3s.; or without Answers, 2s. 6d.
Part II. To include Logarithms (four-figure tables), Binomial Theorem, Exponential and Logarithmic Series, Interest, Undetermined Coefficients, and Partial Fractions. With or without Answers. 2s. 6d.

TEACHERS' EDITION. An Edition for the use of Teachers, with the Answers printed opposite to each set of examples. In Two Parts, 5s. net each. (*Shortly.*)

EXAMPLES IN ALGEBRA. Extracted from the above. With or without Answers. 3s. Or Part I., without Answers, 1s. 6d.

JUST PUBLISHED. Crown 8vo. 4s. 6d. Or in Two Parts, 2s. 6d. each.

A NEW TRIGONOMETRY FOR SCHOOLS.

By **W. G. BORCHARDT, M.A., B.Sc.,** and **The Rev. A. D. PERROTT, M.A.,** Assistant Masters at Cheltenham College.

The Authors hope that this book will supply the need felt for a Trigonometry based on *four-figure Logarithm Tables*, the authorities responsible for the various Cambridge Examinations, Army Entrance Examinations, &c., now dispensing with seven-figure logarithms. The book lays stress on the more *practical parts* of the subject. *Squared paper* is freely made use of, and 600 Miscellaneous Examples are provided.

THIRD EDITION, REVISED. Complete. Crown 8vo. 4s. 6d.

ELEMENTARY GEOMETRY.

By **W. M. BAKER, M.A.,** and **A. A. BOURNE, M.A.**

Also published in the following forms:—Book I., Fourth Edition, 1s. Books I. and II., Fourth Edition, 1s. 6d. Books I.–III., Sixth Edition, 2s. 6d. Books II. and III., 1s. 6d. Books II.–IV., 2s. 6d. Books I.–IV., Fourth Edition, 3s. Books III. and IV., 1s. 6d. Book IV., 1s. Books IV. and V., 2s. Books IV.–VII., 3s. Book V., 1s. 6d. Books V.–VII., 2s. 6d.

ANSWERS to the NUMERICAL and MENSURATION EXAMPLES, 6d. A FULL KEY, 6s. net.

ELEMENTARY GRAPHS. Reprinted from the above. New and Enlarged Edition. 6d. net.

FOURTH EDITION. Crown 8vo. With or without Answers. 3s.

EXAMPLES IN ALGEBRA.

By **C. O. TUCKEY, M.A.,** Assistant Master at Charterhouse; late Scholar of Trinity College, Cambridge.

"This is a very good collection and may be recommended without reservation."—*Nature.*
"The selection of Examples and the order of the Chapters undoubtedly place the book far in advance of any at present existing."—*Guardian.*

Crown 8vo. With or without Answers. 1s. 6d.

EXAMPLES IN PRACTICAL GEOMETRY AND MENSURATION.

By **J. W. MARSHALL, M.A.,** and **C. O. TUCKEY, M.A.,** Assistant Masters at Charterhouse.

"One is almost inclined to think that a good collection of Examples like this is better to put into the hands of the class than any text-book. The good teacher will supply the text as it is wanted. Certainly if a boy can work through these Examples he should be well fitted to face any reasonable geometry examination, whether it be naval or entrance scholarship."—*Preparatory Schools Review.*

Crown 8vo. 4s. 6d.

DIFFERENTIAL CALCULUS FOR BEGINNERS.

By **ALFRED LODGE, M.A.,**
late Faraday Fellow of St. John's College, Oxford; Professor of Pure Mathematics at the Royal Indian Engineering College, Coopers Hill.
With an Introduction by **Sir OLIVER LODGE, D.Sc., F.R.S., LL.D.,** Principal of the University of Birmingham.

BELL'S LATIN COURSE

FOR THE FIRST YEAR. In Three Parts.
By E. C. MARCHANT, M.A., and J. G. SPENCER, B.A.

Crown 8vo, 2s.

BELL'S CONCISE LATIN COURSE

FOR THE FIRST YEAR.
By E. C. MARCHANT, M.A., Fellow of Lincoln College, Oxford, and J. G. SPENCER, B.A., Assistant Master at St. Paul's Preparatory School.
(Shortly.)

This volume is not merely an abbreviated version of the Editors' well known Latin Course in three parts. The whole of the matter has been thoroughly revised, and all the necessary grammar is given at the beginning. Many sentences have been discarded, especially from the first part, so that the progress in grammar is more rapid, but the special features of the Latin Course remain as they were.

Crown 8vo, with Thirty Illustrations, 1s. 6d.

CLIMAX PRŌTĒ.

A FIRST GREEK READER.
In Two Progressive Parts. With Hints and Vocabulary. By E. C. MARCHANT, M.A., late Fellow of Peterhouse and Classical Master at St. Paul's School.

DENT'S NEW LIST OF SCHOOL BOOKS.

NOTE.—Please write for New Educational Catalogue and Lists.

OXFORD LOCALS, 1905.

Scott's Ivanhoe. Edited, with Notes, &c., by G. L. TURNBULL.

Cæsar's Gallic War. BOOKS II. and III. in One Volume. Edited by A. COWAN PATERSON, M.A. (Edin. and Oxon.). **1s. 4d.**

Cæsar's Gallic War. BOOKS IV. and V. in One Volume. Edited by Dr. JOHN MARSHALL. **1s. 4d.**

Julius Cæsar. Edited by F. ARMYTAGE MORLEY, M.A. **1s. 4d.**

The Merchant of Venice. Edited by R. M'WILLIAM, M.A. **1s. 4d.**

DENT'S MODERN LANGUAGE SERIES.

Dent's First French Book. By S. ALGE and WALTER RIPPMANN. Extra fcap. 8vo, **1s. 6d.** net.

*** Since the publication in November, 1898, of **Dent's First French Book**, Ten Editions (completing 47,100 copies) have been called for. The further experience gained during the last five years has made it advisable to re-write the book, and it is believed that the new version—**Dent's NEW First French Book**—represents a distinct step forward in the teaching of modern languages. The earlier version of **Dent's First French Book** is still on sale, and should be ordered as **Dent's OLD First French Book**, to avoid confusion.

Dent's Second French Book. By S. ALGE and WALTER RIPPMANN. Extra fcap. 8vo, **1s. 6d.** net. [*Fourth Edition.*

*** Following the success of **Dent's NEW First French Book**, authors and publishers felt encouraged to attempt a complete revision of the **Second French Book** also. In the revised version, called **Dent's NEW Second French Book**, the general scheme is the same as in the old, but there have been many extensive additions. The old version will not be reprinted, and consequently those who order the **Second French Book** will receive the *new* version, which can be used side by side with the old.

Phonetic Part of New First French Book, 6d. net.

Dent's Wall Pictures of the Four Seasons. (For Teaching French.) From Drawings specially prepared by J. A. SYMINGTON. Printed in Colours, size 55 by 35 ins. Unmounted, **2s. 6d.** net; mounted on linen and eyeletted, **8s. 6d.** net; mounted on linen and bound at edge, with rollers, **6s.** net.

At the suggestion of many teachers of experience, Messrs. DENT have commissioned Mr. J. AYTON SYMINGTON to design a new set of Wall Pictures of the Four Seasons. The pictures are of high artistic quality, and represent essentially French scenes. Small reproductions of these pictures are included in **Dent's New First French Book**, as an aid to young pupils in their home-work.

Features of French Life. By F. R. ROBERT. Illustrated by J. A. SYMINGTON. 2 Vols. **1s.**

Dent's First Latin Book. By HAROLD W. ATKINSON, of Rossall School, and J. W. E. PEARCE, Head Master, Merton College, Sidcup. With 12 Coloured Illustrations by M. E. DURHAM. Small crown 8vo, cloth, **2s. 6d.** net.

The *Journal of Education* says:—"Certainly an interesting, perhaps an important, book.... The plates, attractively coloured, are put to a sensible use.... The continuity at which the reader aims is an excellent idea. Nothing but the supreme test of the class-room will determine the value of this new method, a test that we advise the teacher who has a free hand and an open mind to apply for himself. He may at least be sure that his time will not be wholly wasted, for the authors have planned their work with intelligence and executed it with care."

Dent's Wall Pictures for Teaching Latin. Four Coloured Pictures enlarged from the "First Latin Book." Size, 30 by 22 ins. Unmounted, **2s.** net each. Romae: Sexti Domus. Romae: Triumphus. Pompeiis: Ostium, Tabernae et Via Strata. In Gallia: Procleum Equestre et Pedestre.

Dent's First English Book. By WALTER RIPPMANN. Extra fcap. 8vo, **2s.** net.

J. M. DENT & CO., 29 AND 30 BEDFORD STREET, LONDON, W.C.

RELFE BROTHERS' BOOKS

For Oxford Local Examinations, 1905, &c.

Scripture Manuals. By G. CARTER, M.A. With very full Notes on Authorised and Revised Versions, Maps, &c., containing all the Information required for Local Exam. work.
Kings I., St. Mark, Acts, &c. 1s. 6d. each.

***Public Examination Scripture Manuals.** By A. RICHES, F.R.G.S.
St. Mark. 1s. **Acts of the Apostles.** 1s. 6d.
* Specially prepared for Teachers' use or Private Instruction.

Notes on the Church Catechism. By H. WORSFOLD. Together with a Selection of Questions from recent Local Examination Papers. 8d.

Scott's Ivanhoe. With Introduction and Notes by J. HIGHAM, M.A. Frontispiece. Full cloth, 2s.

A School Geography and Atlas. By G. CARTER, M.A. The best Geography for all Pass and Competitive Examinations. Containing 32 Maps (mostly coloured) faced by the relative subject-matter. The facts are arranged so as to catch the eye, and stated so concisely that the memory can hardly fail to retain them. Fortieth Thousand. Crown 4to, cloth, 2s. 6d.

Outlines of English History, B.C. 55—A.D. 1901. By G. CARTER, M.A. Unrivalled as a Manual for Candidates who wish to obtain high marks in this important subject. The Biographical Sketches are especially valuable, and full Genealogical Tables are appended. Seventieth Thousand. Cloth, 1s. 6d.

History of England. By G. CARTER, M.A. In Three Parts. Crown 8vo. Part I. (to A.D. 1485) in preparation. Parts II. (1485-1689) and III. (1689-1897) ready. The reigns have been divided into sections, and the well written Biographies will be of the greatest use to the student. Each Part, 2s.

How to Read French. A New French Reader by H. BLOUET, the well known Author of several French Educational Books. Crown 8vo, cloth, 9d.
Quite a new selection of interesting readings—very good practice in Unseens.

The Charterhouse Parsing Books.
The Charterhouse Analysis Books.
} Compiled on the lines laid down for this Examination. Price net 3s. doz.

An Algebra for Junior Forms. By R. B. MORGAN, B.Litt. (Author of "Graphs," &c.). Written on the lines recommended by the Mathematical Association. With 14 Diagrams. Cloth, 1s. 6d. Answers, 6d. net.

The Local Examination Geography of the World. By A. G. HAYNES, B.A. Edited by G. CARTER, M.A. Compiled from the latest and most reliable statistics. Thoroughly up-to-date, special attention being paid to *Commercial Geography*. Fully Illustrated with Maps and Diagrams. Cloth, 1s. *Just published.*

A New Geography of Great Britain and Ireland. By A. G. HAYNES, B.A. In this little book, which is arranged on an up-to-date method, special attention has been given to the *Commercial* aspect as required by most Examining Boards. With 6 excellent Maps (three Commercial). Crown 8vo, cloth, 8d.

The Local Examination Physiography. By W. J. PERRY, M.A., LL.D. Covers the whole groundwork of Senior and Junior Syllabus in PHYSIOGRAPHY and PHYSICAL GEOGRAPHY. With Illustrations, Diagrams, and Maps. A selection of RECENT QUESTIONS is added. Cloth gilt, 2s.

Relfe Brothers' New Aldersgate Atlas. 136 Maps and Diagrams—Astronomical, Physical, and Political—arranged on the Comparative Method, with Introduction and full Index. Imperial 4to, 3s. 6d.

Relfe Brothers' Special Outline Maps. England, Scotland, Ireland, Europe, Canada, France. On good drawing paper, 1d. each, or 8d. per doz. net.

New Preparatory Atlas. Containing 28 very clear full-page Maps, beautifully printed in Colours (*quite up-to-date*). 4to, 6d.
A beautifully printed and coloured Atlas. Only most important places are marked, making it practically unequalled for Elementary Work.

Relfe Brothers' Charterhouse Atlas. 38 Maps (Coloured), containing Railway Map of the British Isles; Coloured Maps of the Environs of London, Liverpool, Manchester, &c.; large-scale Map of Palestine, and a good clear Map of the World as known to the Ancients. Folio size. Seventh Edition. Cloth, 1s.

The Charterhouse English Grammar. By Rev. A. MACRAE, B.A. (Emanuel School, Wandsworth Common). 168 pp. Crown 8vo, full cloth, 1s. 4d.
This book has been written with a view to remedying the defects in the text-books which every *practical teacher* encounters when teaching this important subject. It will be found eminently suitable for all schools preparing for the Local Examinations.

Hints on Essay-Writing for Schools. By C. H. HODGSON, M.A. Designed to make essay-writing a pleasure, and not a disagreeable task, for the schoolboy. Contains:—"General Hints," "Common Faults," and "Skeleton Outlines" on varied subjects, besides several Model Essays. Second Edition. 50 pages, cloth, 8d.

NEAR THE BRITISH MUSEUM.

KINGSLEY HOTEL

HART STREET, BLOOMSBURY SQUARE, LONDON.

OPPOSITE THE BRITISH MUSEUM.

THACKERAY HOTEL

GREAT RUSSELL STREET, LONDON.

These well-appointed and commodious **TEMPERANCE HOTELS** will, it is believed, meet the requirements, at moderate charges, of those who desire all the conveniences and advantages of the larger modern Licensed Hotels. These Hotels have

PASSENGER LIFTS, ELECTRIC LIGHT THROUGHOUT, HEATED THROUGHOUT, BATHROOMS ON EVERY FLOOR, SPACIOUS DINING, DRAWING, WRITING, READING, AND SMOKING ROOMS.

Fireproof Floors. Perfect Sanitation. Telephone. Night Porter. The Kingsley Hotel has a good Billiard Room.

BEDROOMS FROM 2s. 6d. TO 5s. 6d.

FULL TARIFF AND TESTIMONIALS ON APPLICATION.

Inclusive Charge for Bedroom, Attendance, Table d'Hôte Breakfast and Dinner, from 8s. 6d. to 10s. 6d. per day.

ALSO UNDER THE SAME MANAGEMENT.

ESMOND HOTEL

1 MONTAGUE STREET, RUSSELL SQUARE, LONDON.

This **Temperance Hotel** adjoins the British Museum, and is exceptionally quiet and economical. Night Porter.

Bedrooms from 2s. to 8s. 6d. per night. *Full Tariff and Testimonials on application.*

Blackie's Illustrated Latin Series

General Editor—
Prof. R. Y. TYRRELL,
Litt.D., Fellow of Trinity College, and late Regius Professor of Greek in the University of Dublin.

Caesar.—Gallic War. Books I.-VII. Edited by Prof. JOHN BROWN, M.A. I., II., III., and IV., 1s. 6d. each; V., VI., and VII., 2s. each.

Cicero.—The Catiline Orations. Complete. Edited by Prof. C. H. KEENE, M.A. 2s. 6d. **The First Oration.** 1s. 6d.

Cicero.—De Senectute. Edited by G. H. WELLS, M.A. 2s.

Cicero.—De Amicitia. Edited by the Rev. F. CONWAY, M.A. 2s.

Cicero.—Philippics V., VI., and VII. Edited by T. K. BRIGHOUSE, M.A. 2s. 6d.

Eutropius. Books I. and II. Edited by W. CECIL LAMING, M.A. 1s. 6d.

Horace.—The Odes. Books I.-IV. Edited by STEPHEN GWYNN, B.A. 1s. 6d. each. Complete, 5s.

Livy. Book I. Edited by Prof. JOHN BROWN, M.A. 2s. 6d.

Livy. Books V. and VI. Edited by W. CECIL LAMING, M.A. 2s. 6d. each.

Livy. Books XXI. and XXII. Edited by G. G. LOANE, M.A. 2s. 6d. each.

Ovid.—Metamorphoses, I. Edited by ERNEST ENSOR, B.A. 1s. 6d.

Ovid.—Tristia I. Edited by G. H. WELLS, M.A. 1s. 6d.

Sallust.—The Catiline Conspiracy. Edited by the Rev. W. A. STONE, M.A. 1s. 6d.

Tacitus.—Agricola. Edited by W. C. FLAMSTEAD WALTERS, M.A. 1s. 6d.

Terence.—Phormio. Edited by W. CECIL LAMING, M.A. 4s. 6d.

Virgil.—Aeneid, I. and VI. Edited by H. B. COTTERILL, M.A. 2s. each.

Vergil.—Aeneid, II. and III. Edited by Prof. SANDFORD, M.A. II., 2s.; III., 1s. 6d.

Virgil.—Georgics, I.-IV. Edited by S. E. WINBOLT, M.A. 1s. 6d. each.

Blackie's Illustrated Greek Series

General Editor—
Prof. R. Y. TYRRELL,
Litt.D., Fellow of Trinity College, and late Regius Professor of Greek in the University of Dublin.

This Series is similar in aim and general arrangement to *Blackie's Illustrated Latin Series*, its special features being interesting and scholarly introductions, well-printed texts, interesting literary notes, specimens of famous translations, and numerous illustrations, including full-page coloured plates, full-page photographs of bas-reliefs, statues, &c., beautifully printed on superfine art paper, black-and white illustrations specially drawn for the series, and maps where these are required for the elucidation of the text.

Aeschylus.—Eumenides. Edited by L. D. BARNETT, M.A., Litt.D. 3s. 6d.

Euripides.—Cyclops. Edited by the Rev. J. HENSON, M.A. 1s. 6d.

Euripides.—Alcestis. Edited by A. TATE, M.A. 2s.

Homer.—Iliad XVIII. Edited by Prof. PLATT. 1s. 6d.

Homer.—Odyssey I. Edited by the Rev. E. C. EVERARD OWEN, M.A. 2s.

Plato.—Crito. Edited by A. S. OWEN, M.A. 2s. 6d.

Xenophon.—Anabasis I. Edited by C. E. BROWNRIGG, M.A. 2s.

Xenophon.—Anabasis II. and IV. Edited by the Rev. G. H. NALL, M.A. 2s. each.

Xenophon.—Anabasis III. Edited by A. C. LIDDELL, M.A. 2s.

Theophrastus.—Characters. Edited by J. MAXWELL EDMONDS, M.A., and G. E. VAUGHAN AUSTEN, M.A. 4s. 6d.

Blackie's English Texts

Edited by
W. H. D. ROUSE, Litt.D.,
Head Master of the Perse School, Cambridge.

Just Published—Daintily Produced—Price 8d.

Messrs. BLACKIE & SON have commenced to issue, under the above title, a new series of English texts for school use. The series will include specimens of all the acknowledged masters of English, each number being complete in itself, of a convenient size, well printed in clear type on good paper, and issued at a low price.

The books will be reprinted accurately from good texts, in modern spelling, no change being made, except that where necessary they may be abridged. The superiority of a complete or continuous work over a book of selections, however good, is acknowledged by all practical teachers; and the series will eventually contain something to interest children of every age and capacity. Each book will have a brief introduction, dealing with the author's life and place in literature, or any other points of interest touching the book, but no notes. The books will be reprinted complete, wherever that is possible; and, if abridgment be necessary, it will be done only so far as to bring them within reasonable compass. Anything which might offend the taste will be removed, but such omissions will be few and will not affect the unity of the work. The following are the first volumes:—

Defoe's Journal of the Plague Year. 8d. [*Ready.*
Irving's Companions of Columbus. 8d. [*Ready.*
Hawkins's Voyages. 8d. [*Ready.*
Tales from Boccaccio.
Essays from De Quincey.
Erasmus's Praise of Folly.

English Poetry for the Young

Edited by
S. E. WINBOLT, M.A.,
Christ's Hospital, Horsham.

Just Published—Clearly Printed—264 pages—Price 1s.

The poems in this new book of verse will particularly appeal to young people, and are worthy to be printed in their memory. There is a large proportion of narrative poems; but there are also many reflective pieces which will appeal to boys and girls of different ages, some simple, others demanding slightly maturer powers of appreciation. The patriotic vein has not been neglected. All the pieces by their subject-matter make a direct appeal, are vigorous in their expression, and in their moral tone tend to exalt the best instincts of human creatures. The chronological arrangement adopted cannot fail to give some sense of the historical development of English poetry. The only notes given are brief explanations of the meanings of out-of-the-way words.

Such a volume should be useful both at school and at home. In the class-room it is well to have at hand a book which can be had out to illustrate the literature of the history period under study.

The collection, in short, is intended to be useful in the class-room, and also to be cherished by the youth leaving school as the nucleus of his poetical appreciation, instead of being discarded as a thing that has been made distasteful by school-work or become childish and to be put away with advancing years.

Plane Geometry

Elementary Plane Geometry.

By V. M. TURNBULL,
Senior Mathematical Master at the Perse School, Cambridge. Crown 8vo, cloth, 2s.

This new work is intended as an introduction to Deductive Geometry, to be taken up after a course of experimental work involving measurement and numerical calculation.

CONTENTS:—(1) Preliminary Notions and Definitions, &c., &c.; (2) Circles—Angle, Chord, and Tangent Properties; (3) Areas of Triangles and Quadrilaterals; (4) Ratio and Proportion—Similar Figures.

Elementary Geometry

Elementary Geometry of the Straight Line, Circle, and Plane Rectilineal Figures. In Two Parts, 2s. each. With Answers, 2s. 6d. each.

By CECIL HAWKINS, M.A.,
Senior Mathematical Master at Haileybury College.

CONTENTS OF PART I.:—Elementary Notions and Constructions; Intersecting Straight Lines; Triangle; Allied Triangles; Parallel Straight Lines; Parallelograms; Polygons, &c.; Configuration of Circle; Angles at Centre, Chords, Arcs; Angles at Circumference; Tangents; Examples, &c., &c.

Constructive Geometry

Being steps in the synthesis of ideas regarding the properties and relations of geometrical figures arranged for First Year's Course in Science. 2s.

By J. G. KERR, LL.D.

CONTENTS:—(1) Preliminary Notions, Surface, Line, Point; (2) Angles—Right Angles; (3) Equality of Angles—Arcs and Chords; (4) Measurement of Angles—Circular Measure; (5) Rotation of a Plane Figure in its own Plane; (6) Parallel Lines; (7) Parallelograms, Rectangles, Squares, Right-angled Triangles; (8) Triangles; (9) Areas; (10) Distribution of Rectangular Areas; (11) Squares on Sides of Triangles; (12) Chords, &c., &c.; (13) Angles in Segments of Circles.

The Educational Times.

Wanted: An Educational Statesman.

THE centre of educational discussion during the month has been the Educational Science Section of the British Association at Cambridge. This section, one is glad to observe, has been steadily gaining a very prominent position in the jostling crowd of interesting subjects, partly owing to the distinctive character of the successive presidents, mainly perhaps by reason of the increasing public sense of the far-reaching importance of education in every form. In spite of, and to some extent because of, the admirable presidential address of the Bishop of Hereford, the meeting has largely served to impress dissatisfaction with the educational situation. As Dr. Percival doubly emphasized, the essentials of Matthew Arnold's criticism of fully a generation ago still stand valid at this very day, notwithstanding the continuous enforcement it has received from the progress of events; and it may be added that the spirit of that criticism has been continuously finding more and more extensive fields of application. Meeting follows meeting, conference follows conference, and at the last as at the first the discussion is dissipated and the effects are grievously wasted. At the present meeting we look in vain for a comprehensive standpoint on which the energies of the various speakers are concentrated; each goes his several way. The battle to be fought requires strategic and tactical combination. The Bishop laid his finger on the point in a single golden sentence: "If that report"—Matthew Arnold's "illuminating report on the schools and universities of the Continent as he saw them thirty-seven years ago"—"had been turned to practical account at the time, if some English Statesman, like Wilhelm von Humboldt, had been enabled with a free hand to take up and give effect to Mr. Arnold's chief suggestions, as Humboldt and his colleagues gave effect to their ideas in Prussia in the years 1806 onwards, the advantage to our country to-day would have been incalculable." Where is that English Statesman?

Dr. Percival's general survey, though confined to the time-honoured route from primary through secondary to university education, and modestly qualified in point of personal experience and training, is undoubtedly a most suggestive criticism of existing conditions. We present the main points in another column, and can only touch on certain aspects here. The foundation of the whole system no doubt lies in the physical health of the community. Fortunately, there seems, on the recent official investigations, to be no positive ground for supposing that there is any general deterioration, and such unquestionable deterioration as exists affects immediately only the lower classes of the population. Yet it is clear that the question demands close and decisive official vigilance, generally on national grounds, but also specially on educational grounds. The athletic craze, so far as the higher schools and the universities are concerned, ought not to present any insuperable difficulty to discreet and firm administrators. Elementary education has hitherto received the lion's share of official attention, and there are signs of a tendency to misapply less of that attention in worse than useless worry of the teachers, and to approximate to the satisfaction of the sensible requirements urged by Dr. Percival. Much greater importance attaches to the position and possibilities in the secondary sphere. The secondary reforms of the Act of 1902 are but modal and limited, and as yet dubiously efficient on a very minor scale. Though Dr. Percival's estimate of the Local Authorities as "altogether unprepared and untrained for the responsible work now thrown upon them, and hampered by their besetting fear of the ratepayers," is not to be disputed, it must still be acknowledged that the more important bodies have been exhibiting a marked sense of their desire to do the best, and have willingly sought for skilled advice and followed it—an excellent example to the less important bodies. But when all is said for them that can reasonably be said, and when they have all done their best within the limits of their powers, there still remains a vast deal to be done—in fact, almost everything of a thoroughgoing nature. True, as the Bishop suggested, Government might expedite progress by offering "more liberal secondary education grants to be earned by efficient schools, and initial grants towards buildings and scientific equipment, to be met by contributions from local rates or other local sources, public or private." And other

Digitized by Google

things might be done, nationally or locally. But there is needed something more than any or all of such details, useful as they undoubtedly would be. As to the preparatory schools, every one will agree that inspection of private schools—real, instructed, liberal-minded inspection—is an essential thing; though one must still put in a *caveat* for large liberty of administration. And, as to training and registration, both are, of course, beyond the stage of profitable argument.

The Bishop's suggestions for such university action as would "pour a new stream of intellectual influence through our secondary education" are well worthy of attention. As ex-head master of two great public schools and ex-head of an Oxford college, he speaks with commanding authority as well as with practical judgment. The influence of Oxford and Cambridge is well understood, and, whatever their policy, will continue to affect secondary schools throughout the country; but the rise of the new universities ought to warn them that their pre-eminence may be materially affected by a perverse adherence to the old ways. Happily, they have been showing symptoms of a wise tendency to make at least some accommodations with the newer spirit. But, after all, there is a very wide area of secondary education that does not necessarily depend upon them, and, though secondary education cannot be systematized without giving them a large consideration, neither can it be systematized in single regard to them. Still, the closer and the fuller the connexion, the better will it be for all parties.

Where is that Statesman? Improvements here and there, encouragements here and there, accommodations here and there—these are all to the good, certainly. But what seems especially called for now is a real and living co-ordination of the whole system as a national function, with adequate driving power at every point. Some of our theorists, we are well aware, would first demand the production and acceptance of an ideal educational creed formulated in principle, if not in detail. If we wait for such a counsel of perfection, we shall have to muddle on indefinitely in the old fragmentary and spasmodic fashion. The home experience of the recent past, the available suggestions from the experience of other civilized nations, native talent and instinct—these ought to be able to furnish a working formula that might do great things, if not the greatest things or all things. In any case, the idea of progress must be left freely open in scope; and it may be judicious not to pitch hopes unduly high. What is primarily wanted is that Statesman.

We observe with much interest the *Teachers' Guild Quarterly* view of "the main lesson" of the Mosely Educational Report. The writer is "firmly convinced that the chief hope for English mental progress, the chief incentive to that enthusiasm for education which we lack, lies in the arousing of our working classes and those who stand next above them in the social scale to realize the supreme importance of a thorough equipment for life for themselves, their children, and the whole nation—to put more 'soul' into their work." We are not so sure that our desiderated Statesman, if he but would appear, would lack adequate support: we are perfectly sure that he would be backed loyally and vigorously by all the working-class members in the House of Commons, not one of whom but realizes vividly the supreme importance of a thorough educational equipment. To our mind, it is much more a question of leading than a question of enthusiastic following. Where is that Statesman?

"India's Chief Need."

Our enterprising contemporary, *Indian Education*, commenting on the Fourth Quinquennial Review of "Progress of Education in India" (1897–8—1901–2) remarks that "India's chief need" is further expenditure on primary education. To those that "think Imperially," or ought to do so, this Report should be specially interesting and instructive. In 1901–2 there were some 3,204,000 boys and girls receiving primary instruction in public institutions; that is to say, about 1·5 per cent. of the population. The three round millions were boys; the odd thousands were girls. Yet these three millions are only one-sixth of the boys of school-going age: five out of every six boys of school age do not enter a public school. The private institutions have a roll of 574,000 scholars. The total number of pupils at the elementary stage of instruction is thus 3,778,000—a figure not approaching 2 per cent. of the population.

Apart from the variety of systems in the different provinces, the conditions of even this meagre supply of educational facilities are somewhat remarkable. *Indian Education* (July) says:

> In relatively few places have really suitable buildings been provided in which to house the primary schools, and these are principally the property of Government and of missionary bodies; but in very many districts it is still the case that nothing better than the shade of a tree, or a cattle-shed, or a verandah, or sometimes a temple-court, is provided for the village school. In these circumstances we are not surprised to learn that the average cost per month of maintaining a village school is the small outlay of Rs. 11 [14s. 8d.] . . . The use of the sand-board and lamp-black may be dying out, but in some provinces the plantain-leaf still does duty for paper, the luxury of benches and writing-desks is not everywhere enjoyed, and on rough bamboo or mud floors the children have to squat. The teacher has to instruct five or six classes at a time in most schools, and, utterly untrained himself in very many instances, naturally does not know the art of informing the minds of his young charges.

It can hardly be regarded as surprising, then, that our contemporary notes "in some quarters a disposition to criticize the Government of India for having neglected primary education in the past"—that is to say, roughly, during a century of unrestricted control of the destinies of the country. Four-fifths of such schools as exist are private schools—of the character just indicated. Yet, says our contemporary, "Government has not been entirely neglectful or indifferent"—an apologetic expression that carries an appalling condemnation. Government, we are told, has experienced "extreme difficulty in bringing home to the ignorant masses the value of education." How could it be otherwise, on the record of the past? Here is a sample of the difficulty:

> Night schools, for example, encouraged throughout the quinquennium, have proved an almost total failure; and rural schools are still on their trial. Little progress, if any, has been made during the last five years, it is true; but this has been due principally to the disheartening indifference of the masses to the value of knowledge.

Is this really so? Can we seriously accept the view that the Indian population is so hopelessly averse to education, in

Digitized by Google

spite of the neglect or the activity of Government in the past? The explanation does appear to conflict harshly with our previous notions of their characteristic qualities. Is it the methods that are at fault? Or what really is the matter? Anyhow, now at length the Government, we learn, is committed to the enterprise of supplying some assimilable "instruction improved in methods and standards to meet modern ideas and requirements to the scattered and distant hamlets, to the poorer ryots, to the landless labourers, to the ignorant low castes, and to the wild jungle tribes"; and to the incidental attempt to create a desire for education among these people. Our contemporary, therefore, feels "that the hopes of better things are increased tenfold." It rejoices in the recognition of the Resolution on Education that in the opinion of the Government of India "primary education has hitherto received insufficient attention and an inadequate share of the public funds; that it should be made a leading charge upon provincial revenues; that in provinces where it is in a backward condition its encouragement should be a primary obligation; and that, in so far as District or Municipal Boards are required to devote their funds to education, primary education should have a predominant claim upon their expenditure." Yes, good words. But those that consider the existing financial conditions, and that look back to the great Dispatch of 1854, and to the Report of Sir William Hunter's Commission of 1882, to say nothing of Macaulay, Bentinck, and Hardinge, will be able to estimate the probable significance of such fine sentiments in practice. Why do our Indian administrators calmly lie under the reproof of educated Indians' citations from Macaulay's speeches? Why was Mr. Baines able to show in his Census Report of 1891 that only 11 males in 100, and 1 female in 200, were all that could read and write? Why was Mr. Nugent, a high official at Bombay, in a position to declare openly a few years ago that, whenever a reduction of expenditure had to be made, it was the Education budget that always suffered first? This is a very melancholy business indeed in these Imperial times; and it is freely alleged that there is much more in it than meets the uninstructed eye. Yet there is enough on the face of it to make every thinking person among us anxious and inquiring.

NOTES.

THE Report of the Inter-Departmental Committee on Physical Deterioration has important bearings on education, and is sure to lay new work on educational administrators and teachers, as well as more compulsion upon parents and pupils. The original terms of reference were strangely enough confined to the alleged deterioration in Army recruits, but were judiciously enlarged to this:

(1) To determine, with the aid of such counsel as the medical profession are able to give, the steps that should be taken to furnish the Government and the nation at large with periodical *data* for an accurate comparative estimate of the health and physique of the people; (2) to indicate generally the causes of such physical deterioration as does exist in certain classes; and (3) to point out the means by which it can be most effectually diminished.

The first volume (Cd. 2175) contains the Report; the second (Cd. 2210), the minutes of evidence; and the third (Cd. 2186), appendix and general index. On the basis of the Report, Sir Thomas Lauder Brunton has started a scheme for the formation of a National League for Physical Education and Improvement by uniting and co-ordinating all the bodies now labouring for the health of the people. In connexion with this we take the opportunity of drawing attention to a comprehensive and instructive paper on "School Hygiene" by Dr. R. T. Williamson, M.D., F.R.C.P., of Owens College, just published in the new series of "Health Lectures for the People" (3d., Sherratt & Hughes, Manchester).

THE Board of Education have just issued a Circular (No. 515) directing the careful attention of Local Education Authorities to the Report of the Inter-Departmental Committee on the Model Course of Physical Exercises (Cd. 2032) and to the Syllabus of Physical Exercises for use in Public Elementary Schools prepared in accordance with the recommendations of the Committee (9d., Eyre & Spottiswoode). They suggest that existing teachers may have "opportunities for training in the principles and methods of the new course" by means of evening classes and Saturday morning or afternoon classes; and they "are in communication with various Training College Authorities with a view to securing that all students who pass out of the Colleges in future, so far as possible, be qualified to give instruction in the course." And they "consider that the Syllabus should be adopted in all Public Elementary Schools as soon as is reasonably possible." Moreover, they "attach great importance to the regularity and thoroughness with which physical training should be given," and specify "at least one hour per week," in two periods of thirty minutes, or three periods of twenty minutes, as the ordinary dose for the Formal Lessons, while the Recreative Exercises are to be "daily and constantly practised" as recommended in the Report. Further, "it is recommended that where possible a system of taking physical measurements of the children at regular intervals should be instituted." Excellent; but this needs skill and care, and the advice of the British Association leaders in this sort of investigation ought to be invoked at once.

THE "Co-operative Commonwealth" may be left an open question of no great immediate urgency, but it is gratifying to find anticipators of that Utopia laying special stress on the importance of "true education" for the children. We quote from an address by Mr. C. H. Grinling, recently printed in the *Woolwich Labour Journal*:

But now the time has come when in the sphere of the spiritual, no less than in the sphere of the social and the industrial, we must nail our colours to the mast, and realize that our freedom is given to us in order that all the finest powers of the mind and soul may be employed, unfettered by the dogmas of the past, not in order that we as individuals may save our own souls alone, but that we may save the souls of the whole world. If we are to realize this, the education of our children, about which we have been fighting lately, must be deep and true. It must be an education that teaches our children from the earliest day of birth to open their faculties to all the beauties of the world, so that the child's tiny brain asks its own questions, and forms its own interpretations of what it sees and hears. Its questions we should encourage and answer freely, and when in our ignorance we have no answer we should search for the true answers and the true interpretations of life in order that the children shall be encouraged to desire to

Digitized by Google

understand. Above all we shall determine that we shall be seekers after the true education which insists on the drawing forth of all the finer feelings and powers of the mind, the heart and soul. The spirit and the soul cannot be nurtured by bygone traditions alone. The soul of man must be free, and the soul of man can only develop in the true freedom of the Co-operative Commonwealth.

This is a very significant utterance, and Mr. Grinling but formulates what is in the mind of many other thoughtful men in the leadership of labour. When the rank and file have absorbed the doctrine, and realized its potentialities, we shall be on the eve of striking developments. If the process will necessarily be very slow and arduous, the results will be all the more refined and permanent. Whether one of the results will be the evolution of the Co-operative Commonwealth is a very subordinate consideration.

The Church Schools Emergency League is up in arms against the Board of Education's recent circular (No. 512, July 19), instructing inspectors on certain questions relative to the approval of time-tables in voluntary schools. The circular, says the League, "ignores our trust deeds; by a side wind it perverts the statutes and customs of the immemorial past; it is a violation of the spirit of the Act of 1902; a betrayal of those friends of denominational schools who, on the faith of the Prime Minister and the Unionist party, loyally supported that Act; it opens the way to the destruction of Church schools and the practical confiscation of our buildings, without the necessity for any reversal or change of legislation." Here is a formidable indictment, which will surprise even the opponents of the Act of 1902. But it seems to press the facts hard. The approval that used to be given to time-tables including times for taking children to church during school hours was intelligible enough so long as the rest of the school hours satisfied the Board on the point of school attendance; but "it was laid down in 1871, and in later years, that no part of such attendance at church should be registered as school attendance." "Since that time two great changes have taken place—the introduction of compulsory attendance and the imposing of a duty upon every Local Authority to make by-laws respecting school attendance, which by-laws, when made, have statutory force"; and "the attendance so prescribed is for each child," with certain exceptions, "during 'the whole time that the school is open for the instruction of children of similar age.'" Has the Board, then, done more than to recognize an obligation that is practically statutory, and to enforce strictness in place of a customary laxity? At the same time the difficulty ought to be readily got over in practice without conflict with the time-table. The first thing is to realize exactly what the circular means, and what it does not mean.

We had understood that Prof. Postgate's scheme of Latin pronunciation had been accepted at Oxford and Cambridge, and had not been disapproved in the classical schools. But here comes Mr. Robert Bridges, maintaining, in the *Speaker* (July 30), the thesis that "the pronunciation of Latin used in our universities and public schools is one real cause of the degradation of our own native speech." He finds from "the text-book of English phonetics which I am told is in most general use among those who are training the young" that "*Augusta* is pronounced *Ergvster*." Whereon he remarks:

Now, examine the mid syllable of *Augusta*. There are in Latin a long and a short *u*, fairly represented in English by the vowels of *fool* and *full*. But we have also two other sounds which we also write *u*: first the *u* of *but*, which is not a *u* at all but a modified *a*, and it may be shown by an inverted *a*, thus *ɐ*; and, secondly, the impure *u* of *union*, which is the long *u* preceded by a consonantal *i* or *y*, as the *i* in the Latin *iudex* (= *yudex*, the Etonian *dgudex*), so that *union* might for its first syllable be phonetically written *yunion* (like *you*, &c.) Now, it would seem incredible, but it is a fact, that boys in reading Latin are taught to substitute these two impure vowels, which are unknown in Latin, in place of the true ones, which are common to both languages; so that at Eton and Oxford they say *tyu* for *tu*, and *mvndvs* for *mundus*, and *Ergvster* or *Orgvster* for *Augusta*.

This he affirms to be an "extremely typical" example. He also points out—(1) that "Greek and Latin poetry is written on a measured time system," and (2) that "the scholars [at Oxford and Cambridge] do not read it by a time system." Eventually, he declares that "the prevailing system fully justifies all that Prof. Perry and Mr. Wells say." "The universities are most to blame." "The schoolmasters' feet are entangled on all sides, and it is difficult for them to initiate any movement of escape. And yet, if, say, twenty teachers of Latin would meet together for a week in the Long Vacation, and read their beloved poets aloud to each other with proper pronunciation and accent, I do not believe that peradventure five of the twenty would be found to return to their old work."

In the "Life and Letters" of the late Prof. Cowell, just published by Messrs. Macmillan, there is a very suggestive remark of his on the occasion of his acceptance of the Professorship of English History in the Presidency College, Calcutta: "One is wasted in England; not wanted. While in India every one is wanted who can go." We are not concerned, for the moment, with the needs of India; what we wish to emphasize is the waste involved in the deflection of a scholar of such quality as Cowell to work that might be equally well done by any other of a thousand commonplace graduates. How many of our specialist scholars are similarly wasted for want of suitable posts—posts loudly demanded by the progress of modern investigation! Even in the field of Oriental study, we cannot but recall Prof. Rhys Davids's recent laments; and there are so many other fields.

A recent criticism on free public libraries in an article by Mr. Churton Collins receives a striking commentary in the Report of the Public Libraries Committee of the City of Westminster for the year 1903–4. Mr. Collins said:

I cannot speak from statistics, but I should probably not be exaggerating if I said that more than two-thirds of the money expended on these institutions [public libraries] is expended in catering for the tastes of those loungers whose reading is confined to light novels, magazines, and *ana*.

Perhaps something might be said even for "light novels, magazines, and *ana*." But the Chairman of the Westminster Committee meets the allegation directly and definitively:

The expenditure of the City's libraries during the past year upon new books was £1,060. Of this amount £68. 10s., or 6·46 per cent., was expended upon novels of the best kind, according to the judgment of your Committee and librarians. If we add the cost of binding these novels, of replacing old and worn-out fiction, and the amount expended upon magazines (of all kinds), newspapers and periodicals generally, and then compare with the total expenditure upon every-

Digitized by Google

thing, we get nearly an identical proportion—6·49 per cent., *not* 66 per cent., as was assumed, without data, by Mr. Churton Collins. A study of the published reports shows that much the same ratio applies in the majority of public libraries.

It seems somewhat risky to speak about such matters at all if one "cannot speak from statistics."

At the general session of the National Education Association of the United States, President Z. X. Snyder, of the Normal School, Greeley, Colorado, expounded "Our Educational Creed" on the basis of a baker's dozen of theses. These were:

(1) That the application of the doctrine of evolution is fundamental in the interpretation of an individual and his education. "All education is an application of the principle of evolution." (2) That an individual is an involution of possibilities—a composite potential. "The child is a concentration of the ages." (3) That the education of an individual is the evolution of the possibilities within him—an unfolding of the potential. (4) That the possibilities in individuals are variable, no two being the same. (5) That the biological principle that function precedes structure is equally true in the educational world. (6) That true socialization of an individual means to transfigure his individual initiative into mutual aid, or humanity. (7) That a child is born with the instinct and impulse to know and to think and to participate with his fellows, and that the object of his training is individual, the aim social, and the end civic. (8) That the external sources of education are Nature, Mind, and Spirit. (9) That learning is expressing, thinking, feeling, knowing. (10) That the function of the school is to individualize, socialize, and civilize the individual. (11) That the public school system should be the most democratic of our institutions, and the most efficient for the education of the children, for the elevation of the homes, for the solution of municipal, State, and national problems. (12) That the free public-school system ought to extend from the kindergarten to a great national university inclusive. (13) That the school teacher should be trained academically and professionally. "Nothing can take the place of scholarship"; and "professional training is the adjustment of scholarship to the education of the child, the people, and the State."

The full exposition, which is thoughtful and elevated, is published in the *School Journal* of July 16. The bare heads, however, may be usefully compared with current conceptions more or less definitely formulated or mooted among ourselves.

SUMMARY OF THE MONTH.

The Education (Local Authority Default) Act provides that:—

(1) The Board of Education, without prejudice to their right to take any other proceedings, may, if they are satisfied that it is expedient to do so on account of any default of a Local Authority in the performance of their duties as affects any elementary school (*a*) make orders for recognizing as managers of that school any persons who are acting as managers thereof, and for rendering valid any act, thing, payment, or grant which in the opinion of the Board might otherwise be invalid by reason of the default of the Authority, and every such order shall have effect accordingly; and (*b*), if it appears to the Board that the managers of that school have, for the purpose of maintaining and keeping efficient the school, incurred any expenses for which provision should have been made by the Local Education Authority, pay to the managers such amount in respect of these expenses as in the opinion of the Board was properly incurred.

(2) Any sums paid by the Board of Education under this Act shall be a debt due to the Crown from the Local Education Authority, and, without prejudice to any other remedy, may be deducted from any sums payable to that Authority on account of Parliamentary grants.

(3) Any order or payment may be made under this Act as respects matters occurring whether before or after the passing thereof.

The Council of the Evangelical Free Churches of Birmingham and District have memorialized the members of the Birmingham City Council on the transfer of certain pupil-teacher centres to the Council. They had learnt that the Roman Catholics were willing to transfer the management of their centre to the Council on the following conditions:—

(1) That a joint Committee shall be appointed; such Committee to consist of persons partly nominated by the Council and partly by the Trustees.

(2) That the entire teaching staff shall be Roman Catholics.

(3) That the religious instruction and training of these teachers shall be retained by the Roman Catholics.

They also learnt that the Anglicans were willing to transfer their pupil-teachers to the Council's centre on the following conditions:—

(1) That they have the privilege of teaching their distinctive Church doctrine to the pupil-teachers.

(2) That such teaching shall be given on certain days and in school hours and by a teacher whom they approve of, or appoint, and whom they will, if necessary, remunerate.

The Council regard the agreement of the City Council to both these sets of conditions as "extremely reactionary," and say that, "for the first time in the history of popular education in this city, they have committed themselves to a distinctly sectarian policy;" and they protest "in the interests of education and of civil and religious liberty." They contend for "a truly national system of education, having training institutions free to all alike and without any religious tests and disabilities."

Sir George Kekewich writes some startling things about certain denominational schools in the North of England (*Daily News*):

A few weeks ago I visited a school building in one of the great cities of the North of England, which should have been condemned at any time after the passing of the Act of 1870. It was not merely old, but grossly insanitary and inconvenient for teaching purposes. But the inspector had passed it year after year. He was a man in whom I had always placed implicit confidence, and I wondered why he had allowed the school to exist. Then I remembered that under a former Tory Government the same inspector had condemned a number of schools in the same city, which were actually held in basements partly or wholly underground, which were incapable of proper ventilation or lighting, and utterly unfit for school purposes. I supported the condemnation. But when it became known a deputation, politically important and denominationally influential, quickly arrived at the Education Department, and the then heads of the Department gave way. Most of the basements continued to be recognized, though in some cases for a reduced number of children. Some of them, no doubt, are still providing what the managers are pleased to call "education." The inspector could hardly be blamed if he omitted subsequently to condemn buildings which, bad as they might be, were at all events above ground. I have no hesitation in saying that I would infinitely rather see the children running the streets than attempting to learn in the school I visited, or, for that matter, in hundreds of other schools throughout the country, which have been constantly and consistently spared on account of the managers' pockets and of denominational instruction.

Dr. Macnamara thinks that "nationally it is the most criminal profligacy to allow so many of the children of the poor to struggle into adult life as they are doing," and that children's stomachs ought to be put in reasonable working order to support the work in school. He would start a reformation with providing the mid-day meal. Thus:

My plan is an adaptation of the Parisian *Cantine Scolaire* system. Year by year the municipality of Paris provides some eight millions of meals for its school children. These cost about £70,000. The sale of tokens realizes about £16,000; voluntary contributions about £14,000; and the rest—something like £40,000—comes out of the rates. Assuming that London has three times as many needy children as Paris, my scheme would cost some £120,000, or about three farthings in the £ on the rates. The question, therefore, is, Shall the school rate remain at 1s. 2d. (its present level) with the certain knowledge that much of it is being thrown away because of the unfit condition of the children, or shall we make it 1s. 2¾d., and thereby give young London a real chance of becoming a fit heritor of Britain's greatness?

He is careful to point out that he is "all against lessening what is called parental responsibility." In the case of the drunken, thriftless, and self-indulgent, he "would feed their children and then promptly proceed against them with all the rigours of the law to recover the cost," by a slight modification of the Education Act, or of the Cruelty to Children Act.

At the Sanitary Congress recently held in Glasgow, Dr. Elizabeth Pace, referring to the difficulties in the way of anything like a complete physical training in the elementary schools, pointed out that in the poorer schools the children were often tired when they came to school, having already done a certain amount of work at home; they had probably had insufficient sleep, and often insufficient food. If, however, children were too

Digitized by Google

tired to take part in daily drill and exercises, and were not well enough fed to take part in games, they were not fit to be taught any lessons. Then in the better schools there was the great difficulty of want of time. It was a very anomalous condition of things that children in industrial schools should be better off in this respect than children of poor but respectable parents. The fault did not lie with the teachers, but in the overwhelming burden of work laid upon the children by the Code. A Code that would give a daily programme of half-an-hour's gymnastics and half-an-hour's spontaneous play in the school curriculum would be the greatest boon, not only to the children's bodies, but to their minds. Miss Alice Ravenhill sketched out the lines of training in physiology and hygiene which experience had shown to be of service in the management of schools. The importance to health and symmetry of right posture in childhood was selected as a practical example of the value of such knowledge, the points being emphasized by a series of illustrations photographed from life. The evils of faulty positions in standing and sitting were dealt with in detail; suggestions were made for their amelioration; and the responsibility of Local Authorities, teachers, and pupils was emphasized. Mr. Allan Tuke, M.B., read a paper on "Physical Training as a Branch of School Hygiene," pointing out that the objects to be aimed at were to raise the standard of health, and hence increase the power of resistance to the organisms of disease, to assist in the treatment of distinctly pathological conditions, and to aid the development of the child in structure and function. Mr. J. F. Butler-Hogan, B.A., M.D., read a paper on "School Hygiene: a Plea for the Compulsory Teaching of the Elementary Principles of Hygiene in all Public Schools, and a brief Outline of what might be taught." Other papers dealt with the importance of "hygienic school desks and seats."

In reply to Mr. Wharton, M.P., who asked for the relative proportion of the cost of elementary education in England and Wales borne by local and Imperial funds during the last three years, Sir William Anson stated that the total expenditure, so far as elementary education, otherwise than for buildings and for administration, is concerned, was, for 1899–1900, £12,045,000; in 1900–1901 it was £12,557,000; and, in 1901–1902, £13,005,000. The Board have at present no collected figures as to the amounts expended by Local Education Authorities since the Act of 1902 came into operation, but the Imperial contribution has been increased by £1,248,000. If, says Sir William Anson, the expenditure from other than Imperial sources were remaining the same, the proportion of the total expenditure borne by Imperial funds would, owing to the increase of the Exchequer grant given in 1902, have been increased from 63·6 per cent. to 73·2, and the burden to be borne by local funds would have been decreased from 36·4 per cent. to 26·8, so that the Exchequer would be bearing practically three-quarters of the burden of maintenance of public elementary schools. As, however, most of the Local Authorities are quite properly improving the education in their schools, and expending somewhat larger sums than were before spent from sources other than Imperial funds, it is not possible at present to state the exact proportion now borne by Imperial and local funds respectively on maintenance, but there can be no doubt that the Exchequer still bears considerably the larger share of this burden.

The British Science Guild, of which Sir Norman Lockyer is President, has been formed, on a suggestion he threw out in his Presidential address to the British Association last year, to insist on the importance of applying scientific methods to every branch of the affairs of the nation. The objects are thus enumerated:

(1) To bring together as members of the Guild all those throughout the Empire interested in science and scientific method, in order, by joint action, to convince the people, by means of publications and meetings, of the necessity of applying the methods of science to all branches of human endeavour, and thus to further the progress and increase the welfare of the Empire.

(2) To bring before the Government the scientific aspects of all matters affecting the national welfare.

(3) To promote and extend the application of scientific principles to industrial and general purposes.

(4) To promote scientific education by encouraging the support of Universities and other institutions where the bounds of science are extended or where new applications of science are devised.

Diplomas in Education have been issued by the Delegacy for the Training of Secondary Teachers, Oxford, to the following persons:—A. D. H. Allan, M.A. Oriel; C. I. Evans, B.A. St. John's; A. G. Jenkinson, M.A. Brasenose; C. H. Lea, B.A. non-collegiate; W. G. S. Thornton, B.A. Balliol; F. W. Keeling, B.A. London University; H. B. Widdows, M.A. Queens' College, Cambridge; Charlotte S. Banks, Royal Holloway College; Dorothy C. Earle and Mary Hart Davis, Newnham College, Cambridge; Catherine Hawthorne, B.A. London University (University College, Aberystwyth); Ethel M. Hinton, B.A. London University (Royal Holloway College and Westfield College); Janet Vernon Harcourt, Girton College, Cambridge.

The summer vacation school at the Passmore Edwards Settlement, Tavistock Place, the idea of which was borrowed from the United States by Mrs. Humphry Ward, and first put in operation here in 1902, was successfully reopened this year. The first day's attendance was nearly nine hundred. The children are taught to play with energy and good temper, and get some inkling of housewifery and cookery (for girls), woodwork (for boys), ambulance work, Nature study, brush work, drawing, and swimming.

At Manchester a country school for town children is in course of organization. It is to be open from April to September (excepting the midsummer holiday period), and will give some eight hundred children a fortnight in the country. A corrugated-iron building, with dormitories and dining-hall to accommodate eighty children, has been erected at Knolls Green, in Cheshire, on about four acres of land, with the sanction and approval of the Education Authorities. Relays of children, boys and girls alternately, may be sent with their teachers from the Manchester elementary schools for two weeks. The children will carry on a modification of their ordinary school work, giving much time to object-lessons on their rambles, to gardening, and to open-air pursuits of varied kinds. By permission of the Board of Education the children's attendances will be counted in their own schools. A trained nurse has been appointed matron. The total cost per child for the two weeks, including railway fare, will be 7s.

Last year the experiment was tried of a three weeks' course of lectures on Biblical study for women during vacation term at Cambridge. The success of the experiment led the promoters of the scheme to repeat it this year at Oxford, where even greater success was achieved, and it is hoped that the Vacation Term is now an established institution and will be held every summer alternately at Oxford and Cambridge. The students (about two hundred) stayed for the most part at Lady Margaret Hall, Somerville College, and St. Hugh's Hall, and the lectures, which were given at the High School, Banbury Road, were throughout of great interest. The lecturers included Prof. Ramsay (Aberdeen), Dr. Charles, Sir Oliver Lodge, Dr. Buchanan Gray, Prof. Percy Gardner, and the Rev. W. B. Inge. The three weeks' term, which began on July 25 and ended on August 13, was so arranged that such students as could not remain for the whole time might go for any one of the three weeks and yet hear complete courses.

The Board of Education have received from the French Government a notification of their intention to attach as temporary assistants to certain *lycées* a number of young English secondary-school masters, or intending schoolmasters who have undergone an approved course of training and hold some recognized diploma for secondary teachers. These assistants will not take any share in the regular work of the school, but will conduct small conversation groups under the direction of the *proviseur*. Two hours' work a day will be expected of them. The rest of their time will be at the disposal of the assistants, who will thus be able to pursue their own studies. The assistants will receive no remuneration, but will be boarded and lodged at the institutions to which they are attached. Candidates for such posts should forward their application to the Director of Special Inquiries and Reports, St. Stephen's House, Cannon Row, S.W., enclosing testimonials as to character, capacity, and teaching experience, and a medical certificate of health. It will also be necessary for each candidate to have a personal interview with the Director at his office, and, should any candidate have any special desire as to date of interview, it would be well to indicate it when forwarding the application.

The newly formed British Weights and Measures Association has for its objects the defence, standardization, and simplification of British weights and measures. The society will take up

Digitized by Google

a strongly antagonistic attitude to the enforcing of the metre as a British standard, and it proposes eventually to introduce simplified and scientifically related weights and measures based upon existing British measures. Offices have been taken at 25 Victoria Street, Westminster, and Mr. George Moores, F.S.S., of Manchester, has been appointed Secretary.

At a recent meeting of the Joint Committees of the four Inns of Court and of the Law Society, appointed to consider proposals for the establishment of a School of Law, the following resolution, moved by Lord Macnaghten and seconded by Lord Lindley, was passed:—

That the Committees recommend to their several Inns of Court and to the Law Society that they join in a petition to His Majesty, in the form approved by the Committees, for a charter for a School of Law in the terms of the draft charter approved by the Committees.

Scholarships have been awarded at King's School, Canterbury, as follows:—Entrance Scholarships: H. Townshend (Dover College Junior School, and King's School, for mathematics), C. B. Simeon (King's School), B. H. Matheson (Mr. Mansfield, Bracknell), E. B. Nelson (Mr. Reynolds, Southbourne), L. C. Watson (Mr. Brooksbank, Aysgarth), J. Kettelwell (Mr. Olive, Wimbledon). House Scholarships: C. F. Freeborn (Mr. Jelf, Folkestone), D. K. S. Grant (Mr. Clark, Winchester), F. Kidd (Mr. Hardie Scott, South Croydon). Junior Foundation Scholarships: R. M. Gent, E. C. Linton, C. J. N. Adams, H. P. Sparling (for mathematics), all of the King's School. Probationer Foundation Scholarships: H. Townshend (Dover College Junior School and King's School), C. J. Galpin (Junior King's School), L. C. Watson (Mr. Brooksbank, Aysgarth), P. H. Nixon (King's School), B. H. Matheson (Mr. Mansfield, Bracknell), H. Parsons (Mr. Olive, Wimbledon), F. H. E. Martin (Mr. Martin, St. Leonards-on-Sea).

The Committee of Management of the Advanced Historical Teaching Fund state in their second report that the funds still in hand will only just provide for the continuation of the courses to the end of the third year (April, 1905). The Committee earnestly hope that in some way the excellent work now begun may be not only continued but further developed, and that a permanent school of training in historical research, embracing a much larger scope of study than is possible at present, may be established on a sound basis. What they are aiming at is a "post-graduate" school. Is there really no such thing "at present existing at any University in Great Britain"?

Yet another attempt has been made for the establishment of a Natural History Museum in Birmingham. A memorial on the subject has been addressed to the Lord Mayor, signed by representatives of the leading educational institutions, including the Principal of the University, the Chairman of the Education Committee, the Chairman of the Municipal School of Art Committee, the Head Master of King Edward's School, and the Head Master of the Municipal School of Art. It is felt that the acquisition by the Corporation of a large and central site opposite the School of Art, on which it is proposed to erect a building for the accommodation of certain municipal departments which have outgrown their present premises, affords an opportunity for including in the building scheme a natural history museum.

The technical education movement in Northumberland, which is encouraged by the County Council, is producing (says the *Daily News*) some wonderful results. In many colliery villages there are mining classes in the evenings, with the result that large numbers of workmen have qualified for the First Class Certificates of Head Managers of Pits, and a considerable number of workmen still engaged with the pick and shovel have their Managers' Certificates.

Much regret is felt for the premature death of Dr. Gurney (August 13) on the Alps near Arolla, between the Roussette and Mount Dolin, apparently by an accidental fall of some 90 feet. To the public life of the North of England Dr. Gurney will be a very real loss, for, since he went to Newcastle-on-Tyne in succession to Dr. Garnett (now the L.C.C. educational expert), his influence has extended far beyond the doors of the College of Science. He was essentially a vigorous and breezy personality, with something of the sternness of the true pedagogue in class, but with an abundant flow of good spirits once the cap and gown were off. His rule at the Durham College of Science has been sound, and has greatly advanced the interests of an institution which is doing much to foster and develop the mechanical and engineering talent of Tyneside, and which promises ultimately to be the greatest strength of the old University of Durham.

We regret to record the death of Canon Charles Evans, in his eighty-first year. Fellow of Trinity, assistant master at Rugby under Dr. Tait, Head Master of Clifton (1862) and of King Edward's, Birmingham (1862–1872), he was one of the foremost schoolmasters of his time. His tenure of the King Edward head mastership was eminently distinguished.

UNIVERSITIES AND COLLEGES.

London. The Senate of the University and the Council of University College have now agreed on the text of the Bill for the incorporation of the college in the University. The Senate has decided that in future internal and external candidates for the Bachelor of Science Honours degree in botany, chemistry, physics, physiology, and zoology must produce note-books of their laboratory work, which may include a record of any research work in which they have participated. The entries in such note-books must be duly certified by the teacher (if any) and will be taken into account in estimating the qualifications of candidates, provided only that the research work be not allowed to take the place of such sound general knowledge as should be required from an Honours candidate.

In the case of candidates taking the School Examination (Matriculation or Higher Standard) with a view to School-leaving Certificates, the production of a birth certificate by each candidate will not now be insisted upon, but a declaration of the age of each candidate by the head master or head mistress will be accepted as sufficient.

The Preliminary Scientific Examination will, in future, be designated "The Preliminary Scientific Examination, Part I.," and the examination in Organic Chemistry for Medical Students will be designated "The Preliminary Scientific Examination, Part II." Six months must elapse between the examinations. Part II. will be held in January and in July. Medical students (internal and external) who have passed in Physics, or Chemistry, or Botany and Zoology, at the Final B.Sc. Examination, will be exempted from examination in the subjects they have already passed (but no exemption in Biology will be granted to such as have not passed in Botany and in Zoology, either at an Intermediate Examination in Science or Agriculture, or at the Final B.Sc. Examination). Such students, if they have passed in Chemistry at the B.Sc. Examination, will be excused Inorganic Chemistry in Part I. and also Part II. Candidates (internal and external) must take either Inorganic Chemistry and Physics together, or Biology, or all three subjects; but, if they fail in any one, they may be re-examined in that subject taken alone.

Revised Regulations for the B.Sc. degree by Research have been issued (*Gazette*, August 6).

Manchester. The first prospectus of the Faculty of Theology of the University of Manchester has just been issued. Lectures begin on October 4. There are no tests for teachers or students, but "nothing will be introduced in the matter or mode of education in reference to any religious subject which shall be reasonably offensive to the conscience of any student." In addition to the teaching within the walls of the University, lectures in seven of the leading Manchester theological colleges will also be recognized to the extent of about half of the course. Besides Baptist, Independent, Moravian, Unitarian, and Wesleyan colleges, these include the Scholæ Episcopi and Ordsall Hall, the new theological school for graduates, which will be re-opened in October under the direction of the Bishop. There are twelve professors and lecturers, the majority of whom are also teachers in their respective denominational colleges. Among the members of the Advisory Board are the Bishop and Dean of Manchester and Prof. Sanday, of Oxford. A series of popular and inaugural lectures on Tuesday evenings will introduce the infant Faculty to the Manchester public.

Sheffield. Of the £170,000 required nearly £110,000 has been collected or promised. The Duke of Norfolk, who is named as the Chancellor of the new University, has given £10,000. All classes of the community have contributed

Digitized by Google

freely. For example, the elementary-school teachers of Sheffield have undertaken to raise £1,000. During the last few months meetings have been held to rouse interest in the scheme among the workmen in the big works: the result has been the starting of a workmen's fund, made up of small weekly contributions. The women of the city have formed a Committee to raise £10,000 to endow a Chair. The claims of the scheme are being advocated in the large towns near Sheffield, such as Rotherham, Doncaster, Barnsley, and Chesterfield, on the support of which the stability of the University largely depends. It is essential to the success of the scheme that the public grants should be largely increased. The Sheffield City Council now supports the Technical Department of the College to the extent of about £5,000 a year, but has promised, if the charter is granted, to make a yearly contribution to the Arts, Science, and Medical Departments of a sum not exceeding the revenue of a penny rate, which is expected to produce some £6,700 a year, or about £5,000 more than the Council now pays to those departments. The West Riding County Council have set aside £6,000 a year for the Universities in Yorkshire. This sum has not yet been divided between Leeds and Sheffield. In addition, it is anticipated that the Derbyshire County Council, as well as some of the surrounding Local Authorities, will come to the rescue.

Belfast—Queen's College.

The report of Queen's College, Belfast, for 1903–4 states that there has been a continued and noteworthy advance in the number of students. The numbers of entrants in Medicine were higher than in any other medical school in Ireland with the single exception of the Catholic University School of Medicine, Dublin, which showed an entrance of three more students than those attending the Queen's College, Belfast. In the School of Law the numbers attending during the session just ended were exactly double those of the previous year. The School of Engineering also showed an increase. The number of lady students has still further advanced, the total number enrolled being 59. These were distributed over the Faculties of Arts, Medicine, Law, and Music, and not a few of them gained valuable scholarships and prizes. It is pointed out that this was the first University College in Ireland to admit women to its class-rooms. The Council has instituted a series of new scholarships for the special encouragement of modern literary studies. (See "Current Events—Scholarships.")

Cork—Queen's College.

The report on Queen's College, Cork, for 1903–4 contains several complaints. Dr. Moore, Lecturer in Pathology, has been very successful in teaching this subject, and devotes his whole time to it; yet he receives no salary. Again, there is a decided indisposition on the part of medical students to read for Honours in the Royal University, because the proportion of medical examiners from Cork is inadequate (one from Cork to three each from Belfast and Dublin). It is not suggested that the Cork students are treated unfairly, but that they are disheartened by this arrangement. Once more, the claims of the college to an examinership in chemistry in the Royal University have not yet been satisfied. However, the progress of the college was marked. The number of matriculated and non-matriculated students during the session 1903–4 is as follows, the figures in parentheses being those for the previous session:—Roman Catholics, 143 (120); Established Church and Church of Ireland, 66 (57); Presbyterian, 5 (4); Wesleyan, 9 (7); other denominations, 2 (2)—total, 225 (190).

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—ED. *E.T.*]

HOW TO ADVERTISE.

To the Editor of "The Educational Times."

SIR,—I should be much obliged for advice based on personal experience as to how far it is useful to advertise one's school in any of the many contemporary directories, commercial and other—such as the *London and County Commercial Directory*, *Blackie's Counties Directory*—and which are to be especially recommended.—I am, Sir, &c., A. B.

August, 1904.

PHILIPS' NEW LARGE PRINT GLOBES

SIZE — 14 INCHES DIAMETER.

MARVELS OF CHEAPNESS.

Specially prepared for use in Schools and Colleges.

PHYSICAL COLOURING.

An entirely new up-to-date Globe specially prepared for use in Schools and Colleges. The general PHYSICAL FEATURES of countries are graphically shown by means of contours printed in different shades of green and brown to correspond with Philips' Comparative Series of Large Schoolroom Maps. The chief political divisions of the World are clearly shown by red lines. LAKES AND SEAS printed in pale blue colour. OCEAN CURRENTS are shown by means of white lines, with arrows indicating direction.

POLITICAL COLOURING.

All the principal LAKES AND SEAS are clearly printed in a light blue colour. The great POLITICAL DIVISIONS of continents and countries (and the latest changes in South Africa) are carefully distinguished, and minor divisions and States shown by red lines. BRITISH COLONIES are printed in a bright pink, and the Colonial Possessions of Continental Countries are all indicated by colours. Main STEAMER ROUTES with distances in nautical miles, British submarine cables, and through lines of railway connecting seaports are shown. All the names are extremely legible.

PRICES. Coloured Physically or Politically. { **On Metal Stand, Bronzed, with inclined axis, *17s. 6d.***
Ditto, with half graduated Meridian, *21s.*

These prices include the careful packing of Globe in strong wooden box for transit by rail, &c.

Illustrated Catalogue of Maps, Globes, and Atlases on application.

MESSRS. RIVINGTONS LIST

RIVINGTONS' COMPLETE COURSE OF ENGLISH HISTORY TEACHING FOR SCHOOLS, &c.

A First History of England.
By Mrs. CYRIL RANSOME. Small fcap. 8vo, with numerous Illustrations. 2s. 6d.

An Elementary History of England.
By CYRIL RANSOME, M.A. Small fcap. 8vo, with Maps and Plans. 1s. 9d.

A Class Book of English History. For Middle Forms of Schools, Training Colleges, Intermediate and Oxford and Cambridge Local Examinations, the Central Welsh Board, Irish Intermediate, Scottish Leaving Certificates, and other similar Examinations, &c. By ARTHUR HASSALL, M.A., Student of Christ Church, Oxford. Crown 8vo, 3s. 6d.

An Advanced History of England.
For Upper Forms of Schools and Colleges. By CYRIL RANSOME, M.A.
1 Vol., crown 8vo, with Maps and Plans, 7s. 6d.; or in Two Periods:—
Period I.—To Elizabeth, 1603. 4s.
Period II.—To Victoria, 1895. 4s.

AN ELEMENTARY HISTORY OF GREECE.
By C. W. C. OMAN, M.A., Deputy Professor of Modern History in the University of Oxford. Fcap. 8vo, with Maps and Plans, 2s.

A SHORT HISTORY OF GREECE.
For the use of Middle Forms of Schools. By W. S. ROBINSON, M.A.
Small fcap. 8vo, with Maps and Plans, 3s.

A SHORT HISTORY OF ROME.
For the use of Middle Forms of Schools. By W. S. ROBINSON, M.A. Small fcap. 8vo, with Maps and Plans, 3s. 6d.

A HISTORY OF ROME.
For the use of Upper Forms of Schools. By J. L. MYRES, M.A., Senior Student and Tutor of Christ Church, Oxford.
Crown 8vo, with Maps, Plans, &c., 5s.

OUTLINES OF ROMAN HISTORY.
By H. F. PELHAM, M.A., President of Trinity College and Camden Professor of Ancient History in the University of Oxford.
With Maps. Crown 8vo, 6s.

RIVINGTONS' TEXT-BOOKS OF ENGLISH HISTORY. For the use of Schools in which Special Subjects in English History are being taught. With Maps, Plans, Genealogies, Analyses, Lists of Dates, &c. By ARTHUR HASSALL, M.A., Editor of "Periods of European History," and Author of "A Class Book of English History."
Small fcap. 8vo, in Nine Volumes, 2s. each.

It is hoped that these text-books will prove suitable for the Middle and Upper Forms of schools, for Local Examination purposes, and for other Examinations in England, Scotland, Ireland, Wales, &c. The volumes are sufficiently long to avoid the danger of being mere summaries of facts, and at the same time are not so lengthy as to overweight the pupils with more than they have time to assimilate. The arrangement of the matter in each volume will not only appeal to the eye of the learner, but will also be found to stimulate the memory.

Volume V.—The Tudor Dynasty. 1485–1603. [*Published.*

Volume IX.—War and Reform. 1789–1832. [*In the Press.*

FRENCH BOOKS ON THE NEW METHOD.

A FIRST BOOK OF FRENCH ORAL TEACHING. For use in Schools. By C. V. CALVERT, Assistant Master at the Haberdashers' Aske's Schools, Cricklewood. Edited by W. G. HARTOG, B.A. Lond. Crown 8vo, with Illustrations. 2s. Just ready. Four of the Illustrations enlarged for the blackboard, to be had separately, mounted on linen, 3s. 6d. each net.

MELANGES FRANCAIS. An Elementary Reader for the First and Second Years of French Instruction. By W. G. HARTOG, B.A. Lond., Lecturer in French at University College, London. With 12 Full-Page Illustrations. Crown 8vo, 2s. 6d.

In use at Cambridge, Edinburgh, Leeds, Salisbury, Nottingham, &c., and recommended by the London County Council for examinations conducted by the University of London.

"A splendid companion to the same editor's 'Lectures et Conversations,' but intended for younger pupils. The selections are admirable in point of taste and variety. A very special and commendable feature is the series of suggestive questions which are given in the appendix on each of the selections. The illustrations by Miss Williams are charming."—*Educational News.*

LECTURES ET CONVERSATIONS FRANCAISES. A Reader for Middle and Upper Forms, containing subjects forming a suitable basis for French Conversation. By W. G. HARTOG. With a Map of France and a Plan of Paris. Crown 8vo, 2s. 6d.

In use at Cambridge, Manchester, St. Andrews, Hull, Salisbury, Exeter, Bangor, Edinburgh, Tonbridge, &c., and recommended by the London County Council for examinations conducted by the University of London.

"Mr. Hartog's book meets a double requirement. In the extracts from French authors he gives abundant material for conversation. . . . The second part contains sets of well-constructed questions in French on the text, and on matters incidental thereto. . . . A clear map of France and a plan of Paris complete this admirable little book."—*Educational News.*

EXERCISES IN FRENCH PROSE. For Middle Forms of Schools. Adapted for Continuous Prose Writing and Oral Teaching. With Vocabularies. By E. G. H. NORTH, M.A., and L. G. D'A. HUNTINGTON, B.A., Assistant Masters at Wellington College. Crown 8vo, 2s. 6d. A Key, 5s. 2d. net, post free (from the Publishers only).

In use at Rugby, Charterhouse, Merchant Taylors', Bedford, Wellington College, Bath, Oxford, Edinburgh, Bury, Belfast, Sedbergh, &c.

A THREE YEARS' COURSE OF FRENCH PROSE EXERCISE BOOKS. Each containing Exercises, Lessons, and Vocabularies. By G. H. WADE, M.A., Head Master of Wallingford Grammar School, formerly Assistant Master at Dulwich College.

The books aim at a careful and systematic exercise of the pupil from the simplest sentences up to the writing of continuous prose, in a manner which will be useful in classes in schools, as well as to those preparing for the Cambridge Locals and similar examinations.

1. **A First Year French Writer.** Mainly occupied with Accidence and the Syntax of the Simple Sentence. Crown 8vo, 2s. 6d.
A Key, 5s. 2d. net (from the Publishers only).

2. **A Second Year French Writer.** This contains the ordinary uses of Compound Sentences and the Infinitive. Crown 8vo, 3s. 6d.
A Key, 5s. 2d. net (from the Publishers only).

3. **A Third Year French Writer.** This also contains a Summary of the uses of the Prepositions drawn from the analysis of contemporary writers. Crown 8vo, 3s. 6d. [*Just published.*

FRENCH UNSEENS. Edited by the Rev. S. E. LONGLAND, M.A., Assistant Master at Wellington College.

Junior Course.—In Two Books, of equal difficulty, of the standard of the Cambridge Junior Local Examinations. Small fcap. 8vo, 6d. each. [*Book I. just published.*

Senior Course.—In Two Books, of equal difficulty, of the standard of the Cambridge Senior Local Examinations, and of the Oxford and Cambridge Junior Joint Board. Small fcap. 8vo, 8d. each. [*Book I. just published.*

A NEW SCHOOL ARITHMETIC.

ARITHMETICAL TYPES AND EXAMPLES, consisting of fully worked out Types (with rough work shown) and Sets of Examples. By W. G. BORCHARDT, M.A., B.Sc., Assistant Master at Cheltenham College. Crown 8vo, 3s. 6d.; or the Examples separately, 3s.

Copies may be had with and without Answers.

This volume is intended to stand between the complete text-book of Arithmetic and the mere compilation of examples. Each Exercise is preceded by a model worked out according to methods approved by modern teachers, and explanatory notes are added where necessary; but the proof of the method, in many cases, is purposely left to be supplied by the teacher.

"An eminently successful exposition."—*Mathematical Gazette.*

"We heartily wish that many may be found to adopt the book, which, both in character and arrangement, seems to us to be a step in advance."—*Guardian.*

"Provides good and ample practice in arithmetical work."—*School World.*

"The exercises are numerous and well graded."—*Nature.*

"This is exactly the book required by preparatory mathematical masters to enable them to carry out arithmetical teaching as suggested by the Mathematical Association."—*Preparatory Schools Review.*

RIVINGTONS' JUNIOR MATHEMATICS.
Adapted to the Preliminary, Junior, and Senior Cambridge and Oxford Local Examinations, to the Central Welsh Board, Irish Intermediate, Scottish Leaving Certificates, and other similar Examinations. By H. G. WILLIS, M.A., Senior Mathematical Master at Manchester Grammar School.

The Books are divided into Two Parts, each containing Three Sets of Two parallel Series, One Series comprising a Term's work.

Algebra. Part I. Without Answers, 1s.; with Answers, 1s. 4d.; Answers only, 4d.

CONTENTS: Evaluation — Addition, Subtraction, Multiplication, Division — Brackets — Equations — Problems — Factors, Highest Common Factor, Quadratics—Fractions—Graphs.

Algebra. Part II. Without Answers, 1s.; with Answers, 1s. 4d.; Answers only, 4d.

CONTENTS: Factors, Highest Common Factor, Lowest Common Multiple—Fractions—Equations of First and Second Degree—Symmetry—Involution, Evolution—Indices, Surds—Ratio, Proportion, Variation—Progressions—Graphs—Logarithms.

Parts I. and II., in One Volume, complete, 2s. without Answers; 2s. 6d. with Answers; Answers only, complete in One Volume, 6d.

Arithmetic. Part I. Without Answers, 1s.; with Answers, 1s. 4d.; Answers only, 4d.

CONTENTS: Reduction — Compound Addition — Subtraction—Multiplication—Division—Parcels, Bills—Factors—Greatest Common Measure—Least Common Multiple — Fractions—Practice—Proportion — Simple Interest—Decimals—Tables.

Arithmetic. Part II. Without Answers, 1s.; with Answers, 1s. 4d.; Answers only, 4d.

CONTENTS: Factors, Greatest Common Measure—Least Common Multiple — Fractions — Decimals—Practice — Proportion — Interest, Discount—Stocks—Metric System—Areas, Volumes—Square, Cube Root — Approximations — Fellowship, Mixtures, Races—Permutations, Combinations—Probabilities—Graphs—Tables.

AN INTRODUCTION TO THE STUDY OF GEOMETRY. By A. J. PRESSLAND, M.A., F.R.S.E., Master at the Edinburgh Academy.
Crown 8vo. With Diagrams. 1s.

GEOMETRICAL DRAWING.
By A. J. PRESSLAND, M.A., F.R.S.E.
Crown 8vo, 2s. 6d.

AN INTRODUCTORY HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TILL THE YEAR 1832.

By C. R. L. FLETCHER, M.A.,

Fellow of Magdalen College, Oxford.

Part I. From the Earliest Times to the end of the Middle Ages. With Maps. Demy 8vo, 7s. 6d. [*Just Published.*

SOME PRESS OPINIONS.

"This is eminently history as it should be written."—*Times.*

"This is really an introductory history in the best sense. . . . It is entertaining with that good sort of entertainment which comes of a bright style, some grave irony, and a great deal of clear knowledge."—*St. James's Gazette.*

"Mr. Fletcher has produced a most welcome and successful narrative."—*Daily News.*

AN INTRODUCTION TO METAL WORKING.

By J. C. PEARSON,

Technical Assistant to H.M. Inspector of Reformatory and Industrial Schools; Author of "Manual Instruction—Woodwork."

With 12 full-page Plates and nearly 100 Illustrations in the Text. Foolscap 8vo, 2s.

NOW READY. Fcap. 8vo, 1s. each.

A PRIMER OF PHILOSOPHY. By A. S. RAPPOPORT, Ph.D. With an Index. Fcap. 8vo, 1s.

The purpose of this book is to supply the beginner in Philosophy with a kind of Student's Guide to the problems of the science and the solutions which have been proposed.

THE USE OF WORDS. The Accidence of Grammar as it explains the Parts of Speech. By Miss GEORGINA KINNEAR. Fcap. 8vo, 1s.

The aim of this book is to teach grammar, and at the same time to stimulate an intelligent appreciation of the final end which is served by grammar-study, namely, to increase the power of expression and to ensure a correct use of the English tongue.

A PRIMER OF PHYSIOLOGY. By Prof. E. H. STARLING, F.R.S. Illustrated. Fcap. 8vo, 1s.

The author has endeavoured to present, with as few technical terms as possible, the leading ideas which make up present-day physiology. It has been found impossible to treat the subject without assuming, on the part of readers, an elementary knowledge of the main facts of chemistry and physics: but in any curriculum the study of these subjects should always precede the more difficult one of Physiology.

To be published shortly :—

A PRIMER OF BOTANY. By Prof. J. B. FARMER, F.R.S. Fcap. 8vo, 1s.

*** **Teachers wishing to examine copies of any of the above Books are invited to make application to Mr. Murray. Complete Educational Catalogue will be sent on application.**

* * *

THE Court of Common Council has accepted the offer of an anonymous donor to provide for one year a course of lectures by experts in the several branches of music, so as

Digitized by Google

to aid students of the Guildhall School going up to any of the Universities for a degree in Music.

Scholarships and Prizes.

THE Education Committee of the Victoria League offers 1 prize of £10, 3 prizes of £5 each, 2 prizes of £2. 10s. each, and 6 prizes of £1 each, for written lectures (about 3,000 words each) on the following subjects (the prizes to be awarded in December):—(1) Madras Presidency, (2) Bombay Presidency, (3) Calcutta and the Ganges, (4) North-West Frontier and the Punjab, (5) Egypt, (6) The Soudan, (7) Zanzibar, British East Africa, and Uganda, (8) Nigeria and the West African Colonies and Protectorates, (9) Quebec and Ontario, (10) Canadian Maritime Provinces and Newfoundland, (11) Manitoba and the North-West, (12) British Columbia. The lectures should be concisely and graphically written from personal knowledge of the country. The MSS. must be type-written, and should reach the Secretary of the Victoria League, Dacre House, Victoria Street, S.W., not later than November 1.

* * *

MAGDALEN COLLEGE, OXFORD, offers one or more demyships in History, and one or more demyships in Natural Science, £80 each. Examination begins December 13. Age not to exceed nineteen on December 21. Exhibitions may also be offered in the same subjects to candidates under twenty-one. No set books or subjects. Particulars on written application to the President, or to the Tutor in Natural Science.

* * *

MRS. WILLIAMSON, of Liverpool, has founded a bursary in the University of St. Andrews for a student for graduation in Honours, in memory of her late husband, Mr. Stephen Williamson, M.P. for St. Andrews District Burghs, 1860–65.

* * *

QUEEN'S COLLEGE, BELFAST, proposes to offer for competition, during the next three sessions, 12 scholarships in modern literary studies, £24 each for 1 year.

* * *

A RESEARCH STUDENTSHIP, £100 a year for 2 years, is offered by the London School of Economics and Political Science. Examination, October 11–12.

* * *

THE League of the Empire proposes to found 5 "Federal Scholarships"—2 of £50, 1 of £40, 2 of £30—tenable for three years at any recognized University in the Empire.

Appointments and Vacancies.

IN University College, London, Dr. Shuckburgh has been appointed Lecturer in Ancient History, and Mr. D. S. Maccoll Lecturer in the History of Fine Art.

Dr. F. J. Poynton has been appointed Sub-Dean of the Faculty of Medicine, in succession to Prof. Thane resigned. The Council have sent the following resolution to Prof. Thane:—

That the Council desire to place on record their sense of the great services which Prof. G. D. Thane has rendered to the College and to the Faculty of Medicine during the twenty-one years he has held the office of Sub-Dean to the Faculty of Medicine.

* * *

DR. WILLIAM OSLER, M.D., F.R.S., &c., Professor of Medicine in Johns Hopkins University, Baltimore, has been appointed Regius Professor of Medicine in the University of Oxford, in succession to Sir J. S. Burdon-Sanderson.

* * *

DR. T. W. RHYS-DAVIDS, Ph.D., LL.D., Professor of Pali and Buddhist Literature in University College, London (since 1882), Secretary to the Royal Asiatic Society (since 1887), and Fellow of the British Academy, has been appointed to the new Chair of Comparative Religion in the University of Manchester.

DR. J. LORRAIN SMITH, M.A., M.D. (Edin.), Professor of Pathology in Queen's College, Belfast, has been appointed to the Chair of Pathology and Pathological Anatomy in the University of Manchester.

* * *

THE Chair of Mathematics in Aberdeen University is vacant through the sudden death of the Rev. George Pirie, M.A., LL.D., formerly Fellow, Mathematical Lecturer, and Tutor of Queens', Cambridge.

* * *

IN the University of Leeds, the following appointments have been made:—

Mr. Charles Edwyn Vaughan, M.A., Professor of English Language and Literature in the Durham College of Science, Newcastle-on-Tyne (since 1899), to be Professor of English Language and Literature;

Dr. Albert S. Grünbaum, Lecturer in Experimental Medicine in Liverpool University and Director of the Liverpool Cancer Research, to be Professor of Pathology and Bacteriology, in place of Prof. Trevelyan, who retires in September;

Dr. George Wilson to be Lecturer in Civil Engineering; and

Miss Hannah Robertson, B.A., Head of the Training Department, Bedford College, London, to be Mistress of Method, in room of Miss Emmerson, resigned.

* * *

DR. WILLIAM PALMER WYNNE, D.Sc. (Lond.), F.R.S., F.I.C., senior Honorary Secretary of the Chemical Society and Professor of Chemistry in the School of Pharmacy of the Pharmaceutical Society, has been appointed to the Firth Chair of Chemistry in University College, Sheffield, in succession to Prof. Carleton Williams.

* * *

MR. MATTHEW A. PARKER, B.Sc., Glasgow, has been appointed Professor of Chemistry in Manitoba University.

* * *

SIR ROWLAND BLENNERHASSETT, Bart., LL.D. (R.U.I.), D.Sc. (Louv.), has resigned the Presidency of Queen's College, Cork, which he has held since 1897.

* * *

DR. ALFRED TINGLE has been appointed Professor of Chemistry at the University of Shantung.

* * *

DR. G. NORMAN MEACHEN, M.D., B.S. (Lond.), M.R.C.P., M.R.C.S., has been appointed Instructor and Lecturer in Physiology at the Morley Memorial College, Waterloo Bridge Road.

* * *

THE Principalship of the Durham College of Science is vacant by the death of the Rev. Henry Palin Gurney, M.A., Hon. D.C.L., who held the office since 1894.

* * *

FATHER HOOK, of Neath, has been appointed Principal of Holywell R.C. College.

* * *

MR. W. E. DALBY, M.A., B.Sc., M.I.C.E., M.I.M.E., Professor of Mechanical Engineering and Applied Mathematics at the City and Guilds Central Technical College, Finsbury, has been appointed Professor of Civil and Mechanical Engineering at the same college, in succession to Prof. W. C. Unwin, resigned.

* * *

MR. E. R. BURDON, B.A., Sidney, has been appointed Assistant Curator of the Botanical Museum, Cambridge.

* * *

DR. G. SENTER has been appointed Lecturer in Chemistry at St. Mary's Hospital Medical School.

* * *

MISS M. STOKES, Ph.D., has been appointed a Demonstrator in Botany in Manchester University.

THE head mastership of Fauconberge School is vacant through the sudden death of the Rev. Percy Elliott Bateman, M.A.

* * *

THE REV. FRANCIS G. CHANNON, M.A., Fellow of Corpus Christi College, Cambridge, and assistant missioner at the Corpus Christi Mission, Camberwell, has been appointed an Assistant Master at Eton.

* * *

MR. A. M'CAW, M.A., Head Master, Golspie Public School, has been appointed Principal of the Harrismith District Schools, Orange River Colony.

* * *

Mr. E. N. MARSHALL, house master and senior classical master at Loretto, has succeeded the Rev. W. E. Inchbald as Head Master of Queen Elizabeth's School, Kingston. Mr. Inchbald resigns after twenty years' tenure.

* * *

MR. E. H. BLAKENEY, M.A., Head Master of the Borlase School, Marlow, has been appointed Head Master of King's (Cathedral) School, Ely.

* * *

MR. GEORGE HARE, Head Master of Swaffham Grammar School, has been appointed Head Master of the Paston Grammar School, North Walsham, in succession to the Rev. Henry Wimble, M.A., resigned.

* * *

MR. T. W. HOPE, M.A. Trinity College, Cambridge, has been appointed second master at St. Olave's.

* * *

MR. ERNEST H. FORSYTH, M.A. (Aberd), classical master in Oban High School, has been appointed senior assistant classical master in Dundee High School; and

Mr. James S. Stalker, M.A. (St. Andr.), assistant master in Bo'ness Academy, has been appointed junior assistant classical master.

* * *

MR. JOHN F. ANDERSON, M.A. (Aberd.), recently assistant to the Professor of Logic in Aberdeen University, has been appointed Classical Master in Keith Schools.

Literary Items.

THE Clarendon Press will issue early in September the first eight volumes of a new series—the "Oxford Modern French Series," edited by Léon Delbos, M.A., Instructor in French in H.M.S. "Britannia." It will include narratives of travel, biographies, and essays, as well as dramas, romances, and short stories—all by writers of classical rank. The notes will deal mainly with literary and historical points. The series is primarily intended for fairly advanced students, but will also suit general readers. The price will range from 1s. 6d. to 2s. 6d. a volume.

* * *

ANGLERS will be glad to learn that a new edition of Mr. Earl Hodgson's "Trout-Fishing" will soon be issued by Messrs. A. & C. Black. It will contain a new chapter on "The Theory of the Dry-fly," and an appendix giving a list of dressings of the lures in "The Model Book of Flies," which, reproduced in colour by Mr. Mortimer Menpes, has attracted considerable attention.

* * *

MESSRS. DENT announce the early addition of seven fresh volumes to the "Temple Dramatists" series. Dekker's "Old Fortunatus" and Massinger's "A New Way to pay Old Debts" are to be issued at once, and the rest will follow in autumn.

* * *

MR. HENRY FROWDE will presently issue "The Preparation of the Child for Science," by Mrs. M. E. Boole, whose "Lectures on the Logic of Arithmetic" we recently noticed very favourably.

MR. G. W. BACON announces the completion of his new "Reference Atlas and Gazetteer of the British Isles," brought up to date, and including the results of the last census. It contains 70 double-page maps, 50 of which are devoted to England, besides diagrams and index.

* * *

MR. R. F. CHOLMELEY contributes to the *Independent Review* for August "A Complaint of Public Schools"—a biting and charming article. "Is it likely that the well-to-do classes of England will ever, in considerable numbers, take the trouble to look into the education of their children, or that, if they do, they will have the wit to find out what is wrong with it?"

* * *

WE congratulate *Occasional Papers*—"a magazine born into the world from a sheer love of literature rather than a desire for pecuniary profit"—on its fourth (July) number. Mr. James Baker contributes a rousing paper on "The Future of English Education" and Judge Willis a good critical appreciation of "The Youthful Burns."

* * *

A SUPPLEMENT to the June number of the *Educational Review* of Madras (London: Clive) contains the text of the Indian Universities Act, 1904, and the speeches on the Bill in the Legislative Council of the Viceroy.

* * *

IN the *Leisure Hour* for August, Mr. David Williamson gives a very interesting account of "A University built in a Year"—Wooster University, Ohio—with effective illustrations. The University had been burnt down in the end of 1901.

* * *

Child Life for July is a strong number, containing several excellent papers read before the Froebel Society. Prof. Sadler and Mr. Thiselton Mark are among the writers; and Mr. J. H. Badley discusses "Co-education in the Secondary School."

* * *

AT the London School of Economics and Political Science the Hutchinson Medal for the best piece of research during the year has been awarded to Miss C. A. J. Skeel, D.Lit., for her thesis on "The Council in the Marches of Wales: a Study in Local Government during the Sixteenth and Seventeenth Centuries."

General.

A NEW Technical Institute and Public Library has been opened at Eastbourne by the Duchess of Devonshire. The Duke of Devonshire gave the site, and Mr. Carnegie sent £10,000 towards the library.

* * *

ON occasion of the opening of a new Library at Keighley and the transfer of the Mechanics' Institute to the Corporation, the Duke of Devonshire received the freedom of the borough. Referring to the Education Act, he said:

In their infant and elementary schools they were able to secure for the children as good an education—and, he believed, a more practical education than—the children of the rich could have in the nursery or in the preparatory school; and, although, when they left the elementary school, their children might not be able to learn Latin and Greek or football or cricket at one of the great public schools, they would, at the municipal school—for the efficiency of which the corporations had now the responsibility—have the means of a training in their own language and literature—perhaps in some other foreign language, in some branch or branches of science, in some branches of art, and in some form of manual instruction—a training which would fit them, which would add as much in the form of strengthening their intellectual faculties and in the form of strengthening their characters in preparing them for the work of their future lives as was open to the children of the richest and the highest in the land. If that was not a time which had yet arrived, it was a time which, he confidently expected, was not far distant.

EDUCATIONAL SCIENCE AT CAMBRIDGE.

MEETING OF THE BRITISH ASSOCIATION.

BISHOP PERCIVAL'S PRESIDENTIAL ADDRESS.

THE Educational Science Section of the British Association, though but four years old, "has proved an infant Hercules, and already assumed a commanding position in the Association" (*Times*). The Bishop of Hereford (Dr. Percival) was President. In his presidential address, he referred to Plato's and Milton's definitions of "true education," and summed up the matter thus:

TRUE EDUCATION.

True education, then, aims at cultivating the highest and most efficient type of personality, men not only appropriately and technically equipped for their professional business, but endowed with the best gifts and inspired with high purposes, men who desire to follow the more excellent ways and to lead others in them, who love knowledge, truth, freedom, justice, in all the relations of life, whether individual or social, men marked by sense of duty and moral thoughtfulness, public spirit, and strength of character. Such an education is the true basis of individual and national welfare, and experience has abundantly shown how necessary this is to save men from distorted views of history, from wrong conceptions of patriotism and public duty, from mistaken aims and disastrous policy. Scientific consideration of the subject will of course deal largely with such details as the relative claims of the humanist and the realist, subjects and methods of instruction, the correlation of different grades of education, the adaptation of this or that system to special needs, and so forth; but through all this these fundamental requirements of the true education, as placarded before us by Plato or by Milton, must always hold the chief place, and all others must be kept in due and conscious subordination to these.

The element of personality being thus pre-eminently vital, there might be danger from rigid scientific treatment.

NO DANGER FROM SCIENTIFIC METHOD.

The most eminent psychologists, the critics told us, were beginning to recognize the danger, and they bid the educator beware of science which had a great deal to say about mental processes, but took too little account of the emotions and the will, and seemed inclined to forget that men were personalities, and not plants or trees or machines, and that boys would be boys. The combination of a living and fruitful experience, these critics asserted, with systematic, organized scientific methods and processes was more difficult in education than in any other realm of knowledge, because the data were so complicated and so subtle and elusive. For himself his attitude in the whole matter must of necessity be a humble one. For many years of his life he was a teacher, but entirely untrained, or rather self-taught, relying for instruction and guidance entirely on his own reading, observation, experience, and practice. As regards the critics whose views he had endeavoured to express, he said at once that he did not go with them, because he was profoundly convinced that our English education needed the influence of more light and more thought from every quarter, and especially from those who were familiar with scientific methods. Moreover, he hailed the application of scientific intelligence and scientific methods to this subject, because, looking back, he was profoundly conscious that he would have done his own educational work far less imperfectly if, in his youth, he had undergone any rational scientific illuminating preparation for it.

"The want of the idea of science, that is, of systematic knowledge," said Matthew Arnold, some thirty-six years ago, "is, as I have said again and again, the capital want at this moment of English education and English life. Our civil organization (including our education) still remains what time and chance have made it." It is a surprising thing, said Dr. Percival, that, in an age of unusually rapid scientific development, this should be, in the main, still true of a great part of our English educational system.

HOW WE LAG BEHIND.

There is the lack of any systematic preparation for the business of teaching which still prevails throughout our middle and upper class education, although here in Cambridge and in Oxford some excellent pioneer work is being done in the training of teachers. There is the general lack of interest in education still so noticeable in a great deal of English society of all grades, the spirit of indifference to it, and even the tendency to depreciate the intellectual life. There is the excessive influence of tradition and routine on our great schools and universities, and in some quarters an inert or suspicious conservatism. There is throughout our middle-class education a state bordering on chaos, a country largely unexplored, a mixture of things good and bad, involving a vast amount of wasted opportunity and undeveloped faculty. Even in elementary education, which has received the largest share of public attention, there is much that needs to be done in a more thoughtful and scientific spirit. Party politics have to be eliminated as far as possible, especially ecclesiastical politics. The fitness of a great deal of the teaching to the special needs and requirements of the children has to be considered afresh. The tendency to overlook the interests and the attainments of each individual child has to be checked. Much, it is true, had been done in almost every part of the educational field during the last half century, but not nearly so much as ardent friends of education anticipated forty years ago. I have already quoted some significant words from Mr. Arnold's illuminating report on the schools and Universities of the Continent as he saw them thirty-seven years ago. If that report had been turned to immediate practical account at the time, if some English statesman, like Wilhelm von Humboldt, had been enabled with a free hand to take up and give effect to Mr. Arnold's chief suggestions, as Humboldt and his colleagues gave effect to their ideas in Prussia in the years 1808 onwards, the advantage to our country to-day would have been incalculable.

Turning to practical problems confronting us to-day, the Bishop first dealt with

THE PROBLEM OF PHYSICAL HEALTH.

The growth of crowded city populations and the conditions under which multitudes have for at least two generations been growing up and passing their lives in our great cities has set us face to face with the very serious preliminary problem of physical health. On the one hand, in our absent-minded way, we have allowed these generations of town-dwellers, to say nothing of rural villagers, to grow up and live under insanitary conditions which have inevitably produced a physically degenerate, enfeebled, and neurotic race of men and women. On the other hand, in the upper and middle classes, we have been sedulously cultivating the taste for physical exercises, outdoor life, athletics, and sport, thinking nothing of such importance as the development of the body, admiring nothing so much as bodily prowess; carrying all this to such an extent that a natural and wholesome use of athletic exercise has been fostered into a sort of fashionable athleticism, with all its parasitic professionalism, possessing both soul and body. Are we not then in some danger of drifting into the ways of the Greeks, not in their best days, but in their decadence, and of the Romans under the demoralizing influences of the Empire?

With regard to the elementary school, our system does too little to draw out and stimulate the faculties or to form the tastes of each individual child.

ELEMENTARY EDUCATION.

Classes are still, in many cases, far too large. The system of block grants, being inadequately safeguarded or supplemented by inducements to individual children to apply and prepare for certificates of merit or proficiency, however attractive it may be to inspectors and teachers, needs to be very carefully watched in the interests of individual children. The individual child requires the hope and stimulus of some personal recognition or distinction if its faculties are to be fully roused and its tastes properly cultivated. Moreover, the aid of scientific thought and experience is needed to bring both the subjects and methods of instruction into closer and more vital relationship with the environment of the children and with their practical requirements, and more weight has to be given to specific ethical teaching—that moral and spiritual training day by day which has for its end the development and strengthening of character and taste and issues in conduct, which is the greater part of life. And, seeing that it is of the essence of any rational or scientific system to avoid needless waste, it is time that our elementary education should no longer be left in its absurdly truncated condition, which allows a child's education to be stopped abruptly and finally at or about the age of twelve, when, in the nature of things, it should be only beginning. As things are at present, just when the parent of the upper classes is anxiously considering what school would be the best for his son, a vast number of the children of the poorer classes are left by the State to drift out into a wilderness where all things are forgotten. In this connexion, however, it is due to the Board of Education to take note of the reminders lately issued in the introduction to the new Code and the memorandum prefixed to the Regulations for the Training of Teachers.

In the sphere of secondary education there is much greater need of careful study and experienced guidance.

SECONDARY EDUCATION.

Our secondary education has by the Act of 1902 been handed over very largely to County Councils, excellent but heterogeneous bodies, and, for the most part, not only ignorant of educational needs, methods, and possibilities, but quite unaccustomed to their practical consideration—altogether unprepared and untrained for the responsible work now thrown upon them, and hampered by their besetting fear of the ratepayers. These County Authorities needed first of all to be themselves instructed and persuaded as to the right subjects for their schools, the co-ordination or proportion of subjects in any scheme to be encouraged, the methods of instruction, the sort of teachers to be appointed, the wisdom of spending public money on good education,

Digitized by Google

as exemplified in other countries, like Germany, Switzerland, the United States, Denmark. In our rural districts, at all events, it might be said further that one of our first needs was to persuade the Local Authorities by some convincing proof that expenditure on popular education higher than elementary was a wise economy, and that their bread cast on educational waters would come back to them, not after many days, but very soon, and in their own homes. It would greatly expedite progress if the Government could and would offer more liberal secondary education grants to be earned by efficient schools, and initial grants towards buildings and scientific equipment, to be met by contributions from local rates or other local sources, public or private. . . . It would also stimulate our Local Educational Authorities if they could be more fully informed as to the practical advantages which had been derived from a practical system of popular education in such a country as the United States of America; and still more if they had set plainly before them the wonderful results derived by a poor country like Denmark during the last twenty-five years, and in the face of every disadvantage, from the system of education initiated by Bishop Grundtvig and taken up by the Government. The need of our middle classes, especially that of the farmer and tradesmen classes, was very pressing.

As for the public schools and the preparatory schools behind them (which "have now assumed a definite place in secondary education"):

Preparatory and Public Schools.

Some of the preparatory schools are very good, so far as the conditions under which they work admit of excellence; in others there is much room for improvement. Seeing how grave are the considerations involved, one of the things needed for the general improvement of our secondary education is that every private school, of whatever kind, be liable to public inspection and public report thereon; that a licence be required for every such school; and that the staff and their qualifications, and the remuneration given to each of them, the sanitary condition, suitability, and educational equipment of the premises, all be considered in connexion with the giving or withholding of a licence. As regards the curriculum, the subjects taught, and the proportion of time allotted to each, it has to be borne in mind that the schools are not free agents, but are dependent on the requirements of the entrance examination at the public schools they supply; just as those schools in their turn are dependent on the requirements of the university to which they send their pupils. As regards the public schools themselves, the points that invite attention would seem to be such as the following:—There is undoubtedly a great deal of waste owing to the poor teaching of untrained masters, who in some cases cannot even maintain reasonable discipline, and in many more have no real knowledge or mastery of the best methods of teaching their subject, be it linguistic, or historical, or literary, or scientific, and have not acquired that first gift of an efficient teacher, the art of interesting their pupils and drawing out their faculties and their tastes.

Training and Registration.

"It would, therefore, be reasonable, as it would certainly be stimulative and advantageous, to require that all masters should be bound to go through some system of well considered and serious preparation or training for the teacher's work, or at least a probationary period." "It should be made a rule that no master could be placed on the permanent staff until he was certified and registered as having fully satisfied this requirement and given proof of his efficiency." Dr. Percival, accordingly, urged the necessity and the advantage both of training and of registration. He also dealt with the importance of the matter of language teaching as against the grammatical discipline, and lamented the continued weakness of history teaching. He insisted specially on the cultivation of intellectual interests and tastes. Speaking of the duration of school life, he thought many boys would do better to go up to the University at sixteen or seventeen; and, comparing day schools and boarding schools, he preferred the former, at any rate when the boys came from good homes. He then passed to the influence of University requirements and endowments on school education.

The Universities and the Public Schools.

It would be equivalent to pouring a new stream of intellectual influence through our secondary education if Oxford and Cambridge were to agree on some such requirements as the following:—(1) In the matriculation examination (*a*) candidates to be free to offer some adequate equivalent in place of Greek; (*b*) an elementary knowledge of some branch of natural science, and of one modern language, to be required of all candidates; (*c*) a knowledge of some period of English history and literature also to be required of every candidate, and ability to write English to be tested; (*d*) the examination in Latin and any other foreign language to include questions on the subject-matter of any prepared books offered, some questions on history and literature, and translation of easy passages not previously prepared; (*e*) marks of distinction to be given for work of superior merit in any branch of this examination, as, indeed, of every pass examination conducted by the University. Candidates should not be excluded from residence before passing this examination, nor should they be required to pass in all subjects at the same time; but the completion of this examination would be the necessary preliminary to entry for any other examination required for a degree. (2) On the question of endowments and the minimizing of waste in the administration of them there was much to be said, and he would suggest for consideration—(i.) that, as a rule, open scholarships and exhibitions might be reduced to free tuition, free rooms, and free dinners in hall, or thereabouts; (ii.) that every holder of an open scholarship or exhibition whose circumstances were such that he needed augmentation should, on application, receive such augmentation as the college authorities considered sufficient; (iii.) that care should be taken to discourage premature specialization at school. For this end it should be required that no scholar should enjoy the emoluments of his scholarship until he had passed the matriculation examination described above; and a fair proportion of scholarships should be awarded for excellence in a combination of subjects. The Universities might also do good service in the way of stimulating secondary education, if some small proportion of their entrance scholarships were distributed over the country as county scholarships, on condition that the county contributed an equal amount in every case. In this way some equivalent for the endowments so cynically confiscated by the Education Act of 1902 might be recovered and used for the benefit of poor and meritorious students. Other reforms, which would be productive of valuable results, were the requiring from every candidate for a degree a knowledge of some portion of our own literature and history, and the encouragement of intellectual interests and ambitions by abolishing all purely pass examinations. The opportunity of winning some mark of distinction in this or that portion of what was now a pass examination would frequently rouse some latent ambition in an idle man, and transform the whole spirit of his work.

Dr. Percival concluded with the practical suggestion that "it might do a valuable service and supply one of our special educational needs, if the working committee of the section, enlarged by the addition of various representative persons, made it a duty to collect and publish year by year in succession a series of papers, the best that could be written by recognized authorities, on the chief branches of our English education, dwelling on its immediate and pressing needs, and how best to supply them. To do this the committee should set to work systematically, commencing in October with monthly meetings, and formulating, without delay, the scheme or series of papers to be prepared and presented to the next meeting of the Association."

A vote of thanks, proposed by the Vice-Chancellor, and seconded by Prof. Perry, was passed with enthusiastic cordiality.

From the papers on special subjects we quote from one that proved to be of quite exceptional interest. It was by Dr. J. de Körösy, Director of Municipal Statistics at Budapest, and consisted of a statistical comparison of

The Intellectual Power of the Two Sexes.

Dr. Körösy explained that the material of his statistics was drawn from observations made during the last twenty-seven years in the schools of Budapest, where, since 1873, a special report on the progress of each pupil had to be sent to the author's office. These individual reports (amounting latterly to sixty thousand per annum) represented together 808,350 cases; they related at first to the elementary schools (ages six to twelve years) only; later they included the higher elementary schools ("citizen schools," ten to sixteen years), and in the last years the grammar schools also. As to the general progress in the elementary schools, the test applied was the number of children who had to repeat their year's work instead of passing on to the next standard. Of 412,758 boys and 350,382 girls, 69,422 boys (16·8 per cent.) and 54,391 girls (15·8 per cent.) repeated their work. These figures showed a slight superiority on the part of the girls. If the divergence standard by standard were observed, the boys and girls were seen to be nearly level at first, but the advantage of the latter increased with age. Thus, in the first standard the percentage repeating the year's work was—boys 22·5, girls 22·2; in the second standard the percentages were 16·6 and 15·4; in the third standard, 16·3 and 13·8; in the fourth standard, 12·2 and 9·2; in the fifth standard, 9·8 and 5·6; and in the sixth standard, 4·7 and 2·7. As to special progress in the fourth standard of the elementary schools, in a total of 172,477 cases, the frequency of the best marks for boys and girls respectively was: in mother tongue, 23·6 per cent. and 32·3 per cent.; in arithmetic, 28·0 per cent. and 37·3 per cent.; and in geography, 29·2 per cent. and 36·9 per cent. With regard to the progress observed in the higher elementary schools, of 14,201 boys and 20,588 girls, 840 boys (6·2 per cent.) and 450 girls (2·2 per cent.) had to repeat their work. The frequency of the best marks in the fourth standard for boys and girls respectively was, in mother-tongue, 16·7 per cent. and 44·6 per cent.; in German, 12·2 per cent. and 39·2 per cent.; in

history, 20·9 per cent. and 47·3 per cent.; and in arithmetic, 10·8 per cent. and 35·3 per cent. The superiority of girls was, said Dr. Körösy, really puzzling here, especially in arithmetic. In this division, however, there were difficulties, for the female group was more selected than the male; the boys who followed the higher elementary classes, instead of entering secondary schools, were from a class less gifted than the ordinary, while the contrary was the case with the girls. This disturbing cause exercised greater influence in the grammar school, as only the most talented and most ambitious girls entered the Latin schools. Besides this, the system of teaching and examination was more favourable to the girls. Thus the elementary schools furnished the most trustworthy measure, especially where their attendance was, as in Hungary, compulsory. The results were all in favour of the female sex, but related only to children. Since not only in sciences, but also in poetry and (with the exception of the stage) in arts, the great work of human progress had been accomplished by the male sex, one was obliged to suppose that with the age of ripening the feminine intellect developed itself more slowly than the masculine, and that there was a turning point at which the intellectual activity of women seemed to be arrested.

Mr. Henry Hobhouse, M.P., read a paper on the relation of the Local Education Authorities to what was probably the most important factor in our educational progress at the present moment—

THE TRAINING OF OUR TEACHERS.

This has been recognized as a matter of national concern, not only by a formal resolution passed last March by the House of Commons, but by training being insisted upon as a condition of registration under the recent regulations. But the actual establishment of training colleges had *more nostro* long been left to private initiative, and the deficiencies which had naturally resulted were now under the Act of 1902 to be supplied by the action of the Local Authorities and not of the State. The object of the present paper was briefly to indicate the difficulties which beset local bodies in their endeavours to perform what was really a national task. It must first be noted that (taking County Councils and County Borough Councils only) there were some hundred and thirty Local Authorities for higher education in England and Wales. Some of these disposed of very small funds, considering the numerous and important objects of their expenditure, which included secondary and evening schools, scholarships, and technical classes of all kinds. In default of pressure from the Central Authority some of these Local Bodies would be slow to raise more money for the training of teachers. The Government, it would be said, offered liberal contributions, amounting, in the case of the larger training colleges, almost to the whole cost of maintenance. But it was the initial cost of establishing new institutions with expensive buildings and equipment which was likely to prove most formidable to the ratepayers' representatives. Nor were any substantial building grants to be expected from the Government unless a great deal more pressure was applied to the Treasury to carry into effect the very shadowy promise made in the House of Commons last spring. Next to the deficiency of funds came the difficulty of getting any proper co-operation between so many Authorities, autonomous and often jealous of each other. Some inspiring and propelling force would seem to be required in many cases to effect the necessary combinations between counties and boroughs to establish training colleges. Possibly a lever towards this end might be found in the vaguely worded section of the Education Act which required Local Education Authorities, in forming their schemes of higher instruction, to enter into "consultation" with the Board of Education. But the most serious difficulty of all lay in what might be called the "localization" of the individual teacher. The ratepayers, who naturally wished to see their money's worth, would put this question to their County Councillor: "If you rate me for sending teachers to a training college, what guarantee can you give me that they will return to teach in our schools, or that an equivalent number of teachers trained by other Councils will do so?" This question could probably be answered with satisfaction to the ratepayer in the case of the metropolis and some other large towns and counties where the salaries of the teachers and the conditions of their employment were all that they could desire. But it was different in the rural counties, where plenty of good material for training was to be found, but where the schools were small and salaries, even under the new conditions, were likely to be moderate. There was also some danger that certain Local Authorities might prefer to secure teachers trained elsewhere by the offer of high salaries rather than train them themselves. Unless, therefore, some State machinery was devised for requiring each Local Authority to contribute its proper quota towards such training—a course which at present seems impracticable—the Local Authorities, either individually or in combination, would have to bind each teacher they trained to serve exclusively in their schools for a reasonable number of years. Such a system of indenture might be found financially necessary; but it did not seem educationally desirable, and its result must be seriously prejudicial both to the free circulation of educational energy and to the interests of the weaker counties and boroughs. He had hitherto had in mind the training of teachers in training colleges from the age of eighteen and upwards; but it must be remembered that for a long time to come many of our elementary teachers, at all events, would require liberal facilities for training in special subjects elsewhere than at training colleges, and that the Local Authorities would be required to find funds both for this purpose and to supplement the Government grants for training pupil-teachers. This strengthened the case for throwing the cost of training colleges upon the national Exchequer rather than on local rates. One argument against centralization which deservedly had some weight was the desirability of encouraging local experiments and variety of curricula in the training colleges. But there seemed no good reason why this object should not be secured by widening the field of Government grants and aiding equally various types of training courses, as was recommended to the Board by the Departmental Committee which sat in 1901. Equality of standard might be maintained through the Government inspectorate without imposing uniformity of teaching on institutions that ought to suit the different needs of town and country, of large and small schools. In short, the present problem seemed to be how to encourage and impel our Local Education Authorities each to bear its fair share in the task of increasing the supply of competent teachers without forcing them all into one groove and depriving them of all initiative and independence.

A paper by Mr. H. Macan suggested that there should be two classes of teachers—one highly trained (like foremen), the other without academic training (like journeymen). In the discussion. Mr. Gray, M.P., contended that the training of teachers should be at the cost of the nation, and that the time had come for the more scientific training of secondary teachers.

Mr. G. F. Daniell, Chairman of the Incorporated Association of Assistant Masters, urged the need for improving secondary education in this country. If the demand for better trained teachers existed, the supply would quickly grow up to meet it.

The Rev. W. T. A. Barber, Head Master of the Leys School, Cambridge, said that the elementary teachers in the course of their training should not be limited to the elementary schools. It was most important that they should be possessed of a broad training and of associations with other classes of the community than those from which their pupils were drawn. The training college should be in connexion with some university or large educational institution. In the past there had been no training for secondary-school teachers. But the difficulty was that in requiring training in pedagogics one year was added to the costly years of preparation already spent in the university. Unless the chances of the profession were improved, it would be impossible to find any teachers willing to fulfil the new requirements.

Dr. Cook, Chairman of the Bristol Education Committee, urged the difficulties of the Local Authorities, and said that he had known teachers come back from the training colleges less efficient for the imparting of knowledge than before. The curriculum of the ordinary training colleges provided a certain amount of education which was really that of the secondary school, but they gave very little instruction in the art of teaching. The localization difficulty was a ratepayers' question.

Principal Griffiths, of Cardiff, said that the one important question was whether the training of teachers should be a national or a local undertaking. In Wales the present difficulty was about to be considered by a congress of all the Education Authorities in the Principality, and the attempt was to be made to devise one scheme for the whole of Wales. It was most important that those who were training for the teaching profession should be associated with the students for other professions, and that the hard and fast division between primary and secondary teachers should be obliterated.

Sir John Gorst said that the question was how to increase the supply of competent teachers. That supply had been short before the Act of 1902 was passed, and it was much shorter now. The passing of an Act of Parliament did not create a body of teachers. It was most ridiculous to decide before the student was trained whether he was to be an elementary, a secondary, or a technical teacher; and he objected fundamentally to this attempt to divide education into these three water-tight compartments. To suppose that any one could be competent for one kind of teaching without any knowledge of the other kinds was a delusion. No doubt the supply of head masters of public schools could be left to take care of itself; but to increase the great body of teachers it would be necessary to draw on a class which could not afford the necessary training without State help. There was no difficulty in obtaining teachers in Ireland. Why not recruit the teaching staff from that country? The system of training teachers which had hitherto obtained had been a disastrous failure, and a revolution was necessary. The burden laid on the young pupil-teacher was greater than any one could bear, and he was never more indignant than when he heard Sir William Anson, in the House of Commons, reading out the ridiculous answers which pupil-teachers had given in examinations. Such answers were the exact result to be expected from the system now pursued. Assistance for the training of teachers must be given both from Imperial and from local funds; but he was opposed to the old-fashioned training college, where students for the teaching profession were completely isolated. The whole training of the teachers could be supplied in such existing educational institutions as the county schools and the universities, if the Government gave adequate grants. The qualification of the teacher should be certified to by the university and not by a Government Department, and invidious distinctions between one class of teachers and another should be avoided. Then the profession of teaching might offer an honourable career.

OUR EDUCATIONAL NEEDS.

SPEAKING recently at Sheffield, on the occasion of the distribution of prizes, &c., at the Central Higher School, Prof. Sadler brought out the close alliance of two subjects apparently wide apart — the causes of American enthusiasm for education and the educational needs of England. We give the substance of his remarks on both points (after the *Sheffield Independent*):

WHY THE AMERICANS BELIEVE IN EDUCATION.

Prof. Ripper and others who knew the United States would bear him out in saying that when one worked in an American city at educational questions the most striking thing was the fact that nearly everybody heartily believed in education. To put it mildly, he would say that that was not always the case in an English city. What was it that had really converted America? He believed three things had done it.

In the first place, ever since the middle of the seventeenth century, New England, which had been one of the great centres of high ideals in the United States, had had a public and efficient system of secondary education. Men who had led opinion in America had themselves been well educated and believed in schools.

The second reason was that at great expense, but with unfailing courage, Americans had put some of their best work into schools for little children. It was the bottoms of primary schools that contained the real secret of educational success. He did not want to lay before them and other responsible authorities an impossible programme, but he was convinced that they would never get the English democracy really to believe in elementary education until they had made the classes in their elementary schools much smaller than they were at present. They could not do this all at once, but was it not possible to resolve that in each great city they should have two or three classes which should be a model for the world, and in each the instruction given to little children should be such that they would look back to their first school-days with gratitude, affection, and pride?

The third thing that had made America believe in education was the public services rendered by her universities. They had not been exclusive, they had not been stand-off, they had not been pedantic. They had taken off their coats, gone into the streets, and worked for the common people. That was what they had got to do in England. They had to make every man and woman feel that the universities were theirs, working for them, and learning from them. It was no accident that we were living in England at the present time in a period of university renaissance. Many of our greatest educational ideas came from the old Italian universities which were founded just before and at the time of the revival in learning. With three exceptions, every single Italian university, including Padua, to which we in England owed a heavy debt, was founded or helped by municipal aid. Without this aid, indeed, only three or four of them could have been started on their illustrious career, and they were the outcome of a period of great commercial wealth, a period when the princes of industry and commerce saw that it was their interest as well as their duty to place large resources at the service of science and letters. It was municipal aid, too, which caused the establishment in Germany of the University of Erfurt, which was the first to carry out the new learning.

PRESENT EDUCATIONAL NEEDS OF ENGLAND.

Turning directly to the existing situation at home, Prof. Sadler said he believed that what we most wanted at the present time were these three things: (1) improvement in the instruction of our little children; (2) a public and efficient system of secondary education from ten to sixteen years of age; and (3) a number of well equipped and zealous universities crowning in their several districts the educational fabric of which they were the apex.

They could not have any really powerful or elevating educational system unless it was inspired by a great purpose. What was going to be the purpose of the Central Secondary School and those other secondary schools of which Sheffield had already reason to be proud, and would be more proud in the future? There was no better aim for a school than to train boys and girls to be useful and patriotic—ready and able to bear the burden of social service, and, by their industry, ability, sympathy, and self-control, to promote social peace and public well-being. In that way there might be an ever growing number of strenuous workers for the common good, keenly alive to the claim of local and municipal patriotism, but none the less sensitive to the wider duties imposed by the obligations of a great nation and a wide Empire—never forgetting that which linked thinking men and women of the world to that other citizenship for which all earthly claims were but a preparation. In the world Great Britain stood for certain high ideals—for fairness to opponents, for toleration, for empire combined with freedom, for unity of government combined with local difference, and for a desire to walk faithfully in the old ways and yet to be ready to try new experiments as the hour arrived for change. They needed to strengthen educational resources, strengthen industrial and commercial efficiency and the power to grapple with those menacing problems, mental and social, which were characteristic of these times of unrest. They believed their lives must be inspired by the greatest of literature, but, above all, that education must be human and real and practical. It must teach men and women to grapple with facts—to bottom things, not to be content with thinking, but with service—often having to clench their teeth and see things through. They could not have an education like that without the best teachers in their schools, and what most mattered was that such teachers should guide by their influence those committed to their charge.

In the second place, they must stand for individual character. If they came to think of it, the two greatest names in education in Yorkshire were Wycliffe and Joseph Priestley, who had done much by their individuality. Wycliffe's work is well known. Priestley stood up for independence of effort against the excessive claims of the monopoly of the State.

Thirdly, they must have not only the letters, but the practice of art. Such an art as vocal music, which they practised with such effect in Sheffield, proved this. The love of country and Nature should be made a great feature in school work. As the Welsh said: "An eye to see Nature; a mind to understand Nature; and a will to go along with Nature." There was in the education of women hardly anything more important than a pride in exquisite skill in making and keeping a home. Could they wish for anything better than that there should come to every citizen unstinted access to educational opportunity on the highest plane? Let them have an education that trained men and women to steadfastness of character combined with openness of mind, which saw in labour and home-making a way of life no less honourable than scientific and literary skill, and endeavoured to combine all efforts of labour in a common field, which widened the outlook and the sure bond of social welfare and social peace.

This, and nothing less than this, was the task which lay before them. It was a task that could only be accomplished by patient labour and at great cost, and by regard for many points of view. But, difficult as it was, the task was not impossible of accomplishment. It was a task in which all could bear their parts, parents and scholars, employers and workpeople, teachers and administrators. Let them brace themselves to it with courage, with humility, and with unconquerable hope.

THE TEACHING OF HYGIENE.

THE Sanitary Institute, following up the recent deputation from the medical profession to the Board of Education urging the need for the teaching of hygiene in the schools, has addressed the following letter to the Education Authorities throughout England. The Secretary (Mr. E. White Wallis, F.S.S.) writes:—

In the reorganizing of the educational system of the country a great deal of attention is being directed to the adequate training of the teacher, and the Council of the Sanitary Institute desire to urge upon your consideration the necessity of giving a prominent place in this preparation to some practical training in the appreciation of the health conditions essential for carrying on the work of instruction.

Ever since the passing of the Education Act in 1898, the Institute have urged upon the school world the value and importance of hygiene as the basis of education, and they appointed a committee of experts, consisting of medical officers of health, engineers, architects, and others, who have given attention to this need of systematic application of hygiene in school life, to draw up a syllabus, indicating the points that should be comprehended in the training of all teachers.

The teaching of the laws of health in schools will have little effect in training the scholar in the observance of these laws unless they are observed and practised in the conduct of the school, and such training can only be accomplished where the teachers have themselves been trained by practical and experimental work to understand (1) how the laws of health enter into every department of school life, the mental and moral, as well as the physical, and (2) that the subject is one that must be inculcated in the child by observation and experiment. The regulations issued this month by the Board of Education for the training of teachers sum up the professional training with the following very satisfactory recommendations:—"The students ought to have an adequate knowledge of school hygiene. They should understand the general conditions necessary for making a building or a room healthy and for keeping it so, and they should be well acquainted with the rules of personal health, and, so far as possible, with the physiological principles upon which these rules are based. In the case of women students, the nutritive value of food-stuffs in connexion with their cost in the market and in relation to the needs of young children should be known in outlines, even though the student may not be specially qualified in domestic economy. Only thus will they know how to conduct the school as a whole with the greatest profit to the health and bodily development of scholars, and how to adapt the instruction to the limitations which are imposed in some cases by the feeble health of the children or by the poverty or neglect of their parents."

In the prefatory memorandum to these regulations it is also urged

Digitized by Google

that every training college should attempt to conduct its instruction in such a way that there shall be in the case of each student some range of knowledge within which there is no fact and no inference from fact that has not been subjected to the severest tests at his command.

No subject offers a better field for this process of tested knowledge than the subject of hygiene, for, while it affords excellent opportunity for practical work in testing methods, it co-ordinates with nearly all other branches of the teacher's work, and affords an amount of diversity and adaptability which would make its adoption practicable in nearly all colleges, and, if adopted, would give a living groundwork to educational methods, which to be successful must be based on the conditions of health essential to carrying on the work of instruction in schools. Experience, however, has proved the practical advantage of subjecting recently acquired knowledge to the test of examination, and with this end in view the Council of the Sanitary Institute initiated an examination in applied hygiene for school teachers, which has already been adopted and made the focus for the training of teachers under some of the County Councils.

If, in the preparation or carrying out of any scheme that your Council propose, the Institute can, by this examination, or by co-operation in any other way, be of use in furthering the desired end, my Council would be very glad.

REVIEWS.

Pagan Idolatry.

The Worship of the Dead. By Colonel J. Garnier, late Royal Engineers. (12s. 6d. net. Chapman & Hall.)

Colonel Garnier proposes to inquire, not generally into the question of "ancestor worship," but into "the origin and nature of pagan idolatry and its bearing upon the early history of Egypt and Babylonia." He remarks that "the intimate relation of the ancient paganism to the early history of mankind and its influence on the fate and fortunes of the human race gives no little interest and importance to any inquiry into its origin and nature," and he sets himself "to compress into a moderate compass and readable form the facts and archæological discoveries which show the relation of the gods and religious systems of various nations to each other, and to point out the significance and interpretation of the ancient traditions and mythological stories and their bearing on the events of actual history." The task is a sufficiently adventurous one, even for a writer equipped with first-hand knowledge of the intricate mazes of the subject and armed with an acute and alert logical faculty. Colonel Garnier, though himself bold in conjecture, adopts a formal attitude of stringent conservatism: not only does he condemn roundly the "higher" Biblical criticism (whose highest flights are not great in comparison with his own), but he frankly maintains, for example, that every page of the chronicles of Herodotus "bears the impress of a man who is honestly and faithfully relating exactly what he saw and heard" (pages 6–7)—a view that will interest Prof. Sayce. In particular, he champions "the evidence which proves that the originals of the pagan gods were human beings who had once lived upon the Earth." If it be said that the primitive religion of Egypt, Assyria, &c., was a Nature worship, he will not disagree, but he will affirm that "the human originals of the pagan gods were identified with these material objects and powers, and were regarded as their incarnations or human manifestations" (page 147; *cf.* page 13). His general position is stated thus (page v.):

> Attention is called to the fact that the numerous testimonies referred to by the author are not those of one people and one age, but of many individuals living in different ages, and of different nationalities; and that one and all are without the slightest evidence of artificial construction or systematic purpose. They are, for the most part, the statements of persons without relation to each other, who simply record the statements of the people of other countries, or briefly allude to the general belief current in their own. They form, therefore, a number of perfectly independent witnesses, whose testimony is all the more valuable because they are often entirely unaware of the import and significance of their own evidence. It will be seen, also, that their statements mutually explain and confirm each other, while their very mistakes and misconceptions, due to their ignorance of the matters to which they refer, are a guarantee of the genuineness of the statements themselves, and often help to explain their significance.

If we rightly understand this, it may pass for a fairly reasonable basis of action. The test of it lies in the application. We cannot but doubt, however, whether Colonel Garnier has adequately realized the rarity of accurate observation and report, or the insidious frequency of speculation or inference honestly set out in the guise of fact, or the relation of the opinion of a writer to the opinions of the mass of the people of his time.

Part I. is devoted to "Pagan Gods and Goddesses"—gods of East and West, from China to Peru. The author quotes copiously from scores of authors to prove "the connexion and identity of the religious systems of nations most remote from each other." "Everywhere we find the most startling coincidences in rites, ceremonies, customs, traditions, and in the names and relations of their respective gods and goddesses" (page 1). In a word, "Babylon was the centre from which the ancient paganism originated" and spread over the civilized world; Cush, or Hermes (Trismegistus)—whom he identifies with "the most ancient and mythological Buddha," and with various other personages, particularly the father of Nimrod—"was the master mind and originator of this idolatry" (page 147), or, as it is otherwise expressed, "the originator of postdiluvian idolatry" (page 185). We should not like to be responsible for all the links in Colonel Garnier's chain of reasoning. It is startling, for example, to read that Rome "obtained her laws from Greece" (page 353); and it is disconcerting to learn that "Pra Japeti" means "the Lord Japhet" (son of Noah), for we had supposed Praja-pati to be "Lord of Creatures," the son of Dyaus ("the Sky," "Heaven"). Colonel Garnier accomplishes the transformation thus (pages 17, 18):

> In the Hindu mythology, "Sama," "Chama," and "Pra-Japeti" are said to be born of Menu, and to be the human names of the gods "Vishnu," "Siva," and "Brahma." "Pra-Japeti" means "the Lord Japhet," and, the final "a" in "Sama" and "Chama" being quiescent, it is clear that "Chama" is only a form of "Cham" or "Kham," the Egyptian name of "Ham"; and that "Sama" is "Sem," the Greek form of "Shem."

There is much to be explained here, and the passage must be taken in connexion with the rest of the argument; but the author expects too much mental agility from his readers. Again, while he thinks it evident that "Dyauspiter" ("Heaven Father"), the God of Lightning, is identicalwith Jupiter, the God of Lightning, who was called "Diespiter" (page 95), he is bold enough to suggest (page 41) that "the name may also possibly be a corruption, or adaptation, of the name of their [the Aryan nations'] ancestor Japetus, who, we know [*i.e.*, Colonel Garnier has already asserted], was deified under the title of 'Pra-Japeti.'" One flight more (page 139):

> It was so said by Demetrius, quoted by Plutarch, that the islands of Scotland were inhabited by the gods of the natives. Now Bute, Arran, Islay, Iona, Skye, &c., may very well be synonymous with "*Bud*" [=Buddha; said to have been worshipped by "the ancient Irish"]; "*Arhan*," a title of Buddha; "*Ila*," his wife; the Indian "*Yune*," "*Ioné*," or "*Juno*"; and "*Sakya*," one of the most general titles of Buddha.

When the Scotch speak of a "boodie," or "the Boodie" (Devil), they will now know that they are using a modified form of *Bhuta* (Buddha), common to them with the Devil-worshipping Tulus of the west coast of India; just as Woden is, according to Colonel Garnier, also Buddha, through *Pooden*, or *Poden*, "the Tamulic pronunciation of Buddha, or Bodhi" (page 134; *cf.* page 126), and Tuisto is but a slight modification of *Twashta*, one of the titles of Buddha (pages 127, 136). Colonel Garnier might have profitably been more explanatory. But there can be no question about his industry.

Part II. considers "The Origin and Nature of Pagan Idolatry." Here Colonel Garnier discusses the magic of Hermes, the worship of the Sun and the serpent (with association of the *phallus* and the tree or cross), the Nephilim (with the introduction of the worship of and intercourse with evil spirits, supposed to be spirits of the dead), and the worship of the seven stars and the twelve signs of the Zodiac, "which, according to Maimonides, was instituted by Tammuz, *i.e.*, Nimrod" (page 246). Part III. relates "the overthrow of the primitive paganism" and discusses "its relation to the early history of Babylon and Egypt." When Colonel Garnier says that "it is probable that the term 'Keltic,' as applied to the different dialects called by that name, may really be a misnomer," we fancy he is not far off the truth, though we should arrive at a like opinion by a very different route; but what is to be thought of his further probability that, "as the French and Iberians are the purest descendants of the ancient Kelts, the French and Spanish languages, although largely leavened with Latin [!], should be regarded as more truly representative of the ancient Keltic" (page 309)? Part IV. deals with the resuscitation and development of pagan idolatry. The final chapter, on the moral aspect of paganism, receives a modern and practical turn in condemnation of saint-worship, spiritualism, theosophy, mesmerism, faith-healing, hypnotism, &c.; for the spirits of spiritualism and theosophy, "although asserted to be

Digitized by Google

the spirits of the dead, can only be the same *daimonia* who gave the pagan priesthood their powers," while the associated practices of mesmerism, &c., "are identical with the arts by which the ancient sorcerers and magicians sought the aid of these *daimonia*." Though, to our mind at least, singularly inconclusive, the volume contains a vast mass of materials brought together in combinations that are curiously suggestive; and it is a monument of elevated interest and indefatigable industry. It is liberally got up; but the proofs should have been read with more care.

Democratic Secondary Education.

A Modern School. By Paul H. Hanus, Professor of the History and Art of Teaching at Harvard University. (5s. net. Macmillan.)

In this book Prof. Hanus has brought together a number of essays amplifying his earlier work entitled "Educational Aims and Educational Values." The problem he sets himself to solve is one of equal importance for Englishmen, the investigation of the best form of secondary education for a democratic society. His statement of the aim of the secondary school is excellent.

> It should [he says] especially promote the discovery and development of each pupil's dominant interests and powers, and, further, it should seek to render these interests and powers subservient to life's serious purposes and also to the possibility of participation in the refined pleasures of life.

One of the earlier chapters sketches the history of secondary education in Massachusetts. In 1647 a law was passed that every town of a hundred householders should set up a grammar school (*i.e.*, a classical school), to prepare boys for the University. There is evidence that the dominant idea in the minds of those who passed this law was to perpetuate a learned ministry. It remained, however, almost a dead letter; and subsequent statutes of 1789 and 1824 exempted a number of towns from an obligation they had never taken seriously. This failure of the grammar-school system seems to have been due not only to the poverty of young and struggling communities and to the absorbing politics of the towns, but also to the feeling that, under altered social conditions, such schools met the wants of only a limited number of families. Meanwhile, thanks to private generosity and private initiative, another class of schools, the "Academies," sprang up. They were characterized by a wider curriculum, and claimed to give a liberal education to all their pupils, whether destined for the University or not; but, unlike the grammar schools, they were not accessible to rich and poor alike. In 1826 came a further development: a legal obligation was imposed on all towns of four thousand inhabitants to maintain a "public high school" for both sexes. Thus the accessibility of the grammar school and the wide curriculum of the academy were combined; and, as the author adds, the distinction long drawn between preparation for college and preparation for life is fast disappearing.

The programme of the high school forms the subject of some interesting chapters. Prof. Hanus thinks that it should cover about six years—say from twelve to eighteen—and that it should encourage the "elective" system of studies, that is, the choice of studies by the pupil under judicious guidance. He condemns working "against the grain" at uncongenial subjects, in which it is impossible for a pupil to gain any sense of achievement or conscious mastery of a subject for its own sake. At the same time he would prescribe a limited amount of certain studies for all. These studies are: (1) English language and especially literature; (2) natural science (physical geography or botany and geology); (3) a modern foreign language; (4) American or English history; (5) the history of industry and commerce with the elements of "civics"; (6) elementary algebra and geometry; (7) drawing and manual training. He does not desire that all these studies should be carried very far, but looks forward to a selection being made on adequate grounds. The programme thus sketched seems somewhat congested: to relieve it, it is necessary to revise the work of the elementary or preparatory school, which, it appears, is still limited to the old formal curriculum, confining its higher classes to English grammar, arithmetic, and political geography. For the more advanced work on these subjects Prof. Hanus would substitute elementary work in a modern language, geometry and algebra, and natural science, thus bridging the gap between the two classes of schools and giving unity and continuity to the whole educational system. Steps in this direction have already been taken, in accordance with the recommendations of the "Committee of Ten"—an important body which reported a few years ago.

From what has been said it must be obvious that the Professor is no friend of classical studies as a general means of education. "It is false," he says, "to assume that because a youth has studied Greek and Latin for several years he has been trained to apply himself with vigour and success to any mental problem that may be presented to him." What he considers most important is to gain an intelligent appreciation of the part played by Greece and Rome in the development of modern civilization. For this he would have their history studied, and also translations ot some of the masterpieces of classical literature. When Latin is studied as a language, he would adopt the Frankfort system, and preface it with two or three years of French. Other chapters deal with "The School and the Home," "Education as a University Study," and "The Elective System in the University."

"Apperception."

The Secret of Herbart: an Essay on Education, and a Reply to Professor James of Harvard. By F. H. Hayward, D.Litt., M.A., B.Sc. (2s. Sonnenschein.)

Dr. Hayward is still in exalted mood. Like some Homeric warrior, armed *cap-à-pie*, shield in front, spear drawn back in act to hurl, he ranges around Herbart and defies the field, undeterred by his confessed distrust of former "somewhat crude panegyrics" on a point of Herbartian doctrine. He does not want to be told that his essay is "suggestive" and "stimulating"; he wants "to know whether it is true." "Is this apperception doctrine right or wrong?" This is a very refreshing spirit, certainly; but somewhat bustling for less impetuous people. Dr. Hayward is urgent because the question is urgent: for "all talk about educational 'progress,' whether at political caucuses or at teachers' conferences, is unmitigated nonsense until some definite views, theories, or ideals are possessed by the teachers of this country." Frankly, with every respect for Herbart, and with real appreciation of Dr. Hayward's earnestness, we do not understand such an assertion as this. The South of England may be as backward as the author finds it; he admits that he does not know the North; but surely even in the South the teachers are not destitute of "definite views, theories, or ideals." Again (page 36): "Education has failed: we have to admit it." We admit nothing of the kind; nor, so far as educational results have fallen short, should we lay much of the blame on "the failure of teachers to realize the immensity of the mission to which they are called." The schoolmaster "has combined the culture of a bucolic boor with the arrogance of a newly-fledged ritualistic curate": the generalization is an indiscriminating libel. "On the whole, educationists, 'scientific' or 'empirical,' do not appear to be very much in earnest." Such extravagances of advocacy would ruin any cause.

The "Secret"—a term adapted from an expression of Prof. James's—lies in the "apperception" doctrine. Prof. James implies that the word "apperception" does not contain any "recondite and portentous secret"; Dr. Hayward intends to show that "the 'apperception' doctrine has well-nigh incalculable moral, social, and spiritual implications." Such a wide outlook leads him to remark on many aspects of education, more or less pertinent, and at length (page 71) he comes to this:

> What, then, from the educationist's standpoint, is the conclusion and the summary of the matter? What are we to learn from the preceding reflections and experiences?
>
> A simple thing—a thing so simple, indeed, that when stated in these pages many a reader will wonder that there was ever need to state it at all. *The school must nourish the souls of its pupils*, and the only nourishment possible is ideas. There may be other tasks—there are; the soul must be exercised and trained, as well as fed; but the feeding is the first and essential thing, and the richest food of all—that which best of all builds up moral fibre—is the humanistic food that comes down to us from the past in the form of fairy tale, biography, history, and literature.

Really one has difficulty in discerning the urgent need for "full, frank, and remorseless criticism." The matter has received, and is receiving, adequate criticism, both in this country and in America, as well as on the Continent of Europe. Surely there is abundance of "fairy tale, biography, history, and literature" within reach of everybody. In school, indeed, time must be found for "other tasks"; but one cannot survey even the school provision and entertain Dr. Hayward's alarms. Moreover, the efficiency of this "humanistic food" in "building up moral fibre" depends on its preparation: not one of these subjects can be usefully taught without large critical capacity and knowledge on the part of the teacher. Besides, "ideas" are not confined to these subjects; many ideas from other subjects are no less

Digitized by Google

essential. Then there is the question of the balance of the curriculum; and, if the children are taught in school to read with interest, they can, at an early stage, relieve the school work materially by reading at home on such lines as attract them most. There is no use in overhauling here and now the ethical basis of the Herbartian doctrine, or of commenting on fifty points in Dr. Hayward's "preceding reflections and experiences" that provoke discussion. We content ourselves with suggesting that it is very easy for an educated and zealous critic of educational results to expect a vast deal too much both from teachers and from pupils as well as from particular systems, and to neglect neither few nor unimportant conditions over which neither teachers nor pupils can exert any effective control.

A Century of Russian History.

The Expansion of Russia, 1815–1900. By Francis Henry Skrine, F.S.S., H.M.'s Indian Civil Service (retired). (6s. Cambridge University Press.)

"The Conference of the Hague advanced the true interests of our race and the coming of the hour when brute force shall yield to right and justice. A century of Russian history which dawned in bloodshed closed with a determined effort to give the blessings of peace to a distracted world." These are the closing sentences of Mr. Skrine's volume. And already? The Manchurian shambles suggest a fearful commentary on "the Tsar's noble designs" and the conditions of his Empire and government. However, Mr. Skrine's outline of the recent history of Russia comes at a most opportune time. He presents a vivid and easy narrative from 1815 to the close of last century. He brings into relief the personal action of the Tsars, and of great officers of State—an inevitable consequence of the political organization of the Empire and an attractive feature of historical composition. He has read widely, and not inconsiderably, official documents. The Central Asian expansion is strongly described, as well as the southward straining to Constantinople; and three excellent maps help the reader to realize the meaning of the movements. Here and there one needs to read with caution. The Russification of Finland is treated far too leniently; indeed, to a considerable extent, apologetically. It is an unworthy and unwarranted assertion that Gladstone used the strong feeling evoked by the Bulgarian atrocities to "serve his political ambition." It is a complete mistake to say that the Stolietov Mission to Kabul "was warmly received by the Amir." Literature and education, and social conditions generally, appear to have been expressly treated with but incidental attention. The political outline, however, is traced in a forcible and flexible narrative, which will be very welcome as a general guide to the development of Russian policy and the fortunes of the Russian Empire during the past century.

East and West.

The Problem of Existence: its Mystery, Struggle, and Comfort—in the light of Aryan Wisdom. By Manmath C. Mallik, (10s. 6d. Fisher Unwin.)

Mr. Mallik is an Indian member of the English Bar of considerable standing, and he has sat at the feet of the pundits of Benares for a dozen years. His object in this volume is "to inquire whether the virtues preached and practised by great minds in the past"—and especially by the ancient Aryans of India—"cannot be assimilated with what is called by its admirers and devotees practical modern life." In Part I., treating of "The Mystery of Life," he examines the nature of man, and the process and outcome of physical and mental action, with special reference to the highest objects of life. In Part II., treating of "The Struggle of Life," he considers the requisites for success and the causes of failure, duty in its various aspects, and educational training in different departments. In Part III., which treats of "The Comfort of Life," he touches on the several forms of asceticism, the gradual "dawn of light," &c., and resumes "cardinal principles." The attempt to adjust ancient Aryan ideas with modern thought and practice is sufficiently arduous, and, of course, not always successful, but at the same time very interesting. The scientific and philosophical developments of the West are not taken account of so fully as to satisfy such as are fairly acquainted with them. But all can admire the author's earnestness and elevation of thought, and agree on his fundamental contention in favour of the fullest inculcation of the principle of self-control. In many ways, both in its weaknesses and in its strength, a striking product of Indo-Anglian thought.

GENERAL NOTICES.

CLASSICS.

A History of Roman Literature. By Harold N. Fowler, Ph.D., Professor in the College for Women of Western Reserve University. (5s. net. Appletons. Twentieth Century Text-Books.)

"It is proper," Prof. Fowler concludes, "to speak of Roman literature rather than Latin literature; for that which interests us is the literature of the city by the Tiber and of the civilization with which the city is identified rather than works written in the Latin language." The chief writers are very fairly represented in the space available, and it is hardly worth while to cavil at the apparently undue attention given to various minor personages. The attempt to describe the contents of works and to furnish specimens is inevitably difficult, though it enlivens the page and contributes to realization of the author. The sentence or two devoted to each of the plays of Plautus, for example, cannot but convey an impression of scrappiness, and the exemplary extracts are often similarly feeble; yet, on the whole, the results are suggestive and may prove stimulating. When Prof. Fowler gets off the strictly literary track, he is not always fortunate. When he tells us that the *Tripertita* "was for centuries regarded with reverence as the beginning from which grew the great system of Roman law," we are fairly nonplussed. However, this is too common a failing to excite surprise, and it is confined to a very narrow compass. The essential purpose of the book is very satisfactorily attained, and it is written in an easy, unpretentious, and attractive style. It is well worth its place in the excellent series.

Steps to Latin. By Gavin Hamilton, M.A. (Melrose: R. W. Macbean.)

Mr. Hamilton writes for pupils "from Second to Fifth Class." Zumpt and Madvig, and "modern foreign theorists" generally, he cannot abide: on his title-page he appeals to Cæsar, and to Cicero, on the strength of half a century's study. The attitude is right, no doubt; but we should have thought that Classes Two to Five might be taught the elements of Latin without being involved in the strife of ancient authors and modern theorists, foreign or native. Further, Mr. Hamilton sets forth, also on his title-page, that his book is "designed to make pupils laugh rather than cry." We do not see any necessity for making them either laugh or cry; though we admit that we should prefer the laughing philosopher. The laughing material is abundant, and, we may venture to say, in part at least, welcome: "ridentem dicere uerum quid uetat?" But not unfrequently—indeed, to be frank, very frequently—the humour is somewhat crude, for our taste, and the views of the author on a wide range of subjects are too often disputable, and even provocative. The ablative absolute might, we think, be effectively illustrated without the martial aid of "Bobsie."

"Bobsius ecce redit, magnâ *comitante caterva.*
Bravo, bravo!—
So Bobsie's back with comrades in his fights,
In whom the Queen, with people all delights."

Apart from the hopeless vulgarity of "Bobsie," and apart from political and military opinion of Lord Roberts's task and conduct—all which ought to be kept outside Latin teaching—what about "caterva"? Would Cicero or Cæsar, or even Madvig, have used it there? A highly reputable Latin lexicon tells us it was used "especially of barbarian nations, in opposition to the Roman legions," and, indeed, is "rare of Roman troops." Has Mr. Hamilton not involved himself in a political contradiction? From the same page (131) we take another gem:

"Bobse te cuncti diligunt Britanni,
Teque mirantur quia victor esses,
Care, restabit tibi laus perennis,
Tempus in omne."

"Bobsie, on thee the Britons love bestow,
Consummate victor of the Afric foe,
Thy glorious triumphs no end shall know,
Bobsie, bravo, bravo!"

The last line of the sapphic seems rather superfluous after "perennis," and the third line of the English version, if hardly exemplary in rhythm, may be due to the exalted feeling of the poet; but would Cicero or Cæsar — or Madvig — have written "quia victor esses" there? Or would

"Quintus Horatius Flaccus,
Jolly, lively, gay as Bacchus" (page 132)?

The volume reminds one of the haggis—"fine confused feedin'."

MATHEMATICS.

Against the Metric System. By Herbert Spencer. (3d. Williams & Norgate.)

A special interest attaches to the issue of the third edition of this pamphlet. A codicil to Mr. Spencer's will provided for the publication of the pamphlet at a nominal price in the event of an early revival of active Parliamentary discussion relative to the introduction

of the metric system into England. The benefits to accrue from the establishment in this country of a decimal system of weights and measures and coinage are advocated by many, and it is well that the other side of the question should be heard. Mr. Spencer takes strong grounds; he pleads forcibly for the survival of the present system, not as a perfect system in its present state, but as one possessing capabilities for development into an ideal system which are essentially wanting in the decimal system, and which would be hopelessly crushed if the change were effected. A new society, we observe, has established itself in London with some such programme in hand, and it will be interesting to see what comes of its labours. Mr. Spencer strikes a very salutary note of caution, and all should study his able arguments before pronouncing a definite opinion in favour of innovation. He appeals to the best type of English conservatism—the conservatism that persists in refusing to adopt any but well considered changes. In the present edition the body of the text is a reprint of the original, but the support of outside testimony as given in the appendixes has been considerably supplemented.

A School Geometry, Parts I. to V. By H. S. Hall, M.A., and F. H. Stevens, M.A. (4s. 6d. Macmillan.)

From time to time we have had occasion to notice the earlier sections of this work, which in its complete form will be one of the leading school text-books inspired by the recent agitation for the improved teaching of mathematics. It follows closely the recommendations of the Mathematical Association. The portions of the present volume to which at the moment special attention should be directed are Parts IV. and V., dealing respectively with the substance of the Second and Sixth Books of Euclid. The general treatment of the text is good, and the work is likely to become as popular as the author's "Euclid." Great scope for extended usefulness has been secured by the manner of publication, the parts having been issued separately and also in varied combination. The Sixth (doubtless the concluding) section of the text-book is in course of preparation.

Logarithms for Beginners. By Charles N. Pickworth. (1s. Whittaker.)

The work presents to the reader a very lucid account of logarithms and the principles of logarithmic calculation. The difficulties that often trouble the beginner are anticipated as far as possible, and, in the case of each, special pains have been taken to try and smooth it. The text comprises, in addition to simple explanations, a number of fully worked illustrative examples, and exercises (with answers) have been provided for practice. The general principles and their application to four-figure common logarithms form the primary subject of discussion; but the closing chapters are devoted to an introduction to more elaborate systems and to those calculated to bases other than 10. Tables of the four-figure logarithms and corresponding tables of antilogarithms will be found at the close of the volume.

Arithmetic, Scheme A, Books III., IV., V. and VII. By W. H. Higden. (2d., 3d., 3d., and 5d. Pitmans.)

The sets of exercises in arithmetic included in each of these volumes are of gradually increasing difficulty, and constitute a useful series for class purposes. Many teachers will consider it an advantage that the answers are not attached.

SCIENCE.

Strength and Elasticity of Structural Members. By R. J. Woods, M.E., M.I.C.E., Fellow and Assistant Professor of Engineering, Coopers Hill. (10s. 6d. net. E. Arnold.)

The book has been shaped from a series of lectures to students at Coopers Hill, and thus is mainly suited to engineers, though by no means exclusively so. It can be tackled without any very advanced knowledge of mathematics; and the treatment is thoroughly practical, while the methods are simple and concise. A considerable number of well devised exercises (with answers) are appended to most of the chapters. There are 292 figures. The volume is carefully printed and substantially got up. It promises to be extremely helpful.

Mechanics, Molecular Physics, and Heat. By R. A. Millikan, Assistant Professor of Physics in the University of Science, Chicago. (7s. Ginn.)

The volume combines class-room study and laboratory work on a well considered system, aiming at the college grade of attainment. It is deliberately confined to select principles and methods, with a view of getting to the vital spirit of the subject rather than of introducing the student to comprehensive details. Special attention is given to exact measurement. The work has been well thought out, and worked out on a broad basis of practical experience. The get-up is good and serviceable.

Messrs. George Bell & Sons publish a sixth edition of *A Treatise on Hydromechanics: Part I., Hydrostatics*, by W. H. Besant, Sc.D., F.R.S., and A. S. Ramsey, M.A. With careful revision in general, considerable alterations and additions have been made, and the examples have been freshened. The stability of equilibrium of floating bodies has been rehandled on the basis of the principle of energy, which has also been applied vigorously to the laws of capillarity; and the tension of flexible surfaces is treated on fresh lines. The work, excellent as it has always been, has been decidedly strengthened.

A third edition of *A First Book of Electricity and Magnetism*, by W. Perren Maycock, M.I.E.E., is issued by Messrs. Whittaker (2s. 6d.). The work has been searchingly revised and considerably enlarged; many of the figures have been redrawn; and a useful list of experiments (131) has been added. 127 illustrations.

Messrs. Blackie furnish forth handsomely in their series of "Science Text-Books" a fifth edition of the well known *Text-Book of Geology*, "intended as an introduction to the study of the rocks and their contents," by W. Jerome Harrison, F.G.S., Chief Science Demonstrator for the Birmingham City Committee of Education. The book has been carefully revised and brought up to date. There are 140 figures.

MODERN LANGUAGES.

Hugo. *Les Burgraves.* Edited by H. W. Eve, M.A., formerly Fellow of Trinity College, Cambridge, and late Head Master of University College School, London. (2s. 6d. Cambridge University Press. Pitt Press Series.)

The subject belongs to a peculiarly interesting period of mediæval history, towards the end of the disastrous conflict of rival Emperors. The burgrave's castle is most carefully pictured; the spirit of the time is impressed with powerful effect; and the drama is masterly in construction and in style. The work is a very welcome addition to the school repertory, and Mr. Eve has explained and illustrated it with characteristic thoroughness, care, and discrimination. The introduction and the notes are alike marked by sound scholarship and sound judgment.

Lessing. *Minna von Barnhelm.* Edited by R. A. von Minckwitz and Anne Crombie Wilder, B.A. (2s. Ginn. International Modern Language Series.)

The text is Lachmann-Muncker's (Stuttgart), with a few slight deviations. In i. 8 (page 17, line 23), in "Wenn er es länge treibt," surely "länger" is the correct reading; and, in i. 12 (page 21, line 12), "liest" should be "liesest." There is an historical interest in "währendes Krieges" (ii. 2; page 33, line 16; and elsewhere), instead of the ordinary reading, "während des Krieges." The notes are generally useful, though some might readily be spared to make room for desirable explanations omitted. In i. 2 (page 133; 6. 28), "verzweifelte" ("der verzweifelte Nachbar") should scarcely be explained as "one who drives others to despair," though he may in fact do so; and, in i. 4 (page 133; 10. 8), "Lieber Bestie als so ein Mensch—*i.e.*, I should prefer by far to be such a man rather than to be a beast," seems to turn the preference round full circle. "Ich wüszte eben nicht—I do not know of any," still leaves the form unexplained. The vocabulary is also open to improvement. However, the edition is attractively got up, and cannot fail to be very helpful to students of Lessing's charming comedy.

M. Ludwig Weber, Professor of the German Language and Literature, St. Louis College, Brussels, offers to English students *A New Course of Commercial German*, "complete in twenty lessons," with numerous exercises, phraseological vocabularies, &c. (2s. 6d., Hachette). It comes with the recommendation of having been already officially adopted in Belgian institutions. Main points are effectively set forth, and the book is attractively got up.

ENGLISH LITERATURE.

Wordsworth. By Walter Raleigh. (6s. E. Arnold.)

It would certainly be unfortunate, and, except from one point of view, radically uncritical, that Wordsworth, or any other writer, should "be judged by standards that he repudiated, and valued for reasons that have little to do with the inspiration and motive of his work." Yet Wordsworth has suffered on this score, and that, too, in the face of his own explicit protest. Accordingly, we welcome Prof. Raleigh's effort to sustain the poet's plea, "to approach the poetry of Wordsworth with a favourable predisposition," and "to attempt to read it as he would have wished it to be read, and to find in it what he attempted to express." In this enterprise he is happily assisted by the "full body of criticism on his own work" left by the poet. So he puts aside the commentators and communes directly with the heart and mind of his author. The treatment is fresh, sympathetic, and illuminating, and it is expressed in an ample, fluent, and attractive exposition. The work seems to us to be one of the finest pieces of reasonable and convincing criticism in our time; and no student of Wordsworth, or of English literature, will neglect it without literary loss.

"The Favourite Classics."—*The Plays of Shakespeare.* (6d. a volume. Heinemann.)

The first issues—"Hamlet," "The Merchant of Venice," "Richard III.," and "Twelfth Night"—show that the series will be really a "favourite" series of "favourite" works. The form is most convenient; paper and print are excellent; and the binding is tasteful and durable. Each volume has a frontispiece plate executed in photogravure, so that the series will form a very interesting illustrative collection. Dr. George Brandes supplies excellent introductions—literary and critical.

A second batch of four—"Cymbeline," "Macbeth," "Coriolanus," and "Romeo and Juliet"—confirms our first impression.

Digitized by Google

Poems of Thomas Campbell. Selected and arranged by Lewis Campbell. (2s. 6d. net. Macmillan.)

A welcome addition to the "Golden Treasury Series." Dr. Campbell, a relative of the poet, furnishes an admirable introduction, and has bestowed solicitous care upon the text. A frontispiece reproduces Wilkie's portrait of the poet at twenty-four (about 1802).

ENGLISH GRAMMAR AND COMPOSITION.

Senior Course of English Composition. By J. C. Nesfield, M.A. (3s. 6d. Macmillan.)

The work is disposed in two parts. The first (pages 1–106) treats of the qualities of composition, the scheme differing but little from those of previous writers, and the main characteristic being the vast agglomeration of examples. These examples are largely fresh, but a good many of them seem rather beyond the pupil in point of matter. The author shows a stronger grip of his subject than most of his competitors, and his directions and suggestions will be very useful. But not unfrequently he seems hypercritical, or gets out of one apparent difficulty only to land himself in another. Take page 31 at random. Bolingbroke writes: "I know that all words which are signs of complex ideas furnish matter of mistake or cavil." Mr. Nesfield thinks the sense would have been clearer if Bolingbroke had written "all *those* words." Surely the sentence is perfectly clear—though a very temporary dubiety may be caused by "which" (for "that"); and the insertion of "those" makes the expression unduly heavy and unduly emphatic. Again: "And thus the son the fervent sire addressed." Mr. Nesfield would improve Pope by writing "*his* fervent sire," which he thinks would be much clearer. We do not see that it would be a bit clearer; and, if the line be read in its connexion (Homer, "Odyssey" xix., *init.*), there is no obscurity whatever. Once more: "Like a householder who bringeth out of his treasure things new and old." In the interests of improved perspicuity, Mr. Nesfield would say "new things and old"; and again we fail to see eye to eye with him. Other pages would similarly exemplify a literary sense overborne by an attitude of minute criticism, excellent in purpose, but not adequately controlled by the wider outlook. This part of the work, though no better than some other works, is still of high quality, and offers a wide field for practice. The second part (pages 107–338) is devoted to essay-writing, and contains excellent explanations of the sentence and the paragraph, followed by a multitude of "essays for reproduction" and "notes for essays" in the different kinds of composition. The classification of kinds seems a cross-division, but that is of no practical moment. The matter of the essays suggests higher attainments on the part of the pupil than we should readily expect to find; only there is ample room for selection. Moreover, there would, we think, be more virtue in a fuller analysis of exemplary passages. There is a large appendix of essay subjects drawn from a dozen series of public examinations.

Introduction to Rhetoric. By William B. Cairns, Ph.D., Instructor in English in the University of Wisconsin. (Ginn.)

The first Part is devoted to "Style," including points of mere grammatical import, but mainly considering such qualities as may be illustrated by the sentence. The arrangement seems somewhat mixed, but the exposition is clear and forcible, and the illustrations are, in the main, useful and efficient. The second Part, occupying two-thirds of the volume, discusses the forms of composition under the general title of "Invention"—a title that does not appear to be particularly appropriate, though it has obtained standing in America. Narration is said to be of two kinds—without plot and with plot—and the latter kind, illustrated by the novel, is handled much more fully than the former kind; indeed, there is very little practical help suggested for the ordinary narrative of history—a matter that we should take to be greatly more important than novel construction. Description is much more profitably managed, though the principles and the illustrations might have been worked up together with far more effect than can come from a separate presentation, even when supported by slight general "suggestions for exercises." Much the same comment may be made on the other forms of composition. The book has good points so far as it goes, but it will not bear comparison with the first order of English works on the subject.

HISTORY AND GEOGRAPHY READERS.

Nos. I. and II. of the *Complete History Readers* (10d. and 1s., Blackie) consist of "stories from history," judiciously selected and simply retold, so as to give children a vivid and interesting general view. The series will be developed on the concentric method. The illustrations—some of them in colour—are numerous, and, though occasionally rough, effective. The series promises to be very attractive and useful.

Books IV. and V. of *British History in Periods* (1s. 4d. and 1s. 6d., Blackie) run from the Roman Invasion to the Accession of Henry VII., and from Henry VII. to the Battle of Waterloo. The outstanding events are treated lucidly and compactly and freely illustrated (many in IV. and some in V. in colour); and a summary is appended, together with some helpful notes and explanations. A capital series, attractively and substantially got up.

Pitman's New Era Geography Reader, Book I., by Robert Bunting (10d.), handles pleasantly "simple ideas of geography and elementary science derived from observation of common natural objects." It is spaciously printed and profusely and effectively illustrated (partly in colour). Poetical pieces are included; spellings are grouped at the end. A very interesting reader.

Black's Elementary Geography Reader, V.B (1s. 4d.), by Prof. Lyde, confines itself more strictly to its proper business. It treats of *Asia*, first the general geography, and then the several political divisions. The treatment is accurate as well as readable, and the points are selected with distinctive judgment. Illustrations are abundant and excellent. The appended summary will be useful.

The British Empire, one of the "Pictorial Geographical Readers" in "Longmans' Ship Series" (1s. 8d.), is fluently written, admirably descriptive, and judiciously and liberally illustrated. It presents a vivid idea of the various countries under British rule, with their peoples, industries, productions, &c. A very instructive and attractive book.

HISTORY.

The Tutorial History of Greece from the Earliest Times to the Death of Demosthenes. By W. J. Woodhouse, M.A. Oxon., Professor of Greek in the University of Sydney. (3s. 6d. Clive.)

Prof. Woodhouse aims at "a clear conception of the broad features of the Greek civilization and of its place in general history rather than the barren statement of the precise condition in which any particular problem stands, or the exact degree of weight to be assigned to rival theories"; and he sets aside the achievements of the Greeks in philosophy, literature, and art as matters "of too great importance to be dealt with in a book such as this, as mere appendages to political history." He has primarily in view students that "have to look to their text-book, and their text-book only, for information." However, that is no reason why the book should not be used under a teacher. While founding his work on the best authorities, Prof. Woodhouse is very independent in judgment, and he is fresh and vigorous in treatment. There are two maps and several battle plans.

History for Graded and District Schools. By Ellwood Wadsworth Kemp, Head of Department of History, Indiana State Normal School, Terre Haute, Indiana. (4s. 6d. Ginn.)

The title is not particularly attractive or explanatory (to us), but the purpose of the book is "to present a framework of history for children from six to about fifteen years of age" in such a way as "gradually to develop in pupils' minds the idea of the *unity of history*, and thus finally to lead them to feel that history is an unbroken stream of life, of which the present in general, and their lives in particular, constitute an important part." Short lists of reference books are appended to each chapter—"such books as will present not alone the political, but also the social, artistic, religious, industrial, and educational aspects of history." Mr. Kemp tells the story of the Aryans, the Egyptians, the Hebrews, the Greeks, the Romans, the Teutons, and Spanish, French, and English influences on America. He presents a General History, with much attention to the main civilizing agencies as well as to the military and political developments. The treatment is most skilful and attractive. We do not know of any general survey that can compare with this admirable volume. If it were placed in school libraries, the children would read it with avidity by themselves, under general supervision.

EDUCATION.

The New Movement in Education, with special reference to Elementary Education. By Thiselton Mark, B.A., B.Sc., Master of Method, University of Manchester. (6d. Charles & Dible.)

An unpretending *brochure*, to be read from cover to cover. By "the new education" Mr. Mark means "the deliverance of pupil and teacher from excessive bondage to books, and to learning from books, which characterized the 'old education,' and a direction of their attention towards the world in which they live, as another and more direct source of knowledge, and as the natural arena for the exercise of the child's intelligence"; and he dates it from Rabelais. "The new aspects of education, to which various historical and social movements have given rise, are illustrated by noting some of the more striking educational developments which are actually in progress, some just beginning to make themselves felt, others fairly well established; and an attempt is made to trace these movements and developments, at least in part, to influences which the doctrine of evolution has exerted upon the minds of educators and educational administrators." Thus we have chapters on the Historical Movement, Education as a Branch of Social Science, Training for Industry and Citizenship, Nature-study, Hand-work, New Methods of Teaching, The Training of the Teacher, &c. Mr. Mark writes "not so much for the professional teacher as for the large number of non-professional men and women, including those assuming authority in connexion with the local administration of education who are taking a new and serious interest in educational matters."

The Place of Industries in Elementary Education. By Katharine Elizabeth Dopp. (University of Chicago Press. London: King.)

"The study here made," says the authoress, "is based upon several

Digitized by Google

years' practical experience, during which many tentative efforts were made along lines marked out in this book, as well as upon research work in the Departments of Education and Sociology in the University of Chicago." "This work is an attempt to make clear that there is a closer relation than is usually recognized between the attitudes of the child and the serious activities of society in all ages. It is an attempt to bring together from the domain of education, on the one hand, and of anthropology, sociology, and history, on the other, ideas that will mutually reinforce each other. . . . In order to secure a basis for the work, it has seemed best to consider, on the one hand, the several stages of industrial development in the race with reference to the educational significance of each; and, on the other, the successive periods in the development of the child." Accordingly Miss Dopp examines the significance of the industrial epochs: first, the house industries, or the period of domestic economy (the hunting, fishing, pastoral, and agricultural stages, the age of metals, of travel, trade, and transportation, the City State, the feudal system); next, the handicraft system, or the period of town economy; and, finally, the factory system, or the period of national economy. Then she reviews "the origins of attitudes that underlie industry." And thereafter she proceeds to the practical applications. An original investigation conducted with conspicuous ability, and interesting and instructive throughout.

RELIGION AND MORALS.

"The Century Bible." (1) *Psalms, Vol. I.: i.–lxxii.* By the Rev. Prof. Davison, M.A., D.D., Tutor in Systematic Theology, Handsworth College, Birmingham. (2) *The Minor Prophets: Hosea, Joel, Amos, Obadiah, Jonah, and Micah.* By the Rev. R. F. Horton, M.A., D.D. (2s. 6d. net each. Jack.)

(1) Dr. Davison has peculiarly difficult questions to struggle with in pronouncing upon the composition of the Psalms, which he does partly in his general introduction and partly in the detailed introductions to the several psalms. "In the prevailing uncertainty and diversity of opinion, he has tried to do two things: to give a general idea of the views accepted by recent critics, both the more conservative and the more advanced; and briefly to state his own opinion, without attempting to give his full reasons." He places the continuous process of compilation of the Psalter between 450 and 180 B.C.; he refuses to follow the critics that would bring a considerable portion of it down to 160–150 B.C. The titles of the Psalms, he concludes, "are quite untrustworthy for the determination of authorship," although "it does not follow that they are useless." He wrote before the publication of Mr. Thirtle's work. Dr. Davison says: "We are brought to this point at last: that, while there are strong probabilities that David wrote psalms, that these have not all perished, and that some of them are to be found in the Psalter, it is impossible to mark out any—if the evidence of II. Sam. xxii. be rejected—of which we may say that David, and no other, is certainly its author." He is inclined to think that the truth lies somewhere between the conclusions of Profs. Driver and Kirkpatrick. The whole treatment is most judicious and instructive.

(2) Dr. Horton thinks "the best way to regard this book is as an anthology of prophetic utterances, unfortunately not arranged in chronological order, ranging over the whole period of prophetic activity in Israel—viz., from the eighth to the fourth century B.C., or even later." While making constant use of Pusey, he bases his commentary on Wellhausen, Nowack, and G. Adam Smith, supplemented by Profs. Driver and Cheyne, and checked by the more conservative Keil and Orelli. The volume contains much useful matter, though it hardly reaches the high intellectual plane of its predecessors.

The Student's Prayer-Book: The Text of Morning and Evening Prayer and Litany. With Notes. By W. H. Flecker, M.A., D.C.L. (2s. 6d. Methuen.)

Dr. Flecker gives a very good and sufficient sketch of the history of the parts of the Prayer-Book that he treats in the present volume, and very satisfactory notes of explanation, marking specially such passages as may best be left to senior students. An instructive and judicious work, agreeably got up.

MUSIC.

From Messrs. Novello we have several samples of good music. The new additions to *The Junior Violinist*, edited by C. Egerton Lowe, are Book XVII., Nos. 1–4, and Book XVIII., Nos. 5–8, of eight movements from the string quartets of Mozart, arranged for violin (first to third position) and pianoforte (with second violin *ad lib.*) (2s. net each book) —good for preliminary practice to quartet playing. "The violin parts are the same as in the original score; the pianoforte accompaniment has been arranged from the other instruments."—In the series of "Novello's School Music" there are (1) *The Old Year's Vision*, an operetta or cantata for schools and classes, words by Hettie M. Hawkins, music by Percy E. Fletcher (1s. 6d.); (2) *The Idea*, humorous operetta for children in two acts, words by Fritz B. Hart, music by Gustav von Holst (1s.); and (3) *The Tragedy of Cock Robin*, short action piece, composed by T. Arthur Burton (8d.). Then there is Vol. I. of "Novello's Songs for Schools and Classes," consisting of *Thirty-five Classical Songs* by various composers (1s. 6d.). Finally, of "Novello's School Songs" we have Book 65, *Ten Old English Songs* (Grade II.), by various composers (6d.); Book 117, *Seven Junior Unison Songs* (Grade II.), by various composers (6d.); Book 124, *Six Two-Part Songs* (Grade II.), by various composers (6d.); and Book 127, *Five Four-Part Songs* (Grade II.), by various composers (9d.).

Mr. F. S. Turney publishes *The Manchester Two-Part Songs*, Nos. 1–24, words by Ernest A. Bagnall, music by Joseph Smith (2s. net.)—simple and engaging. Also a smaller edition (3d.).

MAPS AND WALL-SHEETS.

Messrs. W. & A. K. Johnston issue (1) a fine political map of *Egypt and the Sudan* (49 in. × 41 in.), with a capital sketch of the Delta of the Nile (11 in. × 14 in.) utilizing the northern wastes of Arabia. It is very full without being overcrowded with names. It reaches down to a few degrees south of the Equator. An excellent map for school use. (2) A cunningly devised chronological and genealogical *Picture Chart of English History from William the Conqueror to the Accession of Edward VII.* (24 in. × 38½ in.)—very clear, not too full, and beautifully produced. (3) and (4) *Physical Maps of Europe* and *The British Isles*, both admirable alike in construction and in production. There are also explanatory "Handbooks" for these two maps (1s. each), each containing a good coloured map, apparently reductions of the large wall maps. (5) *The Howard Vincent Map of the British Empire* (26½ in. × 32 in.), showing extent, population, revenue, and commerce of the British possessions (reduction from twelfth edition)—very comprehensive and excellently produced. To this also there is a companion "Handbook," by Sir Howard Vincent (3d.). (6) A coloured picture, mounted, representing the principal departments in *Gardening* operations, in the "Illustrations of Trades" series—a bit of very capable workmanship.

Messrs. Ruddiman Johnston & Co. publish a group of four "*Nature-Knowledge*" *Diagrams* (27 in. × 37½ in.), showing "the coloration of animals and birds as affected by their environment": (1) Characteristic Life in the Arctic Regions; (2) Characteristic Life in the Desert Regions; (3) Characteristic Inhabitants of Dense Forests, Jungles, Prairies, and Swamps; and (4) Protective Mimicry. The representation is very fair, and the individuals are effectively grouped into attractive pictures. There is a separate explanatory "Handbook" (pamphlet) for each diagram. Diagrams and handbooks together should enable the pupils to realize clearly the various objects illustrated.

Messrs. Nelson's "Royal Wall Atlas," No. 7, *Africa*, consists of six maps attached to one roller—(1) Africa, Physical (relief); (2) Africa, Political (relief); (3) Central and South Africa; (4) North-East Africa; (5) North-West Africa; and (6) South Africa, Industrial (35 in. × 31 in.; 12s. 6d. the set). They are boldly drawn and distinctly coloured, and few names are inserted, the purpose being to make them "teaching and test maps combined." They are sure to be very useful.

McDougall's *School Atlas* of coloured and photo-relief maps (8½ in. × 6¼ in.)—twenty-one maps in colour, with sixteen physical maps in photo-relief placed opposite the political maps of the same countries—is a handy collection for ordinary school use (1s., or 8d., the difference being apparently in the binding). The lettering is clear, and there is a full index.

A large sheet (57 in. × 39 in.), strongly mounted, exhibits *The Boyle System of Ventilation (Natural) as applied to a School*, by means of half-a-dozen diagrams, together with letterpress explaining what natural ventilation is and how it operates (42s.; Robert Boyle & Son, Ventilating Engineers, London, &c.). The principle, we believe, has been applied to many thousand buildings, and certainly it challenges the attention of every official responsible for school ventilation. The sheet is very effective.

Messrs. Dent publish four expansive coloured sheets (33½ in. × 52 in.), representing "Le Printemps," "L'Eté," "L'Automne," and "L'Hiver," designed by J. Ayton Symington (2s. 6d. net each, unmounted). These *Wall Pictures of the Four Seasons* are comprehensive and effective; and they seem well adapted for conversational lessons in French.

Messrs. Bacon present (1) a mounted wall-sheet displaying the *Roman Numerals*, arranged by Frank Steeley (38 in. × 30 in.); and (2) a representation of *The Bootblack*, in the series of "Familiar Folks." Both are excellently produced.

We should add that the measurements given above are all within margins.

MISCELLANEOUS.

In *The Opportunity of Liberalism* (1s. net, Fisher Unwin) Mr. Brougham Villiers attempts to analyse briefly "the social forces which rendered the long Tory reaction of the past twenty years possible," and to sum up the difficulties and the opportunities of the position in the event of a Liberal victory at the next General Election. He takes the attitude of an independent critic at the democratic standpoint, and discusses "the town problem," "the anomalies of our economic position," and especially the question of "British agriculture." The *brochure* should be read by men of all political colours that permit themselves the liberty of independent judgment on public affairs.

Digitized by Google

Mr. Daniel Grant, ex-M.P. for Marylebone (1880-85), presents in convenient and effective form the Liberal view of *Free Food and Free Trade* (2d., Fisher Unwin). The figures are kept in proper subordination to the argument, and their significance is strongly enforced. The pamphlet is well worth perusal by all parties in politics, or out of politics. The question is national in the deepest sense.

The *Two Lectures on the Science of Language* (1s. 6d. net, Cambridge University Press), delivered by James Hope Moulton, M.A., D.Lit. (Lond.), to the students of the University Extension at Cambridge a couple of years ago, must be acknowledged to be well worthy of permanent record. They present in popular form a vigorous and lucid sketch of a very fascinating subject, and should be interesting far beyond the circle of University or University Extension students. They are evidently the flower of wide and earnest study.

NEW EDITIONS AND REPRINTS.

Messrs. Watts have added to the "Cheap Reprints Series" issued for the Rationalist Press Association *A Modern Zoroastrian*, by the late Samuel Laing; and to the "Extra Series" *Ethics of the Great Religions*, by Charles T. Gorham (6d. each). They also publish an instructive Address, *What to Read*, by John M. Robertson—"suggestions for the better utilization of public libraries" (4d.).

Messrs. Macmillan publish a ninth edition, "revised and enlarged," of Mrs. Fawcett's well known *Political Economy for Beginners* (2s. 6d.). New examples have been taken from recent events. A simple and attractive introduction to a subject of more and more pressing importance.

Messrs. E. J. Arnold & Son issue a second edition of *Geometrical Design*—the Application of Geometrical Drawing to Decorative Work and Design—by A Drawing Inspector (2s.). The work has been thoroughly revised, many of the diagrams have been improved, and two new chapters have been added. An excellent work.

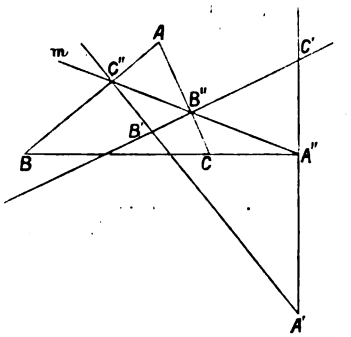
MATHEMATICS.

12264. (Professor NEUBERG.) — Une droite m coupe les côtés d'un triangle ABC en trois points A″, B″, C″ tels que les perpendiculaires élevées en ces points sur BC, CA, AB forment un triangle A′B′C′ de surface donné. Trouver l'enveloppe de la droite m.

Solution by W. J. GREENSTREET, M.A.

Since BA, B′A′, ..., intersect on a line m, the joins of corresponding vertices must be concurrent in a point M. As m moves parallel to itself, M remains the centre of similitude for all triangles A′B′C′, and when one of these triangles degenerates into M, m is then a Simson-line. Hence M is on the circle ABC, and its Simson-line for ABC is parallel to m. Also, as ABC is deducible from A′B′C′ and m, just as A′B′C′ is deduced from ABC and m, it follows that M is on the circle A′B′C′, and its Simson-line for A′B′C′ is parallel to m. Since ABC, A′B′C′ have their homologous sides respectively at right angles, then, if O, O′ are the centres of their circum-circles, we see that OA and O′A′ are at right angles; and, further, OMO′ is a right angle. As m moves, A′B′C′ being of constant area, MO′ is of constant length, and the locus of O′ is a circle concentric with the circum-circle ABC. Then, since O′A′ moves parallel to itself and remains constant in magnitude, the locus of A′ is a circle, centre O″, where OO″ is equal and parallel to O′A′. Finally, the right-angled triangles OO″A and O′MO are equal; therefore O″A = OO′ = O″A′; therefore the locus of A′ passes through A. Hence m is the Simson-line of a point A′ on the circle O″ with reference to the inscribed angle ABC. Therefore it envelops a three-cusped hypocycloid.



Note by the PROPOSER.

Au sujet des triangles orthohomologiques ABC, A′B′C′, on peut voir *Mathesis*, 1886, p. 116; 1895, pp. 265–8; 1896, p. 81. La droite A″B″C″ passe au milieu de la droite joignant les orthocentres des triangles ABC, A′B′C′; le centre de similitude de ces triangles est le second point de rencontre des circonférences circonscrites.

15499. (Lt.-Col. ALLAN CUNNINGHAM, R.E. — *Revised.*) — Let $N = 111\ldots11$ consist of q^n units in the scale of $r = mq+1$, q being *prime;* then $N = Mq^n$.

Solutions (I.) *by* JAMES BLAIKIE, M.A., *and* R. CHARTRES; (II.) *by the* PROPOSER.

(I.) We have $N = 111\ldots1$, q^n factors. Let $p = q^n$. Then

$$N = \frac{r^p-1}{r-1} = \frac{(1+mq)^p-1}{mq} = \frac{1}{mq}\left(pmq + \frac{p(p-1)}{1.2}m^2q^2 + \ldots\right).$$

It has to be shown that each term of this expansion contains pq or q^{n+1} as a factor. The general term is $\frac{p(p-1)\ldots(p-x+1)}{1.2\ldots x}m^xq^x$, which clearly contains pq as a factor, when x is not a multiple of q. Consider the case when x is a power of q, or a multiple of a power of q. Let $x = aq^t$. Then the general term contains the factor q^{n-t+x}, which cannot be less than q^{n+1}, unless $t+1 > x$, or $t+1 > aq^t$, which is impossible, since $q > 1$. Thus $N = Mq^n$.

(II.) In order to avoid heavy double exponents, let R_x denote r^{q^x}, so that $R_2 = r^{q^2}$, $R_1 = r^q$, $R_0 = r$; thus $R_{x+1} = r^{q^{x+1}} = (r^{q^x})^q = R_x^q$. Here

$$N = 111\ldots1 \ [q^n \text{ units}] = (r^{q^n}-1)/(r-1) - (R_n-1)/(R_0-1).$$

Now let N be resolved into its n *algebraic* prime factors, *i.e.*,

$$N = \frac{R_n-1}{R_{n-1}-1}\cdot\frac{R_{n-1}-1}{R_{n-2}-1}\cdots\frac{R_2-1}{R_1-1}\cdot\frac{R_1-1}{R_0-1}.$$

It will be shown that each one of these n fractions contains q. Let

$$F_x = \frac{R_{x+1}-1}{R_x-1} = \frac{R_x^q-1}{R_x-1} = R_x^{q-1} + R_x^{q-2} + \ldots + R_x^2 + R_x + 1 \ [q \text{ terms}].$$

Take the term $R_x^t = (mq+1)^{q^t} = Mq+1$, where Mq means "multiple of q"; therefore $F_x = \Sigma(Mq+1) = Mq+q$ units $= Mq$. A similar argument applies to every fraction F_x, and N contains n such fractions; therefore N contains q^n.

A similar argument to the above would show that, if $N = 100\ldots01$, with (q^n-1) ciphers, in the scale of $r = mq-1$, then $N = Mq^n$. The argument shows that the limitation q = prime (stated in the Question) is unnecessary.

Digitized by Google

15553. (Professor Nanson.)—Eliminate x, y, z from

$$ax^2+by^2+cz^2=0,$$
$$(b-c)\,lyz+(c-a)\,mzx+(a-b)\,nxy=0,\quad lx+my+nz=0.$$

Solutions (I.) *by* Thomas Muir, LL.D., F.R.S.; (II.) *by* A. M. Nesbitt, M.A., *and others.*

(I.) Probably the most direct mode of solution is first to eliminate z, and then from the two resulting equations to eliminate x and y. These equations are

$$(an^2+cl^2)\,x^2+2clmxy+(bn^2+cm^2)\,y^2=0,$$
$$\mathrm{B}lmx^2+(\mathrm{A}l^2+\mathrm{B}m^2-\mathrm{C}n^2)\,xy+\mathrm{A}lmy^2=0,$$

where A, B, C are written for $b-c$, $c-a$, $a-b$ respectively. Their eliminant is of the twelfth degree, a factor of it, n^2, being irrelevant to the original set of equations.

It is of greater interest, however, to observe the result of applying as follows the dialytic method:—From the linear equation three quadrics arise through multiplication by x, y, z: there thus is needed only one other such equation in order to have a complete set of six from which to eliminate x^2, y^2, z^2, yz, zx, xy. This want is supplied by taking the given equations in the form

$$ax\,.\,x+by\,.\,y+cz\,.\,z=0,\qquad \mathrm{C}ny\,.\,x+\mathrm{A}lz\,.\,y+\mathrm{B}mx\,.\,z=0,$$
$$l\,.\,x+m\,.\,y+n\,.\,z=0,$$

and thus deriving by elimination

$$\begin{vmatrix} ax & by & cz \\ \mathrm{C}ny & \mathrm{A}lz & \mathrm{B}mx \\ l & m & n \end{vmatrix}=0,$$

i.e., $\quad a\mathrm{B}m^2x^2+b\mathrm{C}n^2y^2+c\mathrm{A}l^2z^2-c\mathrm{C}mnyz-a\mathrm{A}nlzx-b\mathrm{B}lmxy=0.$

The eliminant as a six-line determinant thus is

$$\begin{vmatrix} a & b & c & \cdot & \cdot & \cdot \\ \cdot & \cdot & \cdot & \mathrm{A}l & \mathrm{B}m & \mathrm{C}n \\ l & \cdot & \cdot & \cdot & n & m \\ \cdot & m & \cdot & n & \cdot & l \\ \cdot & \cdot & n & m & l & \cdot \\ a\mathrm{B}m^2 & b\mathrm{C}n^2 & c\mathrm{A}l^2 & -c\mathrm{C}mn & -a\mathrm{A}nl & -b\mathrm{B}lm \end{vmatrix}.$$

This is seen to separate into six parts arrangeable in two sets of three, viz.:—

$$-\Sigma\left\{b\mathrm{B}lm\begin{vmatrix} a & b & c & \cdot & \cdot \\ \cdot & \cdot & \cdot & \mathrm{A}l & \mathrm{B}m \\ l & \cdot & \cdot & \cdot & n \\ \cdot & m & \cdot & n & \cdot \\ \cdot & \cdot & n & m & l \end{vmatrix}\right\}-\Sigma\left\{c\mathrm{A}l^2\begin{vmatrix} a & b & \cdot & \cdot & \cdot \\ \cdot & \cdot & \mathrm{A}l & \mathrm{B}m & \mathrm{C}n \\ l & \cdot & \cdot & n & m \\ \cdot & m & n & \cdot & l \\ \cdot & \cdot & m & l & \cdot \end{vmatrix}\right\};$$

so that the non-determinant form is readily calculable and found to be

$$\Sigma bc\mathrm{A}^2l^6+\Sigma ca\mathrm{A}^2l^4m^2+\Sigma bc\mathrm{B}^2l^2m^4-2\Sigma bc\mathrm{AB}l^4m^2-2\Sigma ca\mathrm{AB}l^2m^4+\Sigma a^2\mathrm{A}^2l^2m^2n^2.$$

But the sum of the first three terms here is the product of

$$bcl^2+cam^2+abn^2\quad\text{and}\quad \mathrm{A}^2l^4+\mathrm{B}^2m^4+\mathrm{C}^2n^4\ ;$$

and, if we substitute for $\Sigma a^2\mathrm{A}^2$ its equivalent $-2\Sigma bc\mathrm{BC}$, the sum of the last three terms is with equal ease seen to be the product of

$$bcl^2+cam^2+abn^2\quad\text{and}\quad -2\mathrm{BC}m^2n^2-2\mathrm{CA}n^2l^2-2\mathrm{AB}l^2m^2.$$

Thus our final result is $\Sigma bcl^2(\Sigma \mathrm{A}^2l^4-2\Sigma \mathrm{BC}m^2n^2)$. [Rest in *Reprint.*]

15547. (Professor Sanjána, M.A.)—A central conic, whose minor axis is of given length, touches two fixed straight lines; if one focus moves on a given straight line, prove that the other moves on a hyperbola having its asymptotes parallel to the fixed lines.

Solutions (I.) *by* Frances E. Cave; (II.) *by* A. R. Richardson.

(I.) Take the two fixed lines as axes. The product of the perpendiculars from the foci on to either axis is constant, and therefore the products of the abscissæ and of the ordinates are constant. Therefore, if one focus moves along $lx+my+n=0$, the other moves along the hyperbola $l/x+m/y+n/k^2=0$.

(II.) Let $x=0$, $y=mx$ be the equations to the two tangents; b the semi-minor axis; $\xi x+y=\mathrm{C}$ the locus of one of the foci. Then we know that the product of distances of foci from any tangent is b^2; therefore

$$\mathrm{X}y'=b^2,\qquad (\mathrm{Y}-m\mathrm{X})(y'-mx')=b^2(1+m^2),$$

where (X, Y) are the points we seek, and (x', y') of the other focus.

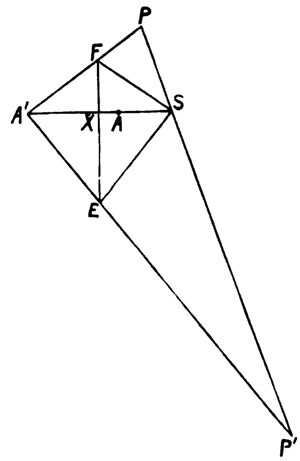
Eliminating x', y' from these two equations and $\xi x'+y'=\mathrm{C}$, we get

$$(\mathrm{Y}-m\mathrm{X})\,[b^2(1+m/\xi)-\mathrm{XC}\,(m/\xi)]=b^2\,[\mathrm{X}\,(1+m^2)],$$

i.e., an hyperbola; and, as asymptotes are parallel to terms of the second degree, they are parallel to $\mathrm{X}=0$, $\mathrm{Y}=m\mathrm{X}$.

15563. (R. F. Davis, M.A.)—Given a hyperbola whose eccentricity $=2$, prove that the circle described upon any focal chord as diameter passes through the further extremity of the transverse axis.

Geometrical Solutions (I.) *by* K. Deva Rau, B.A., *and* W. F. Beard, M.A.; (II.) *by* Professor Sanjána, M.A.



(I.) Let PSP′ be the focal chord, AA′ the transverse axis, and EXF the directrix. Join A′P and A′P′, cutting the directrix in F and E. Join FS and ES. Then FS bisects the angle A′SP, and ES bisects the angle A′SP′; therefore ESF is a right angle.

Again, the eccentricity of the hyperbola $=2$; therefore X is the middle point of SA′. Also EXF is perpendicular to SA′; therefore

$$\angle\mathrm{FA'X}=\angle\mathrm{FSX}$$

and $$\angle\mathrm{EA'X}=\angle\mathrm{ESX};$$

therefore

$$\angle\mathrm{EA'F}=\angle\mathrm{ESF}=90^\circ.$$

Therefore the circle described on PSP′ as diameter passes through A′.

[Rest in *Reprint.*]

15555. (Robt. W. D. Christie.)—Let $p=a^2+b^2$, $q=ac+bd$, $s=c^2+d^2$, $ad-bc=1$: prove $r^{2m}+1=ps$ and $r^{6m}+1=p(p-2q+s)$; and more generally $(pt+r^m)^2+1=p\mathrm{S}$, $(pt+r^{3m})^2+1=p\mathrm{T}$, where r is any primitive root of prime $4m+1$, t any integer. Establish similar equations for prime $p=4m-1$.

Solution by the Proposer.

(A) By adaptation of Euler's theorem we have

$$(ac+bd)(a^2+b^2-ac-bd)-(a^2+b^2)(ac+bd-c^2-d^2)=(ad-bc)^2=1\ldots\text{(i.)}.$$

Adapting to the prime roots, we get

$$r^m(p-r^m)-p\,[(p^2-r^{6m}-r^{2m}-2)/2p]=1\ \ldots\ldots\ldots\ldots\text{(ii.)}.$$

Now $$(ac+bd)^2+(ad-bc)^2=(a^2+b^2)(c^2+d^2),$$

i.e., $$(r^m)^2+1=ps\ \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots(1),$$

$$(r^{3m})^2+1=(p-r^m)^2+1=p^2-2pr^m+r^{2m}+1=p^2-2pq+ps$$
$$=p\,(p-2q+s)\ \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots(2),$$

(3) and (4) follow immediately from (1) and (2).

(B) For primes $=4m-1$, we have, corresponding with (i.) and (ii.) *supra*,

$$(rac+bd)(ra^2+b^2-rac-bd)-(ra^2+b^2)(rac+bd-rc^2-d^2)$$
$$=r\,(ad-bc)^2=r\ldots\ldots\text{(iii.)}$$

when $ad-bc=1$, $\qquad r^{m+1}\,.\,r^{3m+2}-pq=r\ \ldots\ldots\ldots\ldots\ldots\ldots\text{(iv.)}.$

15216. (R. C. Archibald, M.A., Ph.D.)—The *trisectrix* of Maclaurin ($r\cos\frac{1}{3}\phi=\mathrm{C}$ or $r\sin 2\theta+a\sin 3\theta=0$), the *logocyclic* curve or *strophoide* ($r\cos\theta+a\cos 2\theta=0$), and the *cubic* of Tschirnhausen ($r^{\frac{1}{3}}\cos\frac{1}{3}\theta=a^{\frac{1}{3}}$) are nodal cubics. Express their equations in the form $\mathrm{X}^{\frac{1}{3}}+\mathrm{Y}^{\frac{1}{3}}+\mathrm{Z}^{\frac{1}{3}}=0$, where X, Y, Z are linear functions of the Cartesian co-ordinates.

Additional Solution by Professor Sircom.

In each of these curves there is but one real point of inflexion; hence two of the expressions X, Y, Z must be imaginary. The algebraical form of the first equation is

$$2x\,(x^2+y^2)+a\,(3x^2-y^2)=0.$$

This may be written $a^3=(a-2x)\,(x^2+y^2+2ax+a^2)$;

whence $$a^3=(a-2x)\,(x+\iota y+a)\,(x-\iota y+a),$$

which is the rationalized form of

$$(x+\iota y+a)^{\frac{1}{3}}+(x-\iota y+a)^{\frac{1}{3}}+(a-2x)^{\frac{1}{3}}=0.$$

The algebraical form of the second is

$$x\,(x^2+y^2)+a\,(x^2-y^2)=0.$$

The asymptote $a-x=0$ is inflexional: assume, therefore,

$$(lx+m\iota y+a)^{\frac{1}{3}}+(lx-m\iota y+a)^{\frac{1}{3}}+(a-x)^{\frac{1}{3}}=0.$$

Rationalizing and equating coefficients, we have for l, m

$$(2l-1)^3-27l^2=9\,(l+1)^2=27m^2,$$

which give $l=\frac{5}{4}$, $m=\frac{3}{4}\sqrt{3}$, and then

$$(5x+3\sqrt{3}\iota y+4a)^{\frac{1}{3}}+(5x-3\sqrt{3}\iota y+4a)^{\frac{1}{3}}+(4a-4x)^{\frac{1}{3}}=0.$$

The third is $$(4a-x)^3=27a\,(x^2+y^2).$$

This can be written $\quad(2x-8a)^3=-27\,.\,8a\,(x^2+y^2),$

which is the rationalized form of

$$(x+\iota y)^{\frac{1}{3}}+(x-\iota y)^{\frac{1}{3}}-2a^{\frac{1}{3}}=0$$

15604. (Professor Lauvernay.)—Construire un triangle rectangle connaissant en position une droite Δ sur laquelle se trouve l'hypoténuse, le centre Ω du cercle enveloppant les cercles ex-inscrits au triangle ainsi que son rayon ρ.

Solution by Professor Sanjána, M.A.

The circle enveloping the escribed circles is the nine-point circle, and the centre of this is the mid-point of the median to the hypotenuse. Hence, with Ω as centre and ρ as radius, describe a circle, cutting the right line Δ in M; draw the diameter MΩA, as also the diameter LΩN parallel to Δ; join AL, AN, and produce these to meet Δ in B and C. Then ABC is the required right-angled triangle.

As the circle cuts Δ in two points (in general), there are two triangles given by the solution, which are images of one another with regard to the perpendicular from Ω on Δ.

15586. (*Communicated by* J. L. S. Hatton.)—Evaluate the determinant

$$\begin{vmatrix} a & b & c & d & e & f & g & h \\ h & a & b & c & d & e & f & g \\ g & h & a & b & c & d & e & f \\ f & g & h & a & b & c & d & e \\ h & g & f & e & d & c & b & a \\ a & h & g & f & e & d & c & b \\ b & a & h & g & f & e & d & c \\ c & b & a & h & g & f & e & d \end{vmatrix}.$$

Solution by C. M. Ross.

Taking ω_r to be any root of the equation $x^8-1=0$, and adding to the first column the sum of the constituents of the remaining columns multiplied by $\omega_r, \omega_r^2, \omega_r^3, \omega_r^4, \omega_r^5, \omega_r^6, \omega_r^7$, the result is an equivalent determinant in which the first column is

$$a+\omega_r b+\ldots+\omega_r^7 h \quad \ldots\ldots\ldots\ldots\ldots\text{(i.)},$$
$$h+\omega_r a+\ldots+\omega_r^7 g \quad \ldots\ldots\ldots\ldots\ldots\text{(ii.)},$$
$$\ldots\ldots\ldots\ldots$$
$$b+\omega_r c+\ldots+\omega_r^7 a \quad \ldots\ldots\ldots\ldots\ldots\text{(viii.)}.$$

But the expression (ii.) equals (i.) multiplied by ω_r, (iii.) equals (i.) by ω_r^2, and so on.

Hence (i.) is a factor of the determinant, and, as the product of 8 factors each similar to (i.) contains the term $+a^8$, the value of the given circulant is $\prod_{r=1}^{r=8}(a+\omega_r b+\ldots+\omega_r^7 h)$.

15589. (R. Chartres.)—Express $m^n/(mr-1)$ as a radix fraction in scale r.

Solutions (I.) *by* Rev. T. Wiggins, B.A.; (II.) *by the* Proposer.

(I.) $$\frac{m^n}{mr-1}=\frac{1}{r}\,\frac{m^n r-m^{n-1}+m^{n-1}}{mr-1}=\frac{m^{n-1}}{r}+\frac{1}{r}\,\frac{m^{n-1}}{mr-1}$$
$$=\frac{m^{n-1}}{r}+\frac{m^{n-2}}{r^2}+\frac{m^{n-3}}{r^3}+\ldots+\frac{m}{r^{n-1}}+\frac{1}{r^n}.$$

(II.) Since $1/(mr-1)=.\dot{a}bc\ldots m\dot{1}$ in scale radix r, therefore

$$m/(mr-1)=.\dot{1}abc\ldots\dot{m}.$$

Hence $m^n/(mr-1)$ can be found by putting the last n figures first and prefixing the integral part, if any. Therefore $1/x\equiv 1/(pq-1)$ will in scales p and q (1) have unity for last figure; (2) multipliers q and p respectively; (3) the same number of recurring figures in scales $\left(mx+\frac{p}{q}\right)$, m = any positive integer; (4) p^n-1 and q^n-1 will be divisible by $pq-1$, n being the number of recurring figures; (5) and, if $pq-1$ be a prime number and $n=pq-2$, we have Fermat's theorem.

9811. If masses P, Q, and R be placed at the vertices A, B, and C respectively of the triangle of reference, show that the trilinear equations to the principal axes at the centre of gravity of the masses will be

$$x+my+nz=0 \quad\text{and}\quad l'x+m'y+n'z=0,$$

where $l:m:n$ and $l':m':n'$ are determined by the equations

$$P(l/a)+Q(m/b)+R(n/c)=0,\quad P(l'/a)+Q(m'/b)+R(n'/c)=0,$$
$$P(ll'/a^2)+Q(mm'/b^2)+R(nn'/c^2)=0,$$

and

$$ll'+mm'+nn'-(mn'+m'n)\cos A-(nl'+n'l)\cos B-(lm'+l'm)\cos C=0,$$

and that at any point the principal axes are conjugate (*i.e.*, each passes through the pole of the other) with respect to the conics

$$Pl^2/a^2+Qm^2/b^2+Rn^2/c^2=0$$

and

$$l^2+m^2+n^2-2mn\cos A-2nl\cos B-2lm\cos C=0$$

(the circular points at infinity).

Solution by A. M. Nesbitt, M.A.

If $(\bar\alpha, \bar\beta, \bar\gamma)$ represent the actual values of the co-ordinates of the centre of mass, we have $\bar\alpha\,\Sigma P=P(2\Delta/a),\ldots$; so that $\bar\alpha:\bar\beta:\bar\gamma=P/a:Q/b:R/c$. Hence, since this point lies on both the given lines, we get the first two relations in the Question.

Further, the perpendiculars from A to the two given lines are $(l\,2\Delta/a)/[\phi(lmn)]$ and $(l'\,2\Delta/a)/[\phi(l'm'n')]$, where

$$[\phi(l,m,n)]^2=\Sigma l^2-2\Sigma mn\cos A.$$

Expressing that the products of inertia vanish, we have

$$Pll'/a^2+Qmm'/b^2+Rnn'/c^2=0,$$

which is the third relation to be established, and this applies whether the given lines intersect in the centre of mass or not. The fourth merely ensures that the two given straight lines are at right angles.

Further, the trilinear equation to the conic given tangentially by $Pl^2/a^2+\ldots+\ldots=0$ is $QRx^2/(b^2c^2)+\ldots+\ldots=0$, and the condition that (l,m,n), (l',m',n') should be conjugate with respect to this is

$$\begin{vmatrix} QR/(b^2c^2) & . & . & l \\ . & RP/(c^2a^2) & . & m \\ . & . & PQ/(a^2b^2) & n \\ l' & m' & n' & . \end{vmatrix}=0,$$

and, if we respectively multiply the four rows by Pl'/a^2, Qm'/b^2, Rn'/c^2, and $-(PQR/a^2b^2c^2)$, their sum is zero in every column; so that the relation is satisfied.

The final part of the theorem is of course evident *a priori*; or, it may be established thus. The tangential equation $\Sigma l^2-2\Sigma mn\cos A=0$, when translated to trilinears, becomes $\Sigma x^2\sin^2A+2\Sigma yz\sin B\sin C=0$, being, in fact, $(\Sigma x\sin A)^2=0$; and the condition that (l,m,n), (l',m',n') should be conjugate to this is

$$\begin{vmatrix} \sin^2A & \sin A\sin B & \sin A\sin C & l \\ \sin A\sin B & \sin^2B & \sin B\sin C & m \\ \sin A\sin C & \sin B\sin C & \sin^2C & n \\ l' & m' & n' & . \end{vmatrix}=0.$$

Multiplying the first three rows respectively by $l'-m'\cos C-n'\cos B$, $m'-n'\cos A-l'\cos C$, $n'-l'\cos B-m'\cos A$ and adding, we get zero in every column. Hence the relation is satisfied.

10390. (E. Césaro.)—Démontrer que la chaînette d'égale résistance, qui a pour équation intrinsèque $\rho=\frac{1}{2}a(e^{s/a}+e^{-s/a})$, est la seule ligne dont le rayon de courbure soit égal au segment de la normale intercepté par deux droites fixes parallèles.

Solution by Frances E. Cave.

Since radius of curvature = segment of normal intercepted between two parallel fixed straight lines, therefore its projection on their perpendicular distance is constant; therefore $\rho\cos\psi=$ constant $=a$, say, where ψ is the inclination of the tangent to the fixed lines.

Put $\sec\psi=\cosh u$; then $ds=a\,du$; therefore $u=s/a$, if s be measured from the point where ψ vanishes; therefore

$$\rho=a\cosh s/a=\tfrac{1}{2}a(e^{s/a}+e^{-s/a}).$$

15080 & 15368. (Professor Nanson.)—(15080.) Lines drawn through the vertices of a triangle Δ divide the angles into the segments α, α'; β, β'; γ, γ', and form a triangle Δ'. If R, R' are the radii of the circum-circles of Δ, Δ', prove that

$$\frac{R'}{R}=\frac{\sin\alpha\sin\beta\sin\gamma-\sin\alpha'\sin\beta'\sin\gamma'}{\sin(\beta+\gamma')\sin(\gamma+\alpha')\sin(\alpha+\beta')},$$

and deduce the theorems of Ceva and Menelaus.

(15368.) If lines drawn through the vertices of a triangle Δ divide the angles into segments α, α'; β, β'; γ, γ', and form a triangle of area Δ', then

$$\frac{\Delta'}{\Delta}=\frac{(\sin\alpha\sin\beta\sin\gamma-\sin\alpha'\sin\beta'\sin\gamma')^2}{\sin(\beta+\gamma')\sin(\gamma+\alpha')\sin(\alpha+\beta')\sin(\alpha+\alpha')\sin(\beta+\beta')\sin(\gamma+\gamma')}.$$

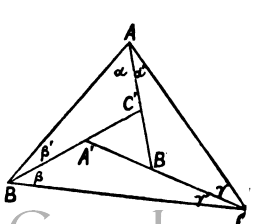
Solutions by the Proposer.

Let $AB'=x$, $AC'=x'$, ..., so that $a'=x-x'$, ...; then, expressing that the large triangle is the sum of the four small triangles, we have

$$\frac{\Delta}{\Delta'}=1+\frac{y'z}{b'c'}+\frac{z'x}{c'a'}+\frac{x'y}{a'b'}=\frac{xyz-x'y'z'}{a'b'c'}.$$

Now $z:y'=a=\sin\beta:\sin\gamma':\sin A',\ldots$; therefore

$$xyz:x'y'z':abc$$
$$=\Pi\sin\alpha:\Pi\sin\alpha':\Pi$$



Digitized by Google

therefore $$\frac{R'}{R} = \frac{a'b'c'\Delta}{abc\Delta'} = \frac{\Pi \sin\alpha - \Pi \sin\alpha'}{\Pi \sin A'} \quad \ldots\ldots\ldots\ldots(1),$$

which gives the formula in Question 15080.

Again $\Delta : \Delta' = bc \sin A : b'c' \sin A' = \ldots$. Hence, from (1) we get

$$\Delta'/\Delta = (\Pi \sin\alpha - \Pi \sin\alpha')^2/(\Pi \sin A \, \Pi \sin A'),$$

which gives the formula in Question 15368.

Further, we have $\Pi \sin\alpha = \Pi \sin\alpha'$ or $xyz = x'y'z'$, when $R' = 0$ or when $R = \infty$, *i.e.*, when the lines through A, B, C are concurrent, or when A, B, C are collinear; and thus we have the theorems of Ceva and Menelaus.

For other solutions see *Reprint*, New Series, Vol. III., p. 74; Vol. V., p. 48.

QUESTIONS FOR SOLUTION.

15623. (G. H. Hardy, M.A.)—Prove that

$$e^x - c = (1-c)\, e^{\frac{1}{2}x} \Pi [1 - x/\log c],$$

the product sign applying to all the factors formed by taking different values of $\log c$, and its convergence being secured by associating the factors appropriately.

15624. (D. Biddle.)—In a cubic equation of form $x^3 - qx - r = 0$, r is the product of two primes. Show what numerical value to attach to q in order that the smaller factor of r may be one of the roots; also find the remaining roots, and prove that Cardan's method does not enable us to solve any given equation of the particular sort, unless the larger factor of r exceed the square of half the smaller one.

15625. (Professor Nanson.)—Resolve into three factors the x dialytic eliminant of the $\frac{1}{2}n(n+1)$ equations $A_pB_q + A_qB_p = 0$, where

$$A_p \equiv \Sigma_r a_{pr} x_r, \quad B_p \equiv \Sigma_r b_{pr} x_r, \quad \text{and} \quad p, q, r = 1, 2, \ldots, n.$$

15626. (R. Chartres.)—If C_r, D_r be the combinations of n and $2n$ things respectively taken r together, find the sum of

$$1 + (C_1)^2/D_2 + (C_2)^2/D_4 + (C_3)^2/D_6 + \ldots.$$

15627. (A. H. Bell.)—Give a formula for all integral right-angled triangles where the difference between the sides containing the right angles is 7.

Examples: 5, 12, 13; 8, 15, 17; ....

15628. (Robert W. D. Christie.)—If $x_1^2 + 1 = p_1 y^m$ for all integal values of m, then $x_n^2 + 1 = p_n y^m$ ad inf., generalize.

E.g.: $239^2 + 1 = 2 \cdot 13^4$; then $85922^2 + 1 = 5 \cdot 17 \cdot 3041 \cdot 13^4$ ad inf.

15629. (A. W. T.)—A number is raised to the power (-1) and reduced to a decimal. It is found that the original number is just n times the digit nearest the decimal point. Find the limits between which the number lies.

15630. (Professor Neuberg.)—Résoudre les systèmes

(1) $\sin x = a\cos y, \quad \sin y = b\cos z, \quad \sin z = c\cos x$;

(2) $\sin x = a\tan y, \quad \sin y = b\tan z, \quad \sin z = c\tan x$.

15631. (J. J. Barniville, B.A.)—Having $u_n = 5u_{n-1} - 5u_{n-2} + u_{n-3}$, prove that

$$\frac{1}{4} + \frac{1}{19} + \frac{1}{75} + \frac{1}{284} + \frac{1}{1064} + \ldots = \frac{34}{25} - \frac{3\sqrt{3}}{5},$$

$$\frac{1}{5} + \frac{1}{20} + \frac{1}{76} + \frac{1}{285} + \frac{1}{1065} + \ldots = 2 - \sqrt{3},$$

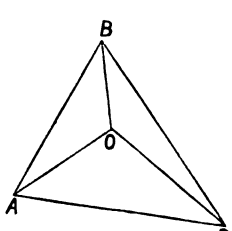
$$\frac{1}{1.2} + \frac{1}{2.3} + \frac{1}{6.7} + \frac{1}{21.22} + \ldots = \frac{2}{5}\sqrt{3},$$

$$\frac{1}{2.3} + \frac{1}{9.10} + \frac{1}{35.36} + \frac{1}{132.133} + \ldots = \frac{4}{3} - \frac{2}{\sqrt{3}}.$$

15632. (R. Tucker, M.A.)—ABC is a triangle; d, e, f are the mid-points of the sides, and D, E, F the feet of the perpendiculars on the sides BC, CA, AB. De, Df; Ef, Ed, Fe, Fd are joined, and produced, if necessary, thus forming two isoscelian triangles, viz., positive $\alpha\beta\gamma$, negative $\alpha'\beta'\gamma'$. Prove that these triangles and ABC have a common centre of perspective.

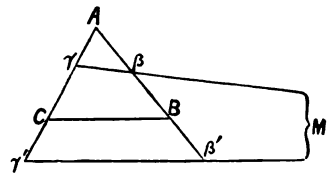
15633. (James Blaikie, M.A.)—If a straight line drawn through the circum-centre of a triangle ABC meet BC, CA, AB in P, Q, R, prove that the circles described on AP, BQ, CR as diameters concur in two points, one on the circum-circle, the other on the nine-point circle, and that their common chord passes through the orthocentre.

15634. (C. Bickerdike.)—In the triangle ABD there are given the sides BA, BD and the included angle ABD: required to draw the lines AO and OD so that the angles AOB and DOB may be equal.



Note.—This question was published in the *Ladies' Diary*, 1727, and the solution given is a trigonometrical one of the fourth degree. A geometrical one is required.

15635. (Professor Cochez.)—On donne un triangle ABC; on porte sur AB et AC les segments $A\beta$, $A\gamma$ tels que $A\beta/A\gamma = K$, puis $B\beta' = A\beta$ et $C\gamma' = A\gamma$. Trouver le lieu du point M de rencontre des droites $\beta\gamma$ et $\beta'\gamma'$.



15636. (C. E. Youngman, M.A.)—Given two circles and a point, draw two parallel tangents, one to each circle, equidistant from the point.

15637. (C. E. Hillyer, M.A. Suggested by Question 14111, Vol. LXXI.)—Prove that the mid-points of the segments intercepted by the axes of a conic on the sides of a self-conjugate triangle are collinear; and that the circles described on these segments as diameters cointersect on the circum-circle of the triangle.

15638. (A. M. Nesbitt, M.A.)—The normals to a parabola at P and P′ meet the axis in G and G′. If H be the mid-point of GG′, prove geometrically that HP = HP′.

15639. (A. R. Richardson.)—α, β, γ, δ are four straight lines; F is a fixed point, and C a fixed conic having F as focus. It is required to draw three conics such that δ is a common tangent to all, F is a focus, their remaining common tangents touch the fixed conic and each touches one of the fixed lines α, β, γ.

15640. (Professor Sanjána, M.A.)—Trace the curve $y = x \log(\sin x)$; and show how to obtain the values of its minimum ordinates.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

12088. (Professor Cavallin, M.A.)—Find the value of the integral

$$\int_0^{\frac{1}{2}\pi} \left\{ \frac{1}{[1-(a+b\cos\theta)^2]^{\frac{1}{2}r}} + \frac{1}{[1-(a-b\cos\theta)^2]^{\frac{1}{2}r}} \right\} \sin^r\theta \, d\theta,$$

where $a = \cos\alpha\cos\beta$ and $b = \sin\alpha\sin\beta$ for $r = 1, 2$, and, if possible, generally.

12085. (Professor Dellac.)—Étant données deux forces P, Q non situées dans un même plan, trouver leur résultante générale, la position de l'axe central de réduction et la grandeur du couple minimum. Discuter en supposant que l'angle des forces restant constant, ainsi que la force P, la force Q varie de $-\infty$ à $+\infty$.

12053. (Professor Sylvester.)—Given an equation-system (six equations to find six quantities) as follows:—

$$x + y + z = u, \quad \xi + \eta + \zeta = -n \quad \ldots\ldots\ldots\ldots(1, 2),$$

$$i(y+z) + j(z+x) + k(x+y) = xy + xz + yz - \xi\eta - \xi\zeta - \eta\zeta \ldots\ldots(3),$$

$$= i(\eta+\zeta) + j(\zeta+\xi) + k(\xi+\eta) \ldots\ldots(4),$$

$$iyz + jzx + kxy = xyz - \xi\eta\zeta = i\eta\zeta + j\zeta\xi + k\xi\eta \ldots\ldots(5, 6):$$

show that there are in all seven solutions which break up into two groups, one a group of three determinable by a cubic equation, the other a group of four subdivisible into two pairs depending on the solution of a double quadratic equation. Also find what happens to the two systems of solutions when two of the coefficients i, j, k become equal to one another.

12083. (W. S. B. Woolhouse, F.R.A.S.)—If five points be taken at random on the surface of any convex quadrilateral, prove that the probability that they will be the corners of a pentagon having one, and one only, re-entrant will be $\frac{5}{8}$.

12194. (Professor Orchard, M.A., B.Sc.)—A negatively charged sphere, of potential V and of radius 1, is placed, by an insulating handle, in contact with a positively charged hemisphere of potential V′ and of radius 2. Find the electric density upon each.

12211. (Rev. T. R. Terry, M.A.)—If a and b are any positive quantities, find the sum of all the fractions $ab/[b + s(a+b)]$, where s may be zero or any integer positive or negative.

THE FRENCH LANGUAGE.

Delbos.—The Student's Graduated French Reader. For the use of Public Schools. I. First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LÉON DELBOS, M.A., of H.M.S. "Britannia." Twelfth Edition. 166 pages. Crown 8vo, cloth, 2s. II. Second Year: Historical Pieces and Tales. Edited, with Notes, by LÉON DELBOS, M.A., of H.M.S. "Britannia," late of King's College, London. Sixth Edition. 180 pages. Crown 8vo, cloth, 2s.

"It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos."—*Athenæum.*

"This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes. . . . A thoroughly good book of this kind should, in fact, be calculated to inspire a taste for literature in the student's mind. The volumes edited by M. Delbos fairly meet this requirement."—*Journal of Education.*

"The notes are critical and explanatory. The book is well printed and excellently got up."—*Educational Times.*

Delbos.—Little Eugène's French Reader. For Beginners. Anecdotes and Tales. Edited, with Notes and a complete Vocabulary. Fourth Edition. Crown 8vo, cloth, 1s. 6d.

This Reader is intended for young children who have mastered the most elementary rules of French accidence, and who know their regular verbs.

Victor Hugo.—Les Misérables. Les Principaux Épisodes. Edited, with Life and Notes, by J. BOIELLE, Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s. 6d.

"May be pronounced a success. The selection has been made with judgment, and the notes are good."—*Athenæum.*

"A worthy addition to our stock of French reading-books which will be welcomed by numberless masters. . . . M. Boielle's notes are full and to the point, his philology is sound, and his translations idiomatic."—*Journal of Education.*

"Has done extremely well in putting forth his selection of the most striking episodes of Victor Hugo's masterpiece, and has done it well."—*Educational Times.*

"Has produced a manual which has the merit of presenting the style of the greatest French writer of the century."—*Scotsman.*

Victor Hugo.—Notre Dame de Paris. Adapted for the use of Schools and Colleges. By J. BOIELLE, B.A., Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s.

"His notes abound in good renderings of sentences and phrases, opportune remarks on the proper meanings of words, and historical information necessary to elucidate the text."—*Athenæum.*

"His famous work, adapted with commendable taste and judgment, . . . presents every factor which could be put together to make a perfect school-book."—*Spectator.*

"Equipped in the same excellent manner as the same author's 'Misérables.' . . . Makes an admirable school-book."—*Scotsman.*

GRAMMARS AND EXERCISES.

FOR PUBLIC SCHOOLS WHERE LATIN IS TAUGHT.

Eugène's The Student's Comparative Grammar of the French Language. With an Historical Sketch of the Formation of French. For the use of Public Schools. With Exercises. By G. EUGÈNE FASNACHT, late French Master, Westminster School. Twenty-first Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or, separately, Grammar, 3s.; Exercises, 2s. 6d.

"The appearance of a grammar like this is in itself a sign that great advance is being made in the teaching of modern as well as of ancient languages. . . . The rules and observations are all scientifically classified and explained. . . . Mr. Eugène's book is one that we can strongly recommend for use in the higher forms of large schools."—*Educational Times.*

"In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen."—*Athenæum.*

Eugène's French Method. Elementary French Lessons. Easy Rules and Exercises preparatory to "The Student's Comparative French Grammar." By the same Author. Seventeenth Edition. Crown 8vo, cloth, 1s. 6d.

"Certainly deserves to rank among the best of our elementary French exercise books."—*Educational Times.*

"To those who begin to study French, I may recommend *as the best book of the kind* with which I am acquainted, 'Eugène's Elementary Lessons in French.' It is only after having fully mastered this small manual and exercise-book that they ought to begin the more systematic study of French."—Dr. BREYMANN, Lecturer on the French Language and Literature, Owens College, Manchester (Preface to "Philological French Grammar").

Eugène's Comparative French-English Studies, Grammatical and Idiomatic. Being an entirely Rewritten Edition of the "French Exercises for Middle and Upper Forms." Sixteenth Edition. Cloth, 2s. 6d.

Delbos (L.).—The Student's French Composition, on an entirely New Plan. With Introduction and Notes. (In use at Harrow, Eton, &c.) Crown 8vo, cloth, 3s. 6d.

In the first part of this work is given an almost word-for-word imitation of the English as it should appear when turned into French, and, as that imitation is on the same page as the correct English text, the student will have something more than notes to guide his faltering steps. All the pieces contained in Part I. are the result of actual class work, and most contained in Part II. have also been used with the advanced pupils.

"The passages are carefully chosen and have been proved by use in class. . . . Will be found most useful."—*Journal of Education.*

Boielle (James).—French Composition through Lord Macaulay's English. Edited, with Notes, Hints, and Introduction, by JAMES BOIELLE, B.A., Univ. Gall., Senior French Master, Dulwich College, &c., &c. Crown 8vo, cloth, 3s. per volume.

Vol. I. **Frederick the Great.** Vol. II. **Warren Hastings.**
Vol. III. **Lord Clive.**

"This, we may say at once, is an exceedingly useful idea, well carried out, and one of the best things of its class that we have seen. . . . We can pronounce the equivalence of the idioms recommended to be quite unusually just."—*Saturday Review.*

"This volume is obviously the work of a practical teacher, produced, or rather begotten, not in the closet, but in the class-room, and—what is rarer—of a teacher equally conversant with both languages. In reviewing the two previous volumes we explained and expressed our approval of M. Boielle's method of teaching French composition, and it is sufficient to say that the present essay is as fully and judiciously annotated as the two previous ones."—*Journal of Education.*

Roget (F. F.).—First Steps in French History, Literature, and Philology. For Candidates for the Scottish Leaving-Certificate Examinations, the various Universities' Local Examinations, and the Army Examinations. Crown 8vo, cloth, 5s.

"This manual will be a boon to many who have neither time nor inclination to work through a large volume on the history of French literature, but who yet desire to obtain a knowledge sufficient to enable them to pigeon-hole their reading of French prose and poetry."—*Educational Times.*

"He has displayed qualities which are rarer and more trustworthy than mere erudition."—*Saturday Review.*

Roget (F. F.).—An Introduction to Old French. By F. F. ROGET, of Geneva University, late Tutor for Comparative Philology, Edinburgh. History, Grammar, Chrestomathy, and Glossary. Second Edition, with Map of French Dialects. Crown 8vo, cloth, 6s.

The work is not intended to be an exhaustive Grammar, but an *introduction* to the larger works by Bartsch, Clédat, Darmstetter, &c. It is eminently suitable for use with classes of advanced students.

THE GERMAN LANGUAGE.

Weisse's Complete Practical Grammar of the German Language. With Exercises on Conversation, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely Rewritten. Crown 8vo, cloth, 6s.

"We have no hesitation in pronouncing this the fullest and most satisfactory German grammar yet published in England."—*Journal of Education.*

Weisse's Short Guide to German Idioms. Being a Collection of the Idioms most in use. With Examination Papers. 8vo, cloth, 2s.

This book of German Idioms will be found to be a fairly complete collection of such phrases as come under this designation, being commonly used both by good writers and in ordinary conversation; while the arrangement in alphabetical order of the characteristic or cue-words will make it easy for the student to refer to any particular expression.

Moller (A.).—A German Reading Book. A companion to Schlutter's "German Class Book." New Edition. Corrected to the Official German Spelling. With a complete Vocabulary. 12mo, cloth, 2s.

The anecdotes and tales forming the Reader have been carefully selected, and are arranged so that the pieces are shortest at the beginning and gradually become more difficult.

Hein's German Examination Papers. Comprising a complete set of German Papers set at the Local Examinations in the four Universities of Scotland. By G. HEIN, Aberdeen Grammar School. Crown 8vo, cloth, 2s. 6d.

A Short Sketch of German Literature. Prepared for the Scottish Leaving-Certificate Examinations. By VIVIAN PHILLIPPS, B.A., Fettes College. Thoroughly Revised. Second Edition. Pott 8vo, 1s.

Apel's Short and Practical German Grammar for Beginners, with copious Examples and Exercises. Third Edition. 12mo, cloth, 2s. 6d.

Intended for students who cannot command a sufficient amount of time for a full acquisition of that difficult tongue, but who nevertheless wish to obtain a fair knowledge of it within a brief period, and in the least laborious manner possible.

Apel (M.).—German Prose Stories for Beginners (including Lessing's Prose Fables), with an Interlinear Translation in the natural order of Construction. Second Edition. 12mo, cloth, 2s. 6d.

Now Ready. Third Hundred Thousand.

Kiepert's Atlas Antiquus. Twelve Maps of the Ancient World. For Schools and Colleges. By Dr. HENRY KIEPERT. Twelfth Edition. Improved, Corrected, and Enlarged, with List of Names. Folio, boards, 6s.; cloth, 7s. 6d.

Recently published, demy 8vo, 3s. net, with large Plate and numerous Illustrations in the Text.

Medical Indoor Gymnastics; or, a System of Hygienic Exercises for Home Use. To be practised anywhere without Apparatus or Assistance by Young and Old of either Sex, for the Preservation of Health and General Activity. By D. G. M. SCHREBER, M.D., late Director of the Orthopædic and Medicinal Gymnastics Institution in Leipzig. Revised and Supplemented by RUDOLF GRAEFE, M.D. Translated from the Twenty-sixth German Edition. Invaluable to both Teachers and Scholars.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,194,485. Annual Income, £398,982.

Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

PRACTICAL APPLICATIONS OF THE ART OF TEACHING.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Principal of the University of London Training College.

The Second Course of Lectures (Thirty-second Annual Series) will commence on Thursday, September 29th, at 7 p.m.

The course is intended for teachers in actual practice. Its purpose is to give assistance, so far as this can be accomplished by means of lectures, in the ordinary work of the schoolroom. While, therefore, the Lecturer will neglect no opportunity of indicating how the present state of affairs in schools may be improved, he will concern himself mainly with the most likely ways of making the best of things as they are.

SYLLABUS.

I. *Organization.*—Relation between curricula and organization. Organization by "sides." The "form" system. The specialist system. The synchronous system. Combination of systems. Various bases of classification of pupils. Co-education. Staff and size of classes. Visiting masters. Prefects.

II. *Time Tables.*—Length of whole school day: relation between class work and preparation work. Arrangements of the major divisions of the day. Theory of fatigue and its application to (*a*) rest intervals, (*b*) sequence of studies, (*c*) length of study periods at different stages and for different subjects, (*d*) relation between physical exercise and mental effort. Form in which time tables should be drawn up—rigidity and elasticity.

III. *Method.*—Meaning and philosophical bases of method. Universal method and special methods. Induction and deduction in their bearing upon method. Methodologists. The "formal steps" and their application to the ordinary work of the school. The Socratic, heuristic, concentric, and other methods.

IV. *English Composition.*—Vocabulary and construction. Relation between knowledge and expression. Imitation and precept. Analytic and synthetic methods of teaching composition. Relation of matter to form, and dangers of the undue prominence of either. The problem of correction. The various kinds of composition found in school, and their relative merits.

V. *English Literature.*—Fallacy of the "Manual of English Literature." Need of first-hand acquaintance with works of authors studied. Problem of "storing" literature in the minds of the pupils till they are ripe for it. Difficulty of finding materials for young classes. World literature the best beginning. Literary "readers." Place of appreciation and criticism in the literature class.

VI. *Language Teaching.*—The inductive and deductive methods of language teaching. The relative merits and the proper spheres of the various methods of teaching modern languages. How far the ancient classics may be taught on the same lines as modern languages. The value of accurate pronunciation and the possibility of teaching it. Phonetics and phonetic text-books. The place of the English master in teaching foreign languages.

VII. *History.—Science* of history beyond the range of school pupils. Place of biography and "drum and trumpet" history in school. Need for materials for future study. Common mistake in the size of text-book. Discussion of the value of the accuracy aimed at in history. Place of fiction and the use of the imagination in the study of history. Use of pictures and other illustrations.

VIII. *Geography.*—Various views of the aim of geography teaching. Consequent differences in the method of approaching the subject. Topography. Physical geography. Mathematical geography. Fundamental importance of direction and distance. Misunderstandings connected with maps. The concentric method. Geography as a science, and its relation to the sciences on which it is based.

IX. *Mathematics.*—The relation of arithmetic to school mathematics. Necessity for a re-arrangement of present distribution of work. Two types of mind, corresponding to algebra and geometry respectively. Mensuration a suitable subject to illustrate various forms of mathematics. Beginnings of algebra for ordinary pupils. Proofs. New methods of teaching geometry. Successors of Euclid. Use of paper-folding and other forms of the concrete, including mathematical instruments.

X. *Science.*—Object of study to cultivate scientific spirit and accurate method. Relative merits of the classificatory sciences and the physical sciences in education. Dangers of observation. Application of the laws of inductive logic. The place of *purpose* or *end* in science teaching. The nature of apparatus: difference in its use at early stages and at later stages: home-made apparatus.

XI. *Drawing.*—Undue prominence of the æsthetic side. Value as (*a*) practice in manual dexterity, (*b*) a training in observation—relation of perspective to observation, (*c*) means of expression. Drawing ought to rank along with writing. Free expression at early stages of school life. Free arm and ambidexter drawing. Rudimentary design and brush-work. Teacher's use of drawing on blackboard.

XII. *Examinations.*—Kinds of examinations and their purpose. Preparation of test papers and examination papers. Method of marking papers. Dominant influence of external examination. The case for "cram." Personal equation of examiner, of pupil, and of teacher. Best method of preparing pupils for external examination. Possibility of obtaining good examination results without sacrificing the pupil.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to all the Courses of Lectures.

C. R. HODGSON, B.A., *Secretary.*

Guardian.—"Mr. Arthur Ropes, whom we look upon as the prince of annotators of French school text-books, has in this, as in Sandeau's 'Mademoiselle de la Seiglière,' also issued by the Pitt Press, done his work with such well considered application of ripe scholarship as to defy criticism. We have done our best to find a weak spot in his armour, but he has been proof against every assault."

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A., LL.D.

Next Session begins October 4th, 1904. The College Courses are arranged with reference to the Degrees of the University of Wales, and include most of the subjects for the B.A. and B.Sc. Degrees of the London University. Students may pursue their first year of Medical study at the College. There are special Departments for Agriculture and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional Fee for Ordinary Arts Course, £11. 1s.; Ditto for Intermediate Science Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students in Upper Bangor. Fee, Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than Twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses, apply to

JOHN EDWARD LLOYD, M.A.,
Secretary and Registrar.

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE. (UNIVERSITY OF LONDON.)

The WINTER SESSION will begin on Monday, October 3rd, 1904.

Students can reside in the College within the Hospital walls, subject to the Collegiate regulations.

The Hospital contains a service of 750 beds. Scholarships and Prizes of the aggregate value of nearly £800 are awarded annually.

The Medical School contains large Lecture Rooms and well appointed Laboratories for Practical Teaching, as well as Dissecting Rooms, Museum, Library, &c.

The Club Ground of the Students' Union (10 acres) is at Winchmore Hill, within easy reach of the Hospital.

For further particulars apply, personally or by letter, to the WARDEN of the College, St. Bartholomew's Hospital, E.C.

A handbook forwarded on application.

THE VICTORIA UNIVERSITY OF MANCHESTER.

The Session will commence on 4th October next. A Prospectus and all information can be obtained on application. Special Prospectuses are also issued for the following Departments:—Engineering, Chemistry, Education, Theology, Commercial Education and Law. These, together with Prospectuses of the MEDICAL FACULTY, DENTAL, PHARMACEUTICAL, and PUBLIC HEALTH DEPARTMENTS, will be forwarded on application to the REGISTRAR.

CHERWELL HALL, OXFORD.

A TRAINING COLLEGE FOR WOMEN TEACHERS.

A RESIDENTIAL COLLEGE providing a year's Professional Training for Secondary Teachers.

The Course includes preparation for the Oxford Teachers' Diploma and the Cambridge Teachers' Certificate, and the Teachers' Diploma of the University of London.

For instruction in the Theory and History of Education, the Students attend the Lectures of the University Reader in Education. The practical work in Teaching in Schools and Demonstration Lessons, &c., is under the supervision of the Principal and Staff of the Hall.

Particulars as to qualifications for admission, Scholarships, &c., may be obtained by application to the Principal, Miss MACKENZIE-SMITH, Cherwell Hall, Oxford, or the Hon. Sec., Miss MARGARET BERNARD, High Hall, Wimborne.

ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS

provides a Course of Professional Training in preparation for Work in Secondary Schools or in Families.

The Students attend the University Lectures on the Theory, History, and Methods of Education, and have systematic practice in Class Teaching in Schools.

Apply for further particulars to the Principal, Miss M. R. WALKER, 5 Melville Street, Edinburgh.

THE MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS

offers a full Course of Professional Training to Ladies who desire to become Teachers in Secondary Schools, or in Kindergartens. For all particulars as to qualifications for Entrance, Terms, Scholarships, Hall of Residence, &c., apply to the Principal, Miss ALICE WOODS, at the College, Salusbury Road, Brondesbury, N.W.

The Gilchrist Travelling Studentship (value £60) for Women Teachers will be awarded by the Council of this College in December, 1904.

For conditions of award apply to the PRINCIPAL of the College.

BEDFORD COLLEGE FOR WOMEN (UNIVERSITY OF LONDON), YORK PLACE, BAKER STREET, W.

The Session 1904-5 will open on Thursday, October 6th.

Students are requested to enter their names on Wednesday, October 5th.

Lectures are given in all branches of General and Higher Education. Taken systematically, they form a connected and progressive course; but a single course in any subject may be attended.

Courses are held in preparation for all Examinations of the University of London in Arts and Science, for the Teachers' Diploma (London), and for the Teachers' Certificate (Cambridge); and also a Special Course of Scientific Instruction in Hygiene.

Six Laboratories are open to Students for Practical Work.

Two Entrance Scholarships will be offered for competition in June, 1905. The Early English Text Society's Prize will be awarded in June, 1905.

Students can reside in the College.

Full particulars on application to the PRINCIPAL.

BEDFORD COLLEGE FOR WOMEN (UNIVERSITY OF LONDON), YORK PLACE, BAKER STREET, W.

DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

Head of the Department—Miss H. ROBERTSON, B.A.

Students are admitted to the Training Course in October and in January.

The Michaelmas Term begins on Thursday, October 6th.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge.

Full particulars on application to Miss ROBERTSON.

THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss H. L. POWELL, late Scholar of Newnham College (Hist. Tripos, Class I.), late Head Mistress of the Leeds Girls' High School.

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Cambridge Training College, Wollaston Road, Cambridge.

HOME AND COLONIAL SCHOOL SOCIETY.

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

Training College (non-Government Branch) for KINDERGARTEN TEACHERS and LOWER FORM MISTRESSES IN HIGH SCHOOLS.

HIGHBURY HILL HOUSE, N.

Principal—Rev. D. J. THOMAS, M.A.

Vice-Principal—Mrs. J. WHITE, D.Sc. (Lond.).

Students trained for the Examinations of the National Froebel Union.

Two Scholarships will be awarded to Students who have matriculated before entrance.

THE INCORPORATED

FROEBEL EDUCATIONAL INSTITUTE.

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

Recognized by the Board of Education as a Training College for Secondary Teachers.

Chairman of the Committee—Sir W. MATHER, M.P.

Treasurer—Mr. C. G. MONTEFIORE, M.A.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

Principal—Miss E. LAWRENCE.

KINDERGARTEN AND SCHOOL.

Head Mistress—Miss A. YELLAND.

Students are trained for the Examinations of the National Froebel Union, and for the University of Cambridge Teachers' Examination, and Special Classes are held in subjects required for the Cambridge Higher Local Examinations.

TWO SCHOLARSHIPS of £20 each, and two of £15 each, tenable for two years at the Institute, are offered annually to Women Students who have passed certain recognized Examinations.

Prospectuses can be obtained from the PRINCIPAL.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address — 74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 5.30 p.m. Hours for interviews are from 10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.

JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Telegrams—"Educatorio, London."

Low Commissions. Liberal Discount.

Head Masters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

KING'S COLLEGE, LONDON. (UNIVERSITY OF LONDON.)

DEPARTMENT FOR TRAINING TEACHERS FOR SECONDARY SCHOOLS.

The Course, which is intended to meet the requirements of the Teachers' Registration Council, is both practical (including properly directed work in a Secondary School) and theoretical (preparing for the London Teachers' Diploma and the Certificate of the Teachers' Training Syndicate).

The Course occupies a year, beginning in October or January.

For further particulars apply to the SECRETARY, King's College, Strand.

KING'S COLLEGE, LONDON. (UNIVERSITY OF LONDON.)

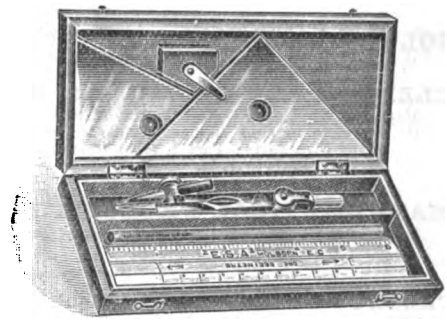
For THE OXFORD AND CAMBRIDGE LOCALS.

Syllabus Requisites for Geometrical Drawing.

BOXES OF INSTRUMENTS.

Containing every article required by Candidates entering for either of the above Local Examinations as stipulated in the Schedules for Geometry.

Every Instrument is of English make and thoroughly reliable.



No 10A.—A Strong, Sliding, Cloth-covered Box, 6½ in. by 3½ in. by ¾ in.

Containing :—**1 Brass Bow Pencil Compass** to take any size of Pencil up to full size.
1 Black Lead Pencil, "H," and **1 Compass Pencil.**
1 Boxwood Rule, 6-inch, graduated in inches, tenths, and eighths of an inch, centimetres, and millimetres, and marked as a **Protractor.**
1 Nickel Set Square (unbreakable), 45°.
1 Nickel Set Square (unbreakable), 60°.

Price **1s. 9d.** per Box. { Price for orders of 6 dozen, **1s. 7½d.** per Box. „ „ 12 dozen, **1s. 6d.** per Box.

No 11A.—Containing Instruments identical with above, but in a Strong, Polished Wood Box, fitted with divisions.

Price **2s. 3d.** per Box. { Price for orders of 6 dozen, **2s. 1½d.** per Box. „ „ 12 dozen, **2s.** per Box.

The *Journal of Education* says :—" We have received from the Educational Supply Association samples of their Boxes of Instruments for Geometrical Drawing. They are of English manufacture and are thoroughly reliable and very cheap. Unlike many of the low-priced instruments on the market, they are designed for use rather than ornament. The method of fixing a pencil of *any size* and length in the compass is particularly good. The set complies with all the regulations of the Oxford Locals Geometry Syllabus, and can be confidently recommended."

A Specimen Box will be sent post free on receipt of stamps for the advertised price.

SPECIAL BOXWOOD RULES.

Made exclusively for the Association, with bevelled edges, and markings guaranteed to be accurate.
These Rules are graduated in inches, tenths of an inch, centimetres, and millimetres on the front, and supplied as follows :—
6-inch Rule, Reverse plain, **2s.** per dozen; or with the Reverse marked as a Protractor, **2s. 6d.** per dozen.
9-inch Rule, Reverse plain, **2s. 6d.** per dozen; or with the Reverse marked as a Protractor, **3s.** per dozen.

The Educational Supply Association, Ltd.,

42 HOLBORN VIADUCT, LONDON, E.C.

Guardian.—"Mr. Arthur Ropes, whom we look upon as the prince of annotators of French school text-books, has in this, as in Sandeau's 'Mademoiselle de la Seiglière,' also issued by the Pitt Press, done his work with such well considered application of ripe scholarship as to defy criticism. We have done our best to find a weak spot in his armour, but he has been proof against every assault."

BLACKIE'S NEW ENGLISH TEXTS

Edited by W. H. D. ROUSE, Litt.D.

This new Series is especially useful in light of the Board of Education's new Syllabus for Secondary Schools (English).

Messrs. BLACKIE & SON have commenced to issue, under the above title, a new series of English texts for School use. The series will include specimens of all the acknowledged masters of English, each number being complete in itself, of a convenient size, well printed in clear type on good paper, and issued at a low price. Each book will have a brief introduction, but no notes.

DEFOE'S JOURNAL OF THE PLAGUE YEAR. 8d. [*Ready.*
IRVING'S COMPANIONS OF COLUMBUS. 8d. [*Ready.*
HAWKINS' VOYAGES. 8d. [*Ready.*
DICKENS—CHRISTMAS CAROL. 8d. [*Ready.*
TALES FROM BOCCACCIO.
ESSAYS FROM DE QUINCEY.
ERASMUS' PRAISE OF FOLLY.
LAMB'S ESSAYS.
MACAULAY'S FIRST CHAPTER.
TALES FROM THE DECAMERON.

ENGLISH CLASSICS

SMALLER ENGLISH CLASSICS

Comprising the leading English Poets from Old Ballads to Tennyson and Browning. Price 3d.

BLACKIE'S ENGLISH CLASSICS

Examination Editions of the principal English Authors from Chaucer to Carlyle. Prices 1s., 1s. 6d., 2s.

*** *Special List of Books suitable for the New Regulations in English post free on application.*

Higher English

A Course of English Study for Middle and Upper Forms. By DAVID CAMPBELL. Cloth, 1s. 6d. *First published 1895; reprinted 1895, 1896, 1897, 1898, 1899, 1900, 1902.*

Lower English

A Text-Book for Intermediate Classes. 1s. By DAVID CAMPBELL. *First published 1895; reprinted 1896, 1897, 1898; revised and reprinted 1898, 1899, 1901, 1902, 1903.*

English Language

The English Language and Literature. An Outline for Schools. Limp, 6d, Boards, 9d. By DAVID CAMPBELL. *First published 1885; reprinted 1886, 1890, 1893, 1895, 1896, 1899, 1900, 1902.*

Historical Eng. Grammar

By BERTHA M. SKEAT, Ph.D. An Introduction to the History of the English Language suitable for Middle Forms. 2s. 6d.

CONTENTS:—(1) Where the English Language came from; (2) The English Tongue in England; (3) Growth of Vocabulary; Borrowings; (4) Vowel Changes; (5) Consonantal Changes; (6) Spelling; (7) Accentuation; (8) Derivation; and (9) Inflexion.

Specimens of English Prose

From Malory to Carlyle. By BERTHA M. SKEAT, Ph.D. The book is divided into eight sections:—Religion, Philosophy, Education, Essays, History, Biography, Diaries and Letters, Romances and Novels. 1s. 6d.

The Oxford Magazine says:—"Miss Skeat has carried out a noteworthy and useful plan. A volume of this kind has long been wanted: we are glad that the gap is so well filled."

English Literature

A School History of English Literature. By ELIZABETH LEE. With Introduction by E. K. CHAMBERS, M.A.

Vol. I.—**Chaucer to Marlowe.** 206 pages. 1s. 6d.

Vol. II.—**Shakespeare to Dryden.** 232 pages. 2s.

The Athenæum says:—"The book has many merits."

Blackie's Little French Classics

"The idea is an excellent one, and admirably carried out."—*Prof. SAINTSBURY.* | "A considerable boon to teachers and taught."—*SPECTATOR.*

This New Series, which is produced under the most competent editorship, embraces all classes of French Literature—Travels, Stories of Adventure, Scenes of Domestic Life, Essays, Letters, Poetry, and Drama—so graduated in difficulty and so varied in matter as to be suitable for boys and girls of all ages. Many authors hitherto unobtainable in a suitable form for class reading are represented, as, for example, Bossuet, Balzac, Stendhal, Rousseau, and Pascal.

The volumes have already found their way into constant use in most of the leading Schools in this country, and Examining Bodies, both at home and in the colonies, are prescribing the books for study during the coming year. [*Complete List on application.*

Price 4d. each book.

The Educational Times.

Inspection of Private Schools.

In another column we publish some very useful notes on the inspection of private secondary schools by the Board of Education. Private teachers will be grateful to "One of H.M. Inspectors" for the trouble he has taken to explain so clearly the method of procedure. It may cause surprise to some readers to learn that "at least four or five months may elapse between the application for the inspection and the receipt of the report"; but those who have waited for a response to their application for admission to the Teachers' Register will be quite prepared for the delay, though they may not understand the reason for it. After all, the sooner the application is made the sooner will the report be available.

At one time the impression obtained that a favourable inspection by the Board of Education would carry with it the stamp of efficiency. This was much to be desired. Efficient schools would then have been authoritatively distinguished from the inefficient; the inefficient would have had a powerful inducement to become efficient; and, in making a survey of secondary schools, the Local Authority would have had no difficulty in determining what schools should receive their favourable consideration. Apparently, however, the Board of Education found it practically impossible to set up any general standard of efficiency. It is quite conceivable that, if a low standard were adopted, a school might claim to be efficient and yet be unable to meet *the* requirements of its neighbourhood; while, on the other hand, a high standard of efficiency might shut out from consideration many schools efficient in their way and capable of development. By the way, it is often too readily assumed of private schools that they are *not* capable of development.

But, if the inspection by the Board of Education omits all mention of efficiency, it may be wondered what, then, is the meaning of the term used by so many private schools—"Recognized by the Board of Education." If this question were referred to the Board, the reply would probably be that the term "recognized" has been wrongly used without qualification, and that it should be stated whether the school is recognized for the purpose of the registration of teachers or of the training of teachers. The schools recognized for the training of teachers are so few that, with possible exceptions, it may be generally stated that there are no private schools recognized by the Board of Education except for the purpose of registration of teachers. This recognition may be the result of an inspection of possibly less than an hour's duration by one inspector, or it may be the result of a detailed inspection. But, even after a detailed inspection, no mention will be made of efficiency, however favourable H.M. Inspector's report may be. There is no recognition for efficiency by the Board of Education.

It seems that the question is not whether a school is efficient or not efficient in the independent sense, but simply whether it is suitably efficient according to the requirements of the neighbourhood in which it is placed. The Local Authorities are called upon to determine this, and where they have intimated that they will base their decision upon the report of the Board of Education Inspectors it will be to the interest of every private school to submit to their inspection. Some Local Authorities, however, are making an independent inspection, while others are prepared to receive as evidence of efficiency the reports of inspectors appointed by the College of Preceptors or by the universities.

Members of the College will naturally incline to their own inspection, which is admitted to be searching, yet sympathetic, while the work is quickly done by inspectors who have mostly also had experience under the Board of Education or the universities, or both. Moreover, previous inspection by the College is a valuable guide to those who wish to be prepared for subsequent inspection by the Board. Certain is it that very few private schools regardful of the future can dispense altogether with inspection by some recognized body, and it will be sound policy for most of them to get inspected as soon as possible. To rely on being "Recognized by the Board of Education" (*i.e.*, for the purpose of the registration of teachers) is to remain willingly blind to the rapid progress of events in connexion with secondary education.

There are, it must be acknowledged, various sound reasons why private teachers should feel reluctant to surrender any

Digitized by Google

tittle of their independence or to submit to any external interference between themselves and their patrons. Indeed the more efficient they are in the general educational sense—the more thoroughly they enter into the ideas that rule the practical life of the time—the more averse will they naturally be to submit to tests that are set up under a system less flexible, more generally applicable, and holding somewhat tightly to time-honoured traditions. We are satisfied, however, that doubts on this score are mistaken. The Board itself, we are persuaded, takes a liberal view of the situation, and the Board's Inspectors are very unlikely to exercise their powers in an arbitrary or pedantic manner. The whole of the circumstances imperatively demand broad views, and everybody is, or should be, fully alive to the importance of allowing independent enterprise the freest possible scope.

On the other hand, it is clear that the private schools must in the main get fitted somehow into efficient co-ordination with the general scheme of national education. Some, of a markedly distinctive character, may go their own way unharmed; but the vast majority will, no doubt, wisely set themselves to co-operate in their own sphere with the general public system in their localities. The first step is inspection. And the luminous and careful Memorandum we publish in another column shows how simple a matter this is, and how important.

NOTES.

In another column we print the full text of the new Regulations just issued by the Board of Education on the teaching of the English Language and Literature in Secondary Schools. They seem to be very judicious—exhibiting a scheme that will secure systematic courses, and yet taking care that it shall be most flexible. Both texts for reading and exercises in connexion with the texts are to be graduated over a period of four years—the ages of 12–13 to 15–16 inclusive. Given the faculty of free reading, a specific graduation, such as is aimed at, ought to expand largely the ground covered by the pupils in the time, as well as to render the results much more effective: no principle is more important than the reading of the right class of book at the right stage. "The Board desire to leave freedom and wide scope to schools with regard both to texts and to methods of teaching": here is the right keynote, and we do not doubt that the Inspectors will scrupulously bear it in mind. "But the Board would strongly urge schools not to provide elaborately annotated texts for the use of the scholars": here again is a provision we cordially welcome, in view of the appalling industry of some of the current commentators, which may be very useful to teachers, but daunts scholars and overwhelms the text. "Paraphrase" also we should gladly delete, unless Inspectors apply particular attention to securing that it shall be a more rational exercise than we have conclusive reasons for believing that it many a time is. The burden of formal grammar also calls for relief. However, the general scope of the regulations is excellent to start with, and practice will naturally soon work any desirable modifications in detail.

The *Speaker* of September 17 offers four important articles on different aspects of secondary education by well known writers of experience. Mr. J. L. Paton thinks that neither Mr. Weisse in the *Contemporary*, nor Mr. Cholmeley in the *Independent Review*, nor yet Mr. Wells in his tilt against the curriculum and athleticism, has touched "the real mischief of our public-school system." To Mr. Paton's mind, "the mischief is not so much in the schools themselves as in the fact of their separateness from the communal life of the people"; and "the result of this severance affects us in three different ways":

> In the first place, it means that our Local Government Authorities in the various towns and cities have hitherto felt no sense of responsibility in regard to anything higher than primary instruction, and, now the responsibility is thrown upon them by the new Act, the men who are organizing the new developments are, in many cases, men who have never themselves attended a secondary school, hardly know what secondary education is, and at the best realize it only as a system of instruction, not having the faintest conception of all those character-forming influences outside the class-room which form the best feature of our national tradition in matters educational. This is the result of the higher education of the country being done, for the most part, outside the local community to which the children belong. The apathy we deplore; the lack of local interest and local pride are the price we pay for the boarding-school system of the country. Worse than this is the separateness of school from home . . . an evil not capable of statistical demonstration, but one of the subtlest factors in the degeneration of our home life. In the third place, the fact that our greatest schools are boarding schools means a gulf of separation between the boarding-school and the day-school system. This has meant, in effect, the degradation of the day school; for, broadly speaking, no large day schools have risen to the first rank of efficiency, except where there have been generous endowments to help them.

"The great problem before us at the present time is to get this gulf spanned." Most of all, it is important "to link on the new development to the old, and to infuse into it all that is best in our cherished national system."

Passing by with respectful mention merely Prof. Phillimore on the classics and Mr. S. E. Winbolt on the difficulties of assistant masters with the Board of Education, we come to Mr. F. W. Aveling on the position of the private school in secondary education. Mr. Aveling cites interesting and impressive statistics:

> People scarcely realize that to-day the great bulk of secondary education in England is done in *private* schools. Taking the Blue Book returns for 1897, we find that private enterprise provides over 90 per cent. of these schools, and caters for over 65 per cent. of the pupils. Local Authorities only provide 4·1 per cent. of the schools, and cater for 17·4 of the pupils. The endowed schools provide only 2·7 per cent. of the schools for 7·5 per cent. of the pupils. Over four-fifths of the secondary schools for girls are under private management.

Here is an array that must command the respect of Local Authorities, were it only on the grounds of expense, even though private schools were compelled to contribute to their own extinction. Among other things, Mr. Aveling points out that the private-school teacher "does not ask for money from the public purse, save in the matter of scholarships won being holdable at his school, and perhaps an occasional grant of apparatus"—in both which cases there is really an adequate *quid pro quo*.

"The older I get the less I believe in University degrees as a test of capacity," Sir William Ramsay is reported to have said, speaking in New York. The proposition has a ring of comfort to the ear of the non-university man, who will probably not take the trouble to analyse it, or even

Digitized by Google

imagine that it needs analysis. A university degree seems to be a compendious way of marking a complex series of facts: it certifies some particular course of study, carried out under particular conditions, and approved as successful under certain prescribed regulations. The same degree may in fact stand for a remarkable variety of such circumstances, and even for astonishing differences of acquirement and achievement within the very same range of conditions: a Scottish M.A. has a vastly different meaning from an English M.A., and the wooden spoon gets his B.A. as well as the Senior Wrangler. The meaning of any given university degree, therefore, is to be sought in the aggregate of circumstances under which it was granted, and not in any vague general impression. Now it will hardly be contended that a university degree may not be obtained without anything that can reasonably be styled "capacity" in the successful student. But, even where the student shows undoubted "capacity," one must go on to inquire what sort of capacity. The capacity of the Senior Wrangler is one thing; the capacity of the First Class Classic or Natural Science man is another thing: and neither the one nor the other is a very trustworthy guide to capacity in practical affairs. These discriminations are, of course, ignored in what we are pleased to call practical administration, and, when they vindicate themselves, there is incredulous surprise. Still, there can surely be no question that a man with a university degree is a more capable man than he would be if he had not gone through the course and conditions of his university training. "Dolus latet in generalibus."

Dr. Frederic Rose, H.M. Consul at Stuttgart, has sent over another luminous and instructive report, on "Commercial Education in Germany," which has just been published by the Foreign Office. He traces the movement for the provision of commercial instruction from the beginning of the eighteenth century, but gives special attention to more recent aspects developed under the enormous changes in industry and commerce witnessed during the past half century. While the four commercial universities display much diversity in organization, management, financial status, and other details, they all possess the distinctive academic character of the German university system: they exact a high standard of preliminary educational qualifications, they take their stand well above the level of the commercial schools, and they have ample liberty of working within the general plans and directions prescribed. Their success is certified by the proposals for more of them: at Berlin, Hamburg, and Hanover in North Germany, and at Münich, Nuremberg, Stuttgart, and Karlsruhe in South Germany. Dr. Rose emphasizes the fact that the initiative for their foundation has been taken by Chambers of Commerce and Municipalities, not by the Governments of the German States; and he deals drastically with current objections to them. He also reviews fully the schools for secondary commercial instruction, especially the commercial continuation schools, the most numerous class. "With regard to the details of the instruction," he says, "it is truly remarkable how all branches of knowledge bearing upon the subject — technical, technological, legal, economic, linguistic, geographical, historical, and mathematical—are condensed and focussed upon the one central and prevailing purpose of commercial utility."

We are all familiar with the use of distinctive type, often coloured (usually red), to impress upon pupils various peculiarities—say, the inflexions of grammar or the irregularities of spelling. In blackboard work, too, children are supposed to be effectively impressed by bright colours. Now Mr. William Taylor, of Yale University, recants belief in the educative value of such colour devices, in a striking article in the *Journal of Pedagogy* for June last. He explains how he devised testing experiments in spelling, and sets out the results. On one system, "the effect of the red letter in confusing or clarifying the word taken as a whole" was not marked either way, "though, if anything, the old method of printing has rather the best of it." On another method of comparison, the conclusion was that, "unless special attention is called to the purpose of the colour, little or no gain comes from its use."

> And when the attention is thus particularly called to its purpose the value lies not so much, in all probability, in the colour contrast as in the fact that the colour is a mechanical aid to discrimination. It is just possible that even under the latter circumstances it would prove to be more confusing than beneficial.

Further experiments of the latter kind are in progress in Yale Psychological Laboratory. There must be some experience available in this country, if somebody would only put it into form and publish it.

Hygiene is a subject of active interest at the present time in educational circles. Apparently there are places in England where the teaching of hygiene has not made much progress. We cut the following paragraph from the *Daily News* of August 27:—

> Considerable sensation was caused at the meeting of the Eaton Bray Rural District Council, held at Leighton Buzzard yesterday, by the sanitary inspector's statement that some of the villagers drink water from the public sewers. In another case he said he had seen water taken from a stream in which was a dog's carcass, which was simply pushed aside by the villagers in order to get the water. The typhoid epidemic which prevails at Eaton Bray and at the neighbouring village of Edlesborough is now being inquired into by a Local Government Board Inspector, who is making a tour of the district and taking note of its sanitary defects.

Oh, yes; but why are not such sanitary defects anticipated? And how is it possible that such things as the sanitary inspector is said to have reported can be done in this country and in this age? Something deeper than the teaching of hygiene seems to be needed at Eaton Bray.

Sir James Crichton Browne delivered a rousing and humorous presidential address to the Provincial Conference of the Sanitary Inspectors' Association at Bournemouth (September 9). With all the progress that has been made he still contended for the need of "redoubled sanitary energy, and therefore of improved education for the sanitary inspector." Indeed, he thought the time had come for the universities to take up sanitary education. He said:

> Why should not the University of London establish a school or department of hygiene, in which, by lectures and demonstrations and in well equipped laboratories and museums, instruction might be given in all those branches of study which it was advisable for sanitary

Digitized by Google

inspectors to pursue? Why should it not examine those who had gone through the prescribed course of study, and bestow on such of them as had proved proficient its licence or certificate, which, coming from such a body, would be valuable to the recipient and often also to the public authorities having sanitary appointments to bestow. The curriculum of the school would have to be liberal and elastic; for we should aim at gradually bettering our sanitary inspectors in knowledge and in social position.

With this we may link the contention of Miss Alice Ravenhill (in the September *Monthly Review*) that "the great resources of all our leading universities should be available to students of hygiene. College courses in sanitary science," she goes on to say, "have been established in universities of high standing in the United States, and have amply justified their position. It will be a day of good omen for this country when popular opinion secures a similar step." The day may not be so very far distant; Sir James Crichton Browne "discerns on all hands a new, an earnest, an intelligent interest in health questions."

SUMMARY OF THE MONTH.

A REPRESENTATIVE of the *Daily Chronicle* has been inquiring what has become of the South Kensington "Charlottenburg" scheme. The Imperial College of Technology (he says) will be in no way a copy of Charlottenburg, but will be a teaching and examining college of applied science—of engineering in all its innumerable branches of metallurgy, chemical technology, hydraulics, and so on—by no means necessarily adopting German methods. As to its magnitude, some idea may be gained from the fact that the object is not only to supplement, but actually to include and co-ordinate, such organizations as the Royal College of Science (including the School of Mines) and the Central Technical College. At present the project is under consideration by a Committee of the Board of Education appointed "to inquire into the present working of the Royal College of Science, including the School of Mines; to consider in what manner the staff, together with the buildings and appliances now in occupation or in course of construction, may be utilized to the fullest extent for the promotion of higher scientific studies in connexion with the work of existing or projected institutions for instruction of the same character in the Metropolis or elsewhere; and to report on any changes which may be desirable in order to carry out such recommendations as the Committee may make." The report of this Committee is expected at least before the end of the year. So far as money is concerned, Lord Rosebery's estimate of £500,000 appears to be considerably under, rather than over, the mark. It is now considered that the carrying through of the whole scheme will need not much short of £1,000,000. It is stated that from various sources between £600,000 and £700,000 of this is already promised or in view.

THERE has been laid before a Co-ordination Committee of the Bradford Education Committee a report resulting from a conference of the teachers of every grade, school superintendents, evening-school teachers, and representatives from the Technical College. The *Yorkshire Post* gives an outline:

There is a concurrence of feeling in favour of co-ordination, which it is recognized was impossible under the School Board owing to its isolated and, to some extent, competitive position. All teachers agree that the children should be put through courses in the preparatory stages to fit them for the next institution to which they are to be passed on. Steps in this direction have already been taken by the Bradford authorities. Thus, the Mechanics' Institute is to become a higher commercial college, and all art schools are to be co-ordinated to lead up to the City Art School to be established at Mannville. The Technical College Committee have purchased a site for a textile department, with full-sized, practical machinery. The infant teachers recommend the limitation of classes to forty "on the rolls," and that children should be retained in the school until seven years of age, instead of six years, as now. The superintendents report in favour of the practice of Froebel principles in infant schools, and recommend that in the ordinary elementary schools half-timers should be taught separately, whilst "Standard VII." children should be sent to separate centres. Scholarships also are proposed to be offered for children leaving the elementary day schools. The reports of the representatives of the "provided" and "non-provided" schools run upon similar lines; so also do those of the certificated assistant teachers. A point to note is that these teachers are in favour of periodical conferences to promote co-ordination and the cause of education generally. The evening-school teachers propose to lead up to the Technical College on the one hand, and to the special commercial classes on the other. The higher-grade schools emphasize the need for the consideration of the subsequent careers of pupils. In each branch scholarships are pleaded for, and the Grammar School claims that it should be regarded particularly as leading up to the universities.

THE National Federation of Assistant Teachers held their Annual Conference at Liverpool (September 24), Mr. E. C. Pritchard, Birmingham, in the chair. Mr. Pritchard said opposition to the last Education Act was not a transient ebullition of feeling, but it would remain as long as the Act permitted schools supported by the State to be under no effective public control, and as long as the appointment of teachers was associated with theological tests. The Associations have increased to 106, and the affiliated members to 13,083. Mr. A. W. Dakers (Newcastle-on-Tyne) was elected Vice-President of the Federation; Mr. G. W. Carr (Bradford), Hon. Treasurer; and Mr. J. T. Boulter (Leicester), Hon. Secretary. The ballot for members of the Committee resulted in the election of Messrs. R. B. Hancock (Nottingham), H. Pearson (Liverpool), D. B. Steer (Derby), R. T. Mawbey (West Ham), W. Harris (Merthyr), and E. Deene (Brighton). Next year's Conference will be held at Hull.

THE Incorporated Association of Assistant Masters in Secondary Schools held their Autumnal General Meeting at Leeds (September 10). The Council (Mr. G. F. Daniell, Mercers' School, London, Chairman, presiding) dealt with the questions of federation, salaries and pensions, and tenure. At the General Meeting, Mr. Daniell urged the importance of registration; regretted the unsatisfactory reply of the Board of Education to joint proposals of the Head and Assistant Masters on the question of tenure; and thought it a mistake to restrict to pupil-teachers scholarships from elementary to secondary schools. Organization, school-leaving certificates, and holidays were discussed. The Chairman said there were 64 examining bodies whose examinations were accepted by various professional bodies and universities in the United Kingdom, and there were 140 in the Empire; so that, if they had any number of boys up to 140, they might have each one of the 140 preparing for a separate examination. Of course, that was absurd. What they wanted was not to add a State examination to the existing examinations, but to get a simpler system which could be easily worked without hampering the freedom of the individual teacher.

THE *Musical Herald* has no doubt that the postponement of registration, so far as music teachers are concerned, is wise.

The idea of training teachers is only just beginning to enter the minds of professors of music. Training classes are scarcely begun; books are wanting. Many excellent teachers of music we have; but each has taught himself. The only part of the musical world where teachers are trained is among the tonic sol-fa-ists. Musicians may be relieved that the subject is shelved; but it will come up again. Now that teachers of other subjects are trained and registered, the demand of head teachers for music teachers who have reached the same level will grow. We do not feel sure that the visiting master in schools will find it worth while to register; but there is no doubt that resident teachers will be anxious to do so. The Board of Education has merely paused for a few years to allow the musical colleges to develop pedagogic work and come in line with other colleges.

THE evening classes held in the various L.C.C. polytechnics, technical institutes, and schools of art have just been reopened. They offer instruction in science, art and technology, artistic handicrafts, &c. The fees are nominal throughout, while in many cases apprentices, learners, and improvers are admitted free. Every facility is offered to different types of students to supplement workshop, office, or studio practice by evening study under the most favourable conditions. Courses are arranged where necessary to prepare professional students for various examinations, art students for the examination of the Board of Education, and artisans for the examinations of the City and Guilds of London Institute, &c. The Council offers annually scholarships and exhibitions to the total value of £1,500 for competition among the students. Detailed particulars can be obtained from the secretary of any particular institute.

CONSIDERABLE interest is being shown by the University of Liverpool in the proposed scheme for the higher education of working men. Three conferences on this subject have been held in various parts of the country, attended by representatives from trade unions, co-operative societies, University Extension authorities, University lecturers, and students; and great results are expected from a conference to be held in Manchester on October 8. Principal Hopkinson will preside, and Principal Dale, of Liverpool, is expected to attend. The conference is called with the approval and assistance of the Co-operative Educational Committees Association and the University Extension authorities of Liverpool and Manchester, and will be attended by delegates from co-operative societies, trade unions, and trade councils. A full explanation will be made of what working men require from the two Universities, and what they are prepared to do to realize their wants. A resolution will be submitted for the appointment of a joint committee of representatives of the co-operative societies and workpeople for the purpose of thoroughly examining the scheme and reporting to a future conference.

THE Examinations of the Society of Arts commence on Monday, April 10, 1905. Important changes have been made in the examination system. The subjects remain the same, but, in place of two Grades, Elementary and General, there will be three Divisions or Stages:—(1) Elementary, corresponding to the former Grade I.; (2) Intermediate, corresponding to the Third Class and lower part of the Second Class of the former Grade II.; (3) Advanced, corresponding to the First Class with the upper part of the Second Class of the former Grade II. In the Advanced and Intermediate Stages First and Second Class Certificates will be granted in each subject. In the Elementary Stage certificates will be given in each of the subjects enumerated. These will be of one class only. Certificates of proficiency will be granted in each grade to candidates who pass in certain specified subjects during a given period. In Rudiments of Music Higher and Elementary Certificates are given. In Harmony Higher, Intermediate, and Elementary Certificates will be granted. Medals and prizes are offered in each subject in Stages II. and III. Full particulars will be found in the Programme. Examinations are also held in the Practice of Music, and *viva voce* examinations in French, German, Spanish, Portuguese, and Italian. For information as to these examinations reference should be made to the Programme.

THE Army Council, in order to simplify the method of obtaining commissions in the Regular Forces by University candidates, has decided that in temporarily commissioning these gentlemen to the Auxiliary Forces it shall not in future be necessary to appoint them as supernumeraries to any particular unit, but that an "unattached" list may be formed in each command. A candidate may, however, be attached to a particular unit under existing conditions if he desires. Officers on the "unattached" lists will not draw pay or allowances, nor will extra supernumerary officers appointed to a particular unit under any circumstances draw pay, or even allowances, for such unit.

"ANGLO-INDIAN" sends to the *Daily Chronicle* some sharp criticisms of the Indian Universities Act, written from a practical standpoint, and with special reference to certain articles on education in India which appeared in its columns a couple of years ago. He says:

In a recent number of the *Quarterly* this measure is spoken of as an epoch-making reform. As a matter of fact it has been received with general disappointment by Englishmen engaged in the work of education. The evils referred to in your articles have not been removed. The first and greatest of these is that there is not the slightest security that the teacher in an Indian college knows the subject he is teaching. A man may come out as a professor of chemistry, for example, and be required at different times to teach mathematics, physics, history, philosophy, or English literature; or he may be made an inspector of schools. It is a matter of perfect indifference to the Government whether he has previously studied these subjects or not.

The next great defect in the system of Indian education is that the final decision in all questions rests with a man who has not the slightest claim to expert knowledge, the Lieutenant-Governor or Governor of the province. He may not even have studied at a university himself. In any case, his whole official life before he became Lieutenant-Governor has been occupied with the details of administration. As Collector or Commissioner he had nothing to do with education. It is as if in England the permanent Under-Secretary of the Home Office controlled all education from the universities to the Board schools. This evil, instead of being removed, is intensified by the Act.

The opinion here expressed about the Indian Universities Act is not peculiar to myself. I have lived many years in India, and have a wide circle of acquaintance among teachers in Indian colleges, both Government and aided. I can say with confidence that the dissatisfaction is general, and is certainly not, as the *Quarterly Reviewer* tries to make out, confined to Babus.

It is true that those who know India well are not too sanguine when any reform is announced. Still it is a little irritating that such a very paltry measure, dealing only with external trivialities and not removing any fundamental defects, should be represented to the English public as a great achievement.

THE Clarendon Press has issued a "Programme of Special Studies for the Academical Year 1903-4, together with some Account of Opportunities for Special Work or Research existing in the University." For post-graduate students the University has so far made no direct provision; but individual college tutors and professors have given advanced lectures or instruction to chance pupils. The "Programme" is a first step towards systematization of such sporadic efforts. It is not official; it has been compiled by various teachers interested in post-graduate work, and the Press publishes it rather as a matter of convenience. But it gives a good and accurate *conspectus* of the lectures, instruction, and other aids—libraries, laboratories, &c.—open to advanced students, and should prove very useful. It also shows how much is already done at Oxford, casually and unsystematically, to assist students in "special work or research."

THE Bury Grammar School Trustees, who recently, on the receipt of a grant of £18,000 from the Hulme Trust, built a new school for boys, have now £10,000 in hand or promised for a new school for girls, and have resolved to proceed at once with the erection. The total cost of the whole block of buildings, with land for playing fields and a central hall, is estimated at between £40,000 and £50,000.

A BOOK just published by order of the Prussian Ministry of Education gives some interesting particulars regarding the cost of working of German universities. The total expenditure by the Government on these seats of learning for the year 1903 is stated at 29,456,298 marks. The eleven Prussian universities took, roughly, one-half. Three Bavarian universities had 3,600,000; two Baden universities, 2,400,000; and the six remaining universities scattered through other States, 9,000,000 marks. One university (Berlin) has nearly 7,000 students. The smallest and poorest is Erlangen, in Bavaria.

LORD MONKSWELL'S second son, the Hon. Gerard Collier, is at present acting as teacher in an elementary school under the West Ham Education Committee. Mr. Collier, who took his Oxford degree last year, is an educational enthusiast, and is desirous of obtaining a thorough knowledge of his subject from a teacher's standpoint. It is his intention to take each standard for about a month, and to watch the other masters and their methods of teaching.

MR. JOHN MACLEOD, H.M.I.S., I.S.O., retires from the inspectorate on November 1 after a distinguished service of over thirty-one years. After graduating at Glasgow he was recommended by Lord Kelvin for the Professorship of Mathematics in King's College, Nova Scotia, which he held for a short period. Returning to be assistant to Prof. Blackburn in his old University, he incidentally delivered a course of lectures to ship captains on the deviation of the compass in iron ships, having been specially recommended by the Senatus on the application of the Institution of Civil Engineers and Shipbuilders. This course led to his unexpected recommendation by Prof. Sylvester for the post of Mathematical Instructor at the Royal Military Academy. He was appointed an Inspector of Schools in 1873. On the occasion of his semi-jubilee in Morayshire, in May, 1902, the teachers of his district with the utmost cordiality presented him with a magnificent illuminated address, eulogizing his ability and impartiality. Soon afterwards, as we announced at the time, he had the decoration of the Imperial Service Order conferred upon him. Mr. Macleod has for many years been an active and esteemed contributor to our mathematical columns. All good wishes to him in his retirement!

THE death of Mr. Traugott Heinrich Weisse, who was engaged

in educational work in Edinburgh for nearly half a century, is announced. Mr. Weisse, who was blind from birth, was educated at Berlin University, and, leaving Germany on account of political troubles, went to Edinburgh in 1848. Robert Louis Stevenson was one of his pupils. Mr. Weisse was the author of a German grammar and some similar works, which are well known in schools.

It is with painful regret that we record the untimely death of Mr. Ronald Hudson, Lecturer in Mathematics in Liverpool University, by a mountaineering accident in North Wales (September 21). Mr. Hudson was Senior Wrangler six years ago, and was already doing important original work in the higher mathematics. Deep sympathy will be felt for his family, and especially for his father, Prof. Hudson, of King's College, London, who has for many years been an esteemed contributor to our mathematical columns. Mr. Hudson was only twenty-seven years of age.

We also announce with much regret the death of Mrs. Biddle, after a prolonged illness. Mr. Biddle may be assured of the genuine sympathy of our readers, to whom he is well known as the former conductor of our mathematical columns, and an active and valuable contributor.

As we go to press comes news of the lamented death of Dr. Thomas A. Stewart, M.A., LL.D. (Aberd.), Senior Inspector of Schools in Scotland, at the premature age of fifty-eight. Dr. Stewart was extremely popular; he understood teachers and pupils as well as education, and had plenty of good sense and humour.

UNIVERSITIES AND COLLEGES.

Sheffield. The Council has passed the following resolution:—

That this Council, fully realizing the personal loss which it has sustained in the death of its Chairman, Sir Henry Stephenson, desires to place on record its sense of the great services which he has rendered to the Sheffield University College. The memory of his untiring interest in this institution will be a constant incentive to the Council to carry out the work he had so much at heart.

Birmingham. The buildings of the Metallurgical Department have been opened. They form only a small portion of the scheme of building at present being undertaken at Bournbrook, which will not be completed for two or three years; but the cramped state of the present University buildings in Edmund Street necessitated the pushing forward of the Metallurgical Department, which, in a large iron centre like Birmingham, is one of the most important connected with the University. All the plant and machinery are of full working size. For instance, there is a two-ton Siemens furnace, with all the latest equipment necessary for a commercial undertaking, and capable, if necessary, of a large weekly output of steel. It is not, however, intended to produce steel for sale; the object is rather to familiarize the students with the various causes, chemical and other, which affect the quality of steel. Another portion of the Department will be devoted to metals other than iron and steel.

Edinburgh. A scheme has been provisionally projected between the Town Council and the University Court by which a new Administrative Board is to be constituted for the Royal (Dick) Veterinary College, and a degree in veterinary science is to be conferred by the University.

VOICE PRODUCTION.

THEORY AND PRACTICE.

From an able and comprehensive paper on "The Relation of Breathing to Voice Production," read at the recent Congress of the Royal Institute of Public Health at Folkestone by Signorina Bambacioni, we take the following passage:—

What is the relation of scientific theory to practice in voice production? A scientific basis is as necessary in singing as it is necessary for breathing exercises. The singing master is not a demonstrator in a laboratory, but no master should be trusted who tells you that men inflate the lungs in one way and women in another, or that men possess a "vocal register" which women have not, or that the different descriptions of voice make use of different registers. The wonder is how any one with the physiological data before him—with the physiological diagrams in front of him illustrating the truth that "all vocal sound is produced in the same way, and generated in the same place," can continue to repeat such mistakes: mistakes from which the first great masters were free—by some artistic intuition—before the discovery of the laryngoscope. There is only one really important thing to be borne in mind for the teaching of singing: It cannot be taught by written methods, or academically. Beyond all other arts it needs the master, because it needs the trained ear for every step of the study. Present-day failure in voice training is due to the practical failure to detect in oneself or others the working of our scientific or artistic theory—to an oblivion of its meaning when it is translated into terms of vocal art. The master teaches one thing, and listens for another. The physiologist indeed knows the principle on which the voice should be produced, but he does not recognize from the quality of the sounds whether have they been produced that way or no. This should be the business of the voice trainer, and it is his first business. It should not be difficult to realize that the key to the voice-production problem is the possession of an ear for pure vocal sound. Unlike the piano or other ready-formed instruments, the vocal instrument must be formed, and it can only be formed by ear. But let us suppose that no first-rate violin had been heard for two or three generations: the timbre of tone required would no longer be generally recognized. The standard of tone would have been lost. That is very much our present position as regards voice training.

There have been many recent attempts to better this condition of things. After the appearance of two articles on the art of singing in the *Nineteenth Century* in May and August of last year, written by a friend and pupil of mine, Canon Lyttelton, the Head Master of Haileybury, applied what had been said there to the problem of the education of the speaking voice. At Oxford, also, I believe, they are proposing to get at the root of the presen mystery which manages to combine so much fine theory with what all recognize to be such deplorable practical results; and a society has only just been formed for the improvement of the teaching of music and singing in secondary schools. I hope I shall carry you with me when I say that there can only be disappointment in store for all attempts to improve our speaking and singing methods unless we begin by realizing: (1) That all proper management of the voice requires proper management of the breathing apparatus, which is not a new art, but that very old one of which the throat specialist Morell Mackenzie wrote: "With the ancient Italian method we acquire a complete dominion over the principle of each respiration, and so avoid a useless expenditure of air, a 'waste of breath.' In other words, with the Italian system the greatest effect is obtained with the least expenditure of force." (2) That all discussion must be sterile of results until we not only use the singing vocabulary in the same, and a settled, sense, but until we possess real knowledge of the practical operation of phrases we use so glibly. (3) That the *sine qua non*, the first and essential requisite, for a school of voice production is the possession by masters of a trained ear for vocal sounds. We should be forgetting very recent history if we found it difficult to account for the present general deterioration in voice theory and voice production. The formation of the vocal instrument—an instrument which gave us none but uniform and pure vocal sounds—was the only study which the old masters understood by voice training; but Wagner, though he admired the results, declared that for the future this training must be abandoned, the reason he gave being that "German throats" were not susceptible of it. In the confusion which followed, in the wreck of sound physiological principles, and the ruin of ear which no longer detected pure vocal sounds, we have an ample and adequate cause for the anarchy and uncertainty which now exist.

THE TEACHERS' REGISTER.

SUPPLEMENTAL REGISTERS.

In September, 1902, the Board of Education referred to the Consultative Committee the question of drafting Regulations for the establishment of Supplemental Registers for teachers of special subjects. The Committee have given very prolonged and earnest consideration to this matter, and, after a conference with the Teachers' Registration Council, a Joint Sub-Committee, including representatives in equal numbers of these two bodies, was appointed to consider proposals for Draft Regulations for these Supplemental Registers. The Report of this Sub-Committee was recently received and considered, and, as a result, the Consultative Committee, at their last meeting before the recess, resolved to recommend to the Board of Education that the establishment of Supplemental Registers be postponed until the teaching of the subjects proposed for the Supplemental Registers has been further organized in connexion with general education. The Board of Education have accepted this recommendation, and, for the present, no further steps will be taken to establish such Supplemental Registers.

COLLEGE OF PRECEPTORS.

CERTIFICATE EXAMINATION,

JULY, 1904.

The following is the list of the successful candidates at the Chefoo, Johannesburg, and Lagos Centres.

N.B.—The small italic letters denote that the Candidate to whose name they are attached was distinguished in the following subjects respectively :—

a. = Arithmetic. *g.* = Geography.
al. = Algebra. *ge.* = German.
d. = Drawing. *h.* = History.
e. = English. *s.* = Scripture.
f. = French.

The small figure ² prefixed to names in the Third Class List denotes that the Candidates were entered for the Second Class.

Bracketing of names denotes equality.

BOYS.

SECOND CLASS [OR JUNIOR].—HONOURS DIVISION.

Parry, R. C. *s.*	China Inland Mission S., Chefoo
Harris, A.	Private tuition
Hendriks, N. *f.ge.*	Private tuition

SECOND CLASS [OR JUNIOR]—PASS DIVISION.

Robinson, G. A.	China Inland Mission S., Chefoo
Burnett, B. C. G. *s.*	China Inland Mission S., Chefoo
Holt, H. *f.ge.d.*	Private tuition
Ford, R. T. *a.f.*	Private tuition
Drummond, J. McC. *d.*	Private tuition
Burnett, B. B.	China Inland Mission S., Chefoo
Alexander, E. *ge.*	Private tuition
Couzyn, M. *a.f.ge.*	Private tuition
Lapin, I.	Private tuition
Grant, J. B.	China Inland Mission S., Chefoo
Schumann, J. W. E.	Private tuition
Robinson, H.	China Inland Mission S., Chefoo
Sims, B. *al.*	Private tuition
Abelheim, S. *ge.*	Private tuition
Nathan, E.	Private tuition
Goldberg, A.	Private tuition
Corbett, R. J.	China Inland Mission S., Chefoo
Harvey, E. A.	Private tuition
Alexander, J.	Private tuition
George, F. R.	Private tuition
Ludorf, J. F.	Private tuition
Cohen, S. B.	Private tuition
Bernberg, H. D. *ge.*	Private tuition
Lance, G. L.	Private tuition
Van Tonder, G. F. L.	Private tuition

THIRD CLASS—HONOURS DIVISION.

Taylor, W. R. O. *s.e.g.a.*	China Inland Mission S., Chefoo
Goforth, P. *e.g.a.al.*	China Inland Mission S., Chefoo
Chalfant, E. N. *e.g.a.al.*	China Inland Mission S., Chefoo
Clarke, A. R. F. *e.a.al.*	China Inland Mission S., Chefoo
Curtis, A. P. *e.a.*	China Inland Mission S., Chefoo
Coulthard, W. H. *a.*	China Inland Mission S., Chefoo
Parry, F. E. *g.*	China Inland Mission S., Chefoo
Miller, G. M. *a.*	China Inland Mission S., Chefoo

THIRD CLASS—PASS DIVISION.

²Martins, T. A.	C. M. S. Gram. School, Lagos
²Rosettenstein, J. W.	Private tuition
²Durham, L.	Private tuition
²Hansen, J. M.	Private tuition
²Strange, D. T. F.	Private tuition
Agbebi, F. A.	C. M. S. Gram. School, Lagos
²Freundlich, S.	Private tuition
Bajulai, J. F.	C. M. S. Gram. School, Lagos
Hill, C. H. *s.*	China Inland Mission S., Chefoo
Brown, G. F.	China Inland Mission S., Chefoo
Yates, K. H. *a.*	China Inland Mission S., Chefoo
Ribeiro, F.	C. M. S. Gram. School, Lagos
²Krummeck, P. J.	Private tuition
Lahanmi, V. R.	C. M. S. Gram. School, Lagos
²Scott, R. W.	China Inland Mission S., Chefoo
²Googboade, E. A.	C. M. S. Gram. School, Lagos
Lawson, W. T. G.	C. M. S. Gram. School, Lagos
²Samuel, J. B.	C. M. S. Gram. School, Lagos
²Hutchinson, C. W. O.	Private tuition
Copp, A. E.	China Inland Mission S., Chefoo
²Figur, D.	Private tuition
Hearn, R. A. *a.*	China Inland Mission S., Chefoo
Butland, W. H.	China Inland Mission S., Chefoo
Gansallo, A. M.	C. M. S. Gram. School, Lagos
²Adeneye, M. L.	C. M. S. Gram. School, Lagos
²DuPlessis, G. J.	Private tuition
²Cattrill, H. F. F.	Private tuition
Tomkinson, L.	China Inland Mission S., Chefoo
²Andrew, H. M.	Private tuition
²Hendry, A. J. K.	Private tuition
²Otolorin, E. A.	C. M. S. Gram. School, Lagos
d'Almeida, J.	C. M. S. Gram. School, Lagos
²Schikkerling, R. W.	Private tuition
²Lewison, S.	Private tuition

GIRLS.

SECOND CLASS [OR JUNIOR]—HONOURS DIVISION.

Burnett, G. M. *s.h.*	China Inland Mission S., Chefoo

SECOND CLASS [OR JUNIOR]—PASS DIVISION.

Thompson, R. L. *s.*	China Inland Mission S., Chefoo
Reid, M. McL.	China Inland Mission S., Chefoo

THIRD CLASS—HONOURS DIVISION.

Coulthard, E. M. *e.g.a.f.*	China Inland Mission S., Chefoo
Clarke, A. L. *s.e.g.*	China Inland Mission S., Chefoo

THIRD CLASS—PASS DIVISION.

²Copp, E. E.	China Inland Mission S., Chefoo
Burnett, G. H.	China Inland Mission S., Chefoo
Orr Ewing, A. H.	China Inland Mission S., Chefoo
Easton, C. E.	China Inland Mission S., Chefoo
Hunnex, L. M.	China Inland Mission S., Chefoo
Stevens, M. M. *f.*	China Inland Mission S., Chefoo

PROFESSIONAL PRELIMINARY EXAMINATION—CLASS LIST.

SEPTEMBER, 1904.

THE Supplementary Examination by the College of Preceptors for Certificates was held on the 6th, 7th, and 8th of September, in London, and at seven other local centres, viz., Alnwick, Birmingham, Bristol, Jersey, Leeds, Liverpool, and Manchester. The following candidates obtained Certificates :—

FIRST CLASS [OR SENIOR].

Pass Division.

Capon, H. V.	Mann, H. M. *h.*
Chambers, G. O.	Neely, C. W. *e.f.*
Cheshire, J. W.	Thoresby-Jones, J. E.

SECOND CLASS [OR JUNIOR].

Honours Division.

Benjafield, J. D. *a.al.ma.*	Hodgson, W. A. *gm.*
Brotchie, R. T. *f.ch.*	Hull, H. R. B. *a.f.*
Campain, J. H.	Kemball, C. H. *a.gm.*
Christitch, Miss A. *f.*	Palmer, R. J. *a.al.f.ch.*
Dawson, G. de H.	Rippon, T. S. *f.*
Douty, R. C. J. *al.gm.f.l.*	Stobie, H. *ma.ch.*
Edmond-Stowell, T.	Stogdon, Miss M. B. *f.ge.*
Evans, H. A. *h.a.al.gm.*	Mom Chow Thavara. *ch.*
Gilbert, N. H.	

Pass Division.

Bampton, J. H.	Campbell, G. W.	Fripp, J. T.
Bates, H. J.	Cartwright, R. *ch.*	Grant, H. D.
Blackman, H. G. B.	Clarke, J. F. H. *f.*	Green, A.
Blows, C. E.	Cobb, I. G.	Griffiths, G. H. C. St. G. *al.*
Botwright, H. R. V.	Comissiong, W. C.	Griffiths, J.
Bowen, T. R. *h.*	Dabbs, A. J.	Harrison, L. E. C.
Bowes, T. D.	Daintith, T. J.	Henning, H.
Breen-Turner, E. V.	Dence, Miss M. C.	Hill, E.
Brown, B. J.	Depree, S. B. *f.*	Hodgkinson, P.
Brown, J. P. *gm.m.*	Drayton, P. W. P.	Hough, G. H.
Browne, H. M.	Dummere, H. H.	Hughes, D. E. J. S.
Burch, H. J.	Edgar, N.	Hughes, G. T. D.
Burton, T. A.	Essex, R. A.	Ingram, W. L. *h.*
Butler, Miss B.	Fletcher, A. A.	Keating, Miss B.
Butts, J. A. *a.*	Frazer, R. B. F.	Keegan, C. A. *gr.*
Killard-Leavey, T. J.	McRae, D.	Scholfield, A. J.
Knowles, A.	Morgan, I. S.	Schwabe, Miss D. L.
Laidler, P.	Morris, C. W. *al.*	Scott, A. G.
Lang, W. S.	Murphy, P.	Stamper, E. P. F.
Langdon, W. M.	Ormrod, J.	Steele, H. L. H.
Leaver, D. C.	Papenfus, D. P.	Thornton, H.
Leigh, H. V.	Pemberton, Miss E.	Tuan.
Marks, C.	Pilliet, Miss M. A.	Wade, H. J.
Martyn, R. G. *f.*	Postans, Miss M. H.	Watts, W.
Martyn, V. C.	Potter, H. V.	Wigan, C. L.
Maxwell, H. W. *a.*	Roe, R. B.	Williams, J. W.
McNabb, C. E.	Runting, E. A. *al.*	Wright, F. C.
	Salter, P. H. *al.*	

N.B.—The small italic letters denote that the candidate to whose name they are attached was distinguished in the following subjects respectively :—

a = Arithmetic. *gr* = Greek.
al = Algebra. *h* = English History.
ch = Chemistry. *l* = Latin.
e = English Language. *m* = Mechanics.
f = French. *ma* = Magnetism and Electricity.
ge = German.
gm = Geometry.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on September 17. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Barlet, Rev. J. B. Blomfield, Dr. Breul, Mr. E. A. Butler, Mr. J. L. Butler, Mr. Charles, Miss Dawes, Mr. Eve, Mr. Hawe, Rev. Dr. Hiron, Mr. Holland, Miss Jebb, Mr. Millar Inglis, Rev. J. E. Mackie, Mr. Pinches, Rev. Dr. Scott, Mr. Starbuck, Rev. J. Stewart, Mr. Storr, and Mr. Vincent.

The minutes of the last meeting were read and confirmed.

The Secretary reported a considerable increase in the number of entries for the Diploma Examination, which was held on August 30 to September 3, as well as for the Professional Preliminary Examination, which was held on September 6–9, as compared with the entries for the corresponding examinations in 1903.

The Diploma of Licentiate was granted to Mr. E. E. Kitchener, who had passed the required examination.

The Report of the Finance Committee was adopted.

The Report of the Examination Committee was adopted, and the following were appointed to Examinerships:—Mr. H. E. Dawson, M.A., and Mr. C. E. Williams, M.A., for Mathematics; Mr. F. A. Gardner, M.A., for Physics; Mr. H. Spencer Harrison, D.Sc., for Physiology and Zoology; and Mr. W. S. Boulton, B.Sc., for Geology.

Digitized by Google

Dr. J. J. Findlay, Professor of Education at the Victoria University, Manchester, and Mr. E J. Morgan, Castle Hill School, Ealing, were elected members of the Council.

A Special Committee was appointed to inquire into the position of private schools under the working of the Education Act of 1902.

The following persons were elected members of the College:—

Miss F. C. Hall, A.C.P., Langford Girls' School, Cotham, Bristol.
Miss A. Jackson, Convent of the Assumption, Richmond, Yorks.
Mr. J. D. McClure, M.A., LL.D. Camb., Mill Hill School, N.W.
Miss A. M. Rolfe, A.C.P., The Girls' Collegiate School, Leicester.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHORS.—Farmar's Place-Names Synonyms Classified; Thornton's Manual of Book-keeping.

By EDWARD ARNOLD.—Lachlan and Fletcher's Elements of Trigonometry; Starling and Clarke's Preliminary Practical Mathematics.

By G. BELL & SONS.—Baker and Bourne's Elementary Algebra, Part I.; Borchardt and Perrott's New Trigonometry for Schools, Part I.; Ready's Précis and Précis-Writing; Pendlebury's New School Arithmetic and New School Examples in Arithmetic.

By A. & C. BLACK.—Clarke's Houssaye's La Bataille de Waterloo; David's Beginner's Trigonometry; Kirkman's About's La Délivrance de Schultz, Frazer's Petites Comédies, and Selections from Gautier; Lyde's Elementary Geography of America, Elementary Geography of Asia, and Elementary Geography of the British Isles; Reynolds's British Isles (Regional Geography); Taylor's Synthetical Map of Canada; Smith's Labiche and Jolly's Le Baron de Fourchevif.

By the CLARENDON PRESS.—Boole's Preparation of the Child for Science; Mansion's De Tocqueville's Quinze Jours au Désert; Ramsay's Exercises in Latin Prose (two Parts); A. H. Smith's Gozlan's Le Château de Vaux; M. Smith's Lamartine's Deux Héroïnes de La Révolution Française.

By C. J. CLAY & SONS.—Cambridge Higher Local Examination Papers, June, 1904.

By W. B. CLIVE.—Matriculation Directory, No. XXXVII., June, 1904.

By HACHETTE & Co.—Barrère's Le Sage's Gil Blas chez les Brigands; Heslop's Heyse's Das Waldlachen; Weiss's Hauff's Der junge Engländer; Rope's Jules Verne's Le Tour du Monde en Quatre-Vingts Jours.

By MACMILLAN & Co.—Cotterill's Macaulay's Oliver Goldsmith, Macaulay's Samuel Johnson, and Selected Poems of Gray, Burns, &c.; Dixon's Hansjakob's Aus dem Leben eines Unglücklichen, and Word- and Phrase-Book to the same; Gwynn's Masters of English Literature; Huxley and Gregory's Physiography Williamson's Phædo of Plato.

By METHUEN & Co.—George's Historical Geography of the British Empire Wilmot-Buxton's Ancient World.

By NELSON & SONS.—Nelson's Royal South African Geography Text-Books (Introductory and Books I. and II.).

By RIVINGTONS.—Calvert's First Book of French Oral Teaching; Hartog's Deux Contes d'Andersen; Longland's Junior French Unseens, Book I., and Senior French Unseens, Book I.; Wade's Third Year French Writer.

Calendars of Aberdeen University and University College, Bristol.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—ED. *E.T.*]

THE REGISTRATION OF DISMISSED HEAD MASTERS IN SECONDARY ENDOWED SCHOOLS.

To the Editor of "The Educational Times."

SIR,—Can you or any reader of *The Educational Times* furnish me with any valid objection to the registration in a separate column of head masters, referred to in paragraph 133 of Part III. of the Secondary Education Commission Report, namely, those who have been dismissed from their posts when they are in the right and their governing bodies in the wrong?—I am, Sir, &c.,

THOMAS ALLEN.

Southwick Lodge, Lower Wick, Worcester.
September 12, 1904.

[There is ambiguity in "the right" and "the wrong," and there is only one sort of "right" and "wrong" that can be considered in the present connexion. Accordingly, it is difficult to see how there can be any one to register in the suggested column. —ED. *E.T.*]

A CORRECTION.—In our notice of Mr. Gavin Hamilton's "Steps to Latin" last month the following sentence ought to be deleted:—"We should have thought that Classes Two to Five might be taught the elements of Latin without being involved in the strife of ancient authors and modern theories." For "the 'controversy,'" as Mr. Hamilton justly remonstrates, "is only on the title-page: all else is restricted to teaching the Latin of Cicero and Cæsar." We regret, with our reviewer, that he omitted to point out this when he passed on to the body of the work.—ED. *E.T.*

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,194,485. Annual Income, £398,982.

Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

MESSRS. BELL'S EDUCATIONAL BOOKS.

Complete Educational Catalogue post free on application.

MODERN MATHEMATICAL BOOKS.

THE TEACHING OF ELEMENTARY MATHEMATICS, being the Report of the Committee of the Mathematical Association. 6d. net.

NEW SCHOOL ARITHMETIC. By CHARLES PENDLEBURY, M.A. With or without Answers. 4s. 6d.; or in Two Parts, 2s. 6d. each.

*** The New School Arithmetic is to a great extent a new book, and not merely a revision of the present work. The original Arithmetic will also be kept in print, and will be revised and kept up to date with each new edition, as hitherto.

NEW SCHOOL EXAMPLES IN ARITHMETIC. Extracted from the above. With or without Answers, 3s.; or in Two Parts without Answers, 1s. 6d. and 2s.

ELEMENTARY ALGEBRA. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. With or without Answers, 4s. 6d. Also in Parts.

PART I. To Quadratic Equations. With Answers, 3s.; or without Answers, 2s. 6d.

PART II. To include Logarithms (four-figure tables), Binomial Theorem, Exponential and Logarithmic Series, Interest, Undetermined Coefficients, and Partial Fractions. With or without Answers, 2s. 6d.

TEACHER'S EDITION, with the Answers printed opposite each set of Examples, Two Parts, 5s. net each. Part I. *now ready.* Part II. *shortly.*

EXAMPLES IN ALGEBRA. Extracted from the above. With or without Answers, 3s.; or Part I. separately, without Answers, 1s. 6d.

EXAMPLES IN ALGEBRA. By C. O. TUCKEY, M.A. Fourth Edition. With or without Answers, 3s.

These Examples are intended to provide a complete course of Elementary Algebra for classes in which the book work is supplied by the teacher.

ELEMENTARY GEOMETRY. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. Complete Third Edition, Revised, 4s. 6d. Also in Parts. Books I.-III., Sixth Edition, Revised, 2s. 6d. Books I.-IV., Fourth Edition, 3s.

Also published in the following forms:—

Book I., 1s. Books I. and II., 1s. 6d. Books II. and III., 1s. 6d. Book IV., 1s. Books III. and IV., 1s. 6d. Books II.-IV., 2s. 6d. Book V., 1s. 6d. Books IV. and V., 2s. Books IV.-VII., 3s. Books V.-VII., 2s. 6d.

ANSWERS TO NUMERICAL AND MENSURATION EXAMPLES, 6d.

COMPLETE KEY, 6s. net.

ELEMENTARY GRAPHS. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. 6d. net.

EXAMPLES IN PRACTICAL GEOMETRY AND MENSURATION. By J. W. MARSHALL, M.A., and C. O. TUCKEY, M.A. With or without Answers, 1s. 6d.

A NEW TRIGONOMETRY FOR SCHOOLS. By W. G. BORCHARDT, M.A., and the Rev. A. D. PERROTT, M.A. With or without Answers, 4s. 6d. Also in Two Parts, 2s. 6d. each.

The authors hope that this book will supply the need felt for a Trigonometry based on *four-figure Logarithm Tables*, the authorities responsible for the various Cambridge Examinations, Army Entrance Examinations, &c., now dispensing with seven-figure Logarithms. The book lays stress on the more *practical parts* of the subject. *Squared paper* is freely made use of, and 600 Miscellaneous Examples are provided.

SUITABLE FOR

CAMBRIDGE LOCAL EXAMINATIONS. 1905.

NOTES ON SHAKESPEARE'S MACBETH. By T. DUFF BARNETT, B.A. 1s.

NOTES ON SHAKESPEARE'S TWELFTH NIGHT. By T. DUFF BARNETT, B.A. 1s.

CÆSAR—DE BELLO GALLICO. Book I. Edited, with Introduction, Notes, Exercises, and Vocabulary, by A. C. LIDDELL, M.A., Assistant Master at the High School, Nottingham. With Illustrations and Maps. 1s. 6d. (*Bell's Illustrated Classics.*)
TRANSLATION. 1s. (*Bell's Classical Translations.*)

VERGIL—ÆNEID. Book II. Edited, with Introduction, Notes, and Vocabulary, by L. D. WAINWRIGHT, M.A., Assistant Master at St. Paul's School. With Illustrations. 1s. 6d. (*Bell's Illustrated Classics.*)
TRANSLATION. 1s. (*Bell's Classical Translations.*)

HORACE—ODES. Book I. Edited, with Introduction, Notes, and Vocabulary, by C. G. BOTTING, B.A., Assistant Master at St. Paul's School. With numerous Illustrations. 1s. 6d. (*Bell's Illustrated Classics.*)
TRANSLATION. 1s. (*Bell's Classical Translations.*)

LIVY. Book V. Prendeville's Edition. Revised by J. H. FREESE, M.A. 1s. 6d.
TRANSLATION. 1s. (*Bell's Classical Translations.*)

EURIPIDES—MEDEA. Edited, with Introduction, Notes, and Vocabulary, by the Rev. T. NICKLIN, M.A., Assistant Master at Rossall School. With Illustrations. 2s. (*Bell's Illustrated Classics.*)
TRANSLATION. 1s. (*Bell's Classical Translations.*)

PLATO—THE APOLOGY OF SOCRATES. Edited, with Notes, Critical and Exegetical, by WILHELM WAGNER, Ph.D. 2s. 6d.
TRANSLATION. 1s. (*Bell's Classical Translations.*)

HAUFF—THE INN IN THE SPESSART. Translated by S. MENDEL. 1s. (*Bell's Modern Translations.*)

GOETHE—IPHIGENIA. Translated by ANNA SWANWICK. 1s. (*Bell's Modern Translations.*)

FREYTAG—DIE JOURNALISTEN. Edited, with Notes, by Prof. F. LANGE, Ph.D. 2s.

SUITABLE FOR

OXFORD LOCAL EXAMINATIONS. 1905.

SHAKESPEARE'S JULIUS CÆSAR. Edited, with Introduction and Notes, by T. DUFF BARNETT, B.A. 2s. (*Bell's English Classics.*)

SHAKESPEARE'S MERCHANT OF VENICE. With Introduction and Notes by T. DUFF BARNETT, B.A. 2s.
The Notes on either of above Plays, without the Text. 1s. each.

NOTES ON SHAKESPEARE'S KING LEAR. By T. DUFF BARNETT, B.A. 1s.

CÆSAR—DE BELLO GALLICO. Book III. Edited, with Introduction, Notes, Exercises, and Vocabulary, by F. H. COLSON, M.A., Head Master of Plymouth College, and G. M. GWYTHER, M.A., Assistant Master at Plymouth College. With numerous Illustrations and Maps. 1s. 6d. (*Bell's Illustrated Classics.*)

CÆSAR—DE BELLO GALLICO. Books IV. and V. Edited, with Introduction, Notes, Exercises, and Vocabulary, by the Rev. A. W. UPCOTT, M.A., Head Master of Christ's Hospital, and A. REYNOLDS, M.A., Assistant Master at Merchant Taylors' School. With Illustrations and Maps. 2s. 6d.; or separately, 1s. 6d. each. (*Bell's Illustrated Classics.*)

HORACE — ODES. Book III. Edited, with Introduction, Notes, and Vocabulary, by H. LATTER, M.A., Assistant Master at Cheltenham College. With Illustrations. 1s. 6d. (*Bell's Illustrated Classics.*)

VERGIL — ÆNEID. Book III. Edited, with Introduction, Notes, and Vocabulary, by L. D. WAINWRIGHT, M.A. With Illustrations and Map. 1s. 6d. (*Bell's Illustrated Classics.*)

XENOPHON — ANABASIS. Book I. Edited, with Introduction, Notes, and Vocabulary, by E. C. MARCHANT, M.A., Fellow of Lincoln College, Oxford. With Illustrations and Map. 1s. 6d. (*Bell's Illustrated Classics.*)

XENOPHON — ANABASIS. Book II. Edited, with Introduction, Notes, and Vocabulary, by E. C. MARCHANT, M.A. With Illustrations and Map. 1s. 6d. (*Bell's Illustrated Classics.*)

EURIPIDES — HECUBA. Edited, with Introduction, Notes, and Vocabulary, by the Rev. A. W. UPCOTT, M.A., Head Master of Christ's Hospital. With Illustrations. 2s. (*Bell's Illustrated Classics.*)

*** **Translations to any of the above Classics.** 1s. each. (*Bell's Classical Translations.*)

MACMILLAN & CO.'S LIST.

EIGHTH EDITION, REVISED, WITH A CHAPTER ON GRAPHS.

ELEMENTARY ALGEBRA FOR SCHOOLS.

By **H. S. HALL, M.A.**, and **S. R. KNIGHT, B.A.** Globe 8vo, **3s. 6d.** With Answers, **4s. 6d.** Answers, **1s.**

*** **KEY**, containing full Solutions, with Diagrams of the Graphical Examples. **8s. 6d.**

AN ELEMENTARY TREATISE ON GRAPHS.

By **GEORGE A. GIBSON, M.A., F.R.S.E.**, Professor of Mathematics in the Glasgow and West of Scotland Technical College. Globe 8vo, **3s. 6d.**

HOOPER AND GRAHAM SERIES.

MODERN COMMERCIAL PRACTICE WITH CORRESPONDENCE SERIES OF TRANSACTIONS FOR USE IN CONNECTION WITH CLASSES IN COMMERCIAL PRACTICE OR BUSINESS METHODS. By F. HEELIS, F.R.G.S., F.Inc.S.T., &c. Part I. The Home Trade. Globe 8vo, 2s.

SIEPMANN'S ELEMENTARY FRENCH SERIES. New Vol.

LES MÉSAVENTURES DE JEAN-PAUL CHOPPART. Par LOUIS DESNOYERS. Edited by L. VON GLEHN, M.A., Modern Language Master at Perse School, Cambridge. Globe 8vo, 2s.

Word and Phrase Book to same. Globe 8vo, sewed, 6d.

Key to same. Globe 8vo, 2s. 6d. net.

SIEPMANN'S ELEMENTARY GERMAN SERIES. New Vol.

AUS DEM LEBEN EINES UNGLUCKLICHEN. Erzählung aus dem Schwarzwalde. Von H. HANSJAKOB. Edited by E. DIXON, Girton College, Cambridge. Globe 8vo, 2s.

Word and Phrase Book to same. Globe 8vo, sewed, 6d.

Key to same. Globe 8vo, 2s. 6d. net.

THE MASTERS OF ENGLISH LITERATURE. By STEPHEN GWYNN. Globe 8vo, 3s. 6d.

"It would not be easy to find a volume of equal, or nearly equal, compass into which so much thought, such an amount of just and penetrating criticism has been put."—*Spectator.*

ENGLISH CLASSICS. New Vol.

SCOTT'S TALISMAN. With Introduction and Notes. Globe 8vo, 2s. 6d.

THE AIM AND METHOD OF THE

READING LESSON.

A Lecture delivered before the Melbourne Educational Centre, University Extension, by CHARLES R. LONG, M.A., Shakespeare Scholar of the University of Melbourne. Crown 8vo, sewed, 1s.

NEW AND REVISED EDITION.

PHYSIOGRAPHY. An Introduction to the Study of Nature. By T. H. HUXLEY. Revised and partly Rewritten by Prof. R. A. GREGORY. With 301 Illustrations. Globe 8vo, 4s. 6d.

"The work in its new form deserves to be warmly welcomed."—*Guardian.*

TABLES FOR QUALITATIVE CHEMICAL ANALYSIS. Arranged for the use of Students. By A. LIVERSIDGE, M.A., LL.D., F.R.S., Hon. F.R.S.E.; Associate of the Royal School of Mines, London; Professor of Chemistry in the University of Sydney. Second Edition. Super royal 8vo, 4s. 6d. net.

New Works on Geometry to meet the New Requirements.

A NEW GEOMETRY FOR SCHOOLS. By S. BARNARD, M.A., Assistant Master at Rugby School, late Fellow and Lecturer at Emmanuel College, Cambridge; and J. M. CHILD, B.A., Cantab., Lecturer in Mathematics, Technical College, Derby. Crown 8vo, 4s. 6d.

A NEW GEOMETRY FOR JUNIOR FORMS. By S. BARNARD, M.A., and J. M. CHILD, B.A., Cantab. Crown 8vo, 2s. 6d.

*** This volume contains all the Practical and Theoretical Geometry required for a pass by Junior Candidates in the University Locals.

A NEW GEOMETRY FOR SENIOR FORMS. By S. BARNARD, M.A., and J. M. CHILD, B.A. Crown 8vo. [*Immediately.*

PART IV. JUST PUBLISHED.

THEORETICAL GEOMETRY FOR BEGINNERS. By C. H. ALLCOCK, Senior Mathematical Master at Eton. Parts I., II., III., and IV. Globe 8vo, 1s. 6d. each.

PRACTICAL GEOMETRY FOR BEGINNERS. By V. LE NEVE FOSTER and F. W. DOBBS, Assistant Masters at Eton College. Crown 4to, 2s. 6d.

PRACTICAL EXERCISES IN GEOMETRY. By W. D. EGGAR, M.A., Assistant Master at Eton College. Revised Edition, with Answers. Globe 8vo, 2s. 6d.

PART VI. JUST PUBLISHED.

A SCHOOL GEOMETRY.

By **H. S. HALL, M.A.**, and **F. H. STEVENS, M.A.** Crown 8vo.

This work is based upon the recommendations of the Mathematical Association, and will be found to satisfy the requirements of University, Local, London Matriculation, Army, Navy, and other Examinations. In particular, the suggestions recently proposed by the Cambridge Syndicate have been carefully considered.

Parts I. and II.—Part I., LINES and ANGLES, RECTILINEAL FIGURES. Part II., AREAS OF RECTILINEAL FIGURES (containing the Substance of Euclid, Book I.). 1s. 6d.

Part III.—CIRCLES (containing the Substance of Euclid, Book III., 1-34, and part of Book IV.). 1s.

Parts I., II., and III. 2s. 6d.

*** This volume exactly suits the requirements of the New Syllabus for the King's Scholarship Examination.

Part IV.—SQUARES AND RECTANGLES, GEOMETRICAL EQUIVALENTS OF CERTAIN ALGEBRAICAL FORMULÆ (containing the Substance of Euclid, Books II. and III., Props. 35-57). Sewed, 6d.

Parts I.-IV. 3s.

Parts III. and IV.—Containing the Substance of Euclid, Books II. and III. and part of Book IV. 1s. 6d.

Part V.—Containing the Substance of Euclid, Book VI., with additional Theorems and Examples. 1s. 6d.

Parts I.-V. 4s. 6d.

Parts IV. and V.—Containing the Substance of Euclid, Book II., Book III., 35-37, and Book VI. 2s.

Part VI.—Containing the Substance of Euclid, Book XI., 1-21, together with Theorems relating to the Surfaces and Volumes of the Simpler Solid Figures. 1s. 6d.

COLLEGE OF PRECEPTORS' EXAMINATIONS.

SPECIAL SUBJECTS, 1904.

Caesar.—Gallic War, Books II., III. By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond., and others. 1s. 6d. each. Vocabulary, 1s. each.

Caesar.—Gallic War, Book IV., 20–end, and Book V., 1–23. By A. H. ALLCROFT, M.A., and others. 1s. 6d. Vocabulary, 1s.

Cicero.—Pro Archia. By A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Camb. 1s. 6d. Vocabulary, 1s.

Euripides.—Alcestis. By J. H. HAYDON, M.A. Camb. 2s. 6d.

Homer.—Odyssey, Books IX., X. By J. H. HAYDON, M.A. Camb. and Lond., and A. H. ALLCROFT, M.A. Oxon. 2s. 6d.

Horace.—Odes, Book I. By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. 1s. 6d. Vocabulary, 1s.

Vergil.—Aeneid, Book I. By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.

SPECIAL SUBJECTS, 1905.

Caesar.—Gallic War, Books IV., V. By A. H. ALLCROFT, M.A., and others. 1s. 6d. each. Vocabulary, 1s. each.

Euripides.—Hecuba. By T. T. JEFFERY, M.A. 3s. 6d.

Horace.—Odes, Book III. By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. 1s. 6d. Vocabulary, 1s.

Vergil.—Aeneid, Book III. By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. Vocabulary, 1s.

Xenophon.—Anabasis, Book I. By A. H. ALLCROFT, M.A. Oxon., and F. L. D. RICHARDSON, B.A. Lond. 1s. 6d. Vocabulary, 1s.

THE SCHOOL JUNIOR SERIES.

Books suitable for the College of Preceptors' Certificate Examinations and the Oxford and Cambridge Junior Locals.

Arithmetic, the Junior. Adapted from **The Tutorial Arithmetic.** By R. H. CHOPE, B.A., of Kingswood School, Bath. 2s. 6d.
"Will prove very suitable for students preparing for the Junior Locals and College of Preceptors' examinations."—*Practical Teacher.*

Bookkeeping, Junior (or The Preceptors'). By THOMAS CHALICE JACKSON, B.A., LL.B. Lond. 1s. 6d.
"The book is an excellent one."—*Accountants' Magazine.*

French Course, Junior (or The Preceptors'). By ERNEST WEEKLEY, M.A. Camb. and Lond. *Second Edition.* 2s. 6d.
"This volume should well serve its purpose."—*School Guardian.*

French Reader, Junior (or The Preceptors'). With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. 1s. 6d.
"A very useful reader with a good vocabulary and sensible notes."—*Schoolmaster.*

Latin Course, Junior (or The Preceptors'). By B. J. HAYES, M.A. Camb. and Lond. *Second Edition.* 2s. 6d.
"A good practical guide."—*Educational Times.*

Latin Reader, Junior (or The Preceptors'). By E. J. G. FORSE, M.A. Camb. and Lond. 1s. 6d.
"We heartily commend the book."—*Secondary Education.*

Mechanics, Junior (or The Preceptors'). By FABIAN ROSENBERG, M.A. Camb., B.Sc. Lond. 2s. 6d.
"The book possesses all the usual characteristics and good qualities of its fellows."—*Schoolmaster.*

Trigonometry, Junior (or The Preceptors'). Edited by WM. BRIGGS, LL.D., M.A., F.R.A.S. 2s. 6d.
"The book meets excellently the wants of the student reading for the College of Preceptors' examination."—*Guardian.*

CURRENT EVENTS.

Fixtures.

AT the Monthly Meeting of the College of Preceptors, on October 19, at 7.30 p.m., the Rev. J. O. Bevan, M.A., F.C.P., will read a paper on "How to evoke a Taste for Reading and Continued Study after the Pupil leaves School."

* * *

THE usual monthly Lecture of the Société Nationale des Professeurs de Français en Angleterre will be delivered at the College of Preceptors on October 29 at 4 p.m.

* * *

AT King's College, London, Prof. Caldecott will lecture on General Psychology during first and second terms of coming Session; Prof. Halliburton, on Histological Psychology, during first term (from October 13); and Dr. C. S. Myers, on Experimental Psychology (with demonstrations and laboratory work), during second and third terms.

* * *

THE annual meeting of the Association of Education Committees will be held on October 6 and 7 at the Holborn Restaurant, London.

* * *

A JOINT CONFERENCE of representatives of County Councils in Wales and M.P.'s for Welsh constituencies will consider on October 6 the bearing of the Education (Local Authorities' Default) Act, 1904, upon the administration of the Education Act, 1902.

* * *

A UNIVERSITY Conference is to be held at Manchester on October 8 to consider a proposed scheme for the higher education of working men.

* * *

THE Society of Arts Examinations for next year will commence on April 10. (See "Summary.")

* * *

THE Birkbeck College, Breams Buildings, Chancery Lane, commences its 82nd session on October 3, when Dr. J. E. Mackenzie will give the opening address at 7.30 p.m.

* * *

THE tenth session of the London County Council School of Photo-engraving and Lithography has just commenced (September 26). Open only to such as are "genuinely engaged in business in any branch of the photo-mechanical, photographic, designing, illustrative, lithographic, engraving, and printing crafts."

* * *

FORMS of entry for the Cambridge Local Examinations (December 12) can now be obtained from the Local Secretaries. The forms for the Senior, Junior, and Preliminary Local Examinations are to be returned to the Local Secretaries by October 3; those for the Higher Local Examination by October 31. The regulations may be obtained from the Local Secretaries or from Dr. Keynes, Syndicate Buildings, Cambridge.

Honours.

THE Archbishop of Canterbury has received the honorary degree of LL.D. from Toronto University.

Digitized by Google

THE University of Leeds proposes to confer a long list of degrees on October 6:—

LL.D.: Lady Frederick Cavendish, the Archbishop of York, the Duke of Devonshire, Lord Spencer (Chancellor of the Victoria University of Manchester), Lord Harewood (Lord Lieutenant of the West Riding), Lord Cross (member of the Court of the Clothworkers' Company), Lord Herries (Lord Lieutenant of the East Riding), Lord Masham, Lord Allerton, Mr. A. H. D. Acland, Sir Francis Powell, M.P., Sir John Barran (Treasurer of the University of Leeds), Sir Charles Hubert H. Parry (Professor of Music in the University of Oxford and Director of the Royal College of Music), Sir Alexander C. Mackenzie (Principal of the Royal Academy of Music), Sir Charles Villiers Stanford (Professor of Music in the University of Cambridge), Sir Edward Elgar. Mr. William Bousfield (Master of the Clothworkers' Company), Mr. Charles Milnes Gaskell (Chairman of the West Riding County Council), Dr. Charles Wood, and Dr. Henry Walford Davies.

Litt.D.: Sir Albert K. Rollit, M.P., Mr. Alfred Austin, the Rev. Andrew M. Fairbairn (Principal of Mansfield College, Oxford), and Dr. Joseph Wright (Professor of Comparative Philology in the University of Oxford).

D.Sc.: Lord Rosse (Chancellor of the University of Dublin), Lord Kelvin, Sir Isaac Lowthian Bell, Sir James Kitson, M.P., Sir William Henry Broadbent, Sir Arthur W. Rücker (Principal of London University), Dr. Thorpe, C.B. (Director of the Government Laboratories), Mr. Claudius G. Wheelhouse, LL.D. (late member of the Council of the Royal College of Surgeons and President of the Council of the British Medical Association), Mr. Jonathan Hutchinson, Mr. J. Pridgin Teal, Dr. Hughlings Jackson, Prof. Miall, Dr. Tempest Anderson, and Prof. A. W. Mayo Robson.

Endowments and Benefactions.

THE late Mr. John Innes, lord of the manor of Merton, is said to have left £300,000 for the establishment and maintenance of a museum at Merton.

* * *

BEDFORD COLLEGE, LONDON, is asking for £100,000 for a building fund, besides endowments, general or special.

* * *

THE Burns Federation has set aside £100 as nucleus of a fund for the foundation of a Chair of Scottish Literature in one of the Scottish Universities.

* * *

LORD STRATHCONA has given 50,000 dols. to the Medical Faculty of McGill University, in supplement of his gift of 100,000 dols. two or three years ago, to complete buildings and to assist in the general work of the Medical School.

* * *

M. LÉON CLÉRY, a distinguished French *avocat*, has left £4,000 to the Animals Protection Society, the yearly interest (say £120) "to be awarded annually to the schoolmaster or schoolmistress who shall have done most to cultivate among his or her pupils the spirit of compassion for their dumb fellow-creatures." How to decide among 60,000 competitors?

Scholarships and Prizes.

AT the Aberdeen and North of Scotland College of Agriculture 14 bursaries of £15 each, and 9 of £10, are offered to students resident in the north-eastern counties of Scotland.

* * *

DR. GEORGE OGILVIE has given £50 for an annual prize or medal at Fordyce Academy, as a memorial of two brothers and himself, old pupils.

* * *

EVERY son of a clergyman or teacher in active service is given upon application a half tuition scholarship in the College of Arts and Science of the New York University.

Appointments and Vacancies.

IT is understood that the Provost of Oriel (Dr. D. B. Monro) will retire from the Vice-Chancellorship of Oxford University at the commencement of Michaelmas Term, and will be succeeded by the Rector of Lincoln (Dr. Merry).

* * *

DR. EDWIN ANDERSON ALDERMAN, D.C.L., LL.D., President of Tulane University, has been appointed first President of the University of Virginia, which has for the past three quarters of a century been content with a Chairman of the Faculty.

* * *

MR. POUNTNEY BIGELOW is to be the first occupant of the new Chair of Colonial Administration at Harvard.

* * *

THE Very Rev. T. J. Murphy, President of Blackrock College, Dublin, has been appointed President of Prior Park College, Bath.

* * *

MR. W. I. LAST, A.M.I.C.E., Senior Keeper in the Science Division of the Victoria and Albert Museum, has been appointed Director of that division of the Museum, in the place of Major-General Festing, C.B., F.R.S., retired.

* * *

PROF. W. MACNEILE DIXON, Litt.D., Professor of English Literature in Birmingham University, succeeds Prof. Raleigh in the Chair of English Literature in Glasgow.

* * *

MR. F. J. RAHTZ, M.A., B.Sc., has been appointed Assistant Lecturer in English and Latin at the Merchant Venturers' Technical College, Bristol.

* * *

DR. H. BURROWS has been appointed Lecturer and Demonstrator in Chemistry at the Sir John Cass Technical Institute, Aldgate.

* * *

MR. A. LANDER, B.Sc., Assistant Lecturer and Demonstrator in Chemistry, University College, Bangor, has been appointed Lecturer in Agricultural Chemistry at the Edinburgh and East of Scotland College of Agriculture.

* * *

MR. F. C. REES, B.Sc., Assistant Lecturer and Demonstrator in Physics, University College, Bangor, has been appointed Inspector of Secondary and Technical Schools under the Glamorganshire County Council.

* * *

MR. ALFRED MORGAN, Head Master of the Pontypridd Pupil-Teacher Centre, has been appointed Director of Education to the Mountain Ash Education Committee.

* * *

MISS M. ATKINSON, M.A. Glas., has been appointed Assistant Lecturer in Classics and Philosophy at the Durham College of Science, Newcastle-on-Tyne.

* * *

MR. DAVID ELLIS, B.Sc. Lond., Ph.D. Marb., science master at Dollar Institution, has been appointed Lecturer in Botany and in Bacteriology at the Glasgow and West of Scotland Technical College.

* * *

MR. F. C. WILLCOCKS, Demonstrator in Entomology and Botany and Diplomé of the South-Eastern Agricultural College, Wye, has been appointed Entomologist to the Khedivial Agricultural Society at Cairo.

* * *

MR. A. J. PERMAN, M.A. Lond., senior assistant master (since 1896), has been appointed Head Master, of Merthyr Tydvil County School.

* * *

MR. FREDERICK BETTERIDGE, LL.B., Head Master of the Hanson Higher-Grade School, Bradford, has been appointed Head Master of the Westoe Road Secondary School, South Shields.

* * *

THE REV. A. J. SKINNER, B.A. Lond., science and mathematical master at Reading School, has been appointed Head Master of Sir William Borlase's School, Marlow.

* * *

MR. F. P. WILDE, B.A., Mathematical Master, Ilminster

Digitized by Google

Grammar School, has been appointed an Assistant Master in Watford Grammar School.

Mr. F. E. Relton, late Scholar of Worcester College, Oxford, succeeds Mr. Wilde at Ilminster.

* * *

Mr. C. E. Brittain, M.Sc. Vict., assistant master at Normanton Grammar School, has been appointed Head Master.

* * *

Mr. James P. Scott, M.A., B.Sc., has been appointed Science Master in Dollar Institution.

* * *

Mr. Alan Inglis, art master, Central Technical School, Clonmel, has been appointed art master in the High School, Arbroath.

* * *

Mr. Frank Sangster, assistant in the Art Department of Brechin High School, succeeds Mr. Richardson as Head.

* * *

Captain Alan Foster, late of the Argyll and Sutherland Highlanders, has been appointed by the Scotch Education Department Inspector of Physical Instruction in connexion with the inspection of higher schools and departments in Scotland. He will also inspect the classes in this subject in the training colleges, as well as those for the further instruction of teachers, conducted under Article 91 (d) of the Code.

* * *

Mr. George Macdonald, M.A., Assistant Director of Higher Inspection, Scotland, has been appointed to act as Assistant-Secretary to the Scottish Education Department in Edinburgh.

Literary Items.

Mr. Bryce is preparing yet another edition of his "Holy Roman Empire"—revised throughout and enlarged.

* * *

Messrs. T. & T. Clark announce a new series—"The Library of Ancient Inscriptions." The first volume will deal with "Babylonian and Assyrian Laws, Contracts, and Letters." The author is the Rev. C. H. W. Johns, M.A., whose translation of the Code of Hammurabi we recently noticed.

* * *

In Mr. Henry Frowde's long list of works to be issued from the Clarendon Press before Christmas we note Dr. Gifford's edition of the "Euthydemus"; Jowett's translation of Aristotle's "Politics"; second volumes of Euripides and Plautus (Oxford Classical Texts); Origines Islandicæ ("Landnámabóc" and the earliest prose Sagas of the Old Northern Tongue), in two volumes; a Facsimile Reproduction of the First Folio of Chaucer, 1532, edited, with introduction, by Prof. Skeat; an English verse rendering of the tragedies of Seneca, by Ella I. Harris, Ph.D. (Yale); and two important books on India.

* * *

The Clarendon Press proposes to publish a selection of the shorter and dispersed writings of the late Prof. York Powell, including, besides some papers of a more professional stamp, literary studies and criticisms, and probably a few verses and translations, with a prefatory memoir based as far as possible upon his letters. Prof. Oliver Elton, of the University of Liverpool, will edit the work and write the memoir. Those that can furnish letters, recollections, or other material, are asked to communicate with Prof. Elton, 15 Parkfield Road, Liverpool, or with Prof. J. A. Stewart, Christ Church, Oxford.

* * *

Dickens's Christmas Books in five tiny volumes, printed on Oxford India paper, are about to be published by Mr. Henry Frowde. The original illustrations by Leech, Maclise, Doyle, Stanfield, Landseer, Tenniel, and Stone are reproduced.

* * *

Messrs. A. & C. Black have just issued the third instalment of Sir Walter Besant's "London in the time of the Tudors," illustrated from contemporary prints, and containing a reproduction of Agas's Map of London in 1560.

* * *

Besides educational text-books, books for boys and girls, annuals, and so forth, Messrs. A. & C. Black announce a remarkable series of descriptive volumes with numerous full-page illustrations in colour.

* * *

Messrs. T. C. & E. C. Jack announce "a complete series of school books for the primary schools, to be followed by books suitable for advanced teaching." Fresh ideas supplement the formal requirements of the Educational Authorities, and "every detail of production has been carefully studied"—especially paper and type and style of illustration. The first samples to hand fully bear out the high claims of the publishers.

* * *

Messrs. Archibald Constable & Co. have in active preparation for immediate publication a work entitled "Science and Immortality," by Prof. Osler, of Oxford.

* * *

In the *World's Work* for September Kathleen Schlesinger charmingly instructs girls "How to study in Dresden."

* * *

Great Thoughts for September 10 gives an instructive interview by Mr. Raymond Blathwayt with Mr. Alexander Devine on his "educational experiment" at Clayesmore (with portrait). Mr. Devine "is endeavouring, as far as possible, to bring the public-school system into harmony with the whole train of thought which is so pre-eminently characteristic of the new era."

* * *

The *Record* (July–September) reviews the present aspect of Agricultural Education, and sets forth preliminary proposals for the training of teachers in the great Northern counties and certain scholarship schemes of Local Education Authorities, with various other matters and numerous illustrations.

* * *

In the *North American Review* for September, Prof. Barrett Wendell defines "the practical aim of a general education" to be "such training as shall enable a man to devote his faculties intently to matters which of themselves do not interest him."

Of all educational superstitions, we may freely admit, none is more instantly apparent than that which worships the classics and mathematics as idols. And yet the newer educational superstition which bows the knee to pedagogics is beginning to seem more mischievously idolatrous still.

This from Harvard!

* * *

The first two numbers of *La Educación Nacionál*, a monthly journal, "organo de la Escuela normál de Preceptores de Santiago," show hopeful promise. The aims of the Comisión directiva are comprehensive and elevated. All success to the new comer!

* * *

The position—one of the writers says "the plight"—of English in the American High School is discussed in three papers in the September number of *Education* (Boston).

* * *

Mr. J. Lewis Paton, M.A., contributes to the July number of *Saint George* an admirable paper on "English Public Schools." "The problem for England at present is the development of Day Schools."

* * *

The *Revue de l'Enseignement des Langues vivantes*, among

Digitized by Google

varied matters of literary interest, is running a spirited French verse translation of "Antony and Cleopatra," by Prof. L. Morel, Lycée Louis-le-Grand.

* * *

THE *Note-Book*, conducted by F. Harvey Hatchard and L. de Castarede, is the new organ of Sloan-Duployan Shorthand (2d. monthly). It gives also a dash of Esperanto, physical training, &c.

General.

AN exhibition of works of art (paintings, sculpture, engravings, and architectural designs) will be arranged in a special pavilion within the grounds of the Universal and International Exhibition to be held in Liège in 1905. The official regulations can be obtained from the Consul-General for Belgium, 29 Great St. Helen's, E.C.

* * *

AN urn containing the ashes of Sir Edwin Arnold has been placed in a niche in the chapel of University College, Oxford. Beneath is a tablet suitably inscribed.

* * *

CHICAGO UNIVERSITY will shortly inaugurate a Charity Chair, to provide courses of study and practical training in social and philanthropic work. The hope is to supply the demand for trained men and women in charitable reformatory institutions, social settlements, and home and foreign mission work.

* * *

DR. BURGE, of Winchester, writing on "The Problem of the Public-School Curriculum" (*Guardian*, September 7), "desires to see a small committee of schoolmasters appointed to take all the evidence available which can show what the experiments and experience of the last twenty years teach us, to report the evidence of witnesses in full, and to summarize the conclusions which can be drawn—in fact, to issue a blue-book."

* * *

AT the recent Carnarvon meeting of the Pan-Celtic Congress, Prof. Rhys, the Chairman, warmly complimented the enthusiasm and perseverance with which the people of Ireland have taken up the study of their ancient language.

* * *

THE Board of Education have published a memorandum drawing the attention of the authorities of training colleges to the recent Report of the Inter-Departmental Committee on the Model Course of Physical Exercises prepared by that Committee.

* * *

THE Board of Education have decided (says the *School Government Chronicle*) that, in future, schools owned by or connected with a company will be eligible for recognition only if the company is wound up and its property vested in the trustees for secondary education purposes.

* * *

THE Report of the Board of Education for 1903–4 has just been issued (Cd. 2271, 5½d.).

* * *

THE Calendar of the Northampton Institute (City Polytechnic) for 1904–5 is now ready (260 pages, with illustrations). Day courses in Technical Optics and Artistic Crafts appear for the first time; and there are various new developments in different departments of engineering. The evening courses began September 26; the day courses begin October 3.

* * *

THE Calendar for the tenth session (1904–5) of the London School of Economics and Political Science (University of London) gives very clear and full information as to the varied and useful courses of study provided.

ENGLISH IN SECONDARY SCHOOLS.

NEW REGULATIONS OF THE BOARD OF EDUCATION.

THE Board of Education have just issued fresh Regulations for the teaching of the English Language and Literature in Secondary Schools. They require in each school a course of general instruction, including the English language and literature (apart from history and geography), and extending over four years. In order to facilitate the adoption by secondary schools of systematic courses in English, the Board think it desirable to indicate in outline the points to which the attention of their inspectors will be directed, as regards:—

1. Granting approval of the course, and
2. Taking the course into consideration in estimating the efficiency of the school.

Each school desiring the approval of the Board for its course in English should be prepared to submit a course providing:—

1. A series of texts or selections graduated in difficulty, such graduation to depend not less on the method of handling the subject than upon considerations of language and subject-matter.
2. A suitably graduated series of exercises (repetition, meanings and use of words, analysis, including parsing, paraphrase, abstract or précis, composition or essay) connected with the language and subject-matter of the text.

Inspectors will be asked to report:—

1. As to the stages of instruction attained by the pupils on their entry upon the course.

The application of a test in the subject of English on admission to the course is desirable, and records of the results of such tests should be kept.

2. As to the number of hours or periods available per week for the subject.

The time allotted to English, apart from grammar, should not be less than three periods (of which one may be home-work); an additional school period is desirable for grammar, though it is not essential that the grammatical teaching should be concentrated in a single period.

3. As to the texts prescribed for study in each of the four years of the course.

Texts or portions of texts should be planned out for each term; and, where circumstances permit, one text a term may usefully be taken. As to length of text studied, no definite instructions are given by the Board, since the extent of ground to be covered cannot be considered apart from the amount of detail corresponding to the method of teaching adopted, or from the exercises and the like set forth in Section 4 below. The Board desire to leave freedom and wide scope to schools with regard both to texts and to methods of teaching, but would strongly urge schools not to provide elaborately annotated texts for the use of the scholars.

4. As to the exercises connected with the text and subject-matter.

The following exercises may be suggested:—(*a*) Repetition and reading aloud; (*b*) meanings and use of words; (*c*) analysis, including parsing; (*d*) paraphrase; (*e*) abstract or précis; (*f*) composition or essay. It need hardly be said that not all the exercises here suggested should be used in each month or even in each term; but each should be used from time to time.

Under each of the headings except (*a*) a set of corrected exercises worked by the class should be kept for the inspector's use, and it is desirable that under headings (*d*) and (*e*) model exercises should be provided and kept in a like manner.

SUGGESTIONS FOR A FOUR-YEAR COURSE IN ENGLISH IN ILLUSTRATION OF THE FOREGOING.

The following scheme is intended to indicate in rough outline some of the texts already in school use which may be so combined as to form a four-year course. It may also serve as a sample of the particulars which, with due allowance for local conditions (*i.e.*, examinations taken, proficiency of staff, &c.), should be submitted by every secondary school seeking the Board's approval of its course in English.

The Board desire it to be clearly understood that the details in the appended scheme are given merely by way of illustration, and are not to be regarded as comprising more than a few specimens of the numerous texts which may advantageously be studied.

In each year of the course poems or passages should, after study in the class, be prescribed for learning by heart; some of these may serve also for recitation. In exceptional cases of scholars with weak verbal memories, some other exercise connected with the text may usefully be substituted.

Digitized by Google

Year of Course.	Age at Entry.	Texts: Poets.	Texts: Prose Authors.
I.	12–13	English Ballads. Lays of Ancient Rome. Hiawatha. Selected poems, mainly lyrical (*e.g.*, Children's Treasury).	Church's Stories of the Iliad, Odyssey, Æneid. Stories of King Arthur. Tales from the Northern Sagas (*e.g.*, Burnt Njal, Asgard and the Gods). Tales from The Faerie Queene. Stevenson's Treasure Island. Morris's Story of the Glittering Plain.
II.	13–14	Scott (*e.g.*, Lady of the Lake; Lay of the Last Minstrel). Longfellow (*e.g.*, Evangeline and general selections). Selected Poems (*e.g.*, Lyra Heroica *or* Poems of England).	Scott (*e.g.*, Talisman, Ivanhoe, *or* Legend of Montrose). Southey's Life of Nelson. Prescott (selections from Peru *or* Mexico). Voyages and Travels.
III.	14–15	Shakespeare (Julius Cæsar; Midsummer Night's Dream; *or* select passages and scenes). Milton (shorter poems). Tennyson (Idylls of the King). Gray (Elegy). Goldsmith (Traveller and Deserted Village) and Coleridge (Ancient Mariner). Wordsworth (simpler poems).	Macaulay, Biographical Essays. Scott (*e.g.*, Waverley, The Antiquary, *or* Old Mortality).
IV.	15–16	Shakespeare (Historical Plays *or* Comedies). Milton (Paradise Lost, Books 1 and 2). Spenser (Faerie Queene, Books 1 and 2). Wordsworth (selections). Tennyson (selections). Morris's Earthly Paradise (selections). Golden Treasury (First *or* Second Series).	Macaulay, Essays *or* History (Chapters 1 and 2). Burke (Reflections on the French Revolution.) Selections from The Spectator. Ruskin (Sesame and Lilies).

INSPECTION OF PRIVATE SECONDARY SCHOOLS

UNDER SECTION 3 OF THE BOARD OF EDUCATION ACT, 1899.

MEMORANDUM BY ONE OF H.M. INSPECTORS.

IN order to anticipate the questions of private secondary schools that may contemplate applying for inspection by the Board of Education under Section 3 of the Board of Education Act, 1899, the following notes on the procedure have been put together by one of H.M. Inspectors.

PRELIMINARY NOTE.

The Board of Education Act of 1899 (a short Act which must not be confused with the contentious Act of 1902) created the Board of Education by the fusion of the two Departments previously known as the Education Department and the Science and Art Department, and gave the Board powers, under Section 3, to conduct inspections of secondary schools where applied for. If desired, the educational inspection may be conducted by the Universities under this section. The Board arrange these inspections many weeks before they take place, and the report is not available until several weeks after the inspection. It follows, therefore, that at least four or five months may elapse between the application for the inspection and the receipt of the report. Hence, where the inspection is required so as to certify the Local Education Authority of the fitness of the school to take a definite place in connexion with the educational system of the county or county borough, no time should be lost in making application.

COST OF INSPECTION, AND CONDITIONS CONSEQUENT ON ACCEPTING COUNTY AID.

The charge for inspection can be ascertained on application to the Board at South Kensington. Hitherto a fee of £5 has been charged where the number of scholars does not exceed fifty. It may be calculated approximately at 2s. per head. In some counties and county boroughs the Local Education Authority offer to secondary schools within their area a grant towards the cost of each case. This enables private schools to reap the benefit of an impartial criticism which the inspection ensures; but it should be clearly understood that the acceptance of aid for this purpose from the Local Education Authority involves the sending of the report to the Education Committee. As, however, the Committee should regard the report as a confidential document, the sending of the report to the Committee should not deter efficient schools from applying for inspection. The rule of the Board is to send a copy of the report to the Local Education Authority if that body aids the school or contributes to the cost of the inspection.

PRIVACY OF THE REPORT.

In the case of privately owned schools, which pay the total charge of inspection, the reports, which may occupy some twelve to twenty pages of type-written foolscap, are (in the absence of special arrangements to the contrary) communicated to the principals alone, since it is only on their invitation that the school can be inspected. The report is thus, in ordinary cases, private as between the Board and the school, unless and until the latter otherwise decides. If, however, the school publishes the report in any way, it must publish it in full. The principal is perfectly free to show the report to any one, but commendatory remarks cannot be quoted (as, for instance, at prize distributions with reporters present) to the exclusion of other criticism of a less attractive, but probably more useful, character. It can scarcely be expected that many schools can sustain a thoroughly impartial criticism of this nature without having attention drawn to some matters requiring consideration. If, however, there is a desire to publish such reports, a brief notice against any adverse comment to the effect that the matter has now been remedied is likely to inspire confidence. Any such notice must, by signature or otherwise, be indicated as made on the responsibility of the school and not of the Board. The reports are not intended, in any way, to subserve purposes of advertisement, but primarily to certify the principal as to the general character and work of the school as viewed by impartial and experienced judges; and, in special cases, to deal with questions arising between the school and outside persons or bodies.

SCOPE OF THE INSPECTION.

The inspection is not confined to any particular section of the life or work of the school, but deals with every department, and with the school as a whole. In the case of private schools finance is only a matter of inquiry in so far as it may affect the character of the teaching. The reports would deal with the class-rooms and their equipment, the special facilities for any subject requiring other than class-room accommodation, such as music, art, science, gymnastics, the various domestic arts, &c., the boarding houses and general sanitary arrangements, playgrounds, and fields, &c. Everything that has a bearing on the corporate life of the school, the organization of games and excursions, the school magazine, art club, old boys' or old girls' clubs, &c., are matters of interest to the inspectors. The following receive special consideration:—The times assigned to different subjects, the details and gradations of syllabuses, the arrangement of the various time-tables; the qualifications and experience of teachers; the methods of teaching the various subjects of the curriculum as evidenced by lessons given in the presence of the inspectors; note-books; past work, and records of successes at public examinations; and, in fact, all the various elements that make for efficiency according to the special aims of the school. The inspection occupies one or more complete days, but includes nothing in the way of systematic examination, though the inspectors are not precluded from setting papers or putting oral questions at their discretion.

Digitized by Google

THE INSPECTORATE.

The inspection is invariably carried out by at least two inspectors of the Board. In practice the Board vary the number from two to six, according to the size and character of the school. The reason for this is that the report can, if necessary, be prepared by specialists in the various subjects of the curriculum. In the case of girls' boarding schools, and most girls' day schools, at least one lady inspector attends. The inspectorate is composed of persons of wide experience in every department of life and work in all types of schools, and the permanent staff is reinforced, as occasion arises, by the employment of occasional inspectors of approved qualifications.

UTILITY OF THE INSPECTION.

Bearing in mind the comparative isolation of the average private school in England, an impartial survey such as is contemplated should be of much value to the principals, by bringing them into contact with those who have the best opportunities of seeing what is good or indifferent in similar schools throughout the country, and thus giving them a means by which their schools can effectively profit by detailed and contemporary experience.

REVIEWS.

A POPULAR HISTORY.

An Introductory History of England, from the Earliest Times to the close of the Middle Ages. By C. R. L. Fletcher, Fellow of Magdalen College, Oxford. (7s. 6d. John Murray.)

For all that has been written about the history of England, and for all the experience of the subject that Mr. Fletcher has had in the Oxford History School, he has chanced upon "certain uncomplimentary young gentlemen (near relations of his own) who were always complaining that they found history intolerably dull." A fortunate chance, for it has set Mr. Fletcher to relieve the history of his country from the reproach; and he could not be dull at the work even were he to try his hardest. His view is "that English History should be an inheritance of childhood; that its legends and its romance should grow into our thoughts from very early years, and should expand themselves with the expansion of our minds; that we should feel History, and dream of it rather than learn it as a lesson." Accordingly, he cannot bear to think of it as a task. "For English History as part of a school 'curriculum,' or as a means of education," he openly avers, "I have no such regard at all." Education is not the acquisition of information; the substitution of Modern History and so forth for Greek and Latin in the Oxford Schools is "nothing short of an irretrievable calamity": even the immense growth of the Oxford History School and of the Cambridge History Tripos in recent years is not at all "a healthy sign for English education." Such being his definite clear-cut opinions, "this little book, not being designed to pour information into any one, still less to help any one to pass any examination, is not fortified with any tables, summaries, or lists of dates"; and the author is too old-fashioned to call "Edith" "Eadgyth" or to spell "abbot" with an Anglo-Saxon (or Old English) "a" instead of the modern "o." Such independence is refreshing; for it is the self-reliance of a strong man, not the wilfulness of a weakling; and it prepares one for a fresh and unconventional narrative.

Romans, Saxons, Danes, Normans pass before us, and Englishmen play their part down to the Battle of Bosworth Field. But it is no ordinary political sketch that Mr. Fletcher presents: he goes right to the heart of his subject at each stage, and sets forth a vivid picture of the time, as well as of the prominent personages, so that from the dim, primitive bleakness of the period of the "River-drift men" down to the establishment and development of what we regard as law and order and civilized administration he exhibits the social panorama with strikingly dramatic effect, without sacrificing the facts of history—nay, rather, by deftly exhibiting them in their working relations. A notable example of this vivid actuality is seen in his exposition of the Domesday system by a comprehensive representative model—not an example from history, but an example constructed so as to embody all the essential elements.

It is quite needless to follow Mr. Fletcher in details. The book should be placed within reach of all pupils of the history age. It will impress the story of the time more effectively than any other book that we can name; not conflicting with the ordinary history of names and dates and summaries (which are all very well in their place), but conveying a general impression that no ordinary history can be expected to achieve. For Mr. Fletcher has so thoroughly realized the situations, and so lucidly and forcibly pictured them, that the subject will no longer be found "intolerably dull," but, on the contrary, intensely interesting and instructive. There are ten excellent and useful maps, and the volume—which runs to about 400 pages—is printed in large open type, and handsomely and serviceably bound.

MORE MEMORIES OF AN EX-INSPECTOR.

Other Memories, Old and New. By John Kerr, LL.D. (3s. 6d. Blackwoods.)

Dr. Kerr's friends, on reading his "Memories, Grave and Gay," naturally and properly asked for more; and Dr. Kerr humorously likens himself to "the Irishman who, dissatisfied with the offer of a *nip* of whisky, and asked if he would prefer a whole glass, replied: 'Ach, sor, I'm as aisy persuaded as a choild.'" The volume is not very large, but it is a tolerably good month's evening relaxation on a Lochlomondside holiday for a septuagenarian. The autobiographical element is modestly restricted—an Inspector of Schools has "no experiences of a historic, heroic, or romantic type"—and the main interest lies in a constant stream of anecdotage, illustrating character and custom, for the most part Scottish. Dr. Kerr does not vouch for the accuracy of the following story, but, if not authentic, at any rate it is *ben trovato*:—

Veitch was Professor of Logic and Rhetoric [at Glasgow]. His classroom was immediately above the Greek class-room. In treating of rhetoric his lectures sometimes ended with an eloquent peroration. On such occasions the applause of the students was, of course, exceedingly hearty, and once so very hearty as to cause a bit of plaster to fall from the ceiling into the Greek class-room, whereupon Jebb (now Sir Richard) is reported to have said: "I'm afraid our 'premises' will scarcely support my friend Veitch's 'conclusions.'"

Dr. Kerr himself at an early period had some difficulty in keeping himself out of a University chair. The story, indeed, borders on both the romantic and the heroic. A pupil of his had gained a medal at Edinburgh Academy, and he himself had been bracketed First Prizeman with another student in the Natural Philosophy class at the University, when the Chair of Natural Philosophy at St. Andrews became vacant. The pupil's father, delighted with his son's success, proposed that Dr. Kerr should stand for the chair.

He said he was intimate with Sir Hugh Playfair, who was at that time practically all-powerful in University matters, and could secure the appointment for me. I treated the proposal as ludicrous, and assured him that I was totally incompetent for such a position. . . . He would have it that I was far too modest. . . . that the classes in St. Andrews were small, and not difficult to manage, and that I would find myself perfectly competent. Notwithstanding my strongest remonstrances, he resolved that he would ask Sir Hugh to come to Edinburgh and have an interview with me. I begged him not to do so, but he stuck to his purpose, and brought Sir Hugh to meet me. I had little difficulty in convincing him that the proposal was entirely out of the question, and that I was as unfit to fill the chair in question properly as to take command of the Channel Fleet. I thus escaped what would have been a calamity for St. Andrews and misery for myself.

We are not sure about the calamity or the misery; but we doubt whether this act of self-abnegation can be paralleled in the history of the Scottish Universities.

The anecdotes are most varied, and the tone of the whole book is manly and sound. We quote a short example of the educational process:

A rapid conversion to orthodoxy is recorded of an old teacher who, in examining his pupils on their knowledge of a very simple manual—"The Mother's Catechism"—asked a boy if God had a beginning. "No," said the boy. "Will he have an end?" "Yes," he replied. This was followed instantly by a buffet on the side of his head. "Will he have an end noo?" "No," said the boy; and the master was satisfied.

One point of arrangement, we may add, is tolerably astute. Dr. Kerr's views on the whole duty of a reviewer are set out, not in his preface, but some ten pages from the end of the book. Providentially we discovered them in time!

LATER ADVANCES IN PHYSICS.

The Recent Development of Physical Science. By William Cecil Dampier Whetham, M.A., F.R.S. (7s. 6d. net. Murray.)

The man in the street probably knows as little as he cares about ions and electrons and gels, but he took a respectful interest in the discovery of argon and helium and in the liquefaction of

Digitized by Google

air, and he perhaps exhibited a more active curiosity as to radium and wireless telegraphy. The idea of Mr. Whetham's volume, which traces and co-ordinates the more striking of the recent developments in physical science, is an admirable one, and an opportune, and he has executed it in a thoroughly capable manner, as becomes a Fellow of Trinity and of the Royal Society. Still, his work demands of the reader a considerable knowledge of the various departments of physical inquiry; and, though he cherishes valiantly "a profound belief in the possibility of treating the wider and deeper generalizations of natural science as fit subject-matter for current thought and literature," he can hardly be said to have broken down the teaching to the average capacity of comprehension and assimilation. Apparently he had no expectation of doing so, for he says that "until the point of view has been altered"—an expression of somewhat cryptic nature—"it is, perhaps, hopeless to look for a proper understanding of the scientific spirit and of scientific method even among the more educated portion of the community." What is wanted seems to be neither more nor less than the preliminary training, which is necessary here just as it is necessary in the advanced departments of all other studies, though in a higher degree than in those whose elements are more familiar, or at any rate more accessible. Mr. Whetham, indeed, appears to touch the spot when he remarks that, "although the development of physical science is one of the most powerful activities of our time, a knowledge of its aims, methods, and results has not yet been recognized as a necessary part of an English liberal education." And, even if this were so recognized, how many of us would still be left out in the dark!

Mr. Whetham first considers the philosophic foundations of physics, and then traces some of the more important developments of the experimental investigations of the physical laboratories in the last few years. In the study of physical equilibrium, the liquefaction of air and hydrogen, with which the name of Sir James Dewar is most prominently associated, is regarded as "the most striking recent work," though the activity of other eminent men of science is duly noted; and, on the processes of fusion and solidification, justice is done to Willard Gibbs and Roozeboom, to whose work we had occasion to refer the other month. The problems of solution in general, apart from conditions of equilibrium, bring the reader for the first time into contact with electrical phenomena. Then comes the treatment of the conduction of electricity through gases—pre-eminently the field of Prof. J. J. Thomson, whose great book on the subject we hope to notice soon. The three final chapters deal with Radio-activity, Atoms and Æther, and Astro-Physics. The panorama is very striking, and it is hopefully suggestive of further achievement. Newton stands as frontispiece; and there are portraits of Lord Kelvin, Van 't Hoff, and J. J. Thomson, with some forty figures, some of them full-page.

Infinitesimal Calculus.

A First Course in Infinitesimal Calculus. By Daniel A. Murray, Ph.D. (Johns Hopkins). (7s. 6d. net. Longmans.)

Among the elementary text-books on the calculus suitable for college students the present work is likely to obtain a leading place as possessing many of the best qualities that we seek in a treatise of the kind. In one respect, however—namely, the compressing of much information within the narrow compass of a volume of moderate size—the reader is tempted to wish that less had been accomplished; for the book would have gained considerably by a more generous allowance of space for text and by the choice of a larger scale for many of the diagrams. The defect, fortunately, does not to any great extent detract from the general excellence of the volume, and is one which may be easily remedied in future editions. In a manner which shows that he understands and enters sympathetically into the difficulties of the beginner, the author lays down the first principles both of the differential and of the integral calculus, discusses many of the methods based on these principles, and treats of many of the ordinary applications of the subject as a whole. He also introduces the student to the elements of differential equations. Numerous notes—suggestive, illustrative, or explanatory, as occasion demands—help to throw light on important points, and tend to enable the student to grasp more thoroughly the essence of the subject. Another attractive feature of the work is the constant guidance to helpful supplementary reading. Of the many references to other writers, some are given for the sake of indicating sources of fuller information; others are intended to be of service by directing attention to parallel demonstrations, for variation of language often furnishes a key to the solution of difficulties. The author desires, moreover, that all shall combine to "train the student in the use of mathematical literature" and to give him some knowledge as to reliable authors and their works. The text need not be studied in the order in which it stands; it is capable of being arranged in alternative courses to suit special cases. Although the English student will meet with occasional instances of unfamiliar nomenclature, he will not experience any inconvenience. It is not to the student alone that Dr. Murray's book may be expected to be acceptable: from the teacher's standpoint, the system of constantly indicating where collateral information may be found endows the volume with more than ordinary value. The book is amply provided with exercises, but such problems as are of a distinctly technical character are in general absent, since the author considers that very often the necessity for explaining the technicalities of some particular branch of applied science retards the progress of the principal subject under discussion. At the same time, for the benefit of those to whom such problems are of special significance, he suggests fruitful sources from which to derive them.

GENERAL NOTICES.

CLASSICS.

The Phaedo of Plato. Edited by Harold Williamson, B.A. (3s. 6d. Macmillan. Classical Series.)

Mr. Williamson writes "for the student of Greek rather than the student of philosophy"; but he necessarily deals with philosophical matters to a certain extent, summarizing the Platonic theory of ideas in the introduction, and elucidating particular points here and there in the notes. The worthy reader will, no doubt, be led to pursue the study in the larger commentaries of the late Sir William Geddes and Mr. R. D. Archer-Hind, and in the more special philosophical treatises. Mr. Williamson gives his main attention to "the interpretation and the language of the dialogue"—the first thing for the student. He takes Mr. Archer-Hind's text as basis, introducing a few variants, and supporting them (in the commentary) with ability and proper independence. The notes discuss all important points of grammar with much acumen and judgment, and in concise form. The edition will be most helpful in the higher forms of classical schools. The type is excellent and the binding is strong and serviceable.

Chambers's Latin Dictionary: Latin-English and English-Latin. (2s. net.)

Part I.—Latin-English (with full appendix of proper names)—occupies 444 pages in double columns, and Part II.—English-Latin—365 pages. The work is intended to serve for all the undergraduate work of schools and universities in Latin; and the selection and treatment of vocables may be deemed very judicious and careful. The prosodial quantities are marked with care, and unusual attention (for so small a compendium) has been bestowed on the etymology. Phrases and idiomatic expressions are freely given, and very numerous references are cited. The type is necessarily somewhat small, but it is very clear, and will probably occasion no trouble to young eyes. On a varied and deliberate test, it seems to us a remarkably good compilation. The binding is strong and flexible, capable of strenuous use.

Exercises in Latin Prose. By G. G. Ramsay, LL.D., Litt.D., Professor of Humanity in the University of Glasgow. Parts I. and II. (1s. 6d. each. Clarendon Press.)

These are two of three handy volumes into which the first volume of Prof. Ramsay's well known "Latin Prose Composition" (with some additions) has been distributed in order to meet the requirements of schools as to cost and otherwise. Part I. contains the easier exercises, with additional easy passages for translation into continuous prose, some of them selected from the second volume of the original work. Part II. is more advanced, with a similar set of continuous passages. Each contains a fair year's work; the one being suitable for scholars preparing to pass Lower-Grade Latin in the Leaving Certificate or University Preliminary examinations, the other for Higher-Grade pupils. Each is furnished with a full vocabulary. They are admirable manuals, constructed with notable care and judgment. The third volume will contain the syntax.

MATHEMATICS.

A Manual of Practical Mathematics. By Frank Castle, M.I.M.E. (6s. Macmillan.)

A book that will be very helpful to many students, and more especially to those to whom a knowledge of mathematics is valuable principally as a means to an end. The writer assumes an acquaintance with arithmetic and with the simpler parts of algebra. His volume does not contain an exhaustive treatment of any single subject, but the student of applied mathematical science will find in it an interesting discussion of such portions of various branches of mathematics as will enable him to make ready practical use of the powerful

Digitized by Google

methods brought within his reach by a knowledge of higher mathematics, slight though it may be. The manual affords, indeed, a good illustration of what is possible in this direction. Algebra, Trigonometry, Mensuration, Differential and Integral Calculus, and Differential Equations are among the subjects from which selections are made. One of the chief difficulties facing the author of such a treatise is that of determining how much may safely be left out. We admit that, for the purposes of practical work, it is often advisable that the student should accept at first the results established by others, postponing until later the consideration of their rigid proof. In such cases, however, he ought to understand clearly what assumptions are made and what limitations exist, and he should know where to obtain precise information. The principle is recognized in the present work, but requires to be more closely followed, as will be evident at once from a reference to the sections devoted to the well known series of Taylor and Maclaurin.

Tables of Logarithms and Decimals. Compiled by F. G. Burkitt. (Simpkin, Marshall, & Co.)

Useful and apparently reliable tables computed in most cases to four figures, and suitable for the purpose of simplifying many business calculations. They are preceded by a short discussion of logarithms and how to manipulate them and by a series of worked examples illustrating the practical application of the subject. Some slight deviations from the regular notation and nomenclature are noticeable.

The "A. L." Problematic Arithmetic, Scheme "B." Edited by Alfonzo Gardiner. Standards I. and II., each 1d.; cloth, 2d. Standards III. to VI., each 2d.; cloth, 3d. Standard VII., 3d.; cloth, 4d. E. J. Arnold).

The special features are (1) that even the simplest exercises take, as a rule, the form of problems, and (2) that the type employed in the text is large and clear, and the form of publication attractive. Worked examples, accompanied by explanations (when necessary), introduce the various rules.

Elementary Geometry, Section III. By Frank R. Barrell, M.A., B.Sc. (1s. 6d. Longmans.)

The concluding section of the author's treatise on elementary geometry, the earlier portions of which have already been noticed. The Third Section includes the subject-matter of Euclid's Eleventh Book, and discusses also the surface and volume of the cylinder, cone, sphere, and other simple solids. The treatment of the text is good, and most of the diagrams are exceptionally effective.

Messrs. Hall and Stevens's *A School Geometry, Parts I.–V.* (4s. 6d., Macmillan), has promptly reached a second edition, revised. A few less important propositions have been reduced to the rank of exercises, and thus room has been found for more numerical and graphical exercises and experimental work; and some other changes have been made, all for the better.

Mr. Rawdon Roberts's *A New Geometry for Beginners* (1s. 6d., Blackie) has met with a like success, and now, after being twice reprinted last year, it appears in a second edition, revised and enlarged. Considerable additions have been made to meet the requirements of the London Matriculation, Oxford and Cambridge Local, and other examinations.

SCIENCE.

The Classification of Flowering Plants. By Alfred Barton Rendle, M.A., D.Sc., F.L.S., Assistant in the Department of Botany, British Museum, and Lecturer in Botany at the Birkbeck College. Vol. I.: *Gymosperms and Monocotyledons.* (10s. 6d. net. Cambridge University Press. Cambridge Biological Series.)

The first chapter furnishes a most interesting account of the historical evolution of plant classification, with incidental critical remarks. Dr. Rendle largely follows the system adopted by Prof. Engler, of Berlin. "This system is based on Eichler's arrangement, and has the merit of attempting to discriminate between those apetalous orders which represent a primitive simplicity and stand more or less alone and those, on the other hand, which have near allies among the polypetalous group and which should therefore be relegated wherever possible to their natural position." Gymnosperms and Angiosperms are treated as parts of the great primary group of Phanerogams or Spermatophytes; although indications of facts that may yet lead to a modification of this arrangement are at least suggested. The work, of course, is pretty severely technical, and it has been executed with laborious care and with great ability. There are 187 figures. The volume is handsomely produced.

Electricity in the service of Man. By R. Mullineux Walmsley, D.Sc. Lond., F.R.S.E., Principal, and Head of the Electrical Engineering Department, of the Northampton Institute, London. (10s. 6d. net. Cassell.)

Like its subject, this work has undergone great development since its first appearance in 1888, when it consisted mainly of a translation from the German of Von Urbanitzky, edited, with numerous additions, by Dr. Wormell. Two further editions were brought out by Dr. Wormell and Dr. Walmsley respectively. Now Dr. Walmsley has made a new book of it; the old material remains only so far as it could be utilized in the historical sections. The First Part (pages 1–688) deals with the history and principles of electrical science, and affords means of a clear grasp of the fundamental laws upon which the remarkable developments of the past generation have been based. Part II. (pages 689–1,192) treats in two divisions: (1) the generation, transmission, and utilization of electrical power; and (2) practical applications of small electric currents. The most recent developments are shown, and the underlying principles and methods are more fully discussed; yet, though the index takes the work beyond 1,200 ample pages, it has been necessary to omit certain portions of the projected scheme, and these are to be placed in a supplementary volume. There are 6 plates and 1,208 figures. An excellent popular exposition, handsomely furnished forth.

ENGLISH LITERATURE.

Loci Critici: Passages illustrative of Critical Theory and Practice from Aristotle downwards. Selected, partly translated, and arranged, with Notes, by George Saintsbury, M.A. Oxon., Hon. LL.D. Aberd., Professor of Rhetoric and English Literature in the University of Edinburgh. (7s. 6d. Ginn.)

The study of "Rhetoric" is looking up again, to some extent at least in England, and in more lively fashion, if in somewhat different form, in America; and there could be no surer guide than Prof. Saintsbury to a choice of illustrative extracts, as his great work on the "History of Criticism," just completed, amply demonstrates, to say nothing of his practical experience at Edinburgh. The work is generally described with fullness and accuracy on the title-page as quoted above. Prof. Saintsbury gives "nothing more than the actual text (with such annotation as may be barely necessary to comprehension)" of the passages which experience has shown him to be most useful for the purpose. "The passages chosen from the enormous bulk at hand are such as may best illustrate the *general* drift of criticism in modern Europe, with a few exceptions and singularities' (pages 77–435); the earlier pages being devoted to the leading Greek and Latin critics from Aristotle to Boethius. "The exclusion of living writers and of very modern critical phases is deliberate" and judicious. The collection is ample and representative, and it is thoroughly practical in purpose. We trust it will be widely used here as well as in America.

Select Translations from Old English Poetry. Edited by Albert S. Cook, Professor of the English Language and Literature, and Chauncey B. Tinker, Foote Fellow in English, in Yale University. (4s. 6d. Ginn.)

"Translated, where that is possible, rather than traduced"—such has been the ideal of the authors; and their selection is catholic, not representing any particular theory of translation to the exclusion of others. Whether we agree or disagree as to the qualities of the poetry or the accomplishments of the poets, we recognize that the idea is excellent and that it has been efficiently carried out. The pieces are very fairly representative of the best old English poetry, and we make no difficulty about the classification of them, or about minor liberties taken with the extracts in respect of details for the sake of uniformity. The volume will interest general readers in our pre-Chaucerian literature, and may attract some of them to essay the originals—no very difficult achievement indeed. It is liberally printed, and nicely and strongly bound. Indeed, it should be in the hands of all students of the literary period represented.

ENGLISH READERS AND TEXTS.

Arnold's Home and Abroad Readers. Books I.–VI. (10d., 1s., 1s. 3d., 1s. 6d., 1s. 6d., 1s. 6d. Edward Arnold.)

An attractive new series, boldly printed on good paper, liberally and efficiently illustrated, and substantially bound. While the matter is generally interesting and suitable to the pupils, its main object appears to be to convey gradually a comprehensive idea of the Empire and of the World, and of the relation of the inhabitants to the various countries and to each other. Book I. (135 pages) gives "Glimpses of the Homeland"—first ideas of geography, descriptions of walks in town and country and by the sea (conversationally). Book II. (152 pages) depicts in simple lessons the life of the peoples in the most interesting countries of the world, Greater Britain in front. Book III. (200 pages) is concerned chiefly with the physical features and industries of England and Wales. Book IV. (232 pages) surveys "The British Dominions." Book V. (228 pages) deals with "The World's Great Powers, Past and Present," not forgetting Japan. Book VI. (228 pages) reviews "The World's Trade and Traders." Illustrations in colour and in black and white are abundant and judiciously chosen. The series, while having many features in common with other series, is very distinctive in general character. It makes a strong bid for acceptance, and will no doubt gradually make its way to the front.

The Jack Readers. (1) Learning to Read—Step One. By Emile S. Mortimer. 3d. (2), (3), (4) Books I., II., and III. By Thomas Cartwright, B.A., B.Sc. Lond. (8d., 10d., 1s. T. C. & E. C. Jack.)

Mr. Mortimer adheres to an "entirely phonic" system, and, although

Digitized by Google

every page has its coloured illustration, he has not permitted the artist to dominate him. The three readers are attractive in matter, varied, and interesting, much verse (not a little of it Mr. Cartwright's own) being judiciously interspersed, and the didactic attitude being avoided. They are abundantly and usefully illustrated, partly in colour, and the get-up is agreeable and substantial. The paper is toned and good, showing up effectively the special type. The series is sure to gain favour widely.

Blackie's English School Texts. Edited by W. H. D. Rouse, Litt.D. (8d. each.)

Handy volumes in limp cloth (very similar to the supplementary series of complete French plays), 112 to 128 pages each, clearly printed and tastefully got up. The matter is good, and the series promises plentiful variety. We have four specimens: (1) Defoe's *Journal of the Plague*; (2) Richard Hawkins's *Voyage into the South Seas*; (3) *A Christmas Carol* (Dickens); and (4) *Companions of Columbus* (Washington Irving). These little books should get read far beyond school.

"McDougall's Supplementary Readers." No. 1, *Scenes from Waverley* (Scott); No. 2, *The Coral Island* (Ballantyne), abridged—present good and attractive matter in excellent type and get-up (2d. paper, 3d. cloth, each).—Of the "A. L. Bright Story Readers" we have No. 40, *Stories from the Life of King Alfred*, prepared by Chas. A. Melford, and suitable for Grade IV.; and No. 62, *Ancient British Heroes*, a series of tales from the "Mabinogion," prepared by I. G. Maguire, and suitable for Grade VI. (4d. each, E. J. Arnold). Both are well printed, and are most interesting.—*Kate's Party* (32 pages, 2d.) is the latest addition to "Chambers's Complete Tales for Infants."

MODERN LANGUAGES.

Nouveau Dictionnaire Anglais-Français et Français-Anglais. Par E. Clifton. Ouvrage entièrement refondu et considérablement augmenté par J. McLaughlin, Officier de l'Instruction publique, Professeur à l'Institut Commercial de Paris, Professeur honoraire au Collège Sainte-Barbe. (In-18 relié toile, 5fr. Garnier Frères.)

Clifton's pocket dictionary had immense vogue for some forty years, but the publishers have laudably wished to present the work in fuller modern form. Mr. McLaughlin has accordingly submitted it to unsparing revision, and more than doubled the size, while Messrs. Garnier have actually reduced the price. The English-French part extends to 658 pages in double columns; the French-English part to 673. The work is based on the larger dictionary of E. Clifton and Grimaux, which has served for a generation as a mine for dictionary compilers; and it is practically a new book, with vocabulary up to date, and framed to meet the necessities of students in the most diverse subjects. Phrases and idioms are given in considerable number and in judicious selection. The type is clear, though necessarily small; the binding is flexible; and the book is handy. An excellent work for school or for private use.

Oxford Modern French Series. Edited by Léon Delbos, M.A., Instructor in French in H.M.S. "Britannia." (Clarendon Press.)

Last month we heralded the appearance of this series, and now we have before us the first eight volumes. There is (1) *Deux Héroines de la Révolution Française* (Madame Roland and Charlotte Corday), from Lamartine's "L'Histoire des Girondins," edited by Mary Bentinck Smith, Lecturer in Mediæval and Modern Languages at Girton (192 pages, 2s. 6d.). (2) *La Vendetta* and *Pierre Grassou* (Balzac), edited by Marie A. Péchinet, B.A., Senior Staff Lecturer in French in the Royal Holloway College (140 pages, 2s.). (3) *Bug-Jargal* (Hugo), edited by Louis Sers, B.-ès-L., French Master at Wellington College (152 pages, 2s.). (4) *Mademoiseile de la Seiglière* (Sandeau)—the novel—edited by A. L. Dupuis, French Master in King's College, London (214 pages, 2s. 6d.). (5) *Mémoires d'Outre-Tombe* (Chateaubriand), edited by Louis Sers (164 pages, 2s. 6d.). (6) *Voyage autour de mon Jardin* (Karr), edited by Stuart G. Hallam, M.A., Beechmont Preparatory School, Sevenoaks (148 pages, 2s.). (7) *Le Château de Vaux* (Gozlan), edited by A. H. Smith, M.A., Whitgift School (92 pages, 1s. 6d.). (8) *Quinze Jours au Désert* and *Voyage en Sicile* (Tocqueville), edited by J. E. Mansion, B.-ès-L., Royal Belfast Academical Institution (122 pages, 2s.). The variety, the interest, and the excellence of the matter are obvious from the mere enumeration; and the notes deal briefly with points of literary, historical, and geographical importance, some little command of the language being assumed. The paper and type are excellent, and the binding is strong. An excellent and welcome series, most serviceable in the higher classes in schools, and attractive to the general reader of French.

MUSIC.

Bell's *Miniature Series of Musicians*, edited by G. C. Williamson, Litt.D., extends already to six volumes (1s. net, each): Beethoven, Gounod, Handel, Mendelssohn, Mozart, Sullivan. Each biography is capitally written by a well known expert, and each volume is liberally illustrated, the portrait of the subject being frontispiece. The series is bound to be popular, as it thoroughly well deserves to be.

The *Chart of the Rules of Counterpoint*, by Arthur Somervell (1s., Clarendon Press), is a companion to the author's "Chart of the Rules

(*Continued on page* 444.)

MR. MURRAY'S LIST
OF NEW SCHOOL BOOKS.

AN INTRODUCTORY HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TILL THE YEAR 1832.

By C. R. L. FLETCHER, M.A.,

Fellow of Magdalen College, Oxford.

Part I. From the Earliest Times to the end of the Middle Ages. With Maps. Demy 8vo, 7s. 6d.

THE DAILY TELEGRAPH says:—

"We doubt whether a better historical book than Mr. Fletcher's has appeared in this country any time within the past fifty years. . . . We would recommend every schoolmaster, every teacher engaged in the stupefying task of cramming into his pupils the summaries, facts, tables, and dates which stand for history with most of us, to read carefully Mr. Fletcher's preface, and then go steadily through the book. . . . Every one who does this will arise from the perusal of the volume with an understanding of what history means, what it implies and connotes, such as he never possessed before."

THE TIMES says:—

"This is eminently history as it should be written. . . . Unlike many authors, he is too modest in his estimation of the book. It is far more than the history for boys which it calls itself; it is a lucid, vivid, and memorable account of events—still more of their social and political significance—from the days of ancient Britain to the death of Richard III."

Now Ready. **Fcap. 8vo, 1s. each.**

THE USE OF WORDS.

The Accidence of Grammar as it explains the Parts of Speech.

By Miss GEORGINA KINNEAR.

". . . is really wonderful. It certainly does teach the elements of English grammar in such an easy way that teachers who use it will find their pupils making progress at comparatively small cost to themselves. But it does much more than this, and therein lies its unique excellence. It considers grammar to be only a means to an end, a study whereby we increase the power of expression, and learn by degrees to ensure an absolutely correct use of the English tongue."—SCHOOL WORLD.

A PRIMER OF PHILOSOPHY.

By A. S. RAPPOPORT, Ph.D.

With an Index.

"An exceedingly able summary. . . . Philosophy is difficult, even to those who expound it; but Mr. Rappoport has succeeded in simplifying it where simplification was possible. . . . We hope to read it again and again."—ACADEMY.

A PRIMER OF PHYSIOLOGY.

By Prof. E. H. STARLING, F.R.S.

Illustrated.

"This little book represents the nearest approach to the ideal primer of physiology that has yet been produced. . . . The direct and simple style in which it is written, and its freedom from all but essential technical terms, render it a model of lucidity, and at the same time extremely interesting reading."—EDUCATION.

TO BE PUBLISHED SHORTLY.

A PRIMER OF BOTANY. By Prof. J. B. FARMER F.R.S. Fcap. 8vo, 1s.

NATURE TEACHING. Based upon the General Principles of Agriculture. For the use of Schools. By F. WATTS, B.Sc., and W. G. FREEMAN, B.Sc. Large crown 8vo, 3s. 6d.

THE INTERMEDIATE FRENCH READER. Based on Sir WILLIAM SMITH'S "French Principia," Part II. Edited, with Historical, Biographical, and Grammatical Notes, by MAURICE A. GEROTHWOHL, B.Phil., L. ès L., F.R.S.L., Examiner to the Oxford and Cambridge Schools Examination Board. Crown 8vo, 2s. 6d.

NOW READY. **PART II. of** Crown 8vo, 4s. 6d.

COMMERCIAL GERMAN. By GUSTAV HEIN, University of Berlin, and Lecturer in German (Honours) to the University of Aberdeen, and MICHAEL BECKER. With Map. PART I. Crown 8vo, 3s. 6d.

AN INTRODUCTION TO METAL WORKING. By J. C. PEARSON, Technical Assistant to H.M. Inspector of Reformatory and Industrial Schools; Author of "Manual Instruction: Woodwork." With 12 full-page Plates and nearly 100 Illustrations in the Text. Fcap. 8vo, 2s.

*** Mr. Murray's EDUCATIONAL CATALOGUE will be sent, post free, to any address. Teachers wishing to see copies of school books are invited to make application to him.

JOHN MURRAY, ALBEMARLE STREET, W.

Digitized by Google

of Harmony," and is arranged on much the same plan. Exercises are included. The compilation is skilful, and will no doubt prove useful to students.

In *Ten Minutes' Technique* (Curwen), Arthur Somervell provides a complete set of technical exercises for each day in the week, which will be welcomed by those that cannot spare much time for practice—and also by those that can. A judicious and meritorious compilation.

My First Piano Lessons, with illustrated notes, by Agnes Honoria Leeds, L.R.A.M. (Novello), "is intended for very young children only." The author certifies that she has found the method very successful. Evidently there are no tears in it. It is carefully graduated, and the mode of presentation is amusing, as well as the illustrations.

Mr. James C. Beazley's *Stepping Stones to the Theory of Music* (1s. net, Boosey) is intended to lighten labour—"not so much to state facts as to help you to grasp them." It is quite simple and lucid, and cannot fail to prove eminently helpful to beginners. Examples are left to the teacher.

The *Child's Primer of the Theory of Music*, by Mrs. C. A. Webster, L.R.A.M. (1s., Novello), has most deservedly reached a 12th edition.

Mr. William Reeves brings out a fresh edition (tenth thousand) of Frederick J. Crowest's *Catechism of Musical History and Biography* (with especial reference to the English school), thoroughly revised and brought up to date, with additions especially in the English section (1s.).

AGRICULTURE AND HORTICULTURE.

The Midland Agricultural and Dairy Institute issue a fourth *Annual Report*, containing details of operations, examination papers and reports, &c. Also separate *Bulletins* of a practical character, containing Reports on (1) Experiments on Preventive Treatment of Abortion in Dairy Stock, (2) Experiments on the Manuring of Permanent Meadow Land, and (3) Experiments with Potatoes.

From University College, Reading, comes a very interesting leaflet, containing a report of experiments conducted at the College Poultry Farm (Theale, Berks), on *Growth of Chickens and Cost of Rearing*.

The Essex Education Committee (County Technical Laboratories, Chelmsford) issue a valuable pamphlet of *Notes on Agricultural Analyses* (1901-03), by T. S. Dymond, F.I.C., and F. Hughes.

We have already noted briefly the appearance of about a dozen of Messrs. Dawbarn & Ward's "Country House Series of Practical Handbooks" (6d. net each). Here are three more: (1) *Rose-Growing, for Amateurs*, by D. Grant McIver, A.R.H.S.; (2) *Bulb-Culture*, by the same author; and (3) *Chrysanthemums*, by E. Haslar Potter, F.R.H.S., who has written on "Carnations," &c., in the same series. They are handy books of sixty to seventy pages, lucidly written by experienced practical persons, and liberally furnished with useful illustrations. The amateur will obtain many a welcome hint from them. They are well printed and nicely got up.

MISCELLANEOUS.

Mr. A. H. Gilkes, Master of Dulwich, writes *A Dialogue* (1s. net, Longmans) "intended partly to exemplify the position of Socrates at Athens, and to account for his unpopularity," the subject-matter consisting of "questions which are interesting at the present day and admit of much discussion." The modern Socrates is Mr. Smith, who meets four bishops at dinner, in order to be inspected as a candidate for the appointment of diocesan secretary; and the discussion turns on Church doctrine and policy. We find it difficult to imagine bishops going through with such a conversation; but, for all that, Mr. Gilkes is dramatically right, and he puts the case with great charm of manner and with much suggestive force. The dialogue may be commended to bishops and laymen alike: Did Socrates Smith get that appointment, however?

Bright and portly as heretofore is the seventh annual edition of *Paton's List of Schools and Tutors* (1s. 6d.). It is now verging on a thousand pages, and offers a most comprehensive and attractive array of schools to the choice of *paterfamilias*. The matter is amply informatory whatever the class of school wanted. The pictorial representation of the different institutions gives a special interest to the volume, which is handsomely got up, as usual.

The "British Graphite Drawing Pencil" (HB), for which we are indebted to Messrs. Hardtmuth, is of quite unusual excellence. It takes a fine point, which keeps fine for a considerable time, being remarkably firm; and it is clear of grit. The materials and the manufacture must be alike superior in order to produce such admirable results. If the rest of the "Koh-i-Noor" pencils be like this sample, they are a distinct boon. Now at last we seem to have found a pencil that will not suddenly break short under reasonable stress of work.

NEW EDITIONS AND REPRINTS.

Messrs. Sampson Low, Marston, & Co. issue a third edition of *Our Navy for a Thousand Years*, by Captain Sir S. Eardley-Wilmot, R.N. The story is brought down to the capture of Khartoum (1898). The style is breezy and vigorous, and there are numerous illustrations. A capital book for boys—and others.

Messrs. Archibald Constable & Co. add to their new popular series a third edition of Herbert Trench's translation of Dmitri Merejkowski's striking historical novel *The Death of the Gods* (2s. 6d.), the only translation into English authorized by the author. It is a remarkably vivid and effective recreation of fourth-century life in the great centres of the Roman action by a novelist that is a scholar, a psychologist, and an artist.

Messrs. Chapman & Hall produce *A Tale of Two Cities* in their popular "Student's Edition" of Dickens, with biographical introduction, notes, and analytical list of characters (1s.). The type is small, but distinct; the binding tasteful and strong.

Messrs. Collins publish in their charming series of "Handy Illustrated Pocket Novels" *Kenilworth* (Scott), with sixteen excellent monochrome illustrations (1s. net, cloth).

Messrs. Blackie & Son issue a twentieth edition of *Common Things and Elementary Science in the form of Object-Lessons* (3s. 6d.). It is really a reprint of the twelfth edition, which was so rigorously revised that further changes have been deemed unnecessary. There are numerous illustrations, and the book is clearly printed and substantially bound. A remarkable compendium of well selected and well ordered information.

Messrs. Macmillan publish a second edition of *An Elementary Geography of India, Burma, and Ceylon*, by Henry F. Blanford, F.R.S., late Meteorological Reporter to the Government of India. Carefully revised, with twenty-seven figures (2s. 6d.).

Messrs. Watts & Co. issue, as one of the Rationalist Press Association's sixpenny reprints, *An Introduction to the Philosophy of Herbert Spencer*, by Prof. W. H. Hudson, revised throughout and largely rewritten. The aim is "to set forth and illustrate Spencer's thought, not to pass judgment upon it, though in places I have not hesitated to travel beyond Spencer himself, and to point out what seem to me to be some of the natural implications of his teaching." A most able, interesting, and helpful exposition.

FIRST GLANCES.

Modern Languages.

Arnold's German Reading Books. (1) Der Töpfer von Kandern and Ungleiche Kameraden (Hermine Villinger). Edited by Walter Rippmann, M.A., Professor of German at Queen's College, London. (2) Die Flut des Lebens (Adolf Stern). Edited by E. M. Prowse. 1s. 3d. each. Edward Arnold.

[Good matter; *Aufgaben*, *Glossar*, *Verzeichnis* (strong and irregular verbs). Both welcome.]

OXFORD MODERN FRENCH SERIES.

Edited by LEON DELBOS, M.A. Crown 8vo, cloth.

The first eight Volumes are the following:—

Deux Héroïnes de la Révolution Française. By LAMARTINE. Edited by MARY BENTINCK-SMITH. 192 pp., 2s. 6d.

La Vendetta and Pierre Grassou. By BALZAC. Edited by MARIE PÉCHINET, B.A. 140 pp., 2s.

Bug-Jargal. By VICTOR HUGO. Edited by LOUIS SERS. 152 pp., 2s.

Mademoiselle de la Seiglière. By SANDEAU. Edited by A. L. DUPUIS. 214 pp., 2s. 6d.

Mémoires d'Outre-Tombe. By CHATEAUBRIAND. Edited by LOUIS SERS. 164 pp., 2s. 6d.

Voyage autour de mon Jardin. By KARR. Edited by STUART G. HALLAM, M.A. 148 pp., 2s.

Le Château de Vaux. By GOZLAN. Edited by A. H. SMITH, M.A. 92 pp., 1s. 6d.

Extraits des Voyages d'Alexis de Tocqueville. Edited by J. MANSION. 122 pp., 2s.

Sir Thomas More's Utopia. Edited, with Introduction and Notes, by J. CHURTON COLLINS, M.A. Crown 8vo, cloth, 3s. 6d.

OXFORD CLASSICAL TEXTS.

Crown 8vo. New Volumes.

Catulli Carmina. Edited by ROBINSON ELLIS, M.A. Paper covers, 2s.; limp cloth, 2s. 6d.

Corneli Nepotis Vitae. Edited by E. O. WINSTEDT, B.A., B.Lit. Paper covers, 1s. 6d.; limp cloth, 2s.

Xenophontis Opera omnia. Tom. III (Expeditio Cyri). Edited by E. C. MARCHANT, M.A. Paper covers, 2s. 6d.; limp cloth, 3s.

Cornelii Taciti Annalium, Libri XIII–XVI. With Introductions and Notes abridged from the larger work of HENRY FURNEAUX, M.A. By H. PITMAN, M.A. Crown 8vo, cloth, 4s. 6d.

Exercises in Latin Prose, with Vocabulary. By G. G. RAMSAY, LL.D., Lit.D. Newly arranged in Three Parts. Crown 8vo, cloth.

PART I., Lower Grade, 1s. 6d.

PART II., Higher Grade, 1s. 6d.

PART III., Syntax and Appendix, 2s. 6d.

Dundee Advertiser:—"The learner could have nothing simpler, more interesting, or more helpful."

The Preparation of the Child for Science. By M. E. BOOLE. Crown 8vo, cloth, 2s.; or, interleaved with writing paper, 3s.

Experimental and Theoretical Course of Geometry. With or without Answers. By A. T. WARREN, M.A. Second Edition, thoroughly revised, with many new Propositions and Figures. Crown 8vo, cloth, 2s.

Relations of Geography and History. By H. B. GEORGE. With two Maps. Crown 8vo, cloth, Second Edition (1904), 4s. 6d.

IMPORTANT TO SCHOOLMASTERS.

The Works of Shakespeare with which Mr. HEINEMANN commences his Series of FAVOURITE CLASSICS are particularly adapted for use in Schools owing to their excessive cheapness and purity of the text, which is unencumbered by notes.

The Volumes are bound in cloth gilt, legibly printed on specially made paper, and contain an Introduction by the first and foremost of all living Shakespeare critics, Dr. GEORGE BRANDES, with a Frontispiece executed in photogravure, and are published at the record price of

SIXPENCE PER VOLUME, NET.

THE FOLLOWING VOLUMES ARE NOW READY:—

Hamlet.	Coriolanus.	Troilus and Cressida.
Richard III.	Cymbeline.	Othello.
Twelfth Night.	Romeo and Juliet.	The Tempest.
The Merchant of Venice.	As You Like It.	King Lear.
Macbeth.	Titus Andronicus.	All's Well that Ends Well.
	Love's Labour's Lost.	

A SPECIMEN COPY WILL BE SENT POST FREE ON RECEIPT OF SEVEN STAMPS.
A PROSPECTUS POST FREE ON APPLICATION.

London: WM. HEINEMANN, 21 Bedford Street, W.C.

MATHEMATICS.

15516. (Hon. G. R. Dick.)—The surface whose co-ordinates at any point are given by

$$x = \rho\cos\phi,\quad y = \rho\sin\phi,\quad z = b\phi + c\int[(\rho^2+b^2)/(\rho^2-c^2)]^{\frac{1}{2}}\,d\rho/\rho$$

is a minimum surface: exhibit them in Monge's form; also the surface

$$\sin z = \sinh x \sinh y.$$

Solution by the Proposer.

(1) It will be found that the values

$$4x = (c+bi)(a+1/a)+(c-bi)(\beta+1/\beta),$$
$$4yi = (c+bi)(a-1/a)-(c-bi)(\beta-1/\beta),$$
$$2z = -(c+bi)\log a+(c-bi)\log\beta$$

satisfy the equation, a and β being arbitrary.

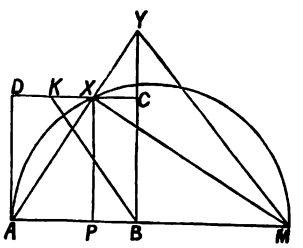
(2) With regard to the surface $\sin z = \sinh x \sinh y$, the forms are

$$x = \tfrac{1}{2}\log(1+ai)/(1-ai)+\tfrac{1}{2}\log(1-\beta i)/(1+\beta i),$$
$$y = \tfrac{1}{2}\log(1+a)/(1-a)+\tfrac{1}{2}\log(1+\beta)/(1-\beta),$$
$$iz = \tfrac{1}{2}\log(1-a^2)/(1+a^2)+\tfrac{1}{2}\log(1+\beta^2)/(1-\beta^2).$$

15102. (J. Prescott, B.A.)—Given a square ABCD; draw a line through A to meet CD in X and BC produced in Y so that XY may be equal to a given length.

Solutions (I.) *by the* Proposer; (II.) *by* C. E. Youngman, M.A.; (III.) *by* D. Biddle.

(I.) Let CK be the given length to which XY must be equal. On AB produced cut off BM = BK. On AM describe the semicircle AXM, meeting DC in X. Join AX and produce to meet BC in Y. Then XY = CK. Draw XP parallel to CB. Then the triangles XPM and ABY are similar and equal.



Now $XY^2+XM^2 = MY^2$
$= BY^2+BM^2$
$= BY^2+BK^2 = BY^2+BC^2+CK^2 = PM^2+BC^2+CK^2$
$= XM^2+CK^2$;

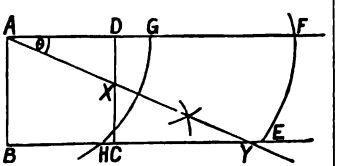
therefore $XY = CK$.

(II.) Writing θ for the angle DAX, a for the side of the square, and d for the given length, we have $a = a\tan\theta + d\sin\theta$

or $d/a = (\cos\theta-\sin\theta)/\sin\theta\cos\theta$;

$\therefore\ d^2/4a^2 = (1-\sin 2\theta)/\sin^2 2\theta$;

$\therefore\ 2a\operatorname{cosec} 2\theta = a+\sqrt{(a^2+d^2)}$.



Hence the construction:—On BC produced take CE, the given length; on AD produced DF = DE; bisect AF at G; with centre A and radius AG cut BC at H; and draw AXY bisecting the angle GAH.

(III.) Let AB = unity,

$XY = 2a,\quad \angle BAY = \theta.$

Then $\sec\theta-\operatorname{cosec}\theta = 2a,$

whence

$$\sin\theta-\cos\theta = a\sin 2\theta,$$

or $[\frac{1}{2}(1-\cos 2\theta)]^{\frac{1}{2}}-[\frac{1}{2}(1+\cos 2\theta)]^{\frac{1}{2}}$
$= a\sin 2\theta.$

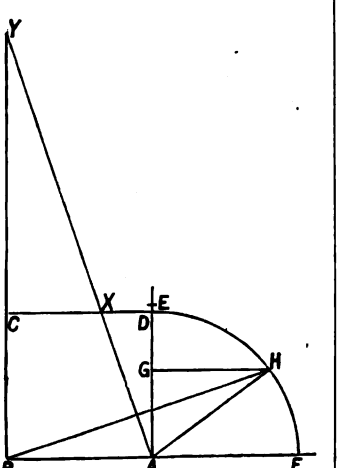
Squaring both sides, we have

$$1-\sin 2\theta = a^2\sin^2 2\theta,$$

whence

$$\sin 2\theta = 1/a[(1+1/4a^2)^{\frac{1}{2}}-1/2a].$$

This value is easily obtainable geometrically, but to represent the process would complicate the diagram. Therefore, let AG = the value of $\sin 2\theta$ in terms of a, as given above, the value of a being represented by AE. With radius AD describe the arc DF, to meet BA (produced) in F. Draw GH parallel to BA to meet the arc in H, and join BH. It is easy to see that the required line AY intersects BH at right angles.



15600. [*Communicated by* Rev. T. Roach, M.A.]—Four pennies are placed flat on a table so that each touches two of the others. Find when the space enclosed between them is a minimum or maximum.

Solution by Rev. T. Wiggins, B.A.

Let r be the radius of a penny and let a be an angle of the rhombus formed by joining the centres of the touching circles.

Required area = area of rhombus − sum of sectors $= 4r^2\sin a-\pi r^2$.

Hence the area is a maximum when $a = 90°$. The minimum value of a is 60°, viz., when the opposite pennies touch; therefore

$$\text{maximum} = r^2(4-\pi),\quad \text{minimum} = r^2(2\sqrt{3}-\pi).$$

Note.—The Editor remarks that strictly speaking 60° is the lower *limit* of a and is never actually reached unless the words of the Question, "Each touches two of the others," are interpreted "Each touches *at least* two of the others": for when $a = 60°$ in two cases out of the four a penny touches each of the other three.

15549. (A. M. Nesbitt, M.A.)—CP, CQ are conjugate semi-diameters of an ellipse. If the triangle CPQ be of constant area, prove that the envelope of PQ is a similar ellipse.

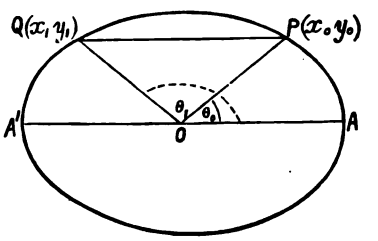
Solutions (I.) *by* Professor Sanjána, M.A.; (II.) *by* W. Scrimgeour, M.A., B.Sc., *and others.*

(I.) If CP, CQ are conjugate, the area CPQ is always constant and equal to the area CAB, where CA, CB are principal semi-axes. But the result is true even when CP, CQ are not conjugate. Let the eccentric angles of P, Q be a, β respectively; then $\Delta CPQ = \frac{1}{2}ab\sin(a-\beta)$; hence for area to be constant $a-\beta$ must be fixed and equal to 2ϕ, suppose. The equation to the chord PQ is then seen to be

$$x\cos\tfrac{1}{2}(a+\beta)/a+y\sin\tfrac{1}{2}(a+\beta)/b = \cos\phi;$$

and by ordinary working we get for the envelope $x^2/a^2+y^2/b^2 = \cos^2\phi$, which is a similar and concentric ellipse. In the case when CP, CQ are conjugate, $2\phi = \frac{1}{2}\pi$, and the envelope becomes $x^2/\frac{1}{2}a^2+y^2/\frac{1}{2}b^2 = 1$.

(II.) The triangle CPQ is always constant.



$P = (x_0, y_0),\quad Q = (x_1, y_1).$

Let $\angle ACP = \theta_0,$

$\angle ACQ = \theta_1,$

$CP = l_0,\quad CQ = l_1;$

also let the eccentric angle of P be ϕ; then the co-ordinates of P are $a\cos\phi$, $b\sin\phi$; then the eccentric angle of Q is $\phi+\frac{1}{2}\pi$, the co-ordinates of Q are $-a\sin\phi$, $b\cos\phi$.

$$2\Delta PCQ = l_0l_1\sin(\theta_1-\theta_0) = l_0\cos\theta_0\, l_1\sin\theta_1-l_0\sin\theta_0\, l_1\cos\theta_1$$
$$= x_0y_1-x_1y_0 = a\cos\phi\, b\sin(\phi+\tfrac{1}{2}\pi)-a\cos(\phi+\tfrac{1}{2}\pi)\, b\sin\phi$$
$$= ab\sin\tfrac{1}{2}\pi = ab.$$

The equation of the line PQ is

$$x/a\cos\tfrac{1}{2}[\phi+(\phi+\tfrac{1}{2}\pi)]+y/b\sin\tfrac{1}{2}[\phi+(\phi+\tfrac{1}{2}\pi)] = \cos\tfrac{1}{2}[\phi-(\phi+\tfrac{1}{2}\pi)]$$

or $$x/a\cos(\tfrac{1}{4}\pi+\phi)+y/b\sin(\tfrac{1}{4}\pi+\phi) = 1/\sqrt{2},$$

i.e., $$x/a(\cos\phi-\sin\phi)+y/b(\cos\phi+\sin\phi) = 1.$$

Now, if l and m in the equation $lx+my = 1$ satisfy the equation $a^2l^2+b^2m^2 = 1$, the line will always touch the ellipse $x^2/a^2+y^2/b^2 = 1$.

Here $$[a^2(\cos\phi-\sin\phi)^2]/a^2+[b^2(\cos\phi+\sin\phi)^2]/b^2 = 2$$

or $$(a/\sqrt{2})^2[(\cos\phi-\sin\phi)^2]/a^2+(b/\sqrt{2})^2[(\cos\phi+\sin\phi)^2]/b^2 = 1;$$

therefore PD always touches the ellipse $x^2/(a/\sqrt{2})^2+y^2/(b/\sqrt{2})^2 = 1$. $2b^2x^2+2a^2y^2 = a^2b^2$, a similar ellipse.

15479. (H. G. Graves.)—If x be the area of one of the faces of a tetrahedron; A, B, C the dihedral angles over x; and

$$M = \sqrt{(1-\cos^2A-\cos^2B-\cos^2C-2\cos A\cos B\cos C)},$$

show that A/M has the same value for all the solid angles.

Solution by Professor Nanson.

Project on the face f_q the other three faces; then we get $\Sigma_p(pq)f_p = 0$, where (pq) is the cosine of the angle between the faces f_p, f_q and $(pp) = -1$. Hence the determinant $|(pq)|$ vanishes and the co-factors of parallel lines therein are therefore proportional, so that, if $[pq]$ is the co-factor of (pq), we have $f_1^2, f_2^2, \ldots; f_1, f_2, \ldots$ proportional to $[1,1], [2,2], \ldots; [1,2], \ldots$, which gives the required result.

15521. (Lt.-Col. Allan Cunningham, R.E.)—If σN denote the sum of the sub-factors of N (including 1, but excluding N), obtain some solutions of $\sigma N = X^2$ (an *even* square).

Digitized by Google

Solutions (I.) *by the* PROPOSER; (II.) *by* JAMES BLAIKIE, M.A.

(I.) Solutions of this question may be obtained in many ways. The process being indirect, the form of solution must be assumed. One such process is: Let $P = 2^{q-1}M_q$, where $M_q = 2^q - 1$, a prime (q being prime). Also let $N = P.p$, where p is an odd prime, but $\neq M_q$. Let $\int N$ denote the sum of all the divisors of N. Then, P being a perfect number, $\int P = 2P$, also $\int p = p + 1$. And, by definition,

$$\sigma N = \int P p - P p = \int P . \int p - P p ;$$

therefore

$$X^2 = \sigma N = 2P(p+1) - Pp = P(p+2) = 2^{q-1}.M_q(p+2).$$

This involves $p = M_q - 2 = 2^q - 3$, a prime. Then there is a solution whenever (2^q-1), (2^q-3) are both prime, which gives

$$N = 2^{q-1}(2^q-1)(2^q-3), \quad X = 2^{\frac{1}{2}(q-1)}(2^q-1).$$

Ex.—$q = 3$ gives $N = 2^2.7.5$, $X = 2.7$; $q = 5$ gives $N = 2^4.31.29$, $X = 2^2.31$, and there are no more of this form up to $q = 149$ at least. Another form giving many cases is $N = 2^r.p$.

(II.) Let $X = 2m$. If $4m^2 - 3 = p$, a prime, then, if $N = 2p$, its factors are

$$\sigma N = 1 + 2 + p = 3 + p = 4m^2 = X^2.$$

Thus N satisfies the condition. *E.g.*, let $m = 2$, $p = 13$, $N = 26$. Similarly we obtain 122, 194, 386, 794, 1146, ... Again, if $4m^2 - 7 = 3p$, where p is prime, then $N = 4p$ satisfies the condition. *E.g.*, $m = 2$, $p = 3$, $N = 12$. Similarly we obtain 76, 124, 332, ... Other solutions are $N = 8p$, where $4m^2 - 15 = 7p$, giving 24, 56, ..., and $N = 18p$, where $4m^2 - 39 = 21p$, giving 90, ... And so on.

15580. (Professor SANJÁNA, M.A.)—A parabola has contact of the second order with $y^2 = 4ax$ at the vertex, and cuts it again at the point whose normal is inclined at $\tan^{-1} m$ to the axis. Prove that its equation is $(4x + my)^2 = 4am^2x$.

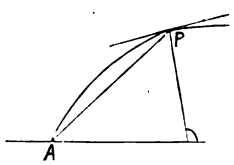
Solutions (I.) *by* R. TUCKER, M.A.; F. W. REEVES, B.A., *and others*; (II.) *by* FRANCES E. CAVE, C. A. B. GARRETT, *and* A. M. NESBITT, M.A.

(I.) The equation to AP is

$$my + 2x = 0 ;$$

hence the curve is

$$y^2 - 4ax - \lambda x(my + 2x) = 0 \quad \ldots\ldots(\text{i.}).$$



Hence, for (i.) to be a parabola, we must have $4 . 1(-2\lambda) = \lambda^2 m^2$, *i.e.*, $m^2\lambda = -8$, and (i.) becomes $(4x + my)^2 = 4am^2x$ (*cf.* C. Smith, *Conics*, § 230).

(II.) Let the equation of the parabola be $(ax + \beta y)^2 + px + qy + r = 0$. Then 0, 0, 0, $-2am$ are roots of $(ay^2/4a + \beta y)^2 + p(y^2/4a) + qy + r$; therefore $r = 0$, $q = 0$, $4a\beta^2 + p = 0$, $2\beta = 2am\,(a/4a)$; therefore the equation may be written $(4x + my)^2 = 4am^2x$.

Remarks on MR. A. M. NESBITT'S *Note on the Solution of certain Equations.*

By Professor SANJÁNA.

[See *Reprint*, Vol. VII. (New Series), pp. 41 and 42.]

It is undoubtedly true that the equality

$$\frac{x}{a+\theta} + \frac{y}{b+\theta} + \frac{z}{c+\theta} - 1 = \frac{(\lambda-\theta)(\mu-\theta)(\nu-\theta)}{(a+\theta)(b+\theta)(c+\theta)} \quad \ldots\ldots\ldots\ldots(\alpha)$$

is satisfied by $\theta = 0$; this is due to its being an identity, and other values of θ, though not so simple, must also satisfy it. This does not vitiate the process, which consists not in solving for θ from a cubic or quadratic, but in equating the coefficients of the various powers in $A + B\theta + C\theta^2 = 0$ to zero. This gives three equations in x, y, z, one of which is

$$\Sigma bcx = abc + \lambda\mu\nu ;$$

the other two are also simple equations, so that x, y, z are determined uniquely. The final result is the same, but it is best to obtain it in the ordinary fashion from (α), by multiplying successively by $a+\theta$, $b+\theta$, $c+\theta$, and then putting $\theta = -a$, $-b$, $-c$, respectively, as some difficult factorization is thereby avoided. The identity is certainly satisfied by making θ infinite.

15512. (R. TUCKER, M.A.)—PQ is a chord of a parabola, constant in direction. PR, QR are also chords drawn in a constant direction. Show that the locus of R is a parabola.

Solution by Professor NANSON.

Consider the more general problem of finding the locus of the vertex R of a triangle whose base angles P, Q lie on a fixed conic S, and whose sides QR, RP, PQ pass through fixed points A, B, C. Clearly there are four positions of R on AB, viz., two at A and two at B. The locus of R is therefore a quartic with nodes at A, B, and passes through the six meets of S with CA, CB, and the polar of C. If now A, B, C are collinear, the quartic breaks up into a conic S′ and the line ABC counted twice. The meets of S′ with ABC are clearly real or imaginary according as the meets of S with ABC are real or imaginary. Hence, if ABC touches S, it also touches S′. Thus in the proposed Question the required locus is a parabola whose axis is parallel to that of the given parabola.

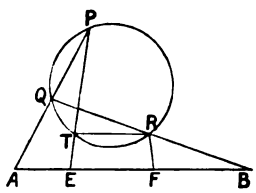
In the general case the remaining two meets of S and the quartic give the solution of Castillon's problem to inscribe in S a triangle whose sides pass through fixed points. (*Cf.* Salmon, Art. 297, Ex. 7.) When S is a pair of lines the quartic breaks up into two MacLaurin conics.

Geometrical Note on Inversion.

By R. F. DAVIS, M.A.

(*Extracted by kind permission from "Mathematical Gazette."*)

Let A, B be fixed points, P a variable point; $AQ . AP = k^2$ and $BR . BQ = k'^2$; so that R is the inverse of the inverse of P.



About PQR describe a circle and draw the chord RT parallel to AB. Produce PT to meet AB in E. Then

$$\angle PEB = \angle PTR = \angle PQR\,(\angle PQB);$$

therefore P, Q, E, B are concyclic and $AE . AB = AQ . AP = k^2$. Therefore E is a fixed point. From R draw RF, making $\angle RFB = \angle TEA$, so that TEFR is a symmetrical trapezium and FR = ET. Then $\angle RFB = \angle TEA = \angle ETR = \angle AQR$; therefore Q. A, F, R are concyclic and $BF . BA = BR . BQ = k'^2$. Therefore F is a fixed point.

Again, from the similar triangles PAE, BRF, EA : EP = FR : FB; wherefore FR . EP (or ET . EP) = EA . FB = constant.

Hence, if P describe any curve, R describes the geometrical image in the perpendicular bisector of EF of the inverse of the curve with respect to E. Thus, no matter what centres and constants of inversion are taken, repeated inversions of any plane curve will only give different inversions of a series of reflections of the original curve.

15556. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Factorise completeyl into *prime* factors $N = G_4^4 + 8 + F_4^4$, where $G_n = F_0 . F_1 . F_2 . \ldots . F_{n-}$ and $F_n = 2^{2^n} + 1$, a Fermat's number.

Solution by the PROPOSER.

Let $E_n = 2^{2^n}$; then $E_{n+1} = E_n^2$ and $F_n = E_n + 1$.

$$G_4 = (2^1-1)[(2^1+1)(2^2+1)(2^4+1)(2^8+1) = (2^{16}-1) = E_4 - 1.$$

Similarly $G_n = E^n - 1$, $N_n = G_n^4 + 8 + F_n^4 = (G_n^4 + 4 . 1^4) + (F_n^4 + 4 . 1^4)$. Each of these terms is a Bin-Aurifeuillian; therefore

$$\begin{aligned} N_n &= [(G_n-1)^2 + 1^2][(G_n+1)^2 + 1^2] + [(F_n-1)^2 + 1^2][(F_n+1)^2 + 1^2] \\ &= [(E_n-2)^2 + 1](E_n^2 + 1) + (E_n^2 + 1)[(E_n+2)^2 + 1] \\ &= (E_{n+1} + 1)\,2\,(E_n^2 + 5) = 2\,(E_{n+1} + 1)(E_{n+1} + 5). \end{aligned}$$

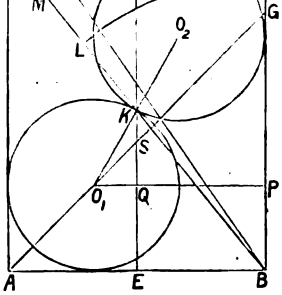
Ex.—Taking $n = 4$,

$$\begin{aligned} N &= G_4^4 + 8 + F_4^4 = 2\,(2^{32} + 1)(2^{32} + 5) \\ &= 2\,(641 . 6700417)(27 . 47 . 3384529). \end{aligned}$$

15567. (SOLIDUS.)—Two equal circular discs are to be cut out of a rectangular piece of paper 10 inches long and 8 inches broad. What is the greatest possible diameter of the discs?

Solutions (I.) *by* D. BIDDLE; (II.) *by* JAMES BLAIKIE, M.A., *and* B. C. WALLIS, F.C.P.; (III.) *by* GEORGE SCOTT, M.A., *and* I. ARNOLD.

(I.) It is easy to see that each circle touches two sides, and that the two circles touch at the centroid of the rectangle.



Construction. — Make BG = BA; bisect GC in H, and draw HJ parallel to CD. With centre B, draw the arc HL to meet the diagonal BD in L, and make LM = GC. With centre B, draw the arc MN to meet HJ in N, and make HP = HN. Draw PQ parallel to AB, and produce to meet AG in O_1; join O_1K, and produce, making $KO_2 = O_1K$. Then O_1, O_2 are the centres of the required circles. For

$$BG = BA = 8, \quad BL = BH = 9,$$

$$BN = BM = 11,$$

$$HP = HN = \sqrt{(11^2 - 9^2)}, \quad \text{and} \quad QE = PB = 9 - \sqrt{(11^2 - 9^2)}.$$

But

$$QE = 5 - KQ = 4 - SQ = 4 - QO_1.$$

Moreover,

$$KO_1^2 = (1 + QO_1)^2 + QO_1^2 = QE^2 = (4 - QO_1)^2,$$

Digitized by Google

whence $QO_1^2 + 10QO_1 = 15$. Therefore

$$QO_1 = 2\sqrt{(10)} - 5 = \sqrt{(11^2 - 9^2)} - 5,$$

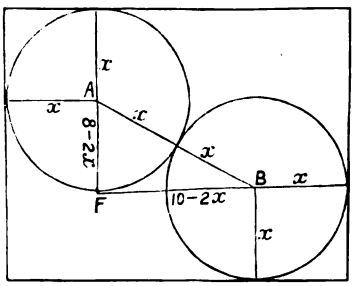
which gives $QE = 4 - QO_1 = 9 - \sqrt{(11^2 - 9^2)}$,

agreeing with the above. Hence, the required diameter

$$= 18 - 2\sqrt{(11^2 - 9^2)} = 18 - 4\sqrt{(10)}.$$

(II.) Let AB be the centres of the discs and let x be their common radius. Then the sides of the right-angled triangle AFB (see figure) are

$$AB = 2x, \quad AF = 8 - 2x,$$
$$BF = 10 - 2x;$$



therefore

$$4x^2 = 4(4-x)^2 + 4(5-x)^2$$

or $$x^2 - 18x + 41 = 0;$$

therefore

$$x = 9 - \sqrt{(40)} = 2{\cdot}676$$

approximately; therefore greatest diameter = 5·35 inches (nearly).

(III.) In order that the two equal circles may be the largest possible, each must touch a pair of the rectangle's adjacent sides; they must also touch one another. They can therefore be found, as proved in Question 15260 (October, 1903), thus—describe a circle passing through the intersection of the diagonals and touching two adjacent sides: this will be one of the required circles. Its radius can be found by the quadratic $(4-r)^2 + (5-r)^2 = r^2$, the half sides of the rectangle being 4 and 5 inches; whence $2r = 18 - 4\sqrt{(10)} = 5{\cdot}3508$ nearly. This common diameter of the two required circles is plainly greater than that of the circles inscribed in either half rectangles; for it is $18 - 2\sqrt{(40)}$, while the diameter of the in-circles is $18 - 2\sqrt{(41)}$.

10582. (R. Knowles, B.A.)—The equation to a conic referred to a tangent and normal as axes being $ax^2 + bxy + cy^2 + gy = 0$, prove that, e being the eccentricity, the equation to its transverse axis is

$$\{4a(a+c) - (2-e^2)(b^2-4ac)\}x + 2b(a+c)y + bg(2-e^2) = 0.$$

Solution by Frances E. Cave *and* L. Isserlis, B.A.

Let the equation referred to the principal axes be

$$\xi^2/a^2 + \eta^2/[a^2(1-e^2)] = 1,$$

and let (ξ_1, η_1) be foot of normal. Then

$$\xi = \xi_1 + \frac{p}{a^2}\left(\frac{x\eta_1}{1-e^2} + y\xi_1\right), \quad \eta = \eta_1 + \frac{p}{a^2}\left(\frac{y\eta_1}{1-e^2} - x\xi_1\right);$$

therefore

$$(1-e^2)\left[\frac{p}{a^2}\left(\frac{x\eta_1}{1-e^2} + y\xi_1\right) + \xi_1\right]^2 + \left[\frac{p}{a^2}\left(\frac{y\eta_1}{1-e^2} - x\xi_1\right) + \eta_1\right]^2 - a^2(1-e^2)$$
$$\equiv \lambda(ax^2 + bxy + cy^2 + gy).$$

Equating coefficients, $\lambda(a+c) = 2-e^2$, $\lambda(b^2-4ac) = 4(e^2-1)$,

$$\lambda a = 1 - \frac{e^2p^2\eta_1^2}{a^4(1-e^2)^2}, \quad \lambda b = -\frac{2e^2p^2\eta_1\xi_1}{a^4(1-e^2)}, \quad \lambda g = \frac{2a^2(1-e^2)}{p};$$

therefore

$$\frac{\xi_1^2p^2}{a^4} = \frac{\lambda a + e^2 - 1}{e^2}.$$

The equation of the transverse axis is

$$0 = \eta = \frac{1}{\xi_1}\left(\xi_1\eta_1 + \frac{p}{a^2}\cdot\frac{y\xi_1\eta_1}{1-e^2} - px\frac{\xi_1^2}{a^2}\right)$$

or $$x[4a(a+c) + (2-e^2)(b^2-4ac)] + 2b(a+c)y + bg(2-e^2) = 0.$$

15581. (C. E. Youngman, M.A.)—If A, B, C, D, E be five points on a rectangular hyperbola, A, B, C, D concyclic, DD′ a diameter of the circle, EE′ of the hyperbola, then the conics ABCD′E and ABCD′E′ will be ellipse and hyperbola, with their axes parallel and proportional.

Solution by W. F. Beard, M.A.

Let CD′, CE, CE′ meet AB at K, L, M. Let p, d be the diameters of the conic ABCD′E parallel to AB, CE; p_1, d_1 those of ABCD′E′ parallel to AB, CE′; P, D, D_1 those of the rectangular hyperbola ABCD parallel to AB, CE, CE′. Since ABCD are on a circle, therefore the diameters of the rectangular hyperbola parallel to AB, CD are equal. But CD′ is perpendicular to CD; therefore AB, CD′ are parallel to conjugate diameters of the rectangular hyperbola; therefore the bisectors of the angle AKC are parallel to the asymptotes of the rectangular hyperbola.

Now, since A, B, D′, C are on a circle, therefore

the bisectors of the angle AKC are parallel to the axes of the conics ABCD′E, ABCD′E′ .....(1).

Again, $MA \cdot MB : ME \cdot MC = p_1^2 : d_1^2 = P^2 : D_1^2$;

therefore $p_1 : d_1 = P : D_1$. Similarly, $p : d = P : D$.

Now CE, CE′, being supplemental chords of the rectangular hyperbola, are parallel conjugate diameters; therefore $D = D_1$; therefore

$$p : d = p_1 : d_1 \quad \text{.....(2).}$$

Also CE, CE′ are equally inclined to either asymptote of the rectangular hyperbola, and therefore to either axis of the conics ABCD′E, ABCD′E′; hence the diameter of the conic ABCD′E′ parallel to CE = d_1. Hence, from (1) and (2), the conics ABCD′E, ABCD′E′ have their axes parallel and the diameters in two separate directions are proportionals; therefore their axes are proportionals.

By considering which of the points K, L, M lie in AB, CD′ or in these lines produced, it will be plain that one of the conics is an ellipse and the other a hyperbola.

QUESTIONS FOR SOLUTION.

15641. (Hon. G. R. Dick.)—Denoting the complete elliptic integral

$$\int_0^1 \frac{dz}{\sqrt{[(1-z^2)(1-k^2z^2)]}}$$

by K(k), prove that

$$K(\cos\tfrac{1}{2}\theta) = \sum_0^\infty \frac{P_n(\cos\theta)}{2n+1}, \quad K(\sin\tfrac{1}{2}\theta) = \sum_0^\infty (-1)^n \frac{P_n(\cos\theta)}{2n+1},$$

where $P_0, P_1, P_2, \ldots, P_n$ are the sphere functions of the first kind (Legendre's functions X_n).

15642. (Professor Nanson.)—In an election each voter marks the candidates in order of preference. For each r-th preference s_r marks are given, and at each scrutiny the candidate with the least number of marks is excluded. If $\frac{1}{2}(s_1 + s_r) \geqslant (s_2 + s_3 + \ldots + s_{r-1})/(r-2)$ and $s_{r-1} > s_r$, show that any candidate with an absolute majority of original first preferences is certain of election.

15643. (H. A. Webb.)—A particle moves in a plane under the influence of two centres of gravitational attractive force of equal intensity μ, situated at the points $(\pm\frac{1}{2}d, 0)$. The particle starts from the point $(d\operatorname{cosec}^2\psi, 0)$ with velocity $4\sqrt{(\mu/d)}[\tan\psi/\sqrt{(1+\sin^2\psi)}]$ in a direction making an angle ψ with the axis of x. Show that the equation of the path described is $\cosh\frac{1}{2}\eta\cosh(1/\sqrt{2})(\xi - i\alpha) = 1$, where

$$x + iy = \tfrac{1}{2}d\cos(\xi + i\eta) \quad \text{and} \quad \cosh\alpha\sin^2\psi = 2,$$

and verify analytically that the path is real.

15644. (W. H. Blythe, M.A.)—If M divides the period of 1/M, or, in other words, if 1/M and $1/M^2$ have the same period, then $M = 2(3^n) + 1$, where n is a positive integer, and a multiple of 5, including zero. Is this the case? It is to be observed that, being true for 3 and 487, it is true also for their product 1461.

15645. (R. Chartres.)—The reciprocals of two consecutive numbers give the same number of recurring figures (n) in the scale radix (r), and the results looked upon as whole numbers are consecutive. Find the numbers and r and n.

15646. (R. W. D. Christie.)—Solve the equation $X^2 - 19Y^2 = -3$ (in integers) by the use of other convergents than the ordinary Pellian, and prove its generality: thus $p_n/q_n = \frac{2}{1}, \frac{5}{1}, \frac{17}{4}, \frac{22}{5}, \frac{61}{14}$ (ad inf.).

15647. (D. Biddle.)—$N = S^2 + A = H^2 - h^2$.—Prove that when N is factorizable it is possible to find integral values to satisfy the following equation:— $6(\lambda^2 - \mu^2) + (\alpha\lambda - \beta\mu) = \frac{1}{24}[N - (\alpha^2 - \beta^2)]$, where $\lambda > \frac{1}{12}S$, whilst α and β are each < 12, being respectively the residues of H and h (mod 12), and can be found from the following formulæ:—

$$H^2 \equiv [\tfrac{1}{2}(N+1)]^2 \pmod{144}, \quad h^2 \equiv [\tfrac{1}{2}(N-1)]^2 \pmod{144}.$$

15648. (C. E. Youngman, M.A.)—The number 666 is apparently the greatest triangular number which has all its figures alike. Is there proof of this?

15649. (A. M. Nesbitt, M.A.)—If $c_r \equiv n!/[r!(n-r)!]$ and if c_a be taken as zero when $a < 0$ or $> n$, prove that the determinant of order $n-1$ the p-th element of whose q-th row is c_{2p-q} is equal to $2^{\frac{1}{2}n(n-1)}$.

15650. (Professor Sanjána, M.A.)—Find the limit of the expression

$$1 - \frac{r^{n+1}}{1-r}\left[1 - \frac{r^{n+2}}{1-r^2}\left\{1 - \frac{r^{n+3}}{1-r^3}\left(1 - \frac{r^{n+4}}{1-r^4} \times \ldots\right)\right\}\right]$$

when the number of brackets is infinite, r being less than unity.

15651. (Professor Langhorne Orchard, M.A., B.Sc.)—Find the sum of n terms of the series $6 + 3 + 2 + \frac{3}{2} + \frac{2}{3} + 1 + \ldots$.

15652. (Professor Nanson.)—A_1, A_2, A_3, A_4 are the vertices of a tetrahedron, and O, O′ are fixed points. If OO′ cuts the face opposite A_r in P_r, and P_r' is the harmonic conjugate of P_r with respect to O, O′, show that the four lines A_rP_r' are generators of a hyperboloid.

15653. (Professor Sanjána, M.A.)—From the moving point (h, k) three normals are drawn to the parabola $y^2 = 4ax$, and a parabola is drawn passing through the feet of these normals and through a fixed point on the given curve. Show how to find the envelope of this parabola, and obtain its equation when (h, k) moves on the circle $x^2 + y^2 = 2ax$.

[Suggested by Mr. Tucker's Question 15490.]

15654. (R. Tucker, M.A.)—Find the envelope of the circle about PQRS in Question 15619.

15655. (Professor Cochez.)—Trouver le lieu des points qui divisent

Digitized by Google

en moyenne et extrême raison les cordes d'une ellipse passant par un point fixe.

15656. (James Blaikie, M.A.)—If a straight line drawn through the circum-centre of a triangle ABC meet BC, CA, AB in P, Q, R, and if points P′, Q′, R′ be taken on the line so that O is the mid-point of PP′, QQ′, RR′, prove that AP′, BQ′, CR′ meet at a point in the circum-circle.

15657. (Professor Neuberg.)—Les diagonales AC, BD d'un quadrilatère ABCD se coupent à angle droit en O. On sait que les projections de O sur les côtés du quadrilatère sont situées sur une même circonférence. Si p est la puissance de O par rapport à cette circonférence et R le rayon, démontrer que

$$1/p = 1/(OA \cdot OC) + 1/(OB \cdot OD),$$
$$4R^2/p^2 = (1/OA - 1/OC)^2 + (1/OB - 1/OD)^2.$$

15658. (I. Arnold.)—Describe a circle (1) passing through two given points and such that a given right line shall cut from it a segment containing a given angle; (2) passing through a given point and such that two given right lines shall cut from it segments containing given angles.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

9876. (R. W. D. Christie.)—Prove that

$$2\tan^{-1}(a/b) \pm \tan^{-1}[1/(b^2 + 2ab - a^2)] = \tfrac{1}{4}\pi,$$

where a is the coefficient of x^n and b of x^{n+1} in the expansion of $1/(1 + 2x - x^2)$.

10041. (Professor Emmerich, Ph.D.)—K being the symmedian point of the triangle ABC, we have $AK + BK + CK \equiv (a + b + c)/\sqrt{3}$.

10050. (H. MacColl, B.A.)—Three pairs of random points P_1, P_2; Q_1, Q_2; R_1, R_2 are taken in the circumference of a circle; and three pairs p_1, p_2; q_1, q_2; r_1, r_2 are taken inside the circle. The three straight lines (produced indefinitely) P_1P_2, Q_1Q_2, R_1R_2 will form a triangle of area α, say; and the three p_1p_2, q_1q_2, r_1r_2 will form another of area β, say. Find (1) the chance that the latter triangle will lie wholly within the circle, and (2) the average value of the ratio $\alpha : \beta$.

10872. (Professor Hudson, M.A.)—A paraboloid of revolution floats with the lowest point of its base in the surface of a fluid, and its axis inclined at an angle θ to the horizon. Find its height and specific gravity.

11079. (D. Edwardes, B.A.)—(1) Prove that

$$d^2\phi/dx^2 - d^2\phi/dy^2 - 1/y\, d\phi/dy + k^2\phi = 0$$

is satisfied by $$\phi = \int_0^{2\pi} e^{-y \sin\theta} f(x + y\cos\theta)\, d\theta,$$

and (2) construct the general solution.

11296. (Professor Cavallin, M.A.)—A locomotive engine of mass M has two equal pairs of wheels of radius a, such that the moment of inertia of either pair with its axle about its axis of rotation is A. The engine exerts a couple G on the forward axle. Show that, if both pairs of wheels bite at once when the engine starts, the friction between either of the forward wheels and the line capable of being called into play must not be less than $[G(A + Ma^2)]/[2a(2A + Ma^2)]$. Prove also that, if the only action between an axle and its bearings is a couple varying as the angular velocity of the axle, the final friction called into play between either forward wheel and the line is $G/4a$.

The EDUCATIONAL TIMES says:—

"Our notice of a work so interesting must necessarily be very imperfect. We have twice essayed to write the notice, and have become so absorbed in the work as to read on for hours forgetful of our object. It is a story of boundless interest and of exquisite beauty."

Part I. Now Ready, Price 6d. net, of

A New and Revised Edition of

THE STORY OF THE HEAVENS

BY

SIR ROBERT S. BALL, LL.D., F.R.S.,

Lowndean Professor of Astronomy, Cambridge.

WITH COLOURED PLATES AND NUMEROUS ILLUSTRATIONS.

A Large Star Map is given with Part I.

(To be completed in 14 Monthly Parts.)

THE STORY OF THE HEAVENS is probably the most popular book on Astronomy that has ever seen the light, and it may be safely said that in no existing work is the marvellous story set forth with such brilliancy and simplicity.

The progress of Astronomy is such that incessant attention is necessary if a work on the subject is not speedily to fall out of date.

The author has therefore corrected and revised this new edition by excising old matter and introducing new. For example, space had to be made for such a memorable incident as the outbreak of the new Star in Perseus in 1901, and the wonderful career of the nebula arising therefrom.

Even the greatest Prime Minister of modern times was proud to proclaim himself a student of Sir Robert Ball's works, whilst such is the charm of style adopted by the author that the unlearned can appreciate the marvellous and beautiful story he tells.

The CONTEMPORARY REVIEW says:—

"Professor Ball's STORY OF THE HEAVENS is a model of exposition. It goes over **the whole ground of astronomical science** with equal fulness of detail and adequacy and lucidity of explanation, and describes all the latest discoveries of the spectroscope as well as the telescope."

Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

TO PRINCIPALS OF SCHOOLS.

—The Rev. G. E. MACKIE, Chief Secretary and Inspector of the Church Schools Company, is prepared to visit Schools in any part of England and confidentially advise Principals on all matters connected with Recognition of Schools, Registration of Teachers, Government Grants, &c. Consultations by post or at the Church House, Westminster.

LONDON COUNTY COUNCIL.

THE LONDON COUNTY COUNCIL

is prepared to receive applications for the post of ASSISTANT MISTRESS in the Marylebone Pupil Teachers' School, Burghley Road, Highgate Road, N.

APPLICANTS must be qualified to teach the general subjects required for the King's Scholarship and Matriculation Examinations, and more especially the subjects of Mathematics, and either French or History.

APPLICATIONS for the appointment must be made on forms to be obtained, with further particulars, from the CLERK OF THE LONDON COUNTY COUNCIL, Education Offices, Victoria Embankment, W.C., to whom the forms should be returned not later than Monday, 7th November, 1904. If a written application is made for a form it must be accompanied by a stamped and addressed foolscap envelope or wrapper, to be marked outside "Application for Teachership (H.E.)." Canvassing for this position, either by letter or personally, will be considered a disqualification.

G. L. GOMME,
Clerk of the London County Council.

Education Offices,
Victoria Embankment, W.C.
19th October, 1904.

STUDENTS FOR THE DUKE OF YORK'S ROYAL MILITARY SCHOOL, CHELSEA, and the ROYAL HIBERNIAN MILITARY SCHOOL, DUBLIN.

—A competitive Examination for Students at these Institutions will take place in London and Dublin in December next. Candidates must be between sixteen and nineteen years of age on the 30th November next. Further particulars may be obtained on application in writing (in unstamped letter) to the A.A.G. (ARMY SCHOOLS), War Office, 68 Victoria Street, London, S.W., by whom applications will be received not later than 15th November next. Students at these Establishments have the privilege of competing for the appointment of Army Schoolmaster.

NOTICE TO SCHOOLS.

DENT'S MODERN LANGUAGE SERIES.

DENT'S FIRST FRENCH BOOK. By S. Alge and Walter Rippmann. Extra fcap. 8vo, **1s. 6d.** net.

*** Since the publication in November, 1898, of **Dent's First French Book**, Ten Editions (completing 47,100 copies) have been called for. The further experience gained during the last five years has made it advisable to re-write the book, and it is believed that the new version—**Dent's NEW First French Book**—represents a distinct step forward in the teaching of modern languages. The earlier version of **Dent's First French Book** is still on sale, and should be ordered as **Dent's OLD First French Book**, to avoid confusion.

DENT'S SECOND FRENCH BOOK. By S. Alge and Walter Rippmann. Extra fcap. 8vo, **1s. 6d.** net. [*Fourth Edition.*

*** Following the success of **Dent's NEW First French Book**, authors and publishers felt encouraged to attempt a complete revision of the **Second French Book** also. In the revised version, called **Dent's NEW Second French Book**, the general scheme is the same as in the old, but there have been many extensive additions. The old version will not be reprinted, and consequently those who order the **Second French Book** will receive the *new* version, which can be used side by side with the old.

Phonetic Part of New First French Book, 6d. net.

DENT'S WALL PICTURES OF THE FOUR SEASONS. (For Teaching Latin.) From Drawings specially prepared by J. A. Symington. Printed in Colours, size 55 by 35 ins. Unmounted, **2s. 6d.** net; mounted on linen and eyeletted, **3s. 6d.** net; mounted on linen and bound at edge, with rollers, **6s.** net.

FEATURES OF FRENCH LIFE. By F. R. Robert. Illustrated by J. A. Symington. Two Vols. **1s.**

DENT'S FIRST LATIN BOOK. By Harold W. Atkinson, of Rossall School, and J. W. E. Pearce, Head Master, Merton College, Sidcup. With 12 Coloured Illustrations by M. E. Durham. Small crown 8vo, cloth, **2s. 6d.** net.

DENT'S WALL PICTURES for Teaching Latin. Four Coloured Pictures enlarged from "The First Latin Book." Size, 30 by 22 ins. Unmounted, **2s.** net each. Romae: Sexti Domus. Romae: Triumphus. Pompeiis: Ostium, Tabernae et Via Strata. In Gallia: Proceum Equestre et Pedestre.

DENT'S FIRST ENGLISH BOOK. By Walter Rippmann. Extra fcap. 8vo, **2s.** net.

J. M. DENT & CO., 29 AND 30 BEDFORD STREET, LONDON, W.C.

A NEW HELP TO NATURE STUDY.

The "A.L." DISSECTED PLANTS.

Being DIAGRAMS AFTER NATURE,

For NATURE-STUDY and OBJECT-LESSONS.

Each, net 2/-; post free, 2/3.

The Six, net 11/3; post free, 11/9.

This is a Series of **Six Plants:**

(1) **Buttercup;** (2) **Wallflower;** (3) **Lily;**
(4) **Apple;** (5) **Primrose;** (6) **Potato.**

The dissections consist of **several overlapping folds**, showing the **structure of the plant** as a whole, and of the various parts, as root, stem, leaves, flowers, seeds, &c.

By means of **movable diagrams, enlarged representations** of ovary, seeds, cells, starch-grains, anthers, stomata, &c., are given in each case.

The Educational Times.

Co-education.

As far as secondary education is concerned the Act of 1902 is only beginning to work; but there is a stir among the dry bones, and the ordinary citizen is at length realizing the lamentable gap in our national system and the inadequacy of private effort to fill it. All over the country Local Authorities are awakening to their new responsibilities, are studying a problem which is strange to most of them, taking counsel with teachers, and calling in the expert. We are still in the experimental stage, and our Iagos, who are nothing if not critical, can find plenty to carp at in the proceedings of County and Borough Councils—inadequate salaries offered to teachers, illiberal curricula, unfair competition, and interference with vested interests. We are far from holding that all these complaints are groundless, but in our opinion the gain enormously outbalances the loss. It is worth running some risks and making many mistakes if thereby we ensure a general interest in education and arouse in each city or area a local pride in its schools and colleges.

This new departure brings to the front a number of educational questions which have been discussed more or less in professional journals and debated at conferences of teachers, but on which there is no consensus of opinion, even among teachers, and which the County Councillor has probably never thought of: the relation of the Central to the Local Authority, the correlation of primary and secondary education, the curriculum of the lower-grade and higher-grade secondary school, the recognition of private schools as an integral part of the educational supply, the tests to be applied as to the efficiency of schools—by inspection, examination, or a combination of both—the training of teachers, and co-education. Some of these questions *solvuntur ambulando*, and on none could the most enlightened and confident of educationists pretend to give a categorical answer that would solve all the difficulties which the County Councillor has to face. Yet there are some guiding principles on which we can confidently insist, some popular fallacies that we can expose, some alternatives we may suggest, either of them commendable, and the choice between which must depend on circumstances.

One or two of these burning questions we have already discussed, and to others we hope to revert. This month we have chosen for our topic the last, and, in order to furnish the data and clear the ground, without any pretence of solving a most complex problem, we put forward a few preliminary observations on co-education.

In England the word itself is a neologism, and till recent years the thing has been unknown, except in the kindergarten and a few primitive rural schools. What is the exception in England is in Scotland the rule, and across the border the vast majority of boys and girls have for generations been taught together till they reached the University; though at the latest stage, it is curious to remark, Scotland was, till very recently, more exclusively conservative than England.

It is well worth our while to examine how this national difference arose. If we trace back its history, we shall find that it originated not in any theory of the equal rights of women or the ideal relations of the sexes, but simply from the force of circumstances. The originators of co-education, had they been put upon their defence, would have pleaded like Dido: "Rerum novitas nos talia cogit moliri"—Our poverty must excuse and justify what is confessedly a makeshift. But it may be doubted whether it occurred to them that there was anything that called for explanation.

In the Scotch Act of 1696 "for settling of schools"—the Act which consummated and perpetuated John Knox's famous scheme—it was ordained that there should be a school settled and established and a schoolmaster appointed in every parish; and means were provided for enforcing this duty on heritors. The Act made no mention of sex; but, on the one hand, it was obviously impossible in a poor country like Scotland to provide two schools for each rural parish, or even a dual school with a master and a mistress teaching under one roof; and, on the other hand, even in those rude times and rude climes, it was felt to be too monstrous to exclude the lassies from all possibility of learning. "Cessante causa, non cessit effectus"; and, to the present day, except in the large towns, joint schools are the rule in Scotland, and, what is more important, there is no sign of dissent, not even a "Wee Church" that would establish separate schools.

Digitized by Google

Wales is a still more instructive object lesson; for there the system of secondary education is not an historical survival, but has grown up beneath our eyes. As a rough generalization, it may be stated that in South Wales all the intermediate schools are mixed; while in North Wales, which is more open to English influences, both systems flourish side by side, and the compromise of the dual school is common.

If we look beyond Great Britain, we may state roughly that in America co-education is the universal rule, while on the Continent it is unknown.

But in America there are signs that a reaction is setting in. The leading authorities, as may be seen in the report of the Mosely Commission, speak doubtfully; and the President of Clark University, in the cyclopædic work that he has just published on "Adolescence," after summing up dispassionately the arguments for and against, pronounces himself, mainly on psychological grounds, a decided opponent.

Such in brief is the present conflict of theory and practice, and it might seem hopeless to search for the *filum labyrinthi*—the clue to guide our bewildered County Councillor. And yet we think it is possible to discover, amidst the dust of battle and the smoke of controversy, some glimmer of light. First, it is clear that there can be no universal rule. What is good for the country is not good for the town; what is good for one country cannot be imposed on another under different social conditions. Secondly, the fear of moral contamination may be dismissed as a bugbear. On this point, as is shown in the volume of essays edited by Miss Woods, there is a consensus of opinion. Thirdly, it will hardly be disputed that a mixed school of a hundred will be not only cheaper, but more efficient, than two separate schools of fifty each; and in schools where the leaving age is sixteen the physiological and psychological objections urged by Dr. Stanley Hall and others are mostly irrelevant.

So far we are on safe ground, and here we must end. To pursue the inquiry further would involve such debatable problems as, to instance only one, whether the trend of civilization is to assimilate or further differentiate the sexes. Such questions we must leave "on the knees of the gods."

NOTES.

Educationists up and down the country should ponder the elaborate and outspoken "Report on Secondary Education in Liverpool, including the Training of Teachers for Public Elementary Schools," by Prof. Sadler, which has just been issued by the Liverpool Education Committee (2s. 6d. net, Eyre & Spottiswoode). It is really a critical survey of the educational system of Liverpool as a whole, with reference to the civic life and commercial interests of the city. Dr. Sadler cannot disguise "the grave concern" with which he regards much of the present secondary education there, especially the secondary education of boys. The defects of the system "are very serious"; they seem "to threaten some of the vital interests of the city." Dr. Sadler's "Suggestions and Recommendations," under a dozen heads, run to forty-five pages of the report; and reasonably prompt and whole-hearted action upon them would certainly inaugurate a new era and a profitable one. We are glad to observe that he considers it "desirable that the Education Committee should take steps to encourage and recognize efficiency in the private schools," which teach about one in three of the Liverpool secondary pupils; and he indicates lines on which the Committee might proceed. The like advice applies everywhere. The Municipal School of Art, the School of Commerce, the teaching of Domestic Science, the Central Technical School, the Evening Continuation Schools and Technical Classes—all these come within the review. The report is comprehensive, incisive, and instructive far beyond the limits of Liverpool. Dr. Sadler makes suitable acknowledgment of the help of assistants and especially of the co-operation of Mr. J. L. Holland.

An official "Addendum to Statutory Rules and Orders, 1903—No. 384 (as amended to March 1, 1904)," records the Board of Education's approval of "the Regulations framed by the Consultative Committee on February 25, 1904, modifying and altering the Regulations for the formation and keeping of the Register of Teachers." This looks like ancient history, and the document is dated "18th April, 1904"—a date sufficiently alarming, now that by the calendar we are, at the date of writing, pretty near the end of October. At first we fancied we must have overlooked the announcement, but we were reassured by the printer's date, which we read as September. If this be so, then really what can be the meaning of such slackness in the administration?

Lord Londonderry is not lacking in hopefulness. He claimed, at Ashton-under-Lyne (October 15) that the opportunities for education had been greatly increased by the Act of 1902—justly, we think; but his anticipations of the gradual disappearance of differences and of the rise of a common ideal of promoting education apart from political and religious views seem dependent upon a very large "if," especially in Wales. No doubt, too, there is a wider agreement as to the higher education, though it is somewhat rotund to affirm that "the whole question of higher education rests entirely with the people." Everything in a sense rests entirely with the people, and yet somehow officialdom manages to have a good deal to say in most things—not always to the same effect as the people appear to wish. It is all very well to have "a popularly elected man" to "decide your children's curriculum," but there is something in the conditions of electing and in the conditions of deciding. The statutory limits of the financial element of the problem are not without their influence; and a strong lead from the Government might supply very much needed suggestion and guidance to the local administrators. Has the Government, indeed, any comprehensive scheme for the adjustment of the higher education at all? Is there any home problem really more pressing for solution?

Addressing a conference of managers and teachers organized by the Berkshire County Association of Teachers (October 15), Dr. Macnamara frankly admitted the advantages of placing the voluntary schools on a more satisfactory

Digitized by Google

footing, and offered a suggestion for the settlement of the disturbing differences. "He believed the solution of the education trouble would lie in the disappearance of the dual system, the putting of all schools under full public control, and the granting of some sort of facilities for specific denominational teaching by volunteers wherever practicable." A permanent settlement, however, "would have to be a settlement by agreement." A striking example had just been shown a few days previously by the Education Committee of the Hertfordshire County Council, who adopted, amid general satisfaction, a syllabus drawn up by Dr. Fry and Principal Whitehouse. If every Education Committee had a similarly capable and sensible couple of conciliators, Lord Londonderry's hopefulness might soon find a very agreeable justification. We print the substance of the syllabus elsewhere, and trust it will receive the wide and earnest attention it deserves. As to the machinery of local education, Dr. Macnamara is reported to have spoken in very pessimistic terms:

> Already the municipal Councils were breaking down under the enormous strain thrown upon them. In London there was absolute chaos, and everywhere the work of administering education was falling into the hands of a few leisured doctrinaires, flanked by a powerful army of paid officials.

One must hope that there is some exaggeration here; but undoubtedly there is reason for insistent warning, as shown by recent reports of the proceedings of the London County Council.

While there is a general outcry of dearth of teachers, Alderman D. P. Williams (in the *Welsh Leader*) has been making an interesting inquiry into the history of the pupils in certain schools and of certain students in one college in Wales, and concludes that "the percentage adopting the teaching profession is dangerously large, or, at any rate, it is doubtful whether such a number will at any future time find a place for themselves in the scholastic profession." This just shows how important it is to have a comprehensive knowledge of the facts. Mr. Williams's inquiry has necessarily been on a limited scale: the ten county schools of Carnarvonshire and the University College, Bangor—1,423 pupils of the schools, and 947 students of the college, of whom 251 and 509 respectively have gone into the teaching profession. The period over which the figures extend is unfortunately not stated, so that it is difficult to say how far England may hope to draw supplies of redundant teachers from Welsh institutions. The inquiry is suggestive indeed, but the narrow basis—even admitting that it may be fairly typical of Wales—forbids any very definite general deductions. "What use have the pupils made of their educational advantages, and what are the vocations in life to which they appear to be specially attracted, and for which their school or college training would appear to have specially equipped them?" Yes, it would be instructive to follow out the investigation; but the discrimination of extra-academical influences would be a task of very great difficulty.

The pictorial postcard appears to have received a somewhat notable educational development down in Surrey. The Surrey Education Committee is reported to have ordered a round million of pictorial postcards representing places of historic interest in the county, with the view of encouraging "more regular and punctual attendance" of the school-children. And not only postcards, but also "a large quantity"—how many tons in the first order not specified—"of bronze and bronze-gilt medals for the same purpose." It is not for us to interfere between this enterprising Committee and their constituents, but it does seem odd that, if the educational enthusiasm of the county is so keen as to urge or to endorse the expenditure of hundreds of pounds in this fashion, its common sense is not equal to the task of securing regular and punctual attendance by some more direct and healthy process. Suppose all the other counties follow the Surrey example, and then calculate the comparative results of applying the money to fundamental educational work instead: the conclusion will be rather startling to those that have some notion of where the most clamant needs of our educational system abound. Are we really to believe that Surrey teachers cannot make school work attractive, or that Surrey parents are so feeble of will as not to enforce a simple duty with simple directness? Some of us have reminiscences of the occasional operation of certain longish strips of leather—firm, flexible, and efficiently moral—not so evanescent as postcards, nor yet so expensive.

"The education of our youth in the science of government: in a republic what species of knowledge can be equally important?" asked George Washington. The same question has not a little relevance here. The subject, however, is branded "A Neglected Problem of Education" by Mr. S. E. Forman, of Washington, in the October issue of *Education*. The Report of the National Commissioner of Education for 1901 gives figures that "show that instruction in civics the country over is steadily declining." Why is this? "Because the task has not been approached in the right way." Well, what is the right way? To make the lesson a lesson in ethics—not a merely intellectual survey of constitutions and political organizations. The training should have three salient features: (1) moral excellence a prime qualification of the teacher; (2) the spirit of institutions to be imparted, not merely the political anatomy; and (3) political problems of pressing interest to be discussed. Partisanship? "A teacher who is at all fit to be entrusted with the task of training for citizenship will have little trouble in avoiding partisanship, and, if he avoids that, the greatest danger will be passed." The ideal is perfectly feasible, no doubt; the difficulty lies in the level-headedness of the teacher, quite as much as in his "moral excellence," unless moral excellence include strong common sense. The teaching of history, too, suggests a very similar line of remark.

Elsewhere we summarize a very strong pronouncement of Mr. Dillon's on education in Ireland. Ireland, according to Mr. Wyndham, is "an educational jungle," and, if so, it is for Irishmen themselves to take an active hand in clearing the jungle. Very likely, we should think, Mr. Dillon's interpretation of the proceedings of the Government is coloured by suspicions that have little or no basis in fact;

Digitized by Google

but the points can be brought out in the vigorous discussion he promises. Meantime we simply remark that the *National Teacher* supports Mr. Dillon's contentions through thick and thin. "What we are proud of," it says (October 21), "is this—that a member of Parliament of Mr. Dillon's experience and standing should have realized all this at a crucial period in the history of primary education in Ireland, because we believe, once he has grasped the state of affairs, he will allow no opportunity to slip until the injustice that is being perpetrated both on the teachers and on the schools is sifted to the very bottom." The particular point referred to is Mr. Dillon's statement that "up to this moment not one penny of the Equivalent Grant has been expended on the primary schools." The self-denying ordinance of the teachers—who had their miserable salaries improved by former grants, but "stated publicly that they would be satisfied if the grant were devoted to the upkeep of the schools"—deserves generous and prompt recognition. As our contemporary says, "their remuneration at present is most inadequate, and we hope something will be done to improve them." Can it be the fact, as stated by Mr. John Nealon, the President of the Teachers' Organization, "that a teacher broken down in health after twenty-six years' service has to retire on the munificent pension of £3. 19s. 8d."?

SUMMARY OF THE MONTH.

THE Calendar of University College, London, for the session 1904–5 gives full particulars of several interesting new developments. The university courses of study, especially those in economics, have been extended, and further arrangements have been made for post-graduate courses, lectures, and research—explained fully in ten pages of the Calendar. The list of papers and other publications proceeding from the different departments of the college during the past year runs to eight full pages, and shows that the work now being accomplished in the college is as good both in quantity and in quality as in any previous year.

THE London School of Economics and Political Science—the oldest University school of administration and commerce in this country—has opened its tenth session with still fuller means of usefulness. The new Calendar shows the work grouped in twelve large divisions. The course for B.Sc. (Econ.) has been completed by the addition of a third year of study. The duplication of the classes for day and evening students has also been completed. Further progress has been made with the organization of the department of graduate study and research. Committees have been formed to advise on Insurance and Transport subjects, and the prospectuses on the classes will be ready presently.

THE London-Oxford-Cambridge scheme for mutual recognition of examinations is now practically settled. After conference between representatives of the three universities, a scheme was drawn up whereby (1) the University of Oxford would recognize the Cambridge Senior Local Examination and the London Matriculation Examination as affording exemption, under certain conditions, from Oxford Responsions: (2) the University of Cambridge would recognize Oxford Responsions, the Oxford Senior Local Examination, and the London Matriculation Examination as affording exemption, under certain conditions, from the Cambridge Previous Examination; and (3) the University of London would recognize Oxford Responsions, the Cambridge Previous Examination, the Oxford and Cambridge Joint Board Higher Certificate Examination, the Oxford Senior Local Examination, and the Cambridge Senior Local Examination as affording exemption, under certain conditions, from the London Matriculation Examination. (Already, under certain conditions, the Oxford and Cambridge Joint Board Higher Certificate Examination affords exemption from Responsions and from the Previous Examination, the Oxford Senior Local Examination from Responsions, and the Cambridge Senior Local Examination and the Higher-Grade Certificate Examination of the Scotch Education Department from the Previous Examination; also the Previous Examination is recognized by the University of Oxford as affording exemption from Responsions.) It is proposed that on the adoption of the scheme by the three universities a Standing Committee, consisting of representatives of the Hebdomadal Council of the University of Oxford, the Council of the Senate of the University of Cambridge, and the Senate of the University of London, should be appointed to consider any points of difficulty that might arise. Any substantial changes made in any of the examinations referred to would be considered by the Standing Committee, and, if necessary, proposals for changes in the conditions of exemption would be made to the universities. It is further proposed that the Committee should, if they think it desirable, take such steps as may enable them to inspect papers of questions and the answers of candidates.

AT a meeting of teachers in the London polytechnics, technical institutes, and schools of art (October 22) there was formed "an Association of Science, Technological, and Art Teachers engaged in the London Polytechnics, Technical Institutes, and Schools of Art, such Association to comprise both permanent staff and evening teachers, other than those engaged in purely secondary work. The main objects of the Association are: (1) the advancement of technical education generally; (2) the interchange of ideas regarding methods of technical teaching; (3) the promotion and safeguarding of professional interests of technical teachers in such matters as (*a*) tenure, (*b*) pensions, (*c*) salaries, (*d*) registration of teachers, (*e*) training and qualification of teachers, (*f*) schemes of examination and inspection; (4) to lay the views of technical teachers before the various Educational Authorities and the public; (5) to enable technical teachers to co-operate as a body with other educational or scientific associations when desirable. The Association, it is hoped, will eventually embrace the teachers in similar spheres of work throughout the country.

THE Thirty-second Annual Meeting of the London Teachers' Association was held at the Memorial Hall, Farringdon Street (October 22). Of 12,730 teachers, no fewer than 10,730 are members of the Association, the increase during the past year being nearly 1,500. The new President, Mr. W. A. Nicholls, of the Eglinton Road Council School, Plumstead, said the London County Council possessed a unique opportunity for inaugurating and administering a comprehensive scheme of education for the whole of the metropolis. No one doubted that the Council took a broad and sympathetic view of the moral and material needs of London. The policy of a progressive body democratically elected must be the child first, the future citizen. The teacher came next, because he was essential to the child's education, and then came, if anywhere, the denominational interest. The next question the Council would have to apply themselves to was that of staffing the schools. There were now 355 vacant places in the ordinary staffs. They were assured the London County Council would do its best to place the educational ladder within the reach of every child, whether in provided or non-provided schools. They longed for the day when that distinction would cease to exist, and when, as a consequence, the application of religious tests to teachers should perish with it.

THE first general meeting of the Association of Education Committees was held at the Holborn Restaurant on October 6–7, Mr. J. Tudor Walters (Leicester), President, in the chair. Mr. Walters, in a long presidential address, dealt on broad lines with the duties and responsibilities placed upon Education Committees throughout the country. The mental, moral, and physical development of the future citizens of England and Wales (he said) had been very largely committed to their charge, and it should be their aim to render education attractive, to breathe a broad spirit into their work, and to look at it from a standpoint that should mean a higher ideal and a nobler standard of educational work in the time that was to come. The members of the Association were, primarily, neither politicians nor theologians; they were educationists, whose policy and programme was to do the best they could to put into the reach of the children the best possible education that could be afforded to them.

AT the Church Congress at Liverpool (October 5), much attention was naturally given to the religious difficulty. The Rev. Canon Brooke (Kennington) reviewed the working of the

Digitized by Google

Act of 1902 in primary education, and the Bishop of St. Asaph, the Rev. Prof. Masterton (Birmingham), the Rev. Dr. James (Rugby), and the Rev. J. B. Lancelot (Liverpool College) dealt with religious education from different points of view. Sir H. Hibbert read a vigorous paper on "Secondary Education," emphasizing the necessity for rearrangements to obviate waste of money, for thoroughness in the teaching of modern languages, for due co-ordination of schools, and for the training of teachers.

A CONFERENCE for the promotion of the higher education of working men was held at the University of Manchester (October 8). Principal Hopkinson presided, and there was a large gathering representing the Universities of Manchester, Liverpool, and Leeds, several co-operative associations and trades councils, the Manchester Ruskin Hall Committee, the National Union of Teachers, the National Conference of Friendly Societies, and the Women's Guild. The meeting was called under the auspices of "An association to promote the higher education of working men" formed about twelve months ago, which seeks to forward its objects by the extension of University teaching and by (1) the development of an efficient school continuation system, and (2) the assistance of working-class efforts of a specifically educational character. The year's experience has convinced the promoters "that the association can do much to assist the development of education in England." They have called the attention of co-operators and trade unionists to the importance of higher education for the workers at many conferences and meetings, and they have kept the matter before the public through the press. They have enabled the University Extensionists and the workers to understand each other better; and they have promoted a better understanding of the work of the National Home-Reading Union, which, during the past year, has entered into alliance with the University Extension authorities. The following resolution, moved by Mr. W. Neild, President of the North-West Co-operative Educational Committees' Association (Oldham), and seconded by Mr. John Harker, President of the Manchester and Salford Trades Council, was passed:—

That the higher education of workpeople in the North-West of England will be best furthered by joint action on the part of the universities and working-class organizations; and that a Committee, consisting of representatives from the following bodies, with power to add to its number, be convened by the Association to promote the higher education of working men, and charged with the duty of making recommendations to a conference to be called hereafter:—The Universities of Manchester, Liverpool, Leeds, Oxford, and Cambridge, the North-Western Section of the Co-operative Union, the North-Western Co-operative Educational Committees Association, the Trades Councils of Manchester, Liverpool, and Leeds, the Manchester Ruskin Hall Committee, the National Union of Teachers, the National Conference of Friendly Societies, and the Women's Guild.

Mr. Neild said there was a deep and seething feeling among artisans of the desirableness of their being brought into closer touch with university teaching. He pointed out that at Oldham alone they had over one thousand students seeking technical instruction. Principal Dale, of Liverpool, also spoke, and Archdeacon Wilson urged the need of compulsory evening schools.

THE Education Committee of the Hertfordshire County Council has amicably settled a religious difficulty which has caused considerable friction between Churchmen and Nonconformists—the kind of religious teaching which should be given in the County Council schools. Some months ago, the Rev. Dr. T. C. Fry, Head Master of Great Berkhampstead School (a Churchman), and Prof. Owen Whitehouse, Principal of Cheshunt College (Nonconformist), were appointed a sub-committee to arrange a syllabus of instruction, together with prayers and hymns, and after considerable labour they drew up a careful syllabus setting forth a list of lessons for each standard. The following recommendations were embodied in the report:—

(1) The Bible shall be read, and such explanation and instruction in Christianity and morality given therefrom as are suited to the capacity of the children. (2) Any part of the Bible may be learnt by heart, in addition to the portions prescribed. (3) The lessons are to be as practical as possible, and especial pains should be taken by the teacher when teaching the Old Testament to show where by the teaching of Christianity we have in any case outgrown primitive religious views, and pictures should be used. (4) Working lists of lessons based upon the syllabus should be drawn up at the beginning of the school year by the head teacher of each school and submitted to the inspector of the County Council at the time of religious inspection.

The utmost simplicity in the teaching of little children was enjoined, such as the learning of the Lord's Prayer and Psalm xxiii., simple stories from Genesis, and the chief facts in the life of our Lord. A course of instruction was also mapped out for use in pupil-teachers' schools, and use of the recent results in archæology was recommended. Over a dozen prayers have been compiled for teachers to select from, and the hymns, from all sources, have been divided into two classes—for children and for infants.

THE Assistant Masters' Association *Circular* for October expresses in handsome and well deserved terms its congratulations to Mr. J. L. Holland on his appointment as Secretary for Education to the County Council of Northamptonshire:

The A.M.A. has had no more loyal and capable servant. For about ten years past he has sat on the Executive Committee. As a member of the Incorporation Committee he knew the ardours of those laborious days—and nights. He was Chairman of the Association in 1902, and in the *interregnum* between the rule of Mr. Rouse and of Mr. Mackness he did most of the duties of Secretary as well. In the same year he was appointed to the Registration Council, and became Vice-President of the Education Section of the British Association. For the last eight months Mr. Holland has been working with Prof. Sadler, assisting in the production of a series of valuable reports on the state of secondary education in counties and boroughs, and drawing up schemes for its better organization. His great powers of work, his mastery of detail, his grasp of essentials, his command of nervous and persuasive speech, his business talent, and a temper admirable alike in its force and its moderation, mark Mr. Holland as a man likely to be of service to the community as he has been to the A.M.A.

MR. P. A. BARNETT, Superintendent of Education in Natal, is returning to England presently. The following letter, handsomely engrossed and encased (Natal arms engraved in solid gold), has been addressed to him by the Natal Minister of Education:—

On the eve of your departure from Natal, the Government desires to express its regret that you have decided to relinquish your appointment upon the termination of the period for which you were seconded by the English Education Department for service in this colony.

Owing to your untiring efforts, the past two years have witnessed a great improvement in the educational condition of the colony. Your unique experience, conspicuous ability, and sound judgment, together with your profound knowledge of mankind, have enabled you to most successfully overcome the many difficulties incidental to the work of a reformer.

In the name of the Government, I have to express its deep appreciation of your work, and to wish you and Mrs. Barnett many years of health, happiness, and prosperity.

AT the annual presentation of prizes and certificates for the London Centre Examinations of Trinity College, London, Mr. A. W. Sebastian Hoare, Secretary for the Local Committee, said that 273 candidates were examined in Musical Knowledge in the year 1903–04, as against 223 in the previous year, and 68 Honours and 156 pass certificates were awarded. For practical examinations there were 1,036 entries—203 Seniors, 256 Intermediate, 301 Juniors, and 276 for the Preparatory Grade. The examiners awarded 877 certificates, 119 being for Honours. The total was 1,309 entries, as compared with 1,261 in the previous year. The Chairman (Rev. H. R. Wakefield, Mayor of Marylebone) congratulated the students upon the technical skill which the examinations disclosed, but reminded them that it was not merely for the acquisition of a certain facility in their art that they studied. In every singer and musician there should be an inspiration, a soul in harmony with human thoughts and aspirations. Dr. Turpin, the Warden of the College, spoke of the musical memories associated with that part of London, and mentioned that on part of the site of Trinity College Chopin once lived, and to that house Thackeray invited several of his literary friends to meet the composer and hear his latest compositions. In their progress as musical artists, students were called upon to do much for themselves. They must develop their sense of hearing. This was a strong point with Sir A. Sullivan, who said that sufficient attention was not given to details. In modern work, however complex, students should try to detect the difference of intervals and the different harmonic combinations.

PROF. FINDLAY writes suggestively in the *Morning Post* (October 14) on the most effective lines of "Research in Education." As to the difficulties to be overcome:

One obvious difficulty lies in the vast extent of the ground to be

Digitized by Google

covered. Setting aside the fundamental ethical inquiries involved in the purpose of national education, there are three principal fields, lying somewhat apart, each of which by itself could fairly demand the attention of a section [of the British Association]. First, there is the external task of the organizer and administrator, requiring a training and an equipment analogous to that of the student of political science; secondly, there is the internal work of professional practice; and, thirdly, there is the field of inquiry into child life, an example of which is being offered at this moment in the three years' programme of study published by the Extension Committee of the London University. This last field is one which will lend itself most readily to the scientific methods pursued in other sections of the Association, and the attention which is now being given to problems of hygiene and school equipment by medical men should be of service in the same direction.

But inquiry into methods of professional practice stands on an entirely different footing. An experiment, say, in modern language teaching requires to be conducted for at least two years; and, to be really effective, it should be carried on for four years before a scientific estimate of results can be reported. A group of scholars must receive continuous instruction under the specified conditions by the same group of teachers, and the results of the instruction must be regularly recorded and judged by independent authorities. These conditions are, obviously, very difficult to secure, and we have few examples in this country or abroad of any work which can be described as scientific in this sense.

A SUMMARY of the points is conveniently provided by Prof. Findlay himself:

(1) The recognition of education as a great national interest, apart from class distinctions or religious movements, carries with it the inevitable demand that the subject shall be handled on modern methods of scientific research. This research in the first instance concerns the teaching profession and the institutions where the teacher is trained, but it concerns also the nation at large, since so large a part of the community is interested not only as parents of children, but as taking a share in the control of schools.

(2) The British Association has responded to this demand for investigation, but since the subject is a theme of wide and popular interest there is a danger that the mode of handling it may degenerate below the high level of production demanded in other sections of that gathering.

(3) This danger is especially to be feared because so little work of a genuinely scientific character is being produced in this field; the conditions are onerous, and in what is perhaps the most important department (that of teaching) real scientific achievement is at present seldom to be expected.

(4) By way of clearing the ground, it seems important that a sharp division should be maintained between fields of inquiry which need to be approached from different standpoints and handled with different tools. In this matter a useful precedent may be sought in the organization of the National Education Association of the United States.

THE *Morning Post* concludes an article of comment on Prof. Findlay's contentions thus:

The first and most earnestly needed research is one that needs no scientific department. For the Board of Education, having laid down the conditions on which alone in future a young man or woman may be registered as a teacher, ought now to report what is the average pay of that profession, what the average number of hours' work a week, and what the prospects of an income on which to raise a family and of a pension on which to retire. It is not a question of making a schoolmaster's life worth living—a worker's life is always worth living to a man who loves his work—but it is a question of whether or not, as things are at present and in the long run, he can live at all. Unless the Board of Education can raise the pay of the teachers—at any rate, in secondary schools—the national system of education will collapse for want of the men to work it.

THE Cornwall County Education Authority, in a circular just issued to the District Committees, states that the growing scarcity of assistant teachers and the great difficulty of maintaining the teaching strength of the county at the proper level, are causing the County Authority the gravest anxiety. It seemed difficult to devise any means for grappling with the problems. The Educational Authorities could not go on indefinitely raising salaries in an undignified competition for the scanty supply of teachers which the county afforded at present, and for the immediate future the outlook was positively disquieting. The District Committees were asked to encourage promising children to adopt the teaching profession.

THE Duchess of Sutherland's Technical School at Golspie has just been opened with the first twenty-five bursars selected, and keen expectation has been excited for improvement of art and industry in the Highlands. The Duchess wisely consulted a variety of practical authorities, and indefatigably raised the necesssary funds. The Duke gave a free site, land for experimental plots, and £8,000 to the building fund, Dr. Carnegie £5,000 for buildings, and Lord Strathcona £1,000 for equipment. Bursaries of the annual value of £30 each have been guaranteed by the Duke and Duchess of Sutherland, the Duke of Portland, the Duke of Westminster, Mrs. Carnegie, Mr. James Coats (Paisley), some Highland County Councils, Highland Associations, and others interested in the North. We learn nothing about the teachers, or about the particular cast of the teaching, but we dare say that has all been satisfactorily arranged.

MR. JOHN DILLON told a meeting at Ballaghadereen, Mayo (October 8), that there were two reasons why the equivalent grant had not gone to the schools of Ireland. One was the new system of finance which had been cautiously and carefully introduced into Parliament, whereby all the savings in Irish administration went into a common pool called the development grant, with the result (to use an American expression) that whoever had the greatest pull got the first call. The second reason was that there had been going on behind the scenes for the last few years a deep-laid plot to revolutionize in an anti-national and anti-Catholic spirit the whole system of education in Ireland. On April 18 last Mr. Wyndham, in a debate in Parliament, clearly revealed the open and avowed policy of the Government to be to take the schools from the control of the Roman Catholic priests, and to turn them into a department of the British Government in this country. The argument used was that because the system of popular control —which was really not popular control, but in the hands of a Department—had been accepted by the bishops and priests of Ireland, and by the public of Ireland, in regard to technical instruction, it should be accepted in regard to primary instruction. There had also been built up in Dublin a plan for defeating the demand for a national university, which seemed to him the greatest danger they had to face. The College of Science, until recently an unknown institution in Stephen's Green, largely attended by English students, and with an attendance from Ireland of thirty or forty, had been taken up by Sir Horace Plunkett, who had obtained a grant of nearly £200,000, and was now constructing a place in Dublin of enormous proportions and equipped in the most magnificent style. It was not going to be a College of Science, but a great scientific university. In what respect did this new scientific university of Dublin differ from the Queen's Colleges from the point of view of nationality and religion? It was much worse than the Queen's Colleges. It was far and away more godless; it was staffed mainly by Protestants, and largely by English and Scotch Protestants, and religion had no place at all within its walls. If that was to be the great scientific university of Ireland, where was the room for that great centre of national thought and culture, which, if it were genuinely national, must be Roman Catholic, because the nation was Roman Catholic? In two or three years this would be used as a formidable answer in Parliament to the demand for a Roman Catholic University. He recommended the bishops and laity to adopt a fighting policy, and warmly support the National Party.

WILLIAM OF WYKEHAM, who died five hundred years ago on September 27, is remembered (says the *Speaker*) with more piety and gratitude perhaps than any other great man in our history—not because he was a great architect and statesman, but because he founded two colleges, the members of which, whatever the reason may be, are prouder of being Wykehamists than of any other distinction they may be born with or acquire. To the rest of the world Wykeham is a mere name, like that of any other great mediæval ecclesiastic or founder of colleges. To the Wykehamist he is the greatest man in history, the all-father, the inspired and only begetter of the most venerable and eternal institution in England. It is easy for those who are not Wykehamists to laugh at this cult, but it is not a small thing to have founded colleges which, for five hundred years, have preserved so intense a piety for their founder, and which remain a link between the mind of the Middle Ages and the mind of the modern world. Winchester and New College were the first real colleges in England. The Oxford colleges founded before them were mere inns, as it were, in which students lodged. The first students at Winchester and New College were Wykehamists, members of a great independent community, with its own laws and character, and that character has endured with extraordinary

Digitized by Google

permanence. Wykeham, in fact, was the real founder of the English public school and the English university as they are now.

A NEW technical university was opened at Danzig with great ceremony by the Kaiser (October 6). His Majesty made a long speech emphasizing the value of technical education and the fact that "the unexpected development of German technics in all directions since the beginning of the era of railways we owe not to chance discoveries and fortunate ideas, but to serious work and to systematic teaching based on the firm foundation of science given in our universities. The new university has been built by the State at a cost of £350,000 on land presented by the city of Danzig. It will have six Faculties—Architecture, Building Engineering and Machine Engineering, Chemistry, General Science, and Shipbuilding.

THE old boys of Merchant Taylors' will hear with regret of the death of Mr. Frederick Vialls, for forty years mathematical master, in his seventy-fourth year. Mr. Vialls was much more than a mathematician: he achieved reputation in art and in music. As a violinist he took part in the first Handel Festival, and as a water-colour artist he won the gold medal at the exhibition at South Kensington in 1874 with a drawing of Beachy Head.

THE Alexandria correspondent of the *Westminster Gazette* reports that an ancient mosque in that city has been acquired by a wealthy Mussulman merchant, who intends to transform the building into a Mohammedan University on the model of the University of Al-Azhar in Cairo. Alexandria would thus resume to some degree its place among the seats of learning in the world, in which two thousand years ago it stood pre-eminent.

UNIVERSITIES AND COLLEGES.

(*From our own Correspondent.*)

Oxford.

THOUGH the term is only (at the moment of writing) a week old, and therefore university business has not really begun to trouble, yet there are always points of interest connected with the beginning of a new academic year, and this year the advent of the Rhodes Scholar has added one more.

In the first place, as in duty bound, we must record the admission of Dr. Merry, of Lincoln, as Vice-Chancellor. In physique and voice he makes a remarkable contrast to the outgoing Vice, Dr. Monro, who, however, though he came from Oriel (a college to which Mr. Cecil Rhodes did not attribute much business knowledge), has shown that he possesses very respectable administrative faculties. He had the rare reward of being made a D.C.L. at the hands of his own Chancellor and in the company of a gathering of really remarkable men. There was a fear that Dr. Merry's acceptance of the office of Vice-Chancellor would entail his resignation of that of Public Orator, a position for which he is so peculiarly well fitted. But we have escaped from this misfortune, and a Deputy Orator is to fill Dr. Merry's place until the termination of his term of office.

The mention of the Vice-Chancellor necessarily leads us to deplore the illness of a recent holder of the dignity, the President of Corpus. He had a serious attack of illness at the beginning of the term. Although the latest bulletins show that he has rallied somewhat, yet there is no doubt that he is in a very critical condition.

The freshmen this year number 810, if the published details are accurate. New College comes first with 59, then Christ Church 56, Keble 54, and Magdalen 49. If we omit "the halls," Corpus has the smallest entry, *i.e.*, 18. Among the freshmen are over seventy Rhodes Scholars, distributed, more or less unevenly, among the various colleges, though none appear in the published lists of Corpus or Jesus. Worcester apparently holds the record with seven.

There seems, if we may judge from the article by Mr. Parkin in the *Times*, to have been some doubt in the United States whether the scholars sent should correspond in age to the ordinary freshmen of home growth or whether the conditions of Mr. Rhodes's bequest and scheme would be best met by sending men of rather more mature years. The second alternative has been adopted, and there is no doubt that the Rhodes scholars are somewhat senior freshmen. We fail to see that this is a disadvantage; and, further, we are inclined to hold that the British parent, in the desire to get his son started in life, is now rather apt to send him up a year too early. So far as we can judge, Oxford has taken the invasion good-humouredly, and, indeed, pronounces it a success. This is perhaps not surprising when we consider that the scholars have been selected on other grounds than "mere scholarship"; indeed, we read in a recent number of the journal published at Yale considerable criticism on the elementary nature of the examination required of the candidates. Yet even then there were those who failed! As a matter of fact, the standard was approximately that required for "Smalls," and, if we bear in mind the age of the candidates, it is a minimum test. Under present conditions there are not many Oxford colleges who will admit candidates without a matriculation examination in addition to "Smalls," though almost all accept a Senior Certificate of the Joint Board, provided it includes Latin, Greek, and elementary mathematics, as exempting from matriculation, in addition to the exemption which it officially gives from "Smalls." It is probable, therefore, that another year, if the candidates are still to be men who have done two years' university work elsewhere, the standard of examination will be raised without injustice either to the candidates or to Oxford. The new arrivals have entered with plenty of zest into our games: one of them—an Australian—appeared with credit in the first Rugby match against the London Scottish, while Schutt, late of Cornell and now of Brasenose, is a distinguished runner.

We have up here once more been engaged in the compilation of details of the recent Home and Indian Civil Service competition. The year has been a veritable triumph for Oxford, which claims not only forty-six out of the whole eighty-seven successful candidates, but—a more remarkable achievement—ten of the first twelve. Of the forty-six New College produced five; Balliol, Hertford, and Trinity four each. There are two "Blues"—Hutchison (Rugby football) and Brinsley Richards (athletics). The competitors this year were of more level merit, if we may infer this from the fact that the first man was credited with 157 marks *less* than the first last year, while the last successful this year obtained 172 *more* than the last of 1903.

Those who wish to study Previous performances and estimate the value of Firsts in Mods. and Greats can find much food for reflection in the details which the *Oxford Magazine* will probably have produced before these lines see print. Firsts in Mods. with Seconds in Greats, and Seconds in Mods. with Firsts in Greats, seem as successful as two Firsts. Of course a Second in Greats may have been the symptom of the fact that a man was devoting more time to his Civil Service than his University examination. If an injustice is thereby done to the University, it ought to be removed when the new scheme by which the standard of age for the Indian Civil Service is raised a year comes into operation.

We have two new Professors. Dr. Osler, however, the Regius Professor of Medicine, will not be in residence, we hear, till the Easter term. His appointment has given universal satisfaction, and has put an end, we hope, to the somewhat undignified dissensions in the Medical School as regards the Professorship. The other new Professor, Mr. Raleigh, is already in residence, and by his stature recalls the days of the "Magdalen giant."

Among recent Fellowship appointments the success of old Wykehamists is striking: Mr. Zimmern at New College, Mr. Moberly at Merton, Mr. Thompson at Magdalen, and Mr. Temple (son of the late Archbishop) at Queen's.

The University football teams began their season on October 22, and in each case with a victory, the Rugby Fifteen defeating the London Scottish, and the Association Eleven Oxford City.

(*From our own Correspondent.*)

Cambridge.

RESIDENTS who returned to Cambridge in the Long Vacation found it swept and garnished, but not exactly empty; the British Association filled up every available nook and cranny, and the picnic was thoroughly enjoyed by all who attended. The leaders of our scientific circles generously returned from their summer holiday to entertain, and in some cases to amuse, the cosmopolitan crowd of guests who demand and receive the hospitality of the resident members of the Association. Mr. Seward and Mr. Heycock carried out their duties of organization in a remarkably thorough manner, and earned many thanks for their self-sacrificing endeavours.

The University Extension meeting at Exeter was also a grand success. It was a happy idea to choose Devonshire as the place for the wise men from the East to confer together, and many came back with a sorrowful conviction that our predecessors made a mistake in settling down on the banks of the muddy

Digitized by Google

Cam instead of by the brawling Exe. Mr. Cranagé, the genial Secretary of the Local Lectures Syndicate, was very much to the front, and the movement has received a fresh impetus. Anything is to be welcomed which shows the outside world that there is life in the old place.

With a view to reduce the number of examinations a scheme has been formulated for the mutual recognition of elementary examinations by the Universities of Oxford, Cambridge, and London. This is as it should be. The candidate who rides at the weak spot in the fence will not be able to take much advantage out of the new scheme, which at first sight appears a sound attempt to eliminate unnecessary examinations.

Dr. Morgan, Master of Jesus, is still lying seriously ill in Morayshire, and, though the latest reports are more hopeful, it will be some time before the distinguished invalid can be among us again. "Black Morgan" (as he is distinctively called) has devoted himself heart and soul to the interests of his college from his freshman's year to his mastership; it was his doing which raised Jesus to the unique position which it held twenty years ago; for thirty years he simply has been the college. Old Jesus men will wish him a speedy and complete recovery, a wish which every Cambridge man will share.

The loss of Mr. Ronald Hudson by a mountaineering accident in Wales deprives St. John's of one of its ablest men. A quarter of a century ago Prof. Balfour's death, since then Prof. Hopkinson and Mr. Clay—surely Cambridge has sacrificed enough to this form of adventure.

The arrangements for conducting the military education of our Army candidates are almost complete. Put briefly, the University candidate will have to take his degree to show he knows something; he will have to be attached for three months to a military unit, to show that he can do something; and he must pass an examination in military subjects, to show that the University can teach him something. Then he will be selected by a board of University men, who will consider him from all points of view—mental, moral, and physical. When his hair is getting grey, and he is weary of work, he will be gazetted, and learn the goose step. The curious part of the scheme, as at present foreshadowed, is that a candidate may be attached to a regiment, though there is absolutely no provision that he should even know the elements of drill. In time the thing may work well, but the Syndicate in charge does not look very strong on paper.

Dr. Chase, President of Queens', has resigned the Vice-Chancellorship, and devotes the first fruits of his leisure to acquiring the game of golf, winning the Captain's prize at Royston, with the creditable score of two up to bogey, and giving promise of many like successes in the future.

Mr. Beck, the incoming Vice-Chancellor, is too well known and popular a man to need mention in these notes. It is very good of him to give the University some of the care and attention which f or years he has lavished upon his boys, or what is usually known as Trinity Hall.

Trinity has distinguished itself in the selection of Fellows, Dr. Lapsley, of Harvard, being one of the fortunate ones. Three Scotchmen and one Englishman complete the tale.

Our football team has been badly defeated by Richmond, but, for all that, is likely to turn out quite one of the best sides we have had for years. The golf club is ensnaring fresh recruits, as the popularity of the game outside is reflected here. Our rowing prospects never were rosier; and, in the competent hands of the present ruling body, a good crew should be the result.

The entry of freshmen is up to the average, but the shortage in the Medical School increases. The deficiency is entirely at the lower end, but the pecuniary question cannot in this case be disregarded.

The man without a hat is now quite safe in our streets.

London. THE University of London has just issued its list of University Extension courses arranged for the present session. In addition to the Central Courses given in the University itself, at South Kensington and Gresham College, and University College, courses have been arranged in every quarter of London, in all about seventy courses, covering a wide range of subjects. Some of the courses, like those on General History by Dr. Reich at the University and at Gresham College, form part of a three years' course of work in the Humanities under the scheme of continuous work adopted by the Senate last year. One of the most interesting courses in the session will be that on "The Evolution of Mankind as seen in the Child and the Race," to be given at University College on Monday evenings. The first year's work will consist of five lectures by Dr. Chalmers Mitchell, on General Biology, to be followed by ten lectures on Anthropology by Dr. Westermarck and a further ten on Animal Psychology by Prof. Lloyd Morgan. These lectures are specially designed for teachers, but will be of interest to all.

In the Department of History will be included, amongst others, the following interesting courses:—"The Local History of the South-Eastern Counties," at Beckenham, and "The History and Antiquities of Surrey," at Croydon, by Mr. Malden; "Social and Industrial England," at Ealing and Erith, by Dr. Holland Rose; "Japan and China," at Streatham and Sutton, by Mr. Ernest Foxwell. In the Department of Literature, "Greek Tragedy and some of its Masterpieces," by Mr. Churton Collins, at the Regent Street Polytechnic; "Dante," by Mr. P. H. Wicksteed, at the City of London College, Barnet, and Upper Holloway; "Social Forces in Nineteenth-Century Literature," by Mr. W. H. Hudson, at Woolwich and other centres; "Life and Literature of the Nineteenth Century," by Dr. Rickett, at Toynbee Hall and Muswell Hill. In Art, Mr. Gaskell will lecture on "Umbrian and Venetian Painters," at Bromley; and Mr. Arnold Mitchell on English Architecture, at Chislehurst. In the Department of Science, Prof. Vivian Lewes will give a course at Balham, New Cross, and Rotherhithe on the "Chemistry of Air, Fire, and Water"; Dr. Fison will lecture on "Great Discoveries in Science," at Gresham College; and Prof. Bottomley will give a course, at Hammersmith, on "Recent Researches on Bacteria in relation to Life." In the Department of Economics, Mr. Alfred Milnes will give courses at the Regent Street Polytechnic, the City of London College, and Battersea; while at Canning Town a special course on "Problems in the Life and Labour of the People," will be delivered by Mr. J. Hartmann Morgan. At various pupil-teacher centres lectures on "The Aims and Methods of Geographical Study" will be given by Mr. Chisholm and Mr. Andrews. Most of the courses will be delivered in the evening, and the fees are sufficiently low to bring them within the reach of every one.

At a general meeting of Convocation (October 11) the following resolution was passed:—"That Convocation desires to point out to the Senate that the graduates now qualified, but not registered, as members of Convocation number upwards of four thousand, and to suggest the issue to those graduates whose addresses can be traced of an invitation to join Convocation, accompanied by a statement of the advantages thereof." Convocation numbers about 5,300 members. Among "the advantages thereof" is a vote for the M.P. for the University, for the Chancellor, for the Chairman of Convocation, and for sixteen members of Senate.

Leeds. THE inauguration ceremony took place on October 6, when honorary degrees (announced in our last issue) were conferred on a number of persons distinguished in various walks of life.

Aberystwyth. THE two hundred undergraduates at the University College of Wales, Aberystwyth (says the *Daily Chronicle*), have adopted a remarkable self-denying resolution. By the rules of the college, students of both sexes attend the same lectures, and survive the same examinations, but for several sessions past the Senate has forbidden the men students to speak outside the college walls to their fair fellow-students. A ten minutes' *tete-à-tête* was allowed between lectures, but recently even that short interval was curtailed, and now the proctor's bell tolls the parting knell at seven minutes past the hour. The irony of this curious social situation is heightened by the fact that the ladies are at liberty to accompany any ex-student or country cousin along the seaside promenade or through the town. For some mysterious reason, however, girl undergraduates have this session taken a hair out of the senatorial dog that bit them. They convened a general meeting at the Alexandria Hall hostel, where they passed a resolution to have no social intercourse outside the college boundaries with any man whatsoever! The young gallants of Aberystwyth are curious to know how long this feminine boycott will prevail.

St. Andrews. PRINCIPAL DONALDSON, in an inaugural address, spoke on the reconstruction of the Arts course, referring particularly to the question raised by the Senatus of the University of Glasgow three years ago, that the academic year should consist of three terms, and

Digitized by Google

not (as at present) of one winter session and one summer session. The success of the system in Germany seemed to indicate the line that the Scottish Universities should take. A distinction should be drawn between studies that were preparatory to scientific research. These preparatory studies could not be carried out by their schools as they were in Germany, where the pupils remained till they were nineteen or twenty. Therefore they must bring some of them within the universities. The subject was a very large one, and many years might elapse before it took practical shape.

Dundee. The Council in their annual report state that the statistics for the year were the most satisfactory yet presented to the Governors. The attendance reached 208, as compared with 184 in the previous session. Within seven years (from the restitution of the union with the University in 1897) the figures had risen by regular annual increments from 84. Evening classes in subjects of general culture continue to be offered by the College, but for some years past the attendance had been gradually declining. While, doubtless, there were subsidiary causes, the main reason for the falling off was to be found in the largely increased facilities for day study. The Training Department for Teachers continues to make excellent progress. In the session recently completed (the fourth since the inception of the work) there were 64 students in attendance, an advance of 12 upon last year.

THE ST. LOUIS DECLARATIONS.

WHAT THE AMERICAN TEACHERS THINK.

The American National Educational Association at its annual Convention, held at St. Louis on July 1 last, adopted the following Declaration of Principles :—

1. We cannot emphasize too often the educational creed first promulgated more than a century ago that, "religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall for ever be encouraged." This declaration of the fathers must come to us now with newer and more solemn call when we remember that in many parts of our common country the fundamental questions of elementary education—local taxation, consolidation of weak schools, rational supervision, proper recognition of the teacher as an educator in the school system, school libraries, and well trained and well paid teachers—are still largely unsettled questions.

2. We would direct attention, therefore, to the necessity for a supervisor of ability and tact for every town, city, county, and State system of public schools. Not only are leaders needed in this position who can appreciate and stimulate the best professional work, but qualities of popular leadership are also demanded to the end that all classes of people may be so aroused that every future citizen of the Republic may have the very best opportunity for training in social and civic efficiency.

3. The very nature of the teacher's task demands that that task be entrusted only to men and women of culture and of intellectual and moral force. Inadequate compensation for educational work drives many efficient workers from the schoolroom, and prevents many men and women of large ambition for service from entering the profession. It is creditable neither to the profession nor to the general public that teachers of our children, even though they can be secured, should be paid the paltry sum of 300 dols. a year, which is about the average annual salary of teachers throughout the country.

4. The Bureau of Education at Washington should be preserved in its integrity, and the dignity of its position maintained and increased. It should receive at the hands of our lawmakers such recognition and such appropriations as will enable it not only to employ all expert assistance necessary, but also to publish in convenient and usable form the results of investigations: thus making that department of our Government such a source of information and advice as will be most helpful to the people in conducting their campaigns of education.

5. We would emphasize the necessity for the development of public high schools wherever they can be supported properly, in order that the largest number possible of those who pass through the elementary grades may have the advantage of broader training, and for the additional reason that the public elementary schools are taught largely by those who have no training beyond that given in the high school.

6. As long as more than half of our population is rural, the rural school and its problems should receive the solicitous care of the National Educational Association. The Republic is vitally concerned in the educational development of every part of its territory. There must be no forgotten masses anywhere in our Union of States and Territories, nor in any one of its dependencies.

7. We believe that merit and merit alone should determine the employment and retention of teachers; that, after due probation, tenure of office should be permanent during efficiency and good behaviour; and that promotions should be based on fitness, experience, professional growth, and fidelity to duty. We especially commend the efforts that are being made in many parts of the country whereby teachers, school officials, and the general public working together for a common purpose are securing better salaries for teachers and devising a better system for conserving the rights and privileges of all and for improving the efficiency of the schools.

8. We declare further that, granted equal character and efficiency, and equally successful experience, women are equally entitled with men to the honours and emoluments of the profession of teaching.

9. We advocate the enactment and rigid enforcement of appropriate laws relating to child labour, such as will protect the mental, moral, and physical well-being of the child, and will be conducive to his educational development into American citizenship.

10. The responsibility for the success or failure of the schools rests wholly with the people, and therefore the public schools should be kept as near to the people as practicable; to this end we endorse the principle of popular local government in all school matters.

11. Since education is a matter of the highest public concern, our public-school system should be fully and adequately supported by taxation; and tax laws should be honestly and rigidly enforced both as to assessments and collection.

12. We congratulate and thank the management of the Louisiana Purchase Exposition for giving education first place in the scheme of classification, for the location and grandeur of its building, and for the extent and arrangement of the educational exhibits. Such recognition of education is in harmony with the genius of our democracy and will stimulate interest in popular education throughout the world.

THE TEACHERS' REGISTER.

MODIFICATION OF REGULATIONS.

An official Addendum to Statutory Rules and Orders, 1903 (No. 384, as amended to March 1, 1904), announces that the Board of Education "approve the regulations framed by the Consultative Committee on February 25, 1904, modifying and altering the regulations for the formation and keeping of the Register of Teachers." Regulation 2 is altered so as to read:

2. A person shall be entitled to be placed on Column B of the Register of Teachers if he satisfies the Registration Authority that he fulfils the conditions set forth in Regulation 3; or, if he applies at any time within *four* years from the establishment of the Registration Authority to be placed on Column B of the Register, and satisfies the Registration Authority that he fulfils the conditions set forth in Regulation 4.

"Four" years, instead of "three." Further, "Oxford Pass Examination for Women" has been added by the Board of Education to Appendix B. Moreover, the following schools have been recognized by the Board of Education for the purposes of the regulations mentioned in each case :—

Regulation 3 (2) (ii.).

London: Convent of the Sacred Heart, Roehampton.
" Streatham Hill and Brixton High School.
Liverpool: High School, Belvidere Road.
" East Liverpool High School.
Reading: Leighton Park School.

Regulation 3 (2) (iv.).

Long Eaton: Trent College.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A meeting of the Council was held at the College, Bloomsbury Square, on October 15. Present: Mr. E. A. Butler, Vice-President, in the Chair; Prof. Adams, Mr. Armitage Smith, Mr. Barlet, Mr. Baumann, Rev. J. O. Bevan, Rev. J. B. Blomfield, Rev. A. W. Boulden, Mr. Bowen, Mr. Charles, Mr. Easterbrook, Mr. Eve, Miss Jebb, Mr. Kelland, Rev. G. E. Mackie, Mr. Millar Inglis, Bishop Mitchinson, Mr. Morgan, Mr. Pinches, Miss Punnett, Mr. Rule, Mr. Starbuck, Mr. Storr, Rev. J. Twentyman, Mr. Vincent, and Mr. Walmsley.

The minutes of the last meeting were read and confirmed.

Diplomas were granted to the successful candidates at the September Diploma Examination. (For list, see page 479.)

The Rev. J. O. Bevan and Dr. Newsholme were appointed to represent the College at a Conference on "School Hygiene" to take place in February, 1905.

Mr. Eve was appointed to represent the College on the Education Council of the League of the Empire.

The report of the Finance Committee was adopted.

The report of the Examination Committee was adopted.

Digitized by Google

An interim report was received from the Committee appointed to inquire into the position of private schools under the working of the Education Act of 1902.

Dr. J. D. McClure, M.A., Head Master of Mill Hill School, was elected a member of the Council.

The following persons were elected members of the College:—

Mr. F. A. Sibly, M.A., LL.D. Camb., Haywardsfield, Stonehouse, Glos.

Rev. R. D. Swallow, M.A. Camb., Grammar School, Chigwell.

The following books had been presented to the Library since the last meeting of the Council:—

By the AGENT-GENERAL FOR NEW SOUTH WALES.—Coghlan's Statistical Account of Australia and New Zealand, 1902-3.

By the CAMBRIDGE UNIVERSITY PRESS.—Eve's Hugo's Les Burgraves; Summers's Tacitus' Histories, Book III.

By HACHETTE & Co.—Thémoin's French Lessons on the Gouin Method, Vol. II.; Weiss's Hauff's Die Geschichte Almansors.

By MACMILLAN & Co.—Hall and Stevens's School Geometry, Part VI.

By METHUEN & Co.—Beard's Easy Exercises in Arithmetic.

By the OXFORD UNIVERSITY PRESS.—Ramsay's Exercises in Latin Prose, Part III., Syntax.

Calendars of St. Andrews University, Birmingham University, Leeds University, and Queen's College, Cork.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—ED. *E.T.*]

LORD MACAULAY AND GERMAN THEORIES.

To the Editor of "The Educational Times."

SIR,—In his "Journal" Lord Macaulay writes: "I deem the refutation of German theories the final cause of my life." That has been done without him, and we have the "History of England" instead. The best place now for German theories is the bottom of the *German* Ocean.

In Napoleon's time a wise and witty Frenchman said: "The English are the rulers of the sea, the French of the land, the Germans of the *air*."

A German himself, Lessing, a truly great critic, had the capacity to see and the courage to say: "No man can be a *great* fool without a *little* Latin." The modern foreign theorist, Zumpt, Latin Professor in Berlin University, wrote in his "Grammar" (Longmans, 1848): "Cicero's Latin is here faulty"!!!

Cicero wrote: "Ego qui *verser* [subj.] in judiciis," "I who engage in trial after trial" ("De Div.")—a *fact*, not a "conception," *direct, definite, absolute*; of course, an *important* fact.

Ovid, who wrote as good poetry as Cicero did prose, writes:

Ille ego, qui *fuerim* tenerorum lusor amorum,

"I that was the sportive bard of tender loves" ("Ep. Pont.")—another *fact, direct, definite, absolute*; of course, an *important* one.

Dyscolus, so called from having a tongue like a tomahawk and a temper like a rat-trap, called the mood *hypotaktikus*, which means *imperativus*, not "subordinate."

Priscian (Constantinople, A.D. 500), a good man, but bad grammarian, wrote a mountain mass of melancholy and mischievous nonsense about the most exquisite organ of expression through which the mind of man has contrived to breathe the music of eloquence and song. Macaulay saw whence it had come.

Such cunning they who dwell on high have given to the Greek.

—I am, Sir, &c.,
GAVIN HAMILTON.

Gattonside, Melrose, *October* 19, 1904.

MR. AVELING'S STATISTICS.

A correspondent points out that Mr. Aveling's statistics (cited last month, page 426) are based on misreading of the 1897 Blue-book (page 13). Mr. Aveling's error "lies in applying the figures for 'mixed schools' (which form about 16 per cent. of the whole number of schools and contain about 14 per cent. of the pupils) to the whole number of schools and pupils."

NOTE.—In reply to several correspondents, copies of Signorina Bambacioni's paper on "Voice Production" may be obtained from the Town Clerk, Town Hall, Folkestone (2d. each and postage).

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,194,485. Annual Income, £398,982.

Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

REGISTRATION FOR SECONDARY DAY AND EVENING SCHOOLS.

A Copy of FORM 487.

From the Supplementary Regulations issued by the Board of Education, South Kensington.

PRINTED ON SUPERFINE PAPER.

UNBOUND. Published Price per Dozen, 3s.

IN BOOK FORM. In Stout Cover, Published Price, 8d. each.

THE GEOGRAPHY IS IN USE AT WELLINGTON COLLEGE.

TEXT-BOOKS FOR HIGHER SCHOOLS.

Edited by Rev. C. S. DAWE, late of St. Mark's College, Chelsea.

Specially prepared for the Oxford and Cambridge Preliminary and Junior Local Examinations and Candidates for Minor Scholarships, &c.

The Series consists of the following books:—

ARITHMETIC. Small amount of **Theory**, large amount of **Practice.** Worked-out **Examples** for each step. Prominence given to the **Metric System. Laboratory Exercises** in a special section.

GEOGRAPHY. Physical facts made the basis of **Political. Commercial** aspects kept constantly in view. **British Empire** fully treated. **Many Coloured Maps and Diagrams.**

ENGLISH GRAMMAR. Example made the basis of instruction. **Analysis** introduced **early.** Aids to **correct speaking** a prominent feature. Plenty of scope given for "practice."

ENGLISH HISTORY. Contains landmarks of our national history. More than usual attention given to the last three centuries.

The **Growth** and **Greatness** of the **Empire** specially considered.

PUBLISHED AT ONE SHILLING EACH.

Specimens gratis on application.

Prize Distribution,

CHRISTMAS, 1904.

The Educational Supply Association

HAS NOW IN STOCK

AN IMMENSE ASSORTMENT OF

REWARD BOOKS,

for the selection of which its greatly enlarged show-rooms afford every facility.

PRIZES. *Bound in Morocco.* *Bound in Calf.* *Bound in Paste Grain.* *Bound in Cloth.* PRIZES.

The Association, having purchased a great number of selected books at much under the usual prices, is offering them at special prices.

MEDALS. GOLD, SILVER, BRONZE, TO SUIT ALL PURPOSES, AT VARIOUS PRICES.

Mathematical Prizes, Instruments, &c., &c.

Catalogues now Ready—

(1) **CLOTH BOUND VOLUMES,** (2) **LEATHER BOUND VOLUMES,** Both of which will be sent post free on application.

MACMILLAN & CO.'S LIST.

EIGHTH EDITION, REVISED, WITH A CHAPTER ON GRAPHS.

ELEMENTARY ALGEBRA FOR SCHOOLS.

By **H. S. HALL, M.A.**, and **S. R. KNIGHT, B.A.** Globe 8vo, **3s. 6d.** With Answers, **4s. 6d.** Answers, **1s.**
*** **KEY**, containing full Solutions, with Diagrams of the Graphical Examples. **8s. 6d.**

AN ELEMENTARY TREATISE ON GRAPHS.

By **GEORGE A. GIBSON, M.A., F.R.S.E.**, Professor of Mathematics in the Glasgow and West of Scotland Technical College. Globe 8vo, **3s. 6d.**

NEW AND REVISED EDITION.

PHYSIOGRAPHY. An Introduction to the Study of Nature. By T. H. HUXLEY. Revised and partly Rewritten by Prof. R. A. GREGORY. With 301 Illustrations. Globe 8vo, 4s. 6d.

School World.—"Will be cordially welcomed, not only as a notable addition to educational literature, but also as a worthy tribute to the memory of a great man."

ENGLISH CLASSICS. New Vols.

WILLIAM PITT. By Lord MACAULAY. With Introduction and Notes by R. F. WINCH, M.A. Globe 8vo, 2s.

SELECTIONS FROM WORDSWORTH. Preceded by LOWELL'S "Essay on Wordsworth," and Annotated by H. B. COTTERILL, M.A. Globe 8vo, 2s.

SIEPMANN'S ELEMENTARY FRENCH SERIES. New Vols.

MONSIEUR PINSON. Par LUCIEN BIART. Adapted and Edited by OTTO SIEPMANN. Globe 8vo, 2s.

LES MÉSAVENTURES DE JEAN-PAUL CHOPPART. Par LOUIS DESNOYERS. Edited by L. VON GLEHN, M.A., Modern Language Master at Perse School, Cambridge. Globe 8vo, 2s.

Word and Phrase Books to same. Globe 8vo, sewed, 6d. each.
Keys to same. Globe 8vo, 2s. 6d. net each.

PART I. NOW READY.

NEW FRENCH COURSE

For Schools. Based on the Principle of the Direct Method, combining the Practical Use of the Living Language with a Systematic Study of Grammar. By CHARLES COPLAND PERRY, New College, Oxford, Dr.Phil. Marburg, Prussia, and Dr. ALBRECHT REUM, Oberlehrer am Vitzthum-schen Gymnasium, Dresden. Part I., with an Introductory Chapter on French Pronunciation. Crown 8vo, 1s. 6d.

FLORILEGIUM TIRONIS GRAECUM. Simple Passages for Greek Unseen Translation, chosen with a view to their Literary Interest. By RONALD M. BURROWS, Professor of Greek in University College, Cardiff, and W. C. FLAMSTEAD WALTERS, Professor of Classical Literature in King's College, London. Crown 8vo, 4s. 6d.

AN ABRIDGED HISTORY OF GREEK LITERATURE. By ALFRED CROISET and Prof. MAURICE CROISET. Authorised Translation by Prof. G. F. HEFFELBOWER, A.M. 8vo, 10s. 6d. net.

New Works on Geometry to meet the New Requirements.

A NEW GEOMETRY FOR SCHOOLS. By S. BARNARD, M.A., Assistant Master at Rugby School, late Fellow and Lecturer at Emmanuel College, Cambridge; and J. M. CHILD, B.A. Cantab., Lecturer in Mathematics, Technical College, Derby. Crown 8vo, 4s. 6d.

A NEW GEOMETRY FOR JUNIOR FORMS. By S. BARNARD, M.A., and J. M. CHILD, B.A. Cantab. Crown 8vo, 2s. 6d.

*** This volume contains all the Practical and Theoretical Geometry required for a pass by Junior Candidates in the University Locals.

A NEW GEOMETRY FOR SENIOR FORMS. By S. BARNARD, M.A., and J. M. CHILD, B.A. Crown 8vo, 3s. 6d.

PART IV. JUST PUBLISHED.

THEORETICAL GEOMETRY FOR BEGINNERS. By C. H. ALLCOCK, Senior Mathematical Master at Eton. Parts I., II., III., and IV. Globe 8vo, 1s. 6d. each.

PRACTICAL GEOMETRY FOR BEGINNERS. By V. LE NEVE FOSTER and F. W. DOBBS, Assistant Masters at Eton College. Crown 4to, 2s. 6d.

PRACTICAL EXERCISES IN GEOMETRY. By W. D. EGGAR, M.A., Assistant Master at Eton College. Revised Edition, with Answers. Globe 8vo, 2s. 6d.

PART VI. JUST PUBLISHED.

A SCHOOL GEOMETRY.

By **H. S. HALL, M.A.**, and **F. H. STEVENS, M.A.** Crown 8vo.

This work is based upon the recommendations of the Mathematical Association, and will be found to satisfy the requirements of University, Local, London Matriculation, Army, Navy, and other Examinations. In particular, the suggestions recently proposed by the Cambridge Syndicate have been carefully considered.

Parts I. and II.—Part I., LINES and ANGLES, RECTILINEAL FIGURES. Part II., AREAS OF RECTILINEAL FIGURES (containing the Substance of Euclid, Book I.). 1s. 6d.
Part III.—CIRCLES (containing the Substance of Euclid, Book III., 1-34, and part of Book IV.). 1s.
Parts I., II., and III. 2s. 6d.
*** This volume exactly suits the requirements of the New Syllabus for the King's Scholarship Examination.
Part IV.—SQUARES AND RECTANGLES, GEOMETRICAL EQUIVALENTS OF CERTAIN ALGEBRAICAL FORMULÆ (containing the Substance of Euclid, Books II. and III., Props. 35-57). Sewed, 6d.
Parts I.-IV. 3s.
Parts III. and IV.—Containing the Substance of Euclid, Books II. and III. and part of Book IV. 1s. 6d.
Part V.—Containing the Substance of Euclid, Book VI., with additional Theorems and Examples. 1s. 6d.
Parts I.-V. 4s. 6d.
Parts IV. and V.—Containing the Substance of Euclid, Book II., Book III., 35-37, and Book VI. 2s.
Part VI.—Containing the Substance of Euclid, Book XI., 1-21, together with Theorems relating to the Surfaces and Volumes of the Simpler Solid Figures. 1s. 6d.

MR. MURRAY'S NEW LIST.

SMALL CLASSICAL ATLAS FOR SCHOOLS.

Edited by G. B. GRUNDY, M.A., D.Litt.,
Fellow and Tutor of Corpus Christi College, Oxford; Author of "The Great Persian War"; Editor of "Murray's Handy Classical Maps," &c.

Folio (14½ × 9¾ ins.). Price Six Shillings.

LIST OF MAPS.

BRITANNIA—GAUL—ITALIA—GRAECIA—HISPANIA—GERMANIA, &c.—ASIA MINOR—MARE AEGAEUM—THE ROMAN EMPIRE, B.C. 218-A.D. 100—THE ROMAN EMPIRE, A.D. 1-300—THE EASTERN EMPIRES—PALESTINE—EGYPTUS—ROME—THE ENVIRONS OF ROME—ROMA QUADRATA—FORUM ROMANUM—ATHENS—THE ACROPOLIS—THE PIRAEUS—THE BOSPHORUS—AND A SHEET OF THE MOST IMPORTANT BATTLEFIELDS OF ANCIENT CLASSICAL HISTORY.

The Maps in this Atlas incorporate the results of recent scholarship, and have been most carefully prepared so as to accentuate all the chief names and natural features of the countries, and by eliminating those of minor importance to avoid overcrowding. The use of colour contours, whilst displaying the configuration of the countries at a glance, enhances the effect of simplicity, which cannot be achieved in maps where the old-fashioned method of hachured mountains obscured the names. A complete index adds to the utility of the volume, and the low price at which it is published (6s.) brings it within the reach of all Classical Students.

A SECOND COURSE OF PRACTICAL SCIENCE.

MECHANICS, HYDROSTATICS, HEAT.

By J. H. LEONARD, B.Sc. Lond., and W. H. SALMON, B.A., B.Sc.

With Illustrations, Diagrams, and Exercises at the end of each Chapter.

Fcap. 8vo, 2s.

This book is a continuation of the *First Course of Practical Science* (1s. 6d.) by Mr. J. H. LEONARD. These two works, together with the *First Course of Chemistry* (1s. 6d.) by the same Author, cover between them all the ground included in the Oxford and Cambridge Local Examinations under the following heads:—Elementary Science (Juniors) and Heat (Juniors); also Heat (Preliminary, Cambridge), Elementary Mechanics (Juniors, Cambridge), and Elementary Mechanics and Hydrostatics (Juniors, Oxford).

AN INTRODUCTORY HISTORY OF ENGLAND.

PART I.: FROM THE EARLIEST TIMES TO THE END OF THE MIDDLE AGES.

With Maps and Plans. **Second Edition. 7s. 6d.**

"We doubt whether a better historical book than Mr. Fletcher's has appeared in this country any time within the past fifty years. . . . We would recommend every schoolmaster, every teacher engaged in the stupefying task of cramming into his pupils the summaries, facts, tables, and dates which stand for history with most of us, to read carefully Mr. Fletcher's preface, and then go steadily through the book. . . . Every one who does this will arise from the perusal of the volume with an understanding of what history means, what it implies and connotes, such as he never possessed before."—*Daily Telegraph.*

NATURE TEACHING.

Based upon the General Principles of Agriculture. For the Use of Schools.

By F. WATTS, B.Sc., and W. G. FREEMAN, B.Sc.

Large crown 8vo, 3s. 6d.

NOW READY. ***PART II. of*** **Crown 8vo, 4s. 6d.**

COMMERCIAL GERMAN.

By GUSTAV HEIN, University of Berlin, and Lecturer in German (Honours) to the University of Aberdeen, **and MICHAEL BECKER.**

With Map. *Part I., crown 8vo, 3s. 6d.*

ONE SHILLING EACH.

THE USE OF WORDS. The Accidence of Grammar as it Explains the Parts of Speech. By Miss GEORGINA KINNEAR. Fcap. 8vo.

A PRIMER OF PHILOSOPHY. By A. S. RAPPOPORT, Ph.D. With an Index. Fcap. 8vo.

A PRIMER OF PHYSIOLOGY. By Prof. E. H. STARLING, F.R.S. Illustrated. Fcap. 8vo.

TO BE PUBLISHED SHORTLY.

PRACTICAL ARITHMETIC.

AN INTRODUCTION TO ELEMENTARY MATHEMATICS.

By S. O. ANDREW, M.A., Head Master of Whitgift Grammar School, Croydon, **and A. CONSTERDINE, M.A.**

Part I. Fcap. 8vo.

A SCHOOL HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TO THE ACCESSION OF KING EDWARD VII.

By Miss M. A. TUCKER, Newnham College, Cambridge.

With Coloured Maps, Plans, and Tables. **Crown 8vo.**

LONDON: JOHN MURRAY, ALBEMARLE STREET, W.

CURRENT EVENTS.

Fixtures.

AT the Members' Meeting of the College of Preceptors, to take place on the 23rd of November, the Rev. Dr. Scott, Head Master of the Mercers' School, will open a discussion on the new geometry teaching, in which the question of the object of such teaching, and the lines on which it is developing, will be debated. It is hoped that many who have had experience of the working of the new method will be present, and express their views on this important subject.

* * *

MR. BARTON KENT, F.R.G.S., will address the Société Nationale des Professeurs de Français en Angleterre on "L'Egypte et le Nil," at the monthly Conférence at the College of Preceptors on November 26 at 4 p.m.

* * *

UNDER the auspices of the Childhood Society, at the Sanitary Institute (72 Margaret Street, W.), Dr. T. B. Hyslop, M.D., M.R.C.P. Edin., will lecture on Mental Hygiene in Childhood," on November 10, at 8 p.m., and Miss M. E. Findlay, B.A., on "The Education of Girls," on November 24, at 8 p.m.

* * *

THE first of a series of lectures by men of note in the medical and teaching professions on practical hygiene, suited to the requirements of teachers, will be delivered at University College, Cardiff, on November 5.

* * *

THE Board of Education has issued the Time Table of Evening Science and Art Examinations in April, May, and June, 1905 (Form 90), and of the Day Examinations in June, 1905 (Form 90d). The Board is considering the question of discontinuing the Day Examinations after 1905.

Honours.

THE McGill University has conferred the honorary degree of LL.D. upon Earl Grey and Mr. John Morley, M.P.

* * *

COLUMBIA UNIVERSITY has conferred upon Mr. Bryce, M.P., the honorary degree of LL.D. Mr. Bryce was presented to the Council by Mr. Seth Low, ex-Mayor of New York, and formerly President of Columbia University.

Endowments and Benefactions.

AN anonymous donor has sent a £1,000 Bank of England note to the Treasurer of University College, Bristol.

* * *

UNIVERSITY COLLEGE, CARDIFF, will eventually receive some £15,000, under the will of the late Dr. Isaac Roberts, F.R.S. Part of the sum will be devoted to two scholarships for research in pure science—£50 a year each.

* * *

LORD RENDEL, President of Aberystwyth University College, has for the fifth time forwarded to the Registrar a cheque for £1,000—£750 to increase the stipends of the staff, and £250 to the county schools in Cardiganshire, Merionethshire, and Montgomeryshire, for exhibitions and bursaries.

Digitized by Google

MR. FRANCIS GALTON, F.R.S., has founded in London University a Fellowship for the promotion of the study of "National Eugenics"—"the study of the agencies under social control that may improve or impair the racial qualities of future generations, either physically or mentally."

* * *

A LECTURESHIP in Physiological Chemistry has been founded in the University of Glasgow, on the basis of £8,000 left by the late Dr. John Grieve.

* * *

MISS THOMAS, of Llwynmadoc, has contributed £500 to the developments fund of St. David's College, Lampeter.

* * *

MR. ROBERT FLEMING, of Dundee, has given £1400 to Dundee University College, "to promote facilities for recreation for the students."

Scholarships and Prizes.

A COMBINED EXAMINATION for 63 entrance scholarships and various exhibitions at Pembroke, Gonville and Caius, King's, Jesus, Christ's, St. John's, and Emmanuel Colleges, Cambridge, will begin on December 6. Candidates must not be over nineteen on October 1. Application, with copy of register of candidate's birth and certificate of conduct, to be lodged by November 20. Forms to be obtained from Mr. W. S. Hadley (Pembroke), the Master (Caius), Mr. W. H. Macaulay (King's), Mr. A. Gray (Jesus), Rev. J. W. Cartmell (Christ's), Dr. Donald MacAlister (St. John's), the Master (Emmanuel).

* * *

QUEEN'S COLLEGE, OXFORD, proposes to extend to two other Yorkshire schools the privileges of the Lady Elizabeth Hastings foundation, enabling them to send two candidates for each vacant exhibition (£100 a year).

* * *

CORPUS CHRISTI COLLEGE, CAMBRIDGE, offers four or five scholarships in Classics or in Mathematics, ranging from £80 to £30 a year, to candidates under nineteen. Certificates of birth, good conduct, and character to be sent to the Tutor, Mr. H. E. Fanshawe, by January 2. Examination on January 3 and 4.

Appointments and Vacancies.

SIR ISAMBARD OWEN, M.A., M.D., F.R.C.P., Senior Deputy Chancellor of the University of Wales, has been appointed Principal of the Durham College of Science, Newcastle-on-Tyne.

* * *

PROF. BERTRAM C. A. WINDLE, M.A., M.D., D.Sc. Dubl., F.R.S., F.S.A., Dean of the Medical Faculty and Professor of Anatomy in Birmingham University, has been appointed President of Queen's College, Cork, in succession to Sir Rowland Blennerhasset.

* * *

MR. HECTOR MUNRO MACDONALD, M.A., F.R.S., Fellow of Clare College and University Lecturer in Mathematics at Cambridge, has been appointed Professor of Mathematics in the University of Aberdeen.

* * *

AT the University of Birmingham, Mr. A. J. Ewart, M.A., D.Sc. Lond., Ph.D. Leipzig, F.L.S., has been appointed Lecturer in Botany, in succession to Dr. A. H. R. Buller, who has been appointed to the Chair of Botany (with Geology) in the University of Manitoba.

Mr. James J. Guest, B.A., has been appointed an Assistant Lecturer in Mathematics; Mr. A. Dupré Denning, B.Sc., Ph.D. Heid., an Assistant Lecturer and Demonstrator in Physics.

* * *

MR. D. NICHOL SMITH, M.A., Lecturer in English in the University of Glasgow, has been appointed Professor of the English Language and Literature in the Durham College of Science, Newcastle-on-Tyne.

* * *

MR. F. M. GOADBY, M.A., B.C.L., has been appointed a Lecturer in the Law Department of the University of Leeds.

* * *

MR. E. L. WATKIN, of University College, Bristol, has been appointed Professor of Mathematics at Hartley University College, Southampton.

Mr. S. B. Maclaren, Trin. Coll. Camb., succeeds Mr. Watkin at Bristol.

* * *

MR. GEORGE H. CARPENTER, of the Science and Art Museum, Dublin, has been appointed Professor of Zoology in the Royal College of Science, Ireland.

* * *

MR. SIDNEY H. WELLS and the Rev. James Went take the places of Prof. H. E. Armstrong and the Rev. Dr. Gow on the Consultative Committee of the Board of Education, the latter members retiring under the terms of the Order in Council constituting the Committee.

* * *

MR. W. GOWLAND, Professor of Metallurgy, Royal College of Science, has been appointed a member of the Examination Board of the Department of Technology of the City and Guilds of London Institute, in place of the late Sir Clement Le Neve Foster, F.R.S.

* * *

MR. J. L. HOLLAND, B.A., has been appointed Secretary to the Education Committee of the Northamptonshire County Council.

* * *

MR. ROBERT WILKINSON, Head Master of St. John's School, Bury, has been appointed Principal of the Technical School and Educational Adviser to the Education Committee of the County Borough of Bury.

* * *

MR. J. H. HAIGH, B.Sc., has been appointed Education Secretary to the Ely Education Authority.

* * *

MR. H. W. COOK, B.Sc., F.C.S., has been appointed Organizing Secretary to the Kent Higher Education Sub-Committee.

* * *

MR. J. M. WYNNE, Head Master of Holly Hall School, Dudley, has been appointed Secretary to the Dudley Education Committee.

* * *

MR. E. W. AXTELL-GARDENER, B.A. Oxon., assistant master in Bath City Secondary Day School, has been appointed Secretary to the Rutland Education Committee.

* * *

MR. H. M. HOWARD, B.A. Lond., Norwich Pupil-Teachers' Centre, has been appointed Secretary to the King's Lynn Education Committee.

* * *

THE REV. DR. WARRE has notified his intention of resigning the Head Mastership of Eton College at midsummer next year. He was appointed in 1884.

* * *

THE REV. DR. WOOD, Head Master of Harrow, has been appointed Dean of Rochester, in succession to the late Dr. Reynolds Hole.

* * *

M. A. DEBAILLEUL, Agrégé de l'Université de Paris, has been appointed Lector in French at Gonville and Caius College, Cambridge.

* * *

MISS ELIZABETH SPEAKMAN, M.A. (Manc.), late University Fellow, has been appointed Assistant Lecturer in History in Manchester University.

THE REV. WALTER NEW, M.A. Cantab., Head Master of Hale's Grammar School, Hertford, has been appointed Vicar of Exford.

* * *

THE REV. EDWARD S. NOAKES, M.A. Cantab., M.A. and LL.D. Dub., Head Master of Magnus Grammar School, Newark, has been appointed Vicar of Edale.

* * *

MR. FRANK J. FULLER, B.A. Cantab. and Lond., science master, Chesterfield Grammar School, has been appointed Head Master of the Salt School, Shipley.

* * *

MR. T. W. IRELAND, B.A. Cantab., Hymers College, Hull, has been appointed Head Master of the Secondary and Pupil-Teachers' School, Mexborough.

* * *

MR. J. A. HARRISON, B.Sc. Lond., A.R.C.S., Senior Science Master, Hulme Grammar School, Oldham, has been appointed Head Master of Whitehaven Secondary School.

* * *

THE REV. WILLIAM PARKER, B.A. Dubl., M.A. Irel., assistant master, Sir R. Cholmeley's School, Highgate, has been appointed Warden of St. Columba's College, Rathfarnham.

* * *

MR. REGINALD W. FERGUSON, B.Sc. Lond., A.R.C.S., Science Master, Newport Intermediate School, has been appointed Principal of the Municipal Technical School, St. Helen's.

* * *

Mr. A. WATSON BAIN, M.A., assistant master in University College School, London, has been appointed Head Master of the Day Secondary School of the Woolwich Polytechnic.

* * *

MISS LILLA B. STRONG, Head Mistress of the Church of England High School, Baker Street, has been appointed Head Mistress of the Diocesan School for Girls at Simla.

* * *

MR. W. E. S. TURNER, Research Scholar in Chemistry, Birmingham University, has been appointed a Demonstrator in Chemistry at University College, Sheffield.

* * *

MR. T. L. HUMBERSTONE, B.Sc. Lond., A.R.C.S., has been appointed Assistant Registrar to London University.

* * *

MR. THOMAS KEEN, M.A. Lond., second master, Barry County School, has been principal French master in the High School, Glasgow.

* * *

MR. FRANK J. WYETH, B.A. Cantab., L.C.P., science master, Whitgift School, Croydon, has been appointed senior science master, Queen Elizabeth's College, Guernsey.

* * *

THE Head Mastership of Aske's Hatcham School is vacant through the death of Mr. Alfred Barker, M.A., B.Sc.

* * *

MR. F. W. G. FOAT, D.Litt., M.A., of the City of London School and the University Tutorial College, has been appointed Lecturer and Tutor in English at the City of London College.

* * *

MR. DAVID MURRAY, M.A., B.Sc., Head Master of the Grammar School, has been appointed Rector of the Academy, Kilmarnock; and

Mr. David Lang succeeds him as Head Master of the Grammar School.

* * *

MR. ARTHUR F. MURRAY, M.A., assistant in Forfar Academy, has been appointed Head Master of the Lower Academy.

Literary Items.

THE Oxford University Press is issuing a "Geometrical Political Economy," by Mr. H. Cunynghame, C.B. — "an elementary treatise on the method of explaining some of the theories of pure economic science by means of diagrams."

* * *

THE Cambridge University Press announces Part VIII. of Sir Richard Jebb's "Sophocles"—The Fragments; "The Literature of the French Renaissance," in two volumes, by Mr. Arthur Tilley, M.A.; "The Nizam," the Le Bas Prize Essay, 1904—which should be specially interesting on the relations between Hyderabad and the Government of India during last century; "Vedic Metre in its Historical Development," by Prof. Arnold, of Bangor; and numerous other important works in many departments. "The Cambridge Companion to Greek Studies" is still on the stocks.

* * *

MR. FISHER UNWIN is publishing, in his shilling series of "How To" manuals, "How to become a Teacher," by Mr. T. W. Berry, Editor of the *Pupil Teacher*. Primary, secondary, and special subjects are all included.

* * *

MR. FISHER UNWIN announces "A Sketch of Chinese History" by Dr. F. L. Hawks Pott, President of St. John's College, Shanghai. Also a new impression of Mrs. Brightwen's popular book, "Wild Nature won by Kindness."

* * *

MR. HALL CAINE'S novel, "The Prodigal Son," just published by Mr. Heinemann, has been issued simultaneously in eight languages, and translations into other six languages are in preparation.

* * *

MR. DOUGLAS STORY, the first war correspondent attached to the Russian army and the first to reach the scene of operations in Manchuria, is also first in the field with "The Campaign with Kuropatkin," which is already announced by Mr. T. Werner Laurie.

* * *

MR. T. WERNER LAURIE will shortly publish "The Queen's Progress"—a volume of Elizabethan sketches by Prof. Felix Schelling, presenting those spacious times under some of their more interesting sidelights.

* * *

THE water-colour drawings of the Channel Islands which Mr. Henry B. Wimbush is now exhibiting in Bond Street have been reproduced in colour facsimile to illustrate a volume on "The Channel Islands," by Miss Edith F. Carey, which Messrs. Adam & Charles Black are just publishing in their delightful and handsome series of "Beautiful Books."

* * *

THE Parents' National Educational Union issue in pamphlet form (3d.) Mr. J. L. Paton's fresh and stimulating paper on "Training in the service of Man."

* * *

MR. H. OSMAN NEWLAND'S course of historical lectures to evening continuation classes on "Citizenship" will be published presently by Messrs. Elliot Stock.

* * *

A NEW mathematical journal for teachers, the *Wiskundig Tijdschrift*—a quarterly (48 pages)—is announced at Rotterdam, under the editorship of Heer F. J. Vaes.

* * *

THE October number of *Child Life* is fresh and attractive. Perhaps the most striking paper is Mr. Ebenezer Cooke's discussion of the question: "Is Development from Within?"—in reply to Mr. Graham Wallas's "Criticism of Froebelian Pedagogy" at the Conference of the Froebel Society in 1901.

* * *

MR. VERE COLLINS, writing in the *National Review* for October on "Starving the Schoolmaster," anticipates that "a country that votes £13,000,000 a year to primary educa-

Digitized by Google

tion will surely not stint supplies for higher education once the facts are squarely put before the public."

* * *

Public Opinion (October 15) opens a series of articles on the "Public Schools of England" with an interesting paper on Harrow, by George W. E. Russell, M.A., LL.D., an Old Harrovian.

General.

Miss Welsh has been presented with a portrait of herself, subscribed for by past and present students of Girton College, and painted by Mr. John Lavery, R.S.A. The final destination of the portrait is probably the College Hall.

* * *

The twenty-first anniversary of the opening of the University College, Cardiff, was celebrated on October 14.

* * *

The offices of the University of Wales have been removed from Brecon to Cardiff.

* * *

The Durham University College of Science, Newcastle-on-Tyne, will henceforth be known as the Armstrong College of Science in the University of Durham.

* * *

The Fielden Demonstration School, expressly under the direction of Prof. Findlay, will be opened in Manchester in January next.

* * *

The Board of Education have published a "Model Form of Register of Attendance" (Form 487).

* * *

A new wing (for laboratories) has been opened at Magdalen College School, Brockley. This and other improvements have cost Magdalen College, Oxford, over £3,000.

* * *

Miss Jessie Elliot Murdoch, M.A. Aberdeen University, has gained the Ferguson Scholarship in Philosophy, open to recent graduates of all the Scottish universities. This is the first time that a lady has gained a Ferguson Scholarship.

STUDY AFTER SCHOOL-DAYS.

By the Rev. J. O. Bevan, M.A., F.C.P.

At the Monthly Meeting of the College of Preceptors on October 19, Mr. James Wilson in the chair, the Rev. J. O. Bevan, M.A., F.C.P., read a paper on

HOW TO EVOKE A TASTE FOR READING AND CONTINUED STUDY AFTER THE PUPIL LEAVES SCHOOL.

The Lecturer began by referring to the importance of the problem attacked and the large number of young people affected. He pointed out the weakness of the present system and the imperfection of the results, enforcing his indictment by the opinions of leading men of all classes. Finally, he proceeded to inquire whether the child, the teacher, or the system was to blame. From this point the address is given *in extenso*.

How far is the System at fault?

In respect of this we can speak more freely, for a system is impersonal, and has neither soul to be saved nor body to be kicked. Therefore we shall all cheerfully acquiesce in the opinion that, if there be a fault, the system under which we labour is mainly responsible. Now, it may be acknowledged freely that it is always easy to pick holes in existing arrangements. In the present case, although one believes that a revolution is necessary, one realizes the enormous difficulty of effecting even a moderate improvement, seeing that there are involved so many elements of difficulty—the child, the parent, the teacher, the taxpayer, the Education Department, the Local Authority, the manager, the inspector, the existing buildings, and the prescriptive right of long-continued system.

Looking, however, at the above question from an ideal standpoint, one would say that school conditions were unnatural in respect of long hours, restricted posture, and compulsion of subject; that the teacher was burdened with too many pupils; that the mode of teaching was on lines altogether too literary; that the child's love of movement and discovery was unrecognized, and that the manual arts—the real things to be dealt with in after life—were largely ignored even in their general design. But one is conscious that one is speaking to practical people, who are beginning to ask themselves: "Now that the disease is allowed and diagnosed, what remedy is to be propounded?"

We will do our best to answer this query; but it must be observed that we are required to recognize the different classes of schools—primary and secondary, town and country, mixed and separate, large and small, rich and poor, well staffed and ill staffed, under public or private control. It is not to be assumed that every school would find it possible or convenient to carry out the following suggestions in full. Each of one's hearers must listen for himself alone. Neither can one hope that a revolution of this magnitude will be wrought in a day, with a word, or in connexion with the school alone. We have no quack remedy to prescribe. It needs must be that we begin by eradicating bad habits, before we indoctrinate new. We shall be required to labour earnestly and long before we see the fruit of our labours; and we must keep on striving to act upon the home, the parents, the churches, public opinion, the well informed, and the wealthy.

The Bettering of the Environment.

We begin by suggesting the bettering of the environment of the child in the school. Doubtless the school premises compare favourably with the homes from which many of our scholars would be drawn; but there is great room for improvement. In some cases the premises are ill-adapted to the education of the child in respect of form, colour, and adornment, not to mention light, cleanliness, and cheerfulness. The class-room is dull and grimy, there is an absence of brightness and attractiveness; the only illustrations consist of some works of the old masters represented by maps acquired in prehistoric times; the atmosphere is tainted; there is an absence of freshness, of the fragrance of flowers. This utilitarian aspect may be considered desirable; but it is a mistake, even for poor children—indeed, the poorer the child, the more striking should be the contrast between the home and the school. Doubtless the change advocated would meet with objection, and would not be wrought without expense and trouble; but it would be worth all the cost. The result of the transformation would be none the less effective in that it was largely insensible. We are familiar with the story of the effects following upon the gift of a simple flower to the residents in a dirty, neglected home. The folks found that they were required to live up to that flower, so that they set to work to clean the window in order to let in the sunshine; to scour the floor, whose condition became then painfully apparent; afterwards to paper the walls; and, finally, to look after their own dress and appearance. Frequently bad habits result from a dirty face and neglected apparel. The loss of one's self-respect and self-esteem entails the loss of all else. A man or child is *at* his best when he is *in* his best. Therefore we plead for the conversion of the class-room into the drawing-room and the school into a true palace of delight. Then we should be justified in laying our commands upon the children to keep the room clean and fresh, which there is no inducement for them to do now. As a result they would be influenced not only in their dress and appointments, but also in their behaviour.

The giving Greater Freedom to the Teacher in respect of Classification and Curriculum.

This would necessitate the breaking up of classes and the employment of a larger number of teachers, who would then be able to adapt their instruction to the circumstances of the scholars and to vary it according to changing seasons and conditions. A larger opportunity would be furnished to study the individual child; for it is clear that you cannot work individuals by one infallible and unchangeable rule. Every child is a special case and needs a special pill.

Our full suggestions may impose fresh tasks upon the scholar, and it must needs be that a part of the previous curriculum be dropped out. We suggest that grammar exercises may well be banished from many schools in the lower stages. The leading features are simple and easily understood at a later age. The graces of speech and composition are rarely learned through formal grammar: both are very much the result of imitation of the teacher and of good examples at home. The force of imitative-

Digitized by Google

ness may be gathered from the fact that many of our scholars have a separate vocabulary and intonation for school and home, as also many domestic servants have for parlour and kitchen.

We may be unable to part with grammar without a pang, for frequently it is the only abstract subject in the time-table; but it will be understood that our recommendation mainly refers to schools and classes of an elementary character.

The Afternoon Ramble—The School Journey.

These should be carried out under the guidance of one who could teach the elements of geology and physical geography from the strata and conformation of the immediate neighbourhood; the teaching of these subjects from books alone being a wasteful and unsatisfactory proceeding. In all these science subjects we should aim at reaching the unknown from the known, the unfamiliar from the accepted. The school and vacation journey has great possibilities.

Treating Subjects as Living, not Dead.

Is there not a tendency on the part of teachers and examiners to consider school subjects from the fixed side; to look at geography as a thing merely of books and atlases; to consider history as a record, as of another planet, having no relation to men of our time or contemporary events; to regard English history as pieced out in watertight compartments, from 1603 to 1688, 1688 to 1815, and so on? Depend upon it, we lose much by not taking up current history. Rather should we deal, in a lantern, or otherwise, with things of the time, wrought out by men of flesh and blood, of like race and passions as ourselves, criticized in newspapers, illustrated in woodcuts, talked about in the streets and at the dinner table. Thus we should make much of such events as the Russo-Japanese war, in order to illustrate the teaching of history, geography, strategy, economics, international politics, and the like. All this is history in solution, and, like all things in solution, can be easily absorbed and digested.

Lantern Work.

The frequent use of a lantern is indispensable to illustrate science, geography, history, literature, archæology, art, biography, Scripture, and current events generally—of course, from the elementary side. It is not difficult for the teacher to cultivate the art of designing and executing lantern diagrams so as to set forth points of interest in successive lessons. A good deal of variety may be brought about by means of a lantern-slide exchange.

The Teaching of Literature.

So many references are made in this paper to experiment and scientific practice that one wishes, in this place, to emphasize the importance of teaching literature aright, so as to refine the character and elevate the taste. This subject, including the classics, is frequently taught in a perfunctory way; the subjects chosen are long, involving many lessons, and tending to disconnectedness, the thread being lost in the midst of a host of detail relating to derivation and the like, very little effort being directed to illustrate the action by rough maps or views. Consider how the teaching of such a poem as "The Lady of the Lake" suffers by the words being simply read from the page, without anything being done to enable the learner to visualize the scenes depicted, or to follow the action upon a diagrammatic map of the country involved. There is a muddle of names of persons and of places on the mind, but no sense of their relative order and importance.

The piece chosen should be short and dramatic; a brief synopsis should be given; any archaic word or allusion should be dealt with beforehand, and the names of persons and of places elucidated—then the piece could be dealt with as a whole. Certain portions might be committed to memory, and selected boys set to declaim them with appropriate action and emphasis before the class; or a lad might be bidden to select the passages which had struck him, and to read them aloud, giving reasons for his choice and for bestowing such and such an emphasis. The remainder of the class might be asked to comment upon the choice made, the discussion being naturally summed up by the teacher. Then (with the teaching of literature and the improvement of intellectual taste) would proceed, *pari passu*, the use of original composition in prose and verse, and the teaching of rhetoric, in the practice of which we, as a nation, are so lamentably deficient. In the United States far greater attention is given than with us to declamation and composition; indeed, in every country of Europe one finds that public speaking is of a more easy and graceful character than in England.

It would tend to interest the parents and managers and to brighten the children if the teacher could arrange social evenings, whereat the more proficient scholar—whether past or present—could recite or act, in character, or if he could arrange *tableaux vivants* to illustrate passages in history.

In connexion with this matter, reference may be made to the formation of school and class-room circulation libraries, and, in special cases, to the utilization of our public libraries and the addition to such institutions of children's departments, with books, both grave and gay, technical and imaginative, carefully chosen. This matter was discussed at the meeting of the Library Association recently held at Newcastle.

Nature-Study.

A strenuous endeavour should be made to utilize subjects calculated to awaken *interest* among young people and to implant a general knowledge of the world of which they themselves form a part. Herein, one rejoices at the spread of kindergarten principles, and at the growing attention paid to Nature-study, which alike aim at cultivating the powers of observation and inference—thus furnishing an excellent introduction to science, the study and application of which, both for boys and girls, are of increasing importance. The old-fashioned object-lesson in due serial form, if well and truthfully illustrated by experiments or pictures and models to scale, or, preferably, by the objects themselves, is by no means to be despised.

To cite a special case, what an introduction to the study of meteorology—a most practical study to all engaged in farming or navigation—would not be furnished by the introduction to the school premises of a vane, barometer, rain-gauge, and maximum and minimum thermometer! It would be considered quite a privilege for one of the senior boys to be allowed to take the observations; and this register and its variations might well be referred to by the teacher before the whole class at least once a week.

Movement.

Children are quickly stirred by things in motion. They desire to see not only results, but to find out—by looking at the "works"—how these results are arrived at. If we cannot have actual living things to show them by way of demonstration, at least we can simulate life by movement.

Introduction of Living Things and Animals.

Much might be effected in the schoolroom or the playground by way of concrete examples, such as would be furnished by an aquarium, a herbarium, the bird-cage, the rabbit-hutch, the patch of vegetables, grain, fruit, or flowers. This has been done with great advantage at the Sesame House, in Acacia Road, St. John's Wood. We are not concerned here to answer the questions: "Who would provide and look after these things, and keep them cared for? What could be done with the live stock on Sundays and holidays? How could boys (boys are such destructive creatures!) be prevented from breaking down and destroying everything?" Respecting these queries, we would follow the example of the Scotch minister, who said to his congregation, "We will look this diffeeculty fairly in the face, and then—pass on." We are satisfied that all such questions, in time, would answer themselves.

King Baby.

In the case of girls' schools of all grades, there is one animal, above all others, which should be introduced, *i.e.*, the human baby. In relation to every such school it is of prime importance to establish a *crêche*, even of half a dozen infants, into which certain of the elder girls might be introduced as a privilege. It would impart an element of sympathetic interest, and furnish teaching of real value at the time, and in respect of their future work and destiny.

The Inner Man.

Cookery should certainly be taught in every school, to boys as well as to girls. It would serve to solve a double problem. One is frequently struck by the meagre and unappetizing fare brought by many children in elementary schools for their luncheon. Could not something be done, at small cost, to supplement this provision, and to arrange that the elder children should be taught both to buy and to cook simple things in a simple way? With a certain amount of expenditure of time and labour, the problem of inexpensive breakfasts and dinners might be solved and the elements both of cookery and waiting inculcated. Furthermore we respectfully suggest to Sir John Gorst and others who are moving in the matter that the great question of supplying free meals to semi-starving school-children might be

Digitized by Google

faced from this direction, viz., that of utilizing the resources of the school and of the children in the supply of their own needs. A writer in the *Parents' Review* for September, 1904, gives an illustrative example as to how this is done in certain cases; and one may here remark that almost every suggestion made in this paper has been based upon what has been experimented upon in certain quarters.

Carpentry, Glazing, and Bookbinding.

In large schools or centres, an opportunity might be furnished for teaching the lads these arts, partly in connexion with work required in their respective schools or furnished by their own wants. Instead of caning a boy for breaking a pane of glass, one might set him to work to mend it, thus carrying out the best part of Mr. Squeers's practical economy. In the case of girls, laundry work and house work generally should be brought in, and that in as real and natural a way as possible.

Visits to Museums.

These, of course, are no novelty; but they are rarely carried out with the organization and completeness characterizing the work in Leeds, where the success of the movement is largely due to the energy and skill of Mr. Crowther, the Curator of the Philosophical and Literary Society. In this respect, as well as in others adverted to, the children cannot be left to themselves to derive meaning and instruction from illustrations or exhibits: they must be personally conducted and in small squads, they must have the salient points brought out; they must be told what to look for, and, finally, be incited to give an account, after a short interval, of what they have learned. Thus, the matter naturally resolves itself into three parts—(*a*) the preparation for the visit, the notification of what is to be looked for, and its principal features; (*b*) the visit proper under suitable guidance; (*c*) the reproduction of the impressions derived, either *viva voce* or on paper. Such visits as we are advocating are permissible under the Code; but they are frequently ineffective because the children are not properly organized and looked after by one who knows what to select and how to describe the exhibit to the young. Mr. Crowther's enthusiasm and energy may well be commended to the imitation of those who have charge of pupils in secondary, as well as in elementary, schools. Prof. Findlay recently addressed the Manchester Teachers' Guild on "The Use of Museums in Education," and his paper contains several important hints.

The Help of Local Societies to be invoked.

There exists a large number of societies, scientific and literary, comprising many members, some of whom might be forward to help in this good work by way of advice or active service. No effort has hitherto been made to excite their sympathy or to secure their aid. Doubtless the members would need to be put in the way of helping the teacher and the scholar; but the field is immense and the subject one which suggests large possibilities. The lecturer trusts to have the opportunity, at no distant date, of bringing the matter under the notice of the delegates attending the Conference of Corresponding Societies inaugurated by the British Association for the Advancement of Science.

The Compilation of a School Journal.

The most noteworthy records of visits to museums, manufactories, public works or buildings might be incorporated into a school journal, neatly clasped together in manuscript. This might be duly circulated and then exchanged with a like journal from another school in England, or, better still, abroad. All this would serve to stimulate and maintain interest—*personal interest*; that is the point, for what a child takes a chief part in is likely to make a lasting impression. Such a journal might be used to illustrate the changes of the year, to chronicle the migration of birds, the occurrence of rare plants or animals, as well as to effect a record of school news. Incidentally, it would stimulate the powers of composition as well as of observation and logical expression.

Collections.

Encouragement should be given to scholars to form collections of natural objects, &c., for the school and for their own homes; such museums to be totally destroyed by fire every year or so, or exchanged for corresponding collections from another school; the danger being that the objects gathered together should become dusty and moth-eaten—a burden to everybody. Freshness and variety should ever be sought for; and the collection made *not for the sake of collecting*, but that it might be illustrative of the pupils' work and hobbies, *both work and hobbies* alike to be suggested and encouraged.

Vacation Schools to be started.

These have been carried out with great success of late in various places and in London at the Passmore Edwards Settlement, as witness the following extract from a vistors' journal:—

An hour was spent by the visitors in inspecting the classes in the buildings and in the gardens, where the children went through drill exercises and received lessons in dancing, singing, carpentry, clay-modelling, drawing, and cooking. The children also took part in various games, such as soap-bubble blowing, skipping, and sand-digging. The out-door lessons were given in a well wooded garden behind the buildings.

Abolition of Ordinary Holidays.

In view of the more reasonable and natural turn suggested to be given to education, it might be unnecessary to have any formal holidays; at all events, in elementary schools. These, at present, are much too long, in country districts sometimes extending over six weeks at a time; the parents are oppressed, the children are frequently turned out into the lanes or streets, they become *ennuyés*, the work of the teacher is impeded by reorganization, and by recalling to the scholars' minds what they have learned and then forgotten. Needless to say, though the school would be in continual session, opportunity would be found for holidays of a suitable length both for teachers and taught.

Happy Evenings Association and Night Continuation Schools.

An official report has lately declared that those of our elementary-school children in London and other large towns who have not as yet begun to earn have little to do out of school hours beyond playing weird games in back streets or moping in hot and overcrowded rooms. In our great public schools games are as highly organized as work, and probably too much is made of them; but at least it is contrived that no moment of the boy's day is unemployed, and that he learns how to play as well as how to work. Our elementary-school buildings and play-grounds are surely too valuable to be used only in day-school hours. In many districts the school is almost the only big and spacious thing, a thing "made for man," made for his growth, health, and general well being. By the kindness of the London County Education Authority, the Children's Happy Evenings Association is allowed to use the schools out of school hours; and it gathers round them a band of willing helpers, ready to be the children's friends and playmates.

So far—well, but it is also necessary to arrange for formal instruction for many who have left school at that early age which is permitted alike by the indifference of parents, of Parliament, and of society at large. After the lapse of a couple of years, it is found that these have forgotten a great part of that learning that had been instilled into them at the cost of so much labour and expense; so that there is a strong probability of a lapse into complete ignorance unless a further effort is made, and an organization provided for taking up the work and making it secure. What can be done by the free will of such scholars should certainly be done; perhaps fresh legislation may be ultimately needed to clinch the matter. In a recent number of the *Sunday Strand*, the Bishop of Hereford makes a remarkable suggestion. He says:

A new Continuation-School Act of Parliament is greatly needed in England to complete our truncated and consequently wasteful system of elementary education. It may be noted by way of comparison, or contrast, that in Germany a boy leaving the elementary school at the age of fourteen may be required to attend a stipulated number of continuation-school classes, generally amounting to three or four hours weekly, during every year until he is seventeen years of age. This law has long been in existence, and is adopted in many parts of the German Empire, and I observe that it has lately been put into operation in the city of Berlin. The boy thus grows up under regular and wholesome educational influences during his first three years of comparative freedom after leaving the elementary school. To secure this gain both in knowledge and character I desire to see attendance at a continuation school or class made obligatory up to the age of seventeen in England as it is in Germany. By this I mean that every boy should be required to attend, let us say, not less than one hundred lessons of a useful kind in the course of each year. But, to make the best of this system as a character-forming influence, I would allow one-third of these attendances to be made at a duly recognized Sunday school or Bible class. These Sunday classes would, under such circumstances, be largely and cheerfully attended everywhere, and they would become a centre and source of the best moral influences to an unprecedented extent.

Digitized by Google

Here I might say that the Sunday morning schools instituted by the Friends in Birmingham and elsewhere have been of marked service. In connexion with this part of our subject, the importance may be insisted upon of enlisting the sympathy and financial help of our manufacturers in important centres. Now, in many cases—as practical men—they begrudge the heavy cost attaching to elementary education, because the results do not appear to be commensurate with the expenditure. It is imperative that they be appealed to to take part in the organization, to visit the schools, to offer prizes *to their own employés*—such prizes to take the form of mathematical instruments, tool trays, thermometers, microscopes, geological or botanical implements, rather than of money or books; so as to excite the attention of the youth to a certain subject, and to awaken interest in its continued study. In the case of girls, workboxes, fret-work apparatus, &c., might be bestowed.

The Introduction of Light Industries for Evening Work during Three Months of the Year.

In many cases, in schoolroom or kitchen, in town and country, ladies—this may well be ladies' work—have started such industries as wood-carving, toy-making, fret-work, leather-work, poker-work, repoussé-work, macramé, smocking, paper-folding for lamp shades and table ornaments, Venetian ribbon-work. The carrying on of these industries is important from the point of view of general education: it brings into operation the sympathies of willing helpers, and makes those engaged in them happy because it makes them useful. Furthermore—witness the case of toys, or, in another direction, of the rearing of poultry for the table or the production of eggs, or even of the cultivation of salads, after the Continental fashion—they might become of great industrial and economic importance. Why should we be so short-sighted as to send millions of money annually abroad for such things as we could easily produce or manufacture for ourselves? Weaving, and many industries of a like kind, used, in the lecturer's memory, largely to be carried on in the worker's home. Times are changed, but it would bring about a silent and salutary revolution in many ways if domestic and rural industries were to be inaugurated and encouraged.

Art and Play.

The cultivation of instrumental and vocal music, of drawing, painting, and modelling, and the fostering of reunions where our lads and lasses—often so loutish, *gauche*, and self-conscious—might be taught how to play games and learn "company" manners, can only be indicated, but, though they are placed last, they are by no means least, in importance, for all of us are compounded of more natures than one; work and play act and react and interact the one on the other, so that now, as always, "all work and no play makes Jack a dull boy."

Conclusion.

Time did not admit of the reading of the concluding portion of the lecture. This referred to: (*a*) the necessity for stimulating the interest of the young and for laying down a distinct principle which they could be incited to follow; (*b*) the need of a special organization and of a body of leaders and teachers apart from those engaged in day-school work; (*c*) the characteristics of that liberal and comprehensive education which should produce the new teacher fitted to carry on the new work. We shall hope to find a place for the substance of this portion in a future issue.

Miss FINDLAY said that children in elementary schools should receive such an education as would be of practical use to them in their home life. They might, for instance, be taught to scrub the floors and tables in the schoolrooms, and should be encouraged to perform similar duties at home. The schools for domestic economy aimed at giving a practical education of this kind, but they were over-organized and over-methodized, and the children were not encouraged to think for themselves.

Mr. ORCHARD said the subject of the paper formed one of the greatest perplexities of the present-day educationist. The lecturer had offered several practical suggestions, the most important of which related to the provision of suitable environment, the encouragement of initiative in the pupil, and the promotion of co-operation between teacher and pupil. The teacher should take care not to do too much for the pupil, but should encourage him to discover things for himself. He would thus arouse the interest of the pupil and cultivate a desire for knowledge which would remain after school life. Much might be done by the formation of student societies to foster the pursuit of the study of literature, and boys who had been taught to collect and classify natural objects would probably continue their studies of Nature after they had left school.

The Rev. J. B. ELLIS said he had for many years been connected with schools in the West Indies, where the conditions were entirely different from those which obtained in England. In the case of negro boys and girls, the greatest obstacle to the continuation of study after leaving school was a lack of vocabulary, owing to the limited number of text-books in use in the schools.

The CHAIRMAN said the problem under consideration was how to manage school life in such a way that when it was ended the lessons should not be regarded as final, but only as a beginning. At school the child was taught the use of the tools, but very little more; and, in proportion to what he had to learn afterwards, his knowledge was infinitesimal. The present methods of education did not allow sufficient play for the initiative of the child, and tended to destroy originality and individual judgment. Schools were now passing through a time of transition, and the outcome would depend upon how schoolmasters brought their forces to bear on the problem of the curriculum, which should be framed in accordance with local needs. A system of education which sent boys and girls out into the world without any taste for improving their minds or studying the great literature which had been handed down to us must be regarded as a complete failure.

Mr. BEVAN having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

TEACHERS' DIPLOMA EXAMINATION.

SUMMER, 1904.

THE Summer Examination commenced on the 30th of August, and was held in London and at the following Local Centres:—Alnwick, Birmingham, Blackburn, Bristol, Colchester, Inverness, Jersey, Leeds, Manchester, Newcastle-on-Tyne, Plymouth, West Hartlepool, Sliema (Malta), Murree (India), and Worcester (South Africa).

The total number of candidates examined was 445.

The following are the names of the candidates who passed in the various subjects: (*hon.*) attached to a name, or to a letter denoting a subject, indicates that the candidate obtained Honours in the subject:—

Theory and Practice of Education.

REVIEWS.

The French Revolution.

The Cambridge Modern History. Planned by the late Lord Acton, LL.D., Regius Professor of Modern History. Edited by A. W. Ward, Litt.D., G. W. Prothero, Litt.D., and Stanley Leathes, M.A. Vol. VIII.: *The French Revolution.* (16s. net. Cambridge University Press.)

The present volume is beyond all comparison the most complete, critical, and impressive history of the French Revolution disposed within manageable compass. Wide and complicated as are the issues involved, the main attention centres in Paris, and it is confined within a decade; the Consulate, which opens a fresh phase of European history, and the current politics of Great Britain, which are of subordinate European interest, being reserved for separate treatment elsewhere. While the regeneration of France is, of course, the main subject, there is interwoven with its processes a secondary interest: the fate of Poland—the ambition and intrigue of Russia, and the jealousy of Austria and Prussia over the Polish spoils. There emerge, too, intermittent indications of the coming Eastern question, which was to "occupy the energies and attract the ambitions of statesmen and diplomatists for more than a century to come." The volume depicts the various aspects of the great drama in twenty-five chapters written by well known English scholars—with one exception: M. Paul Viollet, Member of the Institute, and Professor of the History of Civil and Canon Law in the Ecole des Chartes, contributes the luminous chapter on French Law in the age of the Revolution.

The editors express effectively, if somewhat compendiously, the course of the main stream of events:

> The present volume traces the intellectual genesis of the revolutionary movement among the audacious thinkers and the philanthropic listeners of the eighteenth century. It shows how the institutions and the administration of France were unfitted to resist a violent shock, while her vacillating rulers hesitated to use such resources as the constitution placed in their hands. Benevolent enthusiasm, peaceful agitation, irresolute control, are succeeded by anarchy and terrorism; society seems to be resolved into its elements, and the fortunes of the nation to depend on the caprice and idiosyncrasies of a few chance-selected men. The impulse spreads beyond the frontiers. Europe gathers her forces to resist the destructive flood. France reacts to hostile pressure; institutions are extemporized in the midst of foreign and civil war; the organic unity of the French nation reasserts itself; order succeeds to anarchy, fixed aims to vague aspirations; and wars of conquest follow wars of self-preservation. Separately is described the attempt of legislators to break loose from the bonds of custom, convention, and tradition, and to build up a new scheme of human relations from a purely rational basis. Finally, the effect of these destructive and reconstructive ideas is traced in action and reaction through the chief countries of Europe; and the foundations of our modern political and social system become visible.

Mr. P. F. Willert opens the volume with a lucid review of the opinions and influence of the philosophers. "Even if we believe that the philosophers did not cause the Revolution, nor originate the ideas which determined the form it was to take, we must allow," he concludes, "that they precipitated it by giving a definite shape to vague aspirations, by clearing away the obstacles which restrained the rapidly rising flood of discontent, by depriving those whose interests made them the defenders of the old order of all faith in the righteousness of their cause, and by inspiring the assailants with hope and enthusiasm." Prof. Montague, who writes five of the earlier chapters with his accustomed ability, describes the mechanism of government and the condition of the different classes. He discounts largely the allegations of "the appalling misery of the French peasants," and points to growing population, riches, and enlightenment, and to a more reasonable and humane temper among administrators and judges under Louis XVI. than under Louis XIV. "But," he says, "in a society where personal freedom was general, landed property widely diffused, and every class aspiring to equality with the class above, evils which elsewhere might have been borne in patience were felt to be intolerable"; and "the long reign of a slothful and sensual Prince gave time for discontent to accumulate and criticism to become embittered." Mr. Henry Higgs ably examines the finances (and, later on, the Revolutionary finance). He finds that "in spite of the numerous reforms of Turgot and of Neckar, the finances of France on the eve of the Revolution illustrate every possible defect"; that, under the weight of imposts, "the very springs of industry were broken"; that in fact "fiscal burdens were ruining alike the Government and the people." As for the King, Prof. Montague, after the fullest allowances for inherited embarrassments, points out "that no other reign so forcibly attests the insufficiency in great affairs of good will unsupported by wisdom and firmness." Add the transition to untried modes of government without the necessary basis of success either in governors or in governed, and the cataclysm does not seem so much of a marvel. "The results were so strange because the agents had not even that dim prevision which, in ordinary times, is possible to public men."

We need not follow the outline of the stages or the outstanding episodes. Mr. J. R. Moreton Macdonald describes the Legislative Assembly, the National Convention, the Terror, and the Thermidorian Reaction, in four well informed and well balanced chapters. Dr. Rose Holland handles in masterly fashion the part played by Bonaparte; Mr. R. P. Dunn-Pattison deals with the general war, Mr. H. W. Wilson with the Naval War, Mr. G. K. Fortescue with the Directory, and Mr. H. A. L. Fisher with the Brumaire. Mr. Oscar Browning expounds the foreign policy of Pitt to the outbreak of war with France; Prof. Lodge treats the Eastern Question and the extinction of Poland; and Mr. G. P. Gooch closes the volume with a comprehensive chapter showing how the Revolution was regarded in the various countries of Europe. The bibliography, chronological table, and index are very full and correspondingly serviceable.

Dreams of Expansion.

The Food of the Gods; and How it came to Earth. By H. G. Wells. (6s. Macmillan.)

A physiologist and a chemist between them evolved a nutritive substance of power—"Herakleophorbia," "the Food of the Gods." Administered to the human subject, it raised the partakers to six or seven times the old normal proportions: the young men and the Princess stood some 40 feet in their stockings. Escaping from the experimental farm in Kent, it nourished similarly gigantic wasps, rats, &c. In a word, it threatened to upset the established law and order; did indeed upset it; for eventually the new order and the old came to blows, and the history breaks off in the middle of the struggle, with a presage of the victory of the "Boomfood" people—"a great black outline against the starry sky—a great black outline that threatened, with one mighty gesture, the firmament of heaven and all its multitude of stars"—the new Ajax defying the lightning.

The development of the story of the Boomfood undoubtedly has its interest—the interest of the exaggerated—the interest of the ordinary amazing rough-and-tumble story for boys. The boys will not wince at the contemptuous treatment of scientific men other than the practical engineer; nor will their nerves be jarred by lack of literary finish. If the cultivated reader, fortified by the belief that the author must have some underlying serious purpose, and stimulated from time to time by a lively thrust, hold on through, say, two-thirds of the volume, it will probably begin to dawn upon him that Mr. Wells is pushing his hasty ideas of social reform in a new guise. What idiots are those little folk that have not eaten the Boomfood of new ideas and obstruct progress! The thesis has indeed a serious side in

Digitized by Google

every department of human thought; but, after all, the adversity of vexatious obstruction is not without its uses, and in any case we have to put up with gradual and slow development. The outpouring of satire upon the ignorant little folk that still persist in stoning the big prophets is natural enough; but probably a more effective process would be for the prophets to take measures to make their messages clearer to the dull of understanding, and especially to guard against immature and inopportune propagandism. It does seem a grievous pity that Mr. Wells will not get away from a hopeless tilting at windmills, which he has no great skill in, and expend his capacity and energy upon really artistic work in a sphere whose conditions he does understand.

CAMBRIDGE ENGLISH CLASSICS.

Richard Crashaw: Poems. The Text edited by A. R. Waller. (4s. 6d. net. Cambridge University Press.)

Crashaw can hardly be said to be a popular poet, but his work is of varied interest and exhibits many turns of curious felicity, and this handsome edition will render it readily accessible. The volume presents, for the first time in a single collection, the whole of Crashaw's poems—Latin as well as English; nay, there are even some Greek examples among his "Epigrammata Sacra," of 1670. The poems and epigrams issued by the Cambridge Press in 1634 and 1670, and those contained in the Sancroft MS. in the Bodleian, are faithfully reproduced from the originals. The "Steps to the Temple" and "The Delights of the Muses" are from the editions published by Humphrey Moseley "at the Princes Armes in St. Pauls Church yard" in 1648. The considerable series of poems under the general title of "Carmen Deo Nostro" is from the edition issued at Paris by Peter Targa, "printer to the Archbishope of Paris," in 1652, and the small plates engraved from Crashaw's own drawings are reproduced beautifully at the end of the volume. The pages thus have a quaint aspect, and the reader feels that he is brought face to face with the real Crashaw in his own times. In his instructive prefatory note and in his critical appendix, as well as throughout the text, Mr. Waller exhibits the utmost editorial care. Students of English literature will be very grateful for this elaborate and generously furnished edition.

GENERAL NOTICES.

CLASSICS.

The Tragedies of Sophocles, translated into English Prose. By Sir Richard C. Jebb, Litt.D., Regius Professor of Greek and Fellow of Trinity College in the University of Cambridge. (5s. net. Cambridge University Press.)

A very tasteful and handy volume, containing the English version of the plays in the author's great edition of the poet's works—"to meet the convenience of some readers." A brief introduction is prefixed to each play, so as to put the reader in position. In the translation Sir Richard Jebb keeps a free hand, refusing to be tied to a literal rendering. Probably readers that do not know the Greek will wish he had been still more free—more English, and less Greek, in the cast of expression. Still, there is something to say on the other side, and, in any case, the rendering conveys the poet's meaning very accurately and gracefully. The volume will be specially instructive in schools and colleges.

Roman Literature. By Hermann Joachim. Translated by L. D. Barnett, M.A., D.Litt. (1s. net. Dent.) (The Temple Cyclopædic Primers.)

Like the rest of this admirable series of compendia, the small volume is very skilfully packed with the essential matters of its subject. Its scope is properly ample: it comes down to the legislation of Justinian. The treatment is competent and fresh, the only drawback arising from the narrow compass, which sometimes necessitates a round statement without desirable qualifications. But, within the space, the work could hardly have been better accomplished. The get-up is very tasteful, agreeable, and substantial.

MATHEMATICS.

Notes on the Teaching of Elementary Geometry and Algebra. By C. D. Chambers, M.A. (1s. net. Waghorn.)

The methods of which the author here gives a brief summary have been employed by him in the training of his own classes, and the success which has attended their use has encouraged him to publish them in the hope that they may be of service to other teachers. In practice, he has found it expedient to vary the details of the methods ordinarily adopted in applying certain well known algebraic principles, and some novel and welcome hints are to be obtained from a perusal of his pamphlet. As a matter of course, all the suggestions made will not win unqualified approval. For instance, while Mr. Chambers's mode of leading up to the theory of indices is satisfactory, yet his definition of a power of a number is not equally good, though it is superior to the erroneous definition which he justly condemns. Again, many mathematicians will still maintain that the idea of direction is irrelevant to a first explanation of the meaning of an algebraic expression. The early attention now paid to the study of *graphs* gives rise to the author's proposal, but the intimate connexion between arithmetic (the science that deals with particular numbers) and algebra (the science of number generally) furnishes a strong argument in favour of introducing the beginner to algebra as generalized arithmetic, and of deferring for the moment the consideration of positive and negative quantity. The student is very soon in a position to grasp the broader conception of number, and the application to geometry may then be pointed out. The notes on the teaching of geometry are very good. The eye is to be made to assist the mind in following the course of an argument, and to this end the use of chalks of different colours in diagrams is recommended. The idea is not an original one, but Mr. Chambers appears to have developed the method more systematically than many of its advocates, and in a manner calculated to produce excellent results. It is, of course, understood that the device should be employed only as an aid to the first study of propositions; these cannot be said to be fully mastered until such assistance as is not always available is no longer required.

Knotty Points in Euclid (Books I.–IV. and VI.); and Key to the same. By Alfred E. Ikin, B.Sc. Lond., L.C.P. (2s. 6d. net and 1s. net. Normal Correspondence College Press.)

The first of these volumes combines a reprint of the two "Parts" of a small text-book designed by the author as an aid to the student of Euclid and intended for use in connexion with any standard edition of the "Elements." The "Key" is new, and furnishes hints for the solution of the examination questions reproduced in the text-book itself. Some of the solutions are very neat, and, if the volume is legitimately used, it will be of service to the student and enable him to avoid waste of valuable time. The production of a cheap key readily accessible to students of every type is always, however, a source of danger to the cause of true education. Of this the author himself is aware, and he expresses the hope that the benefit to the earnest worker will more than counterbalance any evil that may arise from an occasional abuse of the assistance offered. There is an unfortunate lack of finish in the arrangement of the letterpress and in the reproduction of the diagrams; and the various forms of type might be more pleasingly and effectively combined. We should hope to see improvement in these points in a future edition.

Longmans' Senior Arithmetic. By T. F. G. Dexter, B.A., B.Sc., and A. H. Garlick, B.A. (4s. 6d. Longmans.)

A well written book. The simple methods of explanation and the fullness of the reasons given for the processes employed make the text-book a specially suitable one for students working alone. It will also be very acceptable to teachers. The exercises are nearly all selected from the question papers of a large number of public examining boards.

ENGLISH LITERATURE.

Dryden: An Essay of Dramatic Poesy. Edited by Thomas Arnold, M.A. Third Edition, Revised by William T. Arnold, M.A. (3s. Clarendon Press.)

It is amusing to read that "the drift of the ensuing discourse was chiefly to vindicate the honour of our English writers from the censure of those who unjustly prefer the French before them," and that it was "written in the country without the help of books or advice of friends," and then to find Mr. W. T. Arnold stating that "perhaps the most prominent feature of my revision is the copiousness of quotation from Corneille," for "in no other way did it seem possible to bring home to the reader the greatness of Dryden's debt—extending not only to ideas and arguments, but even phrases—to his French contemporary." Mr. Arnold, indeed, has added a very considerable body of useful notes, besides those quotations from Corneille, and sensibly strengthened the edition. The "Defence" of the essay is also given. Apart from Dryden's handling of interesting critical questions, it is gratifying that there should be a school demand for Dryden's vigorous English.

"The Mermaid Series." *John Dryden.* Edited by George Saintsbury. In Two Volumes. (2s. 6d. net each. Fisher Unwin.)

We are glad that Prof. Saintsbury has made two volumes of his selections from Dryden's plays, and not merely one; and we hope he will yet be encouraged to add a third volume, for which, as he himself points out, there is good material of distinctive characteristics. The present two volumes certainly "give the reader as fair an opportunity as is possible in the space of seeing what the greatest writer of English verse and prose in his own special time managed to do in that remarkable department of literature which lays both prose and verse under contribution." The introduction gives a luminous sketch of the state of the stage and the influences operating upon it when Dryden began his dramatic work, and reviews generally the main features of his plays. Prof. Saintsbury is a candid critic as well as an admirer of Glorious John; but his candour will not deter any worthy

Digitized by Google

student of our literature from making, or renewing, acquaintance with the powerful intellect and the astonishing literary craftsmanship displayed in these plays. The volumes are beautifully printed on thin paper, and attractively got up. We should add explicitly that they make a fresh addition to the series, and a valuable addition, and are not a mere reprint.

An Introduction to the Poems of Tennyson. By Henry Van Dyke, D.D., LL.D., Professor of English Literature in Princeton University. (2s. net. Ginn.)

Five essays showing the growth of the poet's mind and art, the methods he practised, the variety of his work, and the chief characteristic qualities of his poetry. They are cultured, careful, and sympathetic, and deserve the attention of all students of Tennyson and of English poetry. The thin volume is artistically printed and got up.

"Heinemann's Favourite Classics." *The Works of Shakespeare.* 6d. each.

Twelve more volumes confirm our earlier opinion of the excellence of this series. We may not always be able to follow the speculations of Dr. Brandes, but his introductions furnish in interesting form the substantial facts that a reader of the plays ought to know. The frontispiece plates will form a valuable gallery of Shakespearian illustration; and the volumes are light, handy, clearly printed, and attractive in appearance.

ENGLISH COMPOSITION.

English Composition for Continental Pupils. By J. Vellenga. Parts I. and II. F. 1.25 and 1.50. (Amsterdam: W. Versluys.)

Mr. Vellenga is head master of a municipal intermediate school in Rotterdam, and he evidently knows English very well. His work is intended to be "a class-book for beginners," and, as "there is, with the exception of some of the pictures, very little that is distinctively Dutch about it," it may be used for "Continental pupils" generally. His principle is that "English should be taught in English," and so his book is all English, no Dutch being visible in either volume. Of course, he contrives his lessons so that the teacher has maps, pictures, multifarious objects, to work upon; and he does reluctantly admit the native language for explanatory purposes, but only as a very last resort: "it is wonderful how seldom an experienced teacher has recourse to the mother-tongue." We know something of the plan as applied in England to French and German, and we confess to doubts about its limits. However, given an experienced teacher, we can readily understand that he would carry his pupils far forward on Mr. Vellenga's laboriously graduated lessons, with their varied repetitions. The whole system of lessons is most carefully framed. We hope the work will prove a success.

Errors in English Composition. By J. C. Nesfield, M.A. (3s. 6d. Macmillan.)

The volume is in two parts: (1) sentences to be corrected or justified, and (2) solutions of the examples. The collection is immense, and it is widely varied. The author gives reasons for the solutions he offers. The work should be extremely useful in schools where teachers concern themselves to discriminate between good and bad in English expression. Mr. Nesfield has a strong hold of principle, but, as we hinted recently, he seems to us occasionally to defer too much to formal or technical considerations. However, such points can be argued out in practice. No grammarian can unfailingly suit the taste of everybody.

The King's English, and how to write it. By John Bygott, F.Inc.S.T., F.I.P.S. (Honours), and A. J. Lawford Jones, of H.M. Civil Service. (1s. 6d. net. Jarrolds.)

The book is tolerably comprehensive: it deals with orthography, punctuation, grammar, auxiliaries of style, essay-writing, paraphrasing, indexing and *précis*-writing, &c., and gives "hints as to course of reading," and even instructions as to "style of note-book." The handling is breezy and unconventional, and the matter is abundant and roughly useful. But what is the use of telling pupils that it is incorrect to say: "Take more exercise, so that you might be strong"; or "One thought ourselves lost"? Nobody would ever either say or write the one or the other. Much of the exercise material will be very serviceable.

MODERN LANGUAGES.

A German Reader. By W. H. Carruth, Ph.D., Professor of Germanic Languages and Literatures in the University of Kansas. (2s. 6d. Ginn. International Modern Language Series.)

A pretty and handy volume "for first reading in German," with notes and vocabulary. The extracts are judiciously selected from authors of high repute: half a dozen considerable prose passages from popular story-tellers (Niebuhr, Andersen, Grimm, Zschokke, Hauff, Benedix), and nearly forty *Gedichte*, mostly old favourites that are ever fresh. The notes are generally useful, though some of them seem to be superfluous: prefixed to them are brief biographical sketches of the authors. There is a long series of elaborate and carefully graded exercises, based on the text: these offer ample scope for working up the material of the extracts. A vocabulary is appended. A very attractive, well considered, self-contained volume, capable of giving the pupil a good start and a decided impulse to go forward in the study of the language.

Japanese Grammar Self-taught. By H. J. Weintz. (4s. Marlborough. Self-taught Series, No. 18.)

The volume goes beyond the general scope of the series, for it aims at being "a complete manual of the Japanese language," as well as, and indeed rather than, a phrase-book for travellers and commercial people. The roman character alone is used throughout. Mr. Weintz frankly admits that "the syntax certainly *is* formidable to a European, as it is quite different from anything met with in Western languages," but he reassures one by stating that it is "of very minor importance," and that, after all, "one can make oneself understood after far less time spent in study than is necessary in the case of any European language." It is "syntactical accuracy" that is the serious difficulty. We do not profess to know much about it, but the method of the work strikes us favourably, and our experience of Mr. Weintz in fields nearer home gives us no little confidence in his Far East linguistics.

The Englishman in Egypt: Arabic. (Cairo: Mme. J. Barbier. London: A. Owen & Co.)

A handy list of useful words and phrases, English and Arabic (in roman letters), with explanation of Egyptian money in terms of English values.

Primer of Esperanto. By J. C. O'Connor, B.A. (1d. Dixon & Hunting and the Farringdon Press, Limited.)

Mr. O'Connor explains the grammar—what little there is to explain—and gives some exercises (with vocabularies) for practice. The system is sufficiently simple.

ART—DESIGN—DRAWING.

Messrs. W. & A. K. Johnston's "Simplex Drawing Books" have received two recent additions: (1) *Geometrical Pattern Drawing, Part III.*, by Ben Jonson, containing 270 patterns for elementary pupils. with full instructions (6d.); and (2) *Lettering, Part I.*, containing 326 examples of letters and numbers (2d. net). Both very satisfactory.

Messrs. Jarrolds publish nine pictorial *Post-cards* (6d.), from original water-colour sketches, representing important buildings or scenes in London. No doubt, the cards will be very popular.

CHRISTMAS GIFT-BOOKS.

I.

Historical Tales.

The foremost place among the historical tales of the season may well be assigned to *The Crusaders*, a story of the War for the Holy Sepulchre, by the Rev. A. J. Church, M.A., whose many previous stories are so widely known and appreciated (5s., Seeley). Prof. Church puts the story into the mouth of a wandering Jew. He does not attempt a continuous narrative of the Crusades, but seeks to please and instruct his readers by describing some of the more important events. But, still, the first, third, and eighth Crusades are narrated pretty fully, and a brief historical outline is appended, which will probably be filled out in the private reading of those that are sure to be charmed by the episodes described with unfaltering skill in this volume. The get-up is very handsome and attractive; and the book ought to be placed on the shelves of the school historical library.

In the Trenches, by John Finnemore (5s., Nelson), tells the stirring adventures of a rifleman in the Crimea. The Redan, the Malakoff, the thin red line on the heights of the Alma, the charge of Balaklava, the terrible day of Inkermann, the Siege of Sebastopol, the horrors of the winter, and numerous enterprises less known to history, give unfailing interest to the volume. Six full-page illustrations in colours.

Miss Everett-Green follows up her "Castle of the White Flag" of last year with a worthy successor, *Ringed by Fire* (5s., Nelson), a story of the siege and surrender of Metz in the Franco-German War of 1870-71. It takes a good hundred pages to get war declared, but the story goes on in brisk preparation; and thereafter there is no lack of excitement. The descriptive episodes give a remarkably vivid idea of the scenes of the time; and they are gracefully written. Six full-page illustrations in colour.

An interesting and well managed historical romance is *The Knights of Liberty*, by Eliza F. Pollard (5s., Nelson). The Carbonari organization was formed immediately after the battle of Waterloo, with the object of delivering France from the political influence of the Roman Catholic Church—"the yoke of oppression which was hateful to one and all" of the discontented members. The Saumur branch took the distinctive name of the Knights of Liberty. "We swear to deliver our brethren now lying in prison, the four brave sergeants of La Rochelle." There are plenty of plots and counterplots and adventures, with which a private story is dexterously intertwined. Six full-page illustrations in colour.

Digitized by Google

Stories of Adventure.

Mr. A. T. Quiller-Couch has edited *The Red Adventure Book*, which contains a series of stories of stirring scenes and moving accidents from "The World of Adventure," printed spaciously on good paper and profusely illustrated (5s., Cassell). The stories are from widely separated ages and of widely differing character, but they are all strung upon a thread of romance. There are "escapes from fire, from prison, from shipwreck; deeds of battle, life-boat narratives, stories of Alpine daring, of African and Arctic exploration, of siege, famine, earthquake, and pestilence"—and other things. The catalogue is sufficiently promising. A most varied, attractive, and instructive collection.

The Pirates' Hoard, by A. Alexander (2s. 6d., Nelson), is, of course, a story of hidden treasure, and, being laid in the spacious times of Queen Elizabeth, gives prominence to brawny men of Cornwall and Devon, not omitting Sir Francis Drake; and it hovers about Lundy and Bideford rather than the Spanish Main. There is plenty of wrestling and fighting; and there is a missing casket of jewels to be recovered. A stirring and interesting narrative, written with directness and vigour. Two illustrations in colour, one of them exhibiting the redoubtable Captain Death.

There be land-rats as well as water-rats; and *Highway Pirates*, by Harold Avery, who has come steadily to the front as a writer for boys (3s. 6d., Nelson), takes its name from the doings of certain convicts on a certain high road. To be sure, there are school scenes of three-quarters of a century ago, and schoolboys are foremost actors in the development of the story, but the central interest is the unveiling of the mystery of the Singing Ghost of Coverthorne, and the adventures thereunto appertaining, to which the escapade of the convicts is really subsidiary. However, we do get to the sea, and into a cavern, where are brandy kegs, and so on to a subterranean tunnel, and—possibly enough, to the Ghost. There is, by the way, another big sample of the land-rat, who ought to have been a convict. The story is simply and effectively told. Four coloured illustrations.

Then there is *The Divers*, by Hume Nisbet (3s. 6d., Blackie), in a third edition, with eight coloured illustrations by the author. Many new readers will welcome this pleasant and bustling romance of Oceania, with good old Uncle Tom the Diver, and Queen Mané, and Minnie and Little Dido, not forgetting Ah Sin and his demon cat.

Flights of Fancy.

Mr. G. E. Farrow's multitudinous patrons have been keen to hear "more about the Wallypug," and so he gives them *The Wallypug in Fogland* (5s., Pearson). How it came about that the Wallypug sallied forth into Fogland, and what happened to him there (whether or not he was elevated to the throne), and why and how he came back again (if he did come back)—all this will be more interesting to discover than to be told. Certain it is that Mr. Farrow's imagination is as lively as ever, and that this new episode in the history of the Wallypug will increase the demands for "more." The illustrations, by Alan Wright, are numerous and effective; and the volume is got up in the usual handsome style.

This year it is *The Brown Fairy Book*, which must be somewhere about the tenth colour in Mr. Andrew Lang's very charming series of "Fairy Books" (6s., Longmans). It contains more than thirty stories, brought together from all quarters of the world—stories told by Red Indians, by Australian bush-folk, by African Kaffirs, by Hindus, Persians, Lapps, &c.; and they are delightful. And the volume is delightfully got up. There are eight coloured plates, twenty-two full-page plates in black and white, and twenty other illustrations in the text—all artistically designed and executed. Lucky will be the youngster to whose lot falls a copy of this engaging collection of stories.

Æsop's Fables, with a profusion (say, 100) of new and original illustrations by Maud U. Clarke (7s. 6d., Cassell), is furnished forth in large and handsome type on fine paper. The volume cannot fail to be a great favourite with the little folk that have the good fortune to obtain it.

The Romance of Fact and Fiction.

The Romance of Modern Locomotion, by Archibald Williams, who has already described the romantic aspects of Modern Invention and Modern Engineering, is a most interesting and instructive series of descriptions of the rise and development of the railroad systems in all parts of the world (5s., Pearson). The writer "peeps into the history of typical companies in Great Britain, the United States, and elsewhere; considers the various forms of traction, signals, and other mechanical appliances connected with the working of a railway; notices the effects of railway communication on a country for its peaceful development, or its conquest in war; and makes the tour of a typical locomotive factory"; and altogether gives a very fair idea of what the railway really is, how it has been made, and what the future may have in store for it. The descriptions are as far as possible free from technicalities. An excellent popular work, tastefully got up, with 25 distinctive and good illustrations.

Mr. Williams also offers *The Romance of Modern Exploration* (5s., Seeley). The whole field is much too wide for a single volume, and so he selects a small group of explorers belonging to the nineteenth century, and chiefly to the latter half of it, "whose exploits are in some cases unique, in others typical of what many other brave men have done." We follow the adventures of Dr. Sven Hedin in the Wilds of Asia and in Eastern Turkestan and Tibet; survey in India with Colonel Lambton, and in Tibet with Captain Deasy; visit Lhasa with Chandra Das; advance from Manchuria to the Pamirs with Colonel Younghusband; perambulate China and Eastern Tibet with Mr. T. T. Cooper; explore the East Indian Archipelago with Dr. Haddon; pass through Timbuktu, and down by the mouth of the Niger; accompany Livingstone, Du Chaillu, Joseph Thomson, in their African journeys; inspect the Sahara, Somaliland, and King Solomon's Mines; make "a brave dash for the North Pole" with Nansen, and a rash venture in the same direction with Andrée, as well as excursions to the South Pole with recent expeditions; and then take a turn through the Grand Cañon of Colorado, the forests and mountains of Canada, the forests of South America, the summits of Aconcagua and Tupungato, and the hinterlands of Australia. A book of absorbing interest, attractively got up, and furnished with 26 excellent illustrations.

The Romance of the Animal World is depicted by Edmund Selous in strikingly interesting descriptions of "the strange and curious in Natural History" (5s., Seeley). There are crabs, wasps, beavers, birds that make pottery, owls that live in burrows, ants that keep slaves, make tunnels and bridges, sow and reap, and grow mushrooms, angler-fish, leaf-resembling butterflies, jaguars and peccaries, whales and sword-fish, the sea serpent, snakes, gorillas—and countless other animals with more or less marvellous histories. An engrossing volume, most tastefully got up, and furnished with 16 illustrations by Lancelot Speed and S. T. Dadd.

Mr. S. R. Crockett lays aside the pen of fiction to present a most charming series of *Red Cap Tales* "stolen from the treasure chest of the Wizard of the North" (6s., A. & C. Black)—a first series. There were four children that would not read Scott, and so Mr. Crockett "told them these stories—and others—to lure them to the printed book, much as carrots are dangled before the nose of the reluctant donkey"—a comparison that ought to be withdrawn with suitable apology, for, if the children had been at the right age, they would not have required a lure. The stories are retold, very skilfully indeed, from "Waverley," "Guy Mannering," "Rob Roy," and "The Antiquary"; and no doubt we shall have more from other novels next Christmas—if we be good. The interludes of discussion between the story-teller and his young hearers are very interesting. The volume will undoubtedly prove a great favourite. It is spaciously printed, and very tastefully bound; and there are 16 coloured illustrations. Mr. Crockett, we should add, has done his best to translate all the hard words and phrases "in pity for children who have the misfortune to inherit only English."

For Girls.

Mrs. Molesworth brings *The Ruby Ring* this year (4s. 6d., Macmillan), and gives the stone as a birthday present to Sybil, a spoilt child of ten, who is discontented because she "thought it would be blue." Of course, if it had been blue, she would have grumbled because it wasn't red; just as she hated "every sort of lesson that ever was invented." Then gypsies come along, and "transformations" ensue. The story is prettily written, but there is more fancy than actuality in the results. Eight illustrations by Rosie M. M. Pitman.

The Little Heiress, by Margaret Bruce Clarke (3s. 6d., Nelson), is a bright and fresh story of the daughter of a millionaire orange-grower of California and an English mother, who comes to school at Stoneyhurst Hall, in Old England. A school difficulty leads to adventures and a clearing-up of unsuspected relations, and school ties eventually lead to other ties. A very spirited and healthy narrative. Four coloured illustrations.

Blind Loyalty, by E. L. Haverfield (2s., Nelson), is a sequel to "Our Vow." The loyalty is sufficiently tried, anyhow, and "blind" should rather read "persistent in the face of very grave dissuasives." The usual events of school life are worked out in fresh forms very interestingly. The story is skilfully arranged and attractively written. Eight full-page coloured illustrations, and a good many insets in black and white.

Diana Polwarth, Royalist, by J. F. M. Carter (5s., Seeley), is the story of a girl's life in the days of the Commonwealth, if not founded on fact, yet "at least resting on a background of fact." Political and religious elements of the period are worked into the development of the plot with judicious restraint, and the picture is outlined with considerable skill and in excellent tone. Eight illustrations by T. H. Crawford, R. S. W., and C. V. Harcourt. The type is large and the binding tasteful.

The Girls of Cromer Hall, by Raymond Jacberns (2s., Nelson), deals with the reformation of a badly spoilt little girl, in the course of which there are various perturbations in the school. It is brightly and sensibly written, and the interest is steadily maintained in a natural manner. Two illustrations in colour.

The Seymour Girls, by Geraldine R. Glasgow (9d., Nelson), is a pretty story of the first efforts of three girls in housekeeping. Two illustrations in colour.

Digitized by Google

VARIOUS.

Archie Digby, by G. E. Wyatt (1s., Nelson), is a story of "an Eton boy's holiday," though really Eton has nothing particular to do with the matter. A strong moral is enforced on the basis of an awkward business that arises from thoughtless self-confidence on the way from the railway station to Digby Castle, and of another unfortunate affair that comes of proud recklessness on the ice at Christmas time. The author plans skilfully and writes pleasantly, but rather weakly brings wrongs more or less right in the end—an artistic failing that is, indeed, very widely approved.

Miss Julia Long, the author of "Two of a Trade," presents *The Water-finders* (1s., Nelson), a tale of the wonders of the divining-rod, and how it saved a village from a plague. It is a trying matter when a population of seventeen thousand fall very short of water, and fever begins to stalk about the place; and a divining-rod that actually does find water comes in useful. Anyhow, the interest of the story lies in the attitude of the villagers. Of course, there is a collapse of the workings, and other mildly exciting eventualities.

Mrs. Burton Kingsland has compiled *The Book of Indoor and Outdoor Games*, with suggestions for entertainments on special occasions in all the months of the year (Heinemann). If it be true that "the average hostess is not very inventive," this is the book for the average hostess; and young folk will find in it large and attractive additions to their repertory. The author has not only compiled—she has also invented—a good many of the games she recommends. There are more than six hundred well packed pages, lucidly descriptive of an enormous number of varied expedients for passing the time interestingly.

NEW ISSUES OF NOTABLE BOOKS.

Here is *Gulliver's Travels* "into several remote nations of the world," handsomely printed and furnished forth (6s., A. & C. Black). It has sixteen full-page illustrations in colour by Stephen Baghot de la Bere, and is sure to be a favourite with all young readers fortunate enough to obtain it.

Cook's *Voyages of Discovery*, always interesting, have been been freshly edited by John Barrow, F.R.S., F.S.A., with eight illustrations in colour by John Williamson, and printed in good round type. A fine prize book, brightly got up.

Messrs. Seeley issue a new edition of Miss Mitford's *Country Stories*, with illustrations by George Morrow (2s. net). The volume is beautifully and spaciously printed and very tastefully bound.

Messrs. Macmillan have placed Tennyson's *Idylls of the King* in their "Golden Treasury Series" (2s. 6d. net). The type is liberal and the form handy—a very welcome edition. The frontispiece represents Guinevere, after Woolner's marble.

ANNUALS.

The yearly volume of *Chums* (8s., Cassell) needs neither description nor recommendation to boys. Its 832 pages contain an immense miscellany of serial stories (six of them, by John Mackie, Andrew Horne, Arthur Rigby, Robert Leighton, Arthur J. Daniels, and E. C. Heath Hosken, more exciting than literary, indeed), pretty nearly 150 complete shorter stories, more than 100 chatty articles on subjects that more specially interest boys, and a great variety of other matters. There are twelve coloured plates and over a thousand pictures of one kind and another; and the volume is, as usual, brightly got up.

The *Quiver* yearly volume (7s. 6d., Cassell) is a solid and substantial collection of varied and readable matter, extending beyond twelve hundred pages, with six Rembrandt photogravure and coloured plates, and some eight hundred illustrations in the text. It has four serial stories of single-volume length, by Christopher Hare, Katharine Tynan, Agnes Giberne, and C. E. C. Weigall; and a great variety of papers, interesting and important, by a wide array of well known contributors. We may specially note a series on "The Makers of Modern Christianity" by the Dean of Gloucester. The high character and tone of the paper appear to be well maintained.

The *Girl's Realm* annual (Bousfield) also runs over a thousand pages, studded with upwards of twelve hundred illustrations and photographs, and embodying a vast variety of interesting stories, useful and instructive articles, humorous sallies, and miscellaneous matters. It is well printed and attractively got up, and it quite deserves the popularity it has gained.

FOR CHILDREN.

The annual volume of *Bo-Peep* (2s. 6d., Cassell) is indeed "a treasury for the little ones," with its simple stories in prose and in verse by popular writers experienced in catering for children, its fine bold type, and its many illustrations in colour and in black and white. Here and there, indeed, the type is in colour. A very attractive volume.—The smaller yearly volume of *Tiny Tots* (1s. 4d., Cassell) is similarly suitable for smaller children. Short stories, numerous verses and jingles, numerous pictures, some simple songs—all contribute to make an entertaining and varied collection.

Three Hans Andersen books, illustrated very charmingly and most

(*Continued on page* 486.)

Oxford University Press.

A Geometrical Political Economy. Being an Elementary Treatise on the Method of explaining some of the Theories of Pure Economic Science by means of Diagrams. By H. CUNYNGHAME, C.B., M.A. Crown 8vo, cloth, 2s. 6d. net.

The Preparation of the Child for Science. By M. E. BOOLE. Crown 8vo, cloth, 2s.; or, interleaved with writing paper, 3s.

Glasgow Herald.—"Teachers may learn a great deal from this thoughtful work, not, it is true, as to the value of particular text-books, or as to the quickest way of preparing youths to pass examinations, but rather as to the true nature of eternal scientific method."

Experimental and Theoretical Course of Geometry. With or without Answers. By A. T. WARREN, M.A. Second Edition, thoroughly revised, with many new Propositions and Figures. Crown 8vo, cloth, 2s.

Education.—"The usefulness of this book is enhanced in the second edition by the arrangement against the propositions of references to corresponding articles in the experimental course."

Notes on Analytical Geometry. An Appendix. By A. CLEMENT JONES, M.A., Ph.D. Crown 8vo, cloth, 6s. net.

Euripidis Fabulae. Tom. II. Edited by G. G. A. MURRAY, LL.D., Litt.D. Crown 8vo, limp cloth, 3s. 6d.; paper covers, 3s. With Vol. I., on India paper, 9s.

[*Oxford Classical Texts.*

Horace. Vol. I: **Odes, Carmen Seculare, and Epodes.** Vol. II: **The Satires, Epistles, and De Arte Poetica.** With a Commentary by E. C. WICKHAM, D.D. Crown 8vo, cloth, 6s. each.

Educational Times.—"Scholarly, elaborate, and helpful; and the print and get-up are very tasteful and attractive."

Livy, Book VI. With Introduction and Notes by A. R. CLUER, B.A. Revised by P. E. MATHESON, M.A. New Edition, Revised. Extra fcap. 8vo, cloth, 2s.

Educational Times.—"The notes are discriminating and careful."

Exercises in Latin Prose, with Vocabulary. By G. G. RAMSAY, LL.D., Litt.D. Newly arranged in Three Parts. Crown 8vo, cloth. PART I, Lower Grade, 1s. 6d. PART II, Higher Grade, 1s. 6d. PART III, Syntax and Appendix, 2s. 6d.

Educational Times.—"Admirable manuals, constructed with notable care and judgment."

Sir Thomas More's Utopia. Edited, with Introduction and Notes, by J. CHURTON COLLINS, M.A. Crown 8vo, cloth, 3s. 6d.

Secondary Education.—"The Oxford University Press edition of Sir Thomas More's "Utopia" ought to find a place in every school in the Kingdom."

OXFORD MODERN FRENCH SERIES.

Edited by LEON DELBOS, M.A. Crown 8vo, cloth.

Educational Times.—"The variety, the interest, and the excellence of the matter are obvious from the mere enumeration; and the notes deal briefly with points of literary, historical, and geographical importance, some little command of the language being assumed. The paper and type are excellent, and the binding is strong. An excellent and welcome series, most serviceable in the higher classes in schools, and attractive to the general reader of French."

Eight Volumes now ready:—

Deux Héroïnes de la Révolution Française. By LAMARTINE. Edited by MARY BENTINCK-SMITH. 192 pp. 2s. 6d.

La Vendetta and **Pierre Grassou.** By BALZAC. Edited by MARIE PÉCHINET, B.A. 140 pp. 2s.

Bug-Jargal. By VICTOR HUGO. Edited by LOUIS SERS. 152 pp. 2s.

Mademoiselle de la Seiglière. By SANDEAU. Edited by A. L. DUPUIS. 214 pp. 2s. 6d.

Mémoires d'Outre-Tombe. By CHATEAUBRIAND. Edited by LOUIS SERS. 164 pp. 2s. 6d.

Voyage autour de mon Jardin. By KARR. Edited by STUART G. HALLAM, M.A. 148 pp. 2s.

Le Château de Vaux. By GOZLAN. Edited by A. H. SMITH, M.A. 92 pp. 1s. 6d.

Extraits des Voyages d'Alexis de Tocqueville. Edited by J. MANSION. 122 pp. 2s.

LONDON: HENRY FROWDE, OXFORD UNIVERSITY PRESS WAREHOUSE, AMEN CORNER, E.C.

Digitized by Google

liberally by Helen Stratton, will be first favourites: (1) the *Fairy Tales*, selected and edited for little folks (2s. 6d.); (2) *The Tinder Box*, and other stories (1s.); and (3) *The Ugly Duckling*, and other stories. The type is large and open, and the get-up is tasteful and attractive. Messrs. Blackie are the publishers.

Stories from the Bible, by Mrs. L. Haskell (2s., Blackie), are very simple and nicely told, and plentifully illustrated, partly in colour.—The first portion of it is also got up separately as *Scripture Stories* (6d., Blackie)—a pretty "picture-book for little folk."

Then here are *The Dear Old Nursery Tales*—Cinderella, Puss in Boots, and Jack and the Bean-stalk—spaciously printed, and humorously illustrated in colour by John Hassall (1s., Blackie).—And *Cinderella* and *Puss in Boots*, separately in "Blackie's New Picture Books" series (6d. each), in very pretty get-up.

My Book of Nursery Rhymes, too, with plenty of funny illustrations in colour by John Hassall (1s., Blackie), will prove greatly attractive.

Messrs. Nelson offer *Robinson Crusoe* (1s.)—a new picture book of 16 large coloured pages, the story being briefly retold in very simple language. And *No End of Fun*, an astonishing presentment of lively coloured pictures at the price (6d.—but 1s. on linen). And several booklets (1d. each)—such as *The Star in the East* (stories about Jesus), *Pretty Poll* (a book of birdies), and *Off and Away* (on holiday, by train)—all prettily furnished forth in coloured type and with coloured illustrations.

Messrs. Methuen present three picture-books (with the stories in verse), tastefully got up, the pictures cleverly drawn and skilfully coloured. (1) *The Story of Little Jack Sprat* (2s.), considerably extended, if we mistake not, and so more varied; the pictures by Frank Adams. (2) *Christmas at the Zoo* (2s.), described in verse by William Boyle, with coloured illustrations by Harry B. Neilson—a variety of picturesque adventures. (3) *Dolly's Theatricals* (2s. 6d.), pictured and described by D. Gwyn Jeffreys in attractive and amusing fashion.

Mr. Heinemann provides *The Wonderful Story of Henny-Penny*—the well known progress to the Fox's hole—pictured boldly in colour by W. D. Adams (1s. net). It is sure to be appreciated.

Two more of "The Oogley Oo Books" (1s. net each). (1) *Eliza Crump* (a dame of mature years and set features), by S. C. Woodhouse, M.A., with 20 coloured pictures by Gerald Sichel; and (2) *Billy Ruddylox* (an ancient British boy), by Lily Schofield, with 21 coloured plates by the author. Messrs. Swan Sonnenschein & Co. are the publishers.

The Little Folks Picture Album in Colour, by S. H. Hamer (Cassell), consists of nearly thirty stories in prose and in verse, with 48 capital coloured plates. A handsome volume, well printed, and interesting throughout.

FIRST GLANCES.

Mathematics.

Diagram Measurer. Designed by D. A. Low, Professor of Engineering, East London Technical College. 1s. net. Longmans.
["Instrument for measuring the areas of irregular figures, and specially useful for determining the mean effective pressure from indicator diagrams from steam, gas, and other engines." Cleverly done.]

Geometrical Drawing, Examples in. By V. Le Neve Foster, M.A. 3s. 6d. net. Eton College Press; Spottiswoode & Co.
[Well devised and classified. Includes a collection of "Patterns" that has been in use at Eton for a year.]

Geometry, A Modern: Theoretical and Practical. By G. A. Christian, B.A., and A. Pratt, B.A., B.Sc., F.R.A.S. 2s. net. Allman.
[Comprises Euclid I. and II., and part of III. "Includes all additional matter necessary for" the King's Scholarship Examination, 1905. Substantially got up.]

Geometry, A School. Part VI. By H. S. Hall, M.A., and F. H. Stevens, M.A. 1s. 6d. Macmillan.
[Substance of Euclid XI. 1–21, together with theorems relating to surfaces and volumes of simpler solid figures.]

Geometry, Preliminary. By Rawdon Roberts, B.Sc. 1s. Blackie.

Geometry, Elementary Pure; with Mensuration. By E. Budden, M.A. Oxon., B.Sc. Lond. 3s. Chambers.
["A complete course of geometry for schools."]

Mensuration, Volumes in. By S. Irwin Crookes, A.I.E.E., F.C.S. 6d. Harris (Birmingham).
["A description of new models and apparatus for teachers of Physics and Practical Mathematics." Usefully suggestive.]

Trigonometry, A New, for Schools. Part I. By W. G. Borchardt, M.A., B.Sc., and the Rev. A. D. Perrott, M.A. 4s. 6d. George Bell (Cambridge Mathematical Series).
[Over 1200 examples, with or without answers.]

Trigonometry, Plane, Elements of. By R. Lachlan, Sc.D., and W. C. Fletcher, M.A. 2s. E. Arnold (Mathematical Series).

Science.

Chemical Laboratories for Schools: Hints. By D. S. Macnair, Ph.D., B.Sc. 6d. George Bell.
[Very useful practical "hints to teachers as to the method of fitting up a school laboratory and of conducting a school course in chemistry."]

Chemistry. Elementary Physics and Chemistry for the use of Schools: Book III., Chemistry. By John Bidgood, B.Sc., F.L.S. 2s. Longmans.
[Simple, in view of limited apparatus. 108 figures.]

Currents, Alternate, Notes on, for Students. By Harold H. Simmons, A.M.I.E.E. 1s. 6d. net. Cassell.
[Mostly part of a larger forthcoming work. 25 figures. Very serviceable.]

Inorganic Qualitative Analysis Tables, with Equations and Notes. By Harold Munkman Timpany, M.Sc. Vict. 1s. Blackwoods.
[Instructive compendium.]

Magnetism, and its Elementary Measurement. By W. Hibbert, F.I.C., A.M.I.E.E. 2s. Longmans.
[First part of a forthcoming volume. "Chief feature lies in the use of a new instrument—a magnetic balance."]

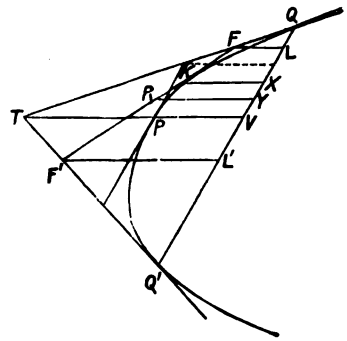
MATHEMATICS.

15599. (A. M. Nesbitt, M.A.) —Two tangents drawn from a point T to a parabola meet any third tangent in F and F′. If the diameter through T meet the curve in P, prove that the tangent at P bisects FF′.

[Solution by elementary geometrical conics required.]



Solutions (I.) *by* R. F. Davis, M.A.; (II.) *by* W. F. Beard, M.A., *and the* Proposer; (III.) *by* Kela Deva Rau, B.A., *and others.*

(I.) Since QF : QT = QL : QV = 2QL : 2QV = QX : QQ′, therefore FX is parallel to TQ′. Similarly, F′X is parallel to TQ. Hence TFXF′ is a parallelogram, and the middle point of one diagonal FF′ coincides with the middle point of the other diagonal TX. But this latter point evidently lies on the tangent at P, etc. (See Milne and Davis, 1890, p. 25.)

(II.) Let FF′ touch the parabola at R and meet the tangent at P in G. Draw GM, RN parallel to the axis,

NM = ½VN, NL′ = ½NQ′;

therefore L′M = ½Q′V;

also NL = ½NQ;

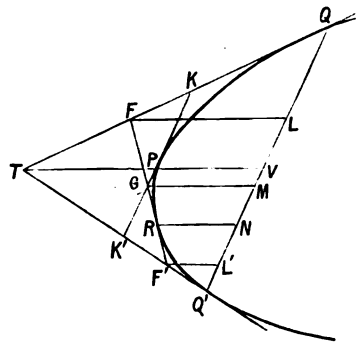
therefore

LL′ = ½QQ′ = Q′V;

therefore

LL′ = 2L′M;

therefore M is mid-point of LL′; therefore G is mid-point of FF′.



(III.) Let the tangent drawn from P meet TQ at K and FF′ at R. From F, K, R, T, F′ draw FL, KX, RY, TV, and F′L′ parallel to the axis. From a well known property of the parabola, PQ is bisected by KX; therefore VQ = 2VX. Similarly Q′X = 2Q′L′, Q′Q = 2Q′V; therefore QQ′ − Q′X = 2(Q′V − Q′L′), *i.e.*, XQ = 2L′V. But XQ = 2XL; therefore LX = L′V, and XY = VY; therefore LY = YL′; therefore FR = RF′, *i.e.*, FF′ is bisected by the tangent at P.

15500 & 15572. (Professor E. B. Escott.)—(15500.) Find two large consecutive numbers (> 10^{14}) all of whose prime factors are less than 100.

Examples: $a^2 = 7534241^2 = 11^2 . 13^2 . 19^2 . 47^2 . 59^2$,
$a^2 - 1 = 2^6 . 3^3 . 5 . 7^2 . 31^2 . 41^2 . 83$;

$a^2 = 15473809^2 = 13^4 . 19^2 . 61^2 . 79^2$,
$a^2 - 1 = 2^5 . 3^3 . 5 . 7^2 . 11 . 17 . 41 . 43 . 47 . 73$.

(15572.) Find two large consecutive numbers (> 10^{17}) all of whose prime factors are less than 200. Examples:

$a^2 = 306 . 331 . 585^2 = 5^2 . 7^8 . 17^2 . 19^2 . 79^2$,
$a^2 - 1 = 2^7 . 3 . 11^2 . 13 . 31 . 37 . 83 . 101 . 107 . 151$;

$a^2 = 315 . 630 . 756^2 = 17766^4 = 2^4 . 3^{12} . 7^4 . 47^4$,
$a^2 - 1 = 5 . 11 . 13 . 17 . 19 . 37 . 73 . 89 . 101 . 109 . 163$;

$a^2 = 940 . 737006^2 = 2^2 . 3^4 . 11^4 . 19^2 . 127^2 . 179^2$,
$a^2 - 1 = 5 . 7 . 13 . 17 . 23 . 31 . 41 . 47 . 59 . 71 . 103 . 193$.

Discussion of the more general Problem by the Proposer.

The Proposer discusses the general methods applicable to the solution of these problems as follows:—

In the computation of logarithms by means of the series

$$\log(x+a) = \log x + 2m\left[\frac{a}{2x+a} + \frac{1}{3}\left(\frac{a}{2x+a}\right)^3 + \dots\right]$$

it is important that we be able to determine two numbers $x+a$ and x all of whose factors are not greater than the number whose logarithm is desired. a should be small in comparison with x (preferably $a = 1$). Huygens (*Opera varia*, Vol. II., pp. 456–458) and Gauss (*Werke*, Band II., Seite 501–3) have given lists of such pairs of numbers suitable for calculating logarithms of numbers as far as 100.

The method I have used in determining these numbers is as follows. By methods which I shall give in a paper soon to be published I have obtained the following pairs of polynomials which have rational linear factors and which differ only in their constant terms. Some of these were given by Borda, *Logarithmic Tables;* Lavernède, *Gard. Notice Trav. Acad.*, 1807, pp. 179–192; Gergonne's *Annales de Math.*, Vol. I., 1810–11, pp. 18–51, 78–100; Lacroix, *Traité du calcul diff. et int.*, tome I., 1810, pp. 48–52; Secretan, *Comptes rendus*, t. XLIV., 1857, pp. 1276–9; Thomas Knight, *Phil. Trans. Roy. Soc. of London*, 1817, pp. 217–233; Wm. Allman, *Trans. Royal Irish Acad.*, Vol. VI., 1797, pp. 391–434.

i. $x(x-a-b) = x^2-(a+b)x$,
$(x-a)(x-b) = x^2-(a+b)x+ab$.

ii. In the preceding, let $b = -a$:
$x^2 = x.x$,
$x^2-a^2 = (x+a)(x-a)$.

iii. $(x+a+b)(x-a)(x-b) = x^3-(a^2+ab+b^2)x+ab(a+b)$,
$(x-a-b)(x+a)(x+b) = x^3-(a^2+ab+b^2)x-ab(a+b)$.

iv. In the last, let $a = b = 1$:
$(x+2)(x-1)^2 = x^3-3x+2$,
$(x-2)(x+1)^2 = x^3-3x-2$.

v. $(x-3)(x-5)(x+8) = x^3-49x+120$,
$(x+7)x(x-7) = x^3-49x$.

vi. $(x+11)(x-5)(x-6) = x^3-91x+330$,
$(x+9)(x+1)(x-10) = x^3-91x-90$.

vii. $(x+2)(x+11)(x-13) = x^3-147x-286$,
$(x+7)^2(x-14) = x^3-147x-686$.

viii. $(x+4)(x-1)(x-4) = x^3-x^2-16x+16$,
$(x+2)^2(x-5) = x^3-x^2-16x-20$.

ix. $(x+7)x(x-8) = x^3-x^2-56x$,
$(x+4)^2(x-9) = x^3-x^2-56x-144$.

x. $x^2(x+5)(x-5) = x^4-25x^2$,
$(x+4)(x+3)(x-3)(x-4) = x^4-25x^2+144$.

xi. $x^2(x-5)^2 = x^4-10x^3+25x^2$,
$(x+1)(x-2)(x-3)(x-6) = x^4-10x^3+25x^2-36$.

xii. $x^2(x-13)^2 = x^4-26x^3+169x^2$,
$(x+2)(x-3)(x-10)(x-15) = x^4-26x^3+169x^2-900$.

xiii. $(x+7)(x-7)(x+1)(x-1) = x^4-50x^2+49$ } (Practically same
$(x+5)^2(x-5)^2 = x^4-50x^2+625$ } as xi.)

xiv. $(x+5)(x+1)(x-2)(x-6) = x^4-2x^3-31x^2+32x+60$,
$(x+4)(x+3)(x-4)(x-5) = x^4-2x^3-31x^2+32x+240$.

xv. $(x+9)(x+1)(x-8)(x+5)(x-7) = x^5-110x^3+2629x+2520$,
$(x-9)(x-1)(x+8)(x-5)(x+7) = x^5-110x^3+2629x-2520$.

xvi. $(x-10)(x+9)(x+7)(x-2)(x-4) = x^5-125x^3+3004x-5040$,
$(x+10)(x-9)(x-7)(x+2)(x+4) = x^5-125x^3+3004x+5040$.

xvii. $x^2(x-7)^2(x+7)^2 = x^6-98x^4+2401x^2$,
$(x+8)(x+5)(x+3)(x-3)(x-5)(x-8) = x^6-98x^4+2401x^2-14400$.

As an example of the method, take the formula

$$\text{xvii.}\quad \frac{x^2(x-7)^2(x+7)^2}{(x+8)(x+5)(x+3)(x-3)(x-5)(x-8)} = \frac{x^6-98x^4+2401x^2}{x^6-98x^4+2401x^2-14400} \quad \dots\dots\dots\dots\dots\dots(1).$$

The numerator and denominator differ by 14400. If we choose x so that *either* numerator or denominator is divisible by 14400, then the other one will also be divisible, and after dividing both terms of the fraction by 14400 the numerator and denominator will differ by unity. Then x must satisfy the congruence $x^2(x-7)^2(x+7)^2 \equiv 0 \pmod{14400 = 2^6 . 3^2 . 5^2}$. The solution is

$$x \equiv 3, 5, 7, 13, 15, 17 \pmod{20} \quad \text{or} \quad x \equiv 0, 8, 32 \pmod{40}.$$

For example, if $x = 3325$,

$$\frac{5^2 . 7^8 . 17^2 . 19^2 . 79^2}{2^7 . 3 . 11^2 . 13 . 31 . 37 . 83 . 101 . 107 . 151} = \frac{306331585^2}{*}.$$

If $x = 4833$,

$$\frac{2^2 . 3^4 . 11^4 . 19^2 . 127^2 . 179^2}{5 . 7 . 13 . 17 . 23 . 31 . 41 . 47 . 59 . 71 . 103 . 193} = \frac{940737006^2}{*}.$$

[Rest in *Reprint.*]

15407. ("Stranger.")—Find a point on a given parabola which is the centre of a circle touching the curve and passing through its focus.

Digitized by Google

Solutions (I.) *by* R. TUCKER, M.A.; (II.) *by* Professor SANJÁNA, M.A.; (III.) *by* LIONEL E. REAY, B.A.

(I.) The equation to the circle touching the parabola at $(am^2, 2am)$ and passing through the focus is

$$x^2+y^2-ax(3m^2+1)-ay(3m-m^3)+3a^2m^2=0.$$

Hence the co-ordinates of the centre are $2x=a(3m^2+1)$, $2y=a(3m-m^3)$, and, that this may be on the curve, $(3m-m^3)^2=8(3m^2+1)$, *i.e.*,

$$m^6-6m^4-15m^2-8=0=(m^2+1)^2(m^2-8).$$

Therefore $2x=a(25)$, $2y=a.5(2\sqrt{2})$.

[Rest in *Reprint*.]

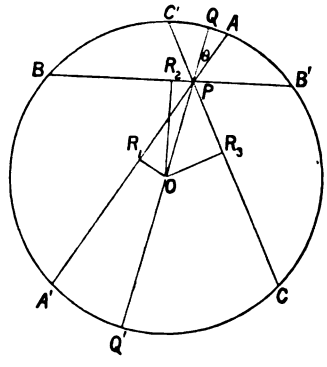
15488. (G. HEPPEL, M.A.)—P is any point within a circle. APA′, BPB′, CPC′ are three chords making angles of 120° with one another. Prove that AP+BP+CP = A′P+B′P+C′P, and that each ranges between 3 and $\sqrt{3}$ times the radius.

Solution by CONSTANCE I. MARKS, B.A.

The construction in the figure is self-evident. Also

$$\angle APC'=60°,$$

and similarly for each angle similarly formed. Let θ be the angle which is not greater than $60°-\theta$. Then



$$A'P-AP=2OP\cos\theta,$$

$$B'P-BP=-2OP\cos(60°+\theta)=-OP\cos\theta+OP\sqrt{3}\sin\theta,$$

$$C'P-CP=-2OP\cos(60°-\theta)=-OP\cos\theta-OP\sqrt{3}\sin\theta.$$

By addition, $(A'P+B'P+C'P)-(AP+BP+CP)=0$,

or $AP+BP+CP=A'P+B'P+C'P$.

Again, if P coincides with O,

$$AA'+BB'+CC'=2(AP+BP+CP)=3\times\text{diameter};$$

$\therefore$ $AP+BP+CP=3r=A'P+B'P+C'P=$ a maximum (r = radius).

Finally, projecting the diameter QQ′ orthogonally on each of the given chords

$$AA'+BB'+CC'>2r\cos\theta+2r\cos(60°+\theta)+2r\cos(60°-\theta)>4r\cos\theta.$$

Making $\theta=30°=$ a maximum, and $\cos\theta$ therefore a minimum,

$$AA'+BB'+CC'>4r\tfrac{1}{2}\sqrt{3}>2r\sqrt{3},$$

whence AP+BP+CP or A′P+B′P+C′P is always greater than $r\sqrt{3}$.

15627. (A. H. BELL.)—Give a formula for all integral right-angled triangles where the difference between the sides containing the right angle is 7.

Examples: 5, 12, 13; 8, 15, 17; ....

Solutions (I.) *by* Lt.-Col. ALLAN CUNNINGHAM, R.E., *and* R. W. D. CHRISTIE; (II.) *by* J. BLAIKIE, M.A.; (III.) *by* D. BIDDLE *and* W. H. BLYTHE, M.A.; (IV.) *by* C. BICKERDIKE.

[Solutions far too numerous to allow of publishing more than a few typical ones.]

(I.) The solution may be given in general terms, and then particularized. Let a, b, c be the sides; $c^2=a^2+b^2$, $a\sim b=d$ (a given quantity). Then there are *two* general solutions of the Diophantine $c^2=a^2+b^2$:—

(i.) $a=\frac{1}{2}(t^2\sim u^2)$, $b=tu$, $c=\frac{1}{2}(t^2+u^2)$; t, u both odd, or both even;

(ii.) $a=t^2\sim u^2$, $b=2tu$, $c=t^2+u^2$; t, u one odd, one even;

and the condition $a\sim b=d$ now gives rise to *four* Diophantines in t, u, which may be included in the single form $T^2-2u^2=\pm 2d$ or $\pm d$, where $T=t-u$. But, as it turns out that the $\pm$ signs of $2d$ and of d lead to the *same* solution, one sign (say $-2d$ and $-d$) may be neglected. Next, let T_0, u_0 be the *least* solutions of either of the two Diophantines $T^2-2u^2=+2d$, or $+d$, and let T_1, u_1; T_2, u_2, &c., be the next higher solutions in ascending order; then the general solution (T_n, u_n) is given by $T_n=T_1\tau_n\mp 2u_1v_n$, $u_n=T_1v_n\mp u_1\tau_n$ (both signs −, or both +), where τ_n, v_n is the nth solution of $\tau^2-2v^2=+1$. These last (τ_n, v_n) may be derived by known rules from the minimum solution $3^2-2.2^2=1$; or they may be taken direct from the present writer's new *Tables of Quadratic Partitions* (just published), p. 261, $\tau=3, 17, 99, 577, 3363, \ldots$; $v=2, 12, 70, 408, 2378, \ldots$.

Ex.—In the present case $d=7$, and the minimum solutions (T_0, u_0) are

$T_0=4$, $u_0=1$ in $T^2-2u^2=14$; $T_0=3$, $u_0=1$, in $T^2-2u^2=7$.

Observing that $t=T+u$, and that each pair τ_n, v_n gives *two* values for T_n and u_n (on account of the double sign in the formulæ for T_n, u_n), a few of the values of $T_n, u_n, t_n, a_n, b_n, c_n$ (as far as $n=2$) may be shown as in table below.

τ	.	3	17	&c.	τ	.	3	17	&c.
v	.	2	12	&c.	v	.	2	12	&c.
t'	4	8, 16	44, 92	&c.	t'	3	5, 13	27, 75	&c.
u	1	5, 11	31, 65	&c.	u	1	3, 9	19, 53	&c.
t	5	13, 27	75, 157	&c.	t	4	8, 22	46, 128	&c.
a	12	72, 304	2332, 10212	&c.	a	15	55, 403	1755, 13575	&c.
b	5	65, 297	2325, 10205	&c.	b	8	48, 396	1748, 13568	&c.
c	13	97, 425	3293, 14437	&c.	c	17	73, 525	2477, 19193	&c.

(II.) We know that, if x and y be integers or multiples of the same quadratic surd, $(x+y)(x-y)$, $2xy$, x^2+y^2 are integers, and may be taken as the lengths of the sides of a right-angled triangle. It is required to find a series $u_1, u_2, u_3, \ldots, u_n$ such that the expression

$$(u_n+u_{n-1})(u_n-u_{n-1})-2u_nu_{n-1}$$

may be constant in magnitude. If we assume that this difference is alternately positive and negative, we obtain the relation

$$u_n^2-u_{n-1}^2-2u_nu_{n-1}=2u_{n+1}u_n-u_{n+1}^2+u_n^2,$$

from which, by reduction, we find $u_{n+1}=2u_n+u_{n-1}$. Consider now the series (*a*) 1, 2, 5, 12, ...; (*b*) 1, 4, 9, 22, ...; (*c*) 2, 3, 8, 19, ... In series (*a*) we have $(u_n+u_{n-1})(u_n-u_{n-1})-2u_nu_{n-1}=\pm 1$. In series (*a*) and (*b*) we have $(u_n+u_{n-1})(u_n-u_{n-1})-2u_nu_{n-1}=\pm 7$. Thus series (*a*) gives a set of right-angled triangles 3, 4, 5; 20, 21, 29; ..., in which the two smaller sides differ by unity, and we can obtain triangles fulfilling the conditions of the question by multiplying each side by 7. Series (*b*) and (*c*) give triangles in which the smaller sides differ by 7, viz., (*b*) gives 8, 15, 17; 65, 72, 97; ...; (*c*) gives 5, 12, 13; 55, 48, 73; ....

[Rest in *Reprint*.]

15548. (Professor S. SIRCOM.)—If D, E, F be any points on the sides BC, CA, AB respectively of a triangle ABC, and X, Y, Z the points in which EF, FD, DE respectively meet the same sides, then

$$(DZ.EX.FY)/(DY.EZ.FX)=-(AF.BD.CE)/(AE.BF.CD).$$

Solutions (I.) *by* A. HOLDEN, B.A.; (II.) *by* C. M. ROSS.

(I.) Let ABC be the given triangle, X, Y, Z the points where the transversals EF, FD, DE meet the sides BC, CA, AB respectively. Draw ER parallel to BC, FS parallel to AC, DT parallel to AB. Then

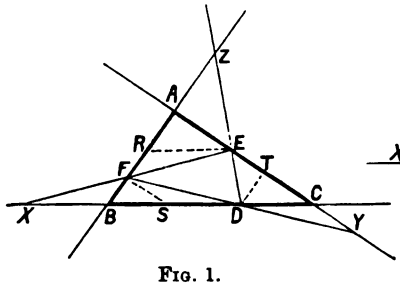


FIG. 1.

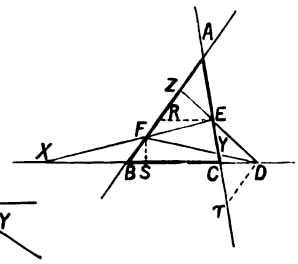

FIG. 2.

DZ/EZ = BD/RE, EX/FX = CE/SF, and FY/DY = AF/TD, from similar triangles; therefore we have

$$(DZ.EX.FY)/(EZ.FX.DY)=(BD.CE.AF)/(RE.SF.TD)\ldots(1).$$

Again the triangles ARE and ABC are similar; therefore

$$RE/EA=BC/CA.$$

Similarly SF/FB = CA/AB and TD/DC = AB/BC; therefore

$$(RE.SF.TD)/(EA.FB.DC)=1;$$

therefore $RE.SF.TD=EA.FB.DC=-AE.BF.CD$.

Therefore, substituting in (1), we have

$$(DZ.EX.FY)/(EZ.FX.DY)=-(BD.CE.AF)/(AE.BF.CD).$$

The same proof holds for any other positions of D, E, F as in Fig. 2.

[Rest in *Reprint*.]

15594. (J. J. BARNIVILLE, B.A.)—Having

$$u_1=2b^2-a^2, \quad u_2=a^2+4ab+2b^2,$$

$$u_3=a^2+8ab+14b^2, \quad u_4=7a^2+36ab+46b^2, \quad \ldots,$$

and $v_1=a^2+2ab+2b^2$, $v_2=a^2+6ab+10b^2$, $v_3=5a^2+26ab+34b^2$, ..., the scale of each series being x^3-3x^2-3x+1, prove that $u_n^2+u_{n+1}^2=2v_n^2$.

Solution by C. M. ROSS.

The scale of relation of the series

$$2b^2-a^2+x(a^2+4ab+2b^2)+(a^2+8ab+14b^2)x^2+\ldots$$

is $1-3x-3x^2+x^3$, and the generating function is

$$[2b^2-a^2+4x(a^2+ab-b^2)+(a^2-4ab+2b^2)x^2]/(1-3x-3x^2+x^3).$$

Digitized by Google

This expression is equivalent to the partial fractions

$$-\tfrac{1}{3}(a^2+2ab-2b^2)\frac{1}{1+x}$$
$$-\frac{a^2(7-4\sqrt{3})+2ab(-5+3\sqrt{3})+2b^2(2-\sqrt{3})}{3(\sqrt{3}-1)}\frac{1}{x-2+\sqrt{3}}$$
$$+\frac{a^2(7+4\sqrt{3})+2ab(-5-3\sqrt{3})+2b^2(2+\sqrt{3})}{3(\sqrt{3}+1)}\frac{1}{x-2-\sqrt{3}}.$$

The sum of the coefficients of x^{n-1} and x^n in the several terms of this expression are equal to u_n and u_{n+1}. Similarly, the sum of the coefficients of x^{n-1} in the expression

$$\tfrac{1}{3}(a^2+2ab-2b^2)\frac{1}{1+x}$$
$$-\frac{a^2(-5+3\sqrt{3})+4ab(2-\sqrt{3})+2b^2(-1+\sqrt{3})}{3(\sqrt{3}-1)}\frac{1}{x-2+\sqrt{3}}$$
$$+\frac{a^2(-5-3\sqrt{3})+4ab(2+\sqrt{3})+2b^2(-1-\sqrt{3})}{3(\sqrt{3}+1)}\frac{1}{x-2-\sqrt{3}}.$$

is equal to v_n.

Hence, grouping together like terms in the squares of the coefficients of x^{n-1} and x^n thus found, it follows that $u_n^2+u_{n-1}^2=2v_n^2$.

15606. (Rev. J. Cullen.)—Given four vectors α, β, γ, δ, show that, if $\phi(t)=\mathrm{V}(\alpha+t\beta)(\gamma+t\delta)^{-1}$, then $\mathrm{U}\Sigma\mathrm{V}\,\phi(t_2)\phi(t_3)$ is invariable for all values of t_1, t_2, t_3, provided $t_1>t_2>t_3$. Hence obtain the equation of the plane formed by the intersection of the reciprocal cone (whose vertex is the origin) with the cylindroid determined by two given screws $(\sigma,\ \omega)$ and $(\sigma_1,\ \omega_1)$.

Solution by the Proposer.

Put $(\gamma+t_1\delta)^2=\mathrm{T}_1^2$, ...; then

$$\phi(t_1)=\mathrm{T}_1^{-2}\mathrm{V}(\alpha+t_1\beta)(\gamma+t_1\delta)=\mathrm{T}_1^{-2}(\xi+t_1\eta+t_1^2\zeta)\ \text{(suppose)}.$$

Hence $$\Sigma\mathrm{V}\phi(t_2)\phi(t_3)=(t_1-t_2)(t_2-t_3)(t_3-t_1)\,\mathrm{T}_1^{-2}\mathrm{T}_2^{-2}\mathrm{T}_3^{-2}\mathrm{K},$$

where $$\mathrm{K}=\gamma^2.\mathrm{V}\eta\zeta+2\mathrm{S}\gamma\delta.\mathrm{V}\zeta\xi+\delta^2.\mathrm{V}\xi\eta.$$

Therefore $\mathrm{U}\Sigma\mathrm{V}\phi(t_2)\phi(t_3)=\mathrm{U}\kappa$, which is independent of t_1, t_2, t_3 provided $t_1>t_2>t_3$.

The equation of the plane through $\phi(t_1)$, $\phi(t_2)$, $\phi(t)_3$ is

$$\mathrm{SK}[\rho-\phi(t_1)]=0$$

or $$\mathrm{SK}\rho-\mathrm{S}\xi\eta\zeta=0 \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ (1).$$

Now, since the vector equation of the cylindroid is

$$\rho=\mathrm{V}(\sigma+t\sigma_1)(\omega+t\omega_1)^{-1}+x(\omega+t\omega_1),$$

we obtain on putting $x=0$ the perpendiculars on the generators which lie on the cone $\mathrm{S}\sigma\rho\mathrm{S}\omega_1\rho-\mathrm{S}\sigma_1\rho\mathrm{S}\omega\rho=0$, and from the above we need only to replace α, β, γ, δ by σ, σ_1, ω, ω_1 in K, ξ, η, ζ in (1) to obtain the equation of the plane.

Algebraical Note.

By A. M. Nesbitt, M.A.

To find the number of ways in which it is possible to place n letters each into a wrong envelope.

The following method of working this familiar question may be found interesting.

Take as a first approximation the total number of ways, $n!$, in which the n letters can be placed in their envelopes. This is too large, and therefore from it we subtract the number in which a is placed right and the rest anyhow, the number in which b is placed right and the rest anyhow, ...; thus subtracting in all $n(n-1)!$. But now we have taken off too large a number, and must therefore add the number of ways in which a, b are put right and the rest anyhow, and so for each and every pair: this gives the term $+\frac{n(n-1)}{1.2}(n-2)!$. Here again we have added too large a number and must compensate by taking off ${}_nC_3(n-3)!$; this in turn requires the addition of ${}_nC_4(n-4)!$; and so on. Hence the required number is

$${}_nC_0n!-{}_nC_1(n-1)!+{}_nC_2(n-2)!-{}_nC_3(n-3)!+\ldots+(-1)^n{}_nC_n0!,$$

i.e., $$n![1-1/1!+1/2!-1/3!+\ldots+(-1)^n1/n!].$$

Cor.—If there are more envelopes than letters—*i.e.*, suppose there to be $m-n$ blank envelopes—we are at once led by similar reasoning to the fact that the number of ways of putting the letters in envelopes so that none shall go right is

$${}_nC_0{}_mP_n-{}_nC_1{}_mP_{n-1}+{}_nC_2{}_mP_{n-2}-\ldots+(-1)^{n-1}{}_nC_{n-1}{}_mP_1+(-1)^n{}_nC_n,$$

i.e., $$\sum_{r=0}^{r=n}(-1)^r\frac{m!}{(m-n+r)!}\frac{n!}{r!(n-r)!}$$

or $$\sum_{r=0}^{r=n}(-1)^r m!\,n!/[r!(n-r)!(m-n+r)!];$$

so that the chance that all the letters go astray is got by substituting $(m-n)!$ for $m!$ in the above expression.

The case in which there are more letters than envelopes presents no special difficulty.

12229. (Professor Lévy.)—Un régiment marche à la cadence de 120 pas par minute; on demande quels sont les soldats qui poseront le pied droit sur le sol en même temps que la musique. Même problème en changeant la cadence.

Solution by W. J. Greenstreet, M.A.

Sound travels at the rate of 1120 ft. per second. The troops are marking time, or walking in a straight line, at 120 paces a minute, *i.e.*, at 2 paces a second, *i.e.*, each man places his right foot on the ground once in a second and his left foot half a second after. Then men at intervals of $1120k$ ft., where k is integral, will appear to the spectator to be keeping time with the band. If the time is changed, the 2 paces a second becomes 2 paces in x seconds. In x seconds sound travels $1120x$ ft. Hence the intervals above must be $1120xk$ ft.

15626. (R. Chartres.)—If C_r, D_r be the combinations of n and $2n$ things respectively taken r together, find the sum of

$$1+(C_1)^2/D_2+(C_2)^2/D_4+(C_3)^2/D_6+\ldots.$$

Solution by the Proposer.

Legendre's coefficient may be arranged

$$P_n(\cos\theta)=(D_n/2^{2n})[\cos n\theta+(C_1^2/D_2)\cos(n-2)\theta+(C_2^2/D_4)\cos(n-4)\theta+\ldots].$$

Let $\theta=0$; therefore $1+C_1^2/D_2+C_2^2/D_4+\ldots=2^{2n}/D_n$.

15198. (Professor Sanjána, M.A.)—ACA′, BCB′ are two fixed conjugate diameters of a hyperbola, and CP, CD are two conjugate semi-diameters: if AP, BD meet in O, and A′P, B′D in Q, prove that PODQ is a parallelogram, whose diagonal OQ is of fixed length and lies along an asymptote. Find also the maximum area of this parallelogram.

Solution by A. M. Nesbitt, M.A.

Taking the conjugate diameters AA′, BB′ for axes and $(x',\ y')$ for co-ordinates of P, we get the following equations:—

$$y/(x-a)=y'/(x'-a)\ \text{for AP},$$
$$(y+b)/x=(bx'/a+b)/(ay'/b)=y'/(x'-a)\ \text{for B′D},$$
$$(y-b)/x=y'/(x'+a)\ \text{for BD}.$$

Hence B′D is parallel to AP; so that OQ is a parallelogram. Also, since $y'^2/(x'^2-a^2)=b^2/a^2$, we may take $y/(x-a)=bm/a$ for AP and

$$(y-b)/x=b/am\ \text{for BD},$$

and, on multiplying up and adding, we find $(m+1)(ay-bx)=0$; so that AP and BD intersect on the asymptote $ay=bx$. [If $m=-1$, the two lines coincide with AB and may therefore be said to intersect on the other asymptote.] Hence we get, for co-ordinates of O, $[am/(m-1),\ bm/(m-1)]$. Now we may similarly take

$$y/(x+a)=b/am,\quad (y+b)/x=bm/a$$

for equations to A′P and BD, and these meet in $[a/(m-1),\ b/(m-1)]$, which are co-ordinates of Q. The difference of the abscissæ of O and Q is thus a, and this is the (oblique) projection of OQ on the x axis. The area of the parallelogram is thus $ab\sin\omega$; so that its area is constant.

QUESTIONS FOR SOLUTION

15634. (C. Bickerdike.)—*Correction.*—Question 15634 is not sufficiently enunciated, and should read:—"In the triangle ABD there are given the sides BA, BD, the included angle ABD, also BO. Required to draw the lines AO and OD so that the angles AOB and DOB may be equal."

15659. (Professor Sanjána, M.A.)—Prove that the integral

$$\int_1^0 x^n\log(1-x^n)\,dx$$

has a finite value when n is any finite positive integer; obtain the indefinite integral in this case, and hence evaluate the series

$$1/[1(2n+1)]+1/[2(3n+1)]+1/[3(4n+1)]+\ldots.$$

Examine also the case when n is infinite. [When $n=1$, 2, 3, the above series has the respective values $\frac{3}{4}$, $\frac{8}{9}-\frac{2}{3}\log 2$, $\frac{1}{16}-\frac{1}{8}\log 3-\frac{1}{24}(\pi\sqrt{3})$.]

15660. (G. H. Hardy, M.A.)—Prove that

$$\int_0^\pi e^{a\cos x}\cos(nx+a\sin x)\,dx=-2\left(\frac{d}{da}\right)^{n-1}\left(\frac{\cosh a}{a}\right).$$

15661. (R. W. D. Christie.)—Prove the following equations:—

$$(l^2+1)(m^2+1)(n^2+1)=(pqr)^2=\{l^2+l^2(q+r)+l(qr+1)+(q+r)\}^2$$

when p is any prime of form $4m+1$, all the other letters (integers) known when p is given.

15662. (H. A. Webb.)—Show that the value of the series

$$1/2^3+1/3^3+1/4^3+\ldots \text{ to infinity}$$

Digitized by Google

differs from the positive root of the equation $3x^3+13x=3$ by less than two millionths.

15663. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Find a general expression for triangular numbers consisting of a certain digit repeated n times followed by another (different) digit repeated n times.

15664. (R. CHARTRES.)—Express $1/(r^n+1)^2$ as a radix fraction in the scale radix $=r$.

15665. (A. M. NESBITT, M.A.)—(1) If $x_1, x_2, \ldots, x_n$ be the roots of the equation $p_0x^n-p_1x^{n-1}+p_2x^{n-2}-\ldots+(-1)^np_n=0$, prove that the product of the $n(n-1)/(1.2)$ quantities of which x_r+x_s is the type (r not being equal to s) may be written as a determinant of order $n-1$ whose κ-th row is $p_{2-\kappa}, p_{4-\kappa}, \ldots, p_{2(n-1)-\kappa}$ with the convention that $p_\alpha=0$ if $\alpha<0$ or $>n$.

Example: If $n=4$, the product is $\begin{vmatrix} p_1 & p_3 & . \\ p_0 & p_2 & p_4 \\ . & p_1 & p_3 \end{vmatrix}$, and, if $n=5$, it is

$$\begin{vmatrix} p_1 & p_3 & p_5 & . \\ p_0 & p_2 & p_4 & . \\ . & p_1 & p_3 & p_5 \\ . & p_0 & p_2 & p_4 \end{vmatrix}.$$

It will be noticed that the principal diagonal is $p_1, p_2, \ldots, p_{n-1}$.

15666. (J. J. BARNIVILLE, B.A., I.C.S.)—Having $u_n+u_{n+1}=u_{n+4}$, prove that

$$\frac{1}{3.4.5.6}+\frac{1}{3.5.6.7}+\frac{1}{4.6.7.9}+\frac{1}{5.7.9.11}+\ldots=\frac{1}{180},$$

$$\frac{1.3.10}{3.4.6.7}+\frac{2.4.12}{3.5.7.9}+\frac{2.5.15}{4.6.9.11}+\frac{2.6.18}{5.7.11.13}+\ldots=\frac{1}{2}.$$

15667. (Professor NEUBERG.)—Chercher la condition pour que les équations $\tan x=a\tan(y-z)$, $\tan y=b\tan(z-x)$, $\tan z=c\tan(x-y)$ soient compatibles.

15668. (Professor NANSON.)—The locus of the meet of perpendicular planes through two fixed lines is a quadric. Show that the three quadrics thus derived from the three pairs of opposite edges of a tetrahedron have a common curve of intersection.

15669. (*Communicated by* A. V. KUTTI KRISHNA MENON, B.A.)—O and O′ are two fixed points, P any point in a curve defined by the equation $1/r-1/r'=1/c$ where $r=$OP, $r'=$O′P, and c is constant. Prove that the distance between P and the consecutive curve obtained by changing c to $c+\delta c$ is ultimately $\delta c/\sqrt{[1+3c^2/(rr')+a^2c^4/(r^3r'^3)]}$, where $a=$OO′.

[*Note.*—The Proposer desires to obtain an elegant solution of the above "Smith's Prize" Question.]

15670. (Professor COCHEZ.)—Construire la courbe

$$\rho=\sqrt{(1+\tan\tfrac{1}{2}\omega)}/(1-2\sin\omega).$$

15671. (Professor SANJÁNA, M.A.)—From the centre of curvature at every point of a central conic the two normals other than the radius of curvature are drawn. Prove that the envelope of the chord joining the feet of these normals is $x^{\frac{1}{3}}/a^{\frac{1}{3}}\pm y^{\frac{1}{3}}/b^{\frac{1}{3}}=1$, and that the locus of the pole of this chord is $a^2/x^2\pm b^2/y^2=1$, the conic being referred to its axes.

15672. (A. R. RICHARDSON.)—S is a fixed conic. One of the chords of intersection of S with any conic circumscribing the triangle of reference passes through the focus of an inscribed conic whose other focus describes a straight line. Show that the other chord of intersection will envelop a series of conics inscribed in the triangle; and find their envelope.

15673. (JAMES BLAIKIE, M.A.)—A straight line meets BC, CA, AB, the sides of a triangle ABC in D, E, F, and CB is produced to D′, so that BD′ = DC; CA is produced to E′, so that AE′ = EC; BA is produced to F′, so that AF′ = FB. Prove that D′, E, F′ are collinear without assuming any property of the hyperbola.

15674. (W. F. BEARD, M.A.)—TP, TQ are tangents, and TAB a secant, to a circle; any circle through AB cuts BP, BQ at C, D. Prove that PQ bisects CD.

15675. (R. TUCKER, M.A.)—ABC is a triangle and O_1, (O_1') are the centres of the circles BΩC, (BΩ′C) respectively. Similar points are taken for the other angles of the triangle. Prove that

$$\Sigma(O_1A)^2+\Sigma(O_1'A)^2=\tfrac{1}{4}k(\operatorname{cosec}^2\omega+8)-3R^2 \quad (k=\Sigma a^2).$$

15676. (C. E. YOUNGMAN, M.A.)—Construct (geometrographically) on a given base a a triangle having $a^2=4bc$, with its Brocard angle a maximum. [*Op.*: $12R_1+6R_2+10C_1+9C_2=37$, or simpler.]

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

8747. (Professor HAUGHTON, F.R.S.)—The law of cooling of the Sun is $dT/dt=aT^3-bT$. Integrate this equation, and show the relation between Sun heat and time.

8761. (D. BIDDLE.)—Two points are taken at random in the base and one point on the curved surface of a right cone of given dimensions. Find the mean area of the triangle formed by joining them.

9123. (Professor NILKANTHA SARKAR, M.A.)—A smooth heavy elastic ball impinges on a given wedge, resting on the horizontal plane in which the ball moves. Prove that the condition that, after impact, the ball may slip up the plane is independent of the coefficient of elasticity between the ball and the wedge.

9486. (E. B. ELLIOTT, M.A.)—Two events A, B are not independent; but (ab), (ab') denote the chances that, if A happens, B will and will not happen respectively, and $(a'b)$, $(a'b')$ respectively the chances that, if A does not happen, B will and will not happen; while (ba), (ba'), $(b'a)$, $(b'a')$ have like meanings with regard to B and A interchanged. Prove that

$$[(ab)/(ba)][(a'b')/(b'a')]=[(ab')/(b'a)][(a'b)/(ba')].$$

9827. If $U=0$ be the homogeneous equation to a curve of order n and $\Delta\equiv x_2\,d/dx_1+y_2\,d/dy_1+z_2\,d/dz_1$, show that the discriminant of $\lambda^nU_1+\lambda^{n-1}\mu\Delta U_1+\frac{1}{2}\lambda^{n-2}\mu^2\Delta^2U_1+\ldots$ only differs by a factor from the result of substituting $\begin{Vmatrix} x_1 & y_1 & z_1 \\ x_2 & y_2 & z_2 \end{Vmatrix}$ for α, β, and γ in the tangential equation to the curve.

9851. (Professor EMMERICH, Ph.D.)—Solve the equations

$$(x+2)(y+2)(z+2)=3, \quad (x^2+4)(y^2+4)(z^2+4)=100,$$
$$(x^3+8)(y^3+8)(z^3+8)=504.$$

PHILIPS'

COMPARATIVE SERIES

OF

Large Schoolroom Maps,

COMBINING PHYSICAL AND POLITICAL GEOGRAPHY.

The great success that attended the publication of **Philips' Elementary Atlas of Comparative Geography** has induced the publishers to produce a series of large Schoolroom Maps based upon the same principle.

Physical features are specially prominent.
Uniformity of Scale and Comparison of Areas.
Political Boundaries are clearly shown.
The lettering is well executed.
Great care has been bestowed upon the selection and spelling of names.

NOW READY.

Mounted on cloth, rollers, and varnished.

AFRICA.	Size, 74 by 59 inches.	Price **16s.**
EUROPE.	Size, 80 by 63 inches.	Price **18s.**
ENGLAND & WALES.	Size, 80 by 63 inches.	Price **18s.**
NORTH AMERICA.	Size, 80 by 63 inches.	Price **18s.**
WORLD.	Size, 80 by 63 inches.	Price **18s.**
NEW ZEALAND.	**North Island.** Size, 80 by 63 inches.	Price **16s.**
SCOTLAND.	Size, 80 by 63 inches.	Price **18s.**

Others in preparation.

TEST MAPS. A Series of Test Maps is also issued uniform in size and price, with full Physical Colouring, Political Boundaries and Town Stamps, but without names.

A Beautifully Coloured reduced Facsimile sent post free on application.

The Elements of Trigonometry. By S. L. LONEY, M.A., Professor of Mathematics at the Royal Holloway College (University of London), sometime Fellow of Sidney Sussex College, Cambridge. Extra fcap. 8vo.

BY THE SAME AUTHOR.

Plane Trigonometry. Sixth Edition. Crown 8vo, 7s. 6d. Or, in separate Parts: Part I., An Elementary Course, excluding the use of Imaginary Quantities, 5s.: Part II., Analytical Trigonometry, 3s. 6d. Solutions to the Examples, 10s. 6d.

Nature.—"It would be hard to find a better introduction to plane trigonometry."

Mathematical Problem Papers. Compiled and arranged by the Rev. E. M. RADFORD, M.A., Mathematical Lecturer at St. John's College, Battersea; formerly Scholar of Trinity College, Cambridge. Crown 8vo, 4s. 6d. net.

Journal of Education:—"Among the crowd of mathematical text-books that have been published during the last year few form so valuable an addition to the teacher's library as the work before us. Only they who have had to write their own problem papers can realize the labour that must have been expended in its preparation, for the 1,200 problems here collected are no doubt the best of a much longer series."

NOW READY. THIRD EDITION.

Electricity and Magnetism, Elements of the Mathematical Theory of. By J. J. THOMSON, M.A., F.R.S., Fellow of Trinity College, and Cavendish Professor of Experimental Physics. Crown 8vo, 10s.

The Analytical Theory of Light. By JAMES WALKER, M.A., Christ Church, Oxford; Demonstrator of Physics in the Clarendon Laboratory, Oxford. Royal 8vo, 15s. net.

The Dynamical Theory of Gases. By J. H. JEANS, M.A., Fellow of Trinity College, Cambridge. Royal 8vo, 15s. net.

A Treatise on Analytical Dynamics. By E. T. WHITTAKER, M.A., Fellow of Trinity College, Cambridge. 12s. 6d. net.

PROFESSOR R. C. JEBB'S TRANSLATION OF SOPHOCLES.

The Tragedies of Sophocles. Translated into English Prose by Sir RICHARD C. JEBB, Litt.D., Regius Professor of Greek, and Fellow of Trinity College, in the University of Cambridge. Crown 8vo, 5s. net.

Sophocles.—The Text of the Seven Plays. Edited, with an Introduction, by Sir RICHARD C. JEBB, Litt.D. Crown 8vo, 5s.

PITT PRESS SERIES.—New Volumes.

Tacitus.—Histories. BOOK III. Edited, with Introduction, Notes, and Index, by W. C. SUMMERS, M.A., Firth Professor of Classics in the University College, Sheffield. 2s. 6d.

Victor Hugo.—Les Burgraves. Edited by H. W. EVE, M.A. 2s. 6d.

Speaker.—"The work can be recommended as an almost ideal edition for higher forms."

School World.—"It is needless to speak in praise of Mr. Eve's work as an editor; for before we open the book we are assured of the conscientious and scholarly labour he has devoted to it. . . . To those who admire the play this edition will be welcome as an admirable guide to its study and interpretation."

CAMBRIDGE PHYSICAL SERIES.—New Volume.

General Editors—F. H. NEVILLE, M.A., F.R.S., and W. C. D. WHETHAM, M.A., F.R.S.

A Treatise on the Theory of Alternating Currents. By ALEXANDER RUSSELL, M.A., M.I.E.E., late Scholar and Assistant Lecturer of Gonville and Caius College, Cambridge; Lecturer in Applied Mathematics and Superintendent of the Testing Department, Faraday House, London. In 2 volumes. Vol. I. Demy 8vo, 12s. net.

The Study of Chemical Composition. An Account of its Method and Historical Development, with Illustrative Quotations. By IDA FREUND, Staff-Lecturer and Associate of Newnham College.

[*Nearly ready.*

The Educational Times.

Lessons from Norway.

THE Board of Education has opportunely published the Norway section of a most instructive Report on Higher Schools in Scandinavia prepared at their desire by Mr. J. S. Thornton. "The extract," to quote the circular letter of the Board, "gives an account of the methods of examination and inspection of secondary schools that have been adopted in Scandinavia for a purpose similar to that which the Consultative Committee have in view in making their proposals" for a system of school certificates; "and the Board are of opinion that information regarding this system of awarding school certificates in Norway and Sweden and particulars of its actual working will be of immediate interest and value to those bodies which are considering the questions raised by the proposals of the Consultative Committee for the establishment of a similar scheme." About that there can be no two opinions. The Report is most welcome.

Mr. Thornton, of course, takes a wider outlook. His materials furnish "a comparative account not only of the leaving examinations themselves and their working, but also of their value as an instrument in the hands of Government for the spread of sound education, and as a means of harnessing in the State service schools of varying origin and methods that are nevertheless working efficiently towards the same goal." Incidentally, too, he finds opportunities "for showing the relative merits and demerits of the different kinds of schools, the manner in which they supply each other's defects, their relative cost, and the amount of favour they win from the population around." This terse summary of contents is enough to show the opportuneness and the value of the information that Mr. Thornton has industriously collected and marshalled in his Report.

It is not necessary to go into details here: we must refer our readers to the Report itself, which is but a matter of thirty-two pages—that is to say, the Norway portion now available. We wish simply to draw particular attention to the most outstanding feature of more immediate interest. "It may be stated broadly (with some exceptions to be afterwards noted) that education authorities, central and local, do not seek a monopoly, but welcome schools of other origin to a position co-ordinate with their own schools." "State recognition consists in the right, confined to recognized schools, of holding the State leaving examinations within their walls." We may quote the substance of the conditions of State recognition (§72 of the Law of 1896):—

(1) That the length of the school course and the hours of instruction be found sufficient.

(2) That instruction in the various subjects be given to a certain extent (set forth in Chapter II. of the Law).

(3) That the staff of the school has on the whole such an education as is required from such as are appointed to the service of the higher schools of the State.

(4) That teachers' salaries be approved by the Department. (In the yearly return the head master states the number of teachers, the total amount paid in salaries, the highest salary paid, and the lowest.)

(5) That the buildings, furniture, and apparatus be suitable and complete.

(6) That at least one set of pupils have been presented at the leaving examination and have passed it satisfactorily.

(7) That the instruction in the school and the leaving tests be submitted to the control appointed by the Department. (Mr. Thornton shows the nature of the present control in an account of the Undervisningsraad, or Educational Council, and of the way in which the examinations are conducted).

(8) That every year there be sent in to the Department a report of the school work; with any report or prospectus issued by the school.

The State schools do not crowd out the private schools, but they constitute a model or standard for them in point of buildings, equipment, and staff. The private schools, on the other hand, while conforming to public standards and supplying "at slight cost to the State public needs in a measure quite as full as the public or State schools," possess "greater freedom and initiative."

Thus it is recognized in Norway, as it has been recognized by thoughtful educationists in unofficial spheres in this country, that the private schools "by the variety of their methods introduce fresh life and vigour into all educational work." Indeed, "it has become almost an axiom in the North of Europe that a balance of schools, public and private, most conduces to the welfare of the State." We have steadily held that in the present transition movement in this country the private school that deserves to be safe will be perfectly safe; and we cannot imagine that the Board of Education, which has sought out and now circulates such an example as is contained in Mr. Thornton's Report, will seek to cripple private schools either by fostering undue competition or by imposing too onerous conditions, or that Education Authorities will fail to appreciate

Digitized by Google

the importance of the Norway example. True, the difference of national temperament and tradition must always be allowed for in such comparisons; but these Northern neighbours of ours are too closely akin to us to permit any anticipation of adverse discriminations on this score, and a successful example of half a century is not lightly to be set aside. Nor can we doubt that the enlightened example of Bedfordshire, which has frankly adopted the Danish point of view in all essentials, will exercise great influence on other Education Authorities, as well as on public opinion generally.

The greatest danger, perhaps, lies in the official tendency to grasp everything too tightly, with the best intentions no doubt, but still with undue self-confidence. In view of the Norwegian experience—and, we will repeat, the English experience—of the initiative enterprise of private schools and the reactive influence on public schools and on the intellectual interests of the nation, it would obviously prove a fatal blunder if public Education Authorities, high or low, were to shackle the full freedom of the private schools. "So far as I know," said Rektor D. F. Knudsen, when he was Expeditionschef (Permanent Education Secretary), "there is no nation that has been willing or able to dispense with private initiative, which is like a free man as compared with one bound hands and feet, like a creature that moves by the side of one fast chained to the ground." The greater freedom that has recently been admitted in the elementary system affords encouragement. But, as we have already said, very much depends upon the attitude and the action of the private schools themselves.

NOTES.

We have pleasure in publishing in another column a letter from Mr. W. E. Hipkins, of Edgbaston, which recognizes in a practical way the importance of after-school study, so strenuously discussed by Mr. Bevan last month and this. Mr. Hipkins, it will be seen, proposes to offer a monetary reward to every one of his employees—over 2,000—that secures an elementary certificate at the local technical schools, and larger rewards for certificates in the higher stages. The difficulty is, as Mr. Hipkins points out, that "the commercial conscript, surrounded by fresh associations, is apt to take too narrow a view of his position and prospects, and to regard the continuance of study as a loss of time." The competing attractions are numerous and strong, and the return appears to be doubtful and remote. Still, the force of successful examples will tell continuously, and it is to be hoped that other employers of labour will encourage the movement in some such practical mode as Mr. Hipkins has adopted. Such enlightened generosity is of the kind that blesses him that gives as well as him that takes.

The West Riding Education Committee has just issued an extremely interesting report, an outcome of the attendance of a group of art masters of the West Riding at the Geneva School of Industrial Arts for six weeks of last summer. The opinions of the professors in different branches are necessarily conditioned by the shortness of the visit; but they are pointed and instructive. On the other hand, the art masters give an interesting account of the school, and pass their own criticisms on the various departments. Apart from special technicalities, the main result is a vivid sense of points of contrast between the Genevan and our own systems of art teaching. The co-ordinated scheme for the teaching of drawing in Geneva is described in some detail, and suggestions are submitted for the consideration of the County Education Committee. The visit has evidently proved very fruitful for the visitors, and the information obtained will, no doubt, largely stimulate, and tend to mould, the development of art teaching in the North, and perhaps more widely.

Prof. H. R. Porter, the Chairman of the Yorkshire Section of the Society of Chemical Industry, has just been publicly making certain criticisms on technical education that some other people have been making privately. He was discussing the relation of the University to industry, and he contended that in England we "have not succeeded in enlisting sufficiently the highest scientific ability in the cause of industry." He very properly laid stress on "the lack of inducement to adopt technical industry as a profession," which is "largely due to the scientific ignorance of manufacturers and business men, to most of whom the chemist is merely a man that can wash bottles and make an analysis." The Bädische Soda- und Anilin-Fabrik knows better. Prof. Porter laid it down deliberately that "it is no part of the work of a University to teach the manual dexterities of a trade beyond the point necessary for successful study" of the theoretical principles, which should be carried to the highest standard attainable. "The ordinary evening-school technology," he said, "may in most cases be dismissed as almost a pure waste of public money as regards the improvement of trade—the sowing of seed in untilled and often unfertile soil"; and there is a good deal lacking, if not in the ability, at any rate in the training, of technical masters. Prof. Porter also has his doubts about the present system of scholarships: would the money not be more fruitfully used in a general lowering of fees, "so as to make the struggle a more open one"? In any case, he would like to see the scholarships dependent less on mere examination results and more on the opinion of the teacher. These views may require modifications, but it is well to have them ventilated.

The inaugural lecture delivered by Dr. Firth, the new Regius Professor of Modern History at Oxford, was marked by a breadth of view and an incisiveness of criticism that are of excellent omen. If he seemed to some to go a little too far in his demands for what Milton called a more "complete and generous education" in the History School, by extended attention to English literature and social and economic history, there was no harm in the excursion: the limits can readily be accommodated in practice. From the professorial point of view, the attainments of the History candidates may appear rather small and thin; but at any rate the school opens out useful work for students that might not make so

Digitized by Google

much out of any other University course. At the same time, a man that has not actually worked out a period, or at any rate an episode, from the original documents, knows precious little of the meaning of history, and little imagines how much traditional representations will be modified by detailed and unbiassed study of the masses of materials yet unexamined. It seems hopeless to set down the whole School to first-hand work, but First Class men might well be required to show familiarity with a limited set of originals. Prof. Firth's programme is admirably practical; yet his student fellow-workers must probably be First Class men and post-graduates, at least to begin with. He has undoubtedly stirred the dry bones in his own department, and raised fresh hopes for the study of history at Oxford.

In the *Monthly Review* for November Mr. F. Legge stirs once more the puzzling historical question of "The Secret of the Templars." He does well to remind historians of "La Doctrine secrète des Templiers," by M. Jules Loiseleur, the Orléans archivist, which "contains, beside a clear and temperate statement of the reasons which induced M. Loiseleur to conclude that the Order of the Temple possessed a secret doctrine in contravention of the faith of the Church, the evidence in full of three Preceptors and three other Knights of the Tuscan branch of the Order, over whom neither the King of France nor the Pope of Avignon were likely to have had any influence." This evidence is notarially attested to have been given publicly and without compulsion or torture ("sine coactione aliqua vel tormentis"); but, even admitting a full report and an honest attestation, the very words mark the exceptional nature of the case, and forbid general inferences. However, Mr. Legge uses the evidence of this Florence Commission together with the evidence before the similar Paris Commission to ground a theory that the Church acted under the belief that the chiefs of the Order of the Temple were undermining the faith of their subordinates by Manichæan offers of indulgences to save them in the next world and of "absolute freedom from all moral and religious restraint in this world into the bargain."

We cannot but think that Mr. H. C. Lea is in the right in holding that there was no "secret" at all. Forms of initiation may have varied, some initiates may have been advanced in degree, and perversions of established doctrine may have been mooted by ignorant or reckless initiators: a systematic conspiracy of anti-Christian tenets for ulterior objects disastrous to the Church is a very different matter. There is no getting away from the impecuniosity and rapacity of Philippe le Bel, the potency of the Inquisition, and the subservience of Clement V. to the French King. It was the King, not the Pope, that started the movement; it was the King that either directly or indirectly carried out the suppression of the Order. If the Order was so thoroughly corrupt, the Pope did not know it; nor did anybody else, excepting always William of Nogaret, the Keeper of the King's Seal. It is a pity that Prof. Döllinger did not leave his treatment of the subject in complete form. But he says this ("Historical and Literary Addresses," page 206):

Previously to October 13, 1307, the day on which the great blow was dealt, no mention had been made of this assumed corruption and degeneracy of the Society. I find, on the contrary, in the literature of the time and of the period immediately following, even until as late as the beginning of the fourteenth century, that authors who sharply condemn the degeneracy of the ecclesiastical communities of the day give evidence in favour of the Order of Knights Templars, either negatively, by omitting any mention of them in the enumeration of degenerate Orders and monastic bodies, or positively, by holding them up as a pattern to others.

The Papal motive must be sought, not in inferences of a secret anti-Christian conspiracy, but in the relations of the Pope to the King of France.

SUMMARY OF THE MONTH.

The report on the work of the Department of Technology of the City and Guilds of London Institute for 1903–4 points out that the encouragement offered by the Board of Education to the teaching of technology is helping to increase the number in the Institute's registered classes. There is a decided improvement on last year. The number of students in November last attending classes in the United Kingdom was 41,089, as against 38,638; and the number of examinees was 20,051, as against 17,989. The closer connexion of the work of the department with the Board of Education is shown also not only by the recognition of the City and Guilds of London Institute as an organization for the inspection of classes in technology, manual training, and domestic economy, but also by the stamping by the Board of Education of full certificates granted by the Institute to students who pass in technology and have "qualified in the cognate science or art subjects required by the Institute." The question of arranging courses of instruction adapted to the requirements of operatives engaged in shipbuilding is under consideration; it is intended to extend the syllabus in ship carpentry and joinery so as to make it suitable for artisans engaged in other branches of the industry. It should be noted that the Department of Technology of the Institute occupies an intermediate position between the Central and Local Education Authorities and the several trade societies. The latter bodies have shown a growing interest in technical instruction, and year by year the department has grown into more intimate relationship with these trade organizations.

From the thirty-sixth annual report of the Oxford Delegacy of Non-collegiate Students it appears that the undergraduate members numbered in August last 179, being two in excess of the preceding year, and that there were 75 matriculations during the year, as against 67 in 1902–3, besides 17 names replaced. Twenty-one took Honours in the Final Schools, and the average of passes was over 68 per cent. The Delegates, it may be observed, admit without examination students in any special branch of study who do not desire to pass through the arts course, on producing evidence of their ability to prosecute their studies with advantage. The disciplinary report is satisfactory.

The Cambridge Local Examinations and Lectures Syndicate in their thirty-first annual report on the local lectures state that the number of centres in active work in the session 1903–4 was 102, as against 96 in the previous session. The number of courses delivered was 119, as against 109, and the number of lectures 1,154, as against 1,050. There was no increase in the number of short courses, but the full courses, with their accompanying examinations and certificates, increased from 67 to 77. The average number of persons attending the lectures was 12,986, as against 12,626 in the session 1902–3. Considerable experience has been gained of the working of the new Education Act as it affects the local lectures. For the first time Local Authorities have had the power of subsidizing lectures in history and literature as well as in science, and it was naturally hoped that they would have given more support to the movement than in former years. "The result has been disappointing."

At Radley College the "Rudens" of Plautus was performed (November 1 and 2) with great success, K. W. H. Baker especially distinguishing himself as Labrax, the slave-dealer. The Rev. J. H. Kirkby, one of the assistant masters, painted the scenery very effectively; and the Rev. F. J. Stone, also an assistant master, composed attractive music.

PROF. BOSANQUET delivered the opening lecture of the session to the University of St. Andrews Education Society on "A Great Educationist of the Nineteenth Century"—the late Mr. T. G. Rooper, H.M.I. An enthusiast in all that concerned the education of the people, Mr. Rooper was not satisfied to let things go on in their old grooves. He was a field botanist, a field geologist, a local antiquary, and he inspired the teachers of his first district in Northumberland with his own interests, and thereby widened the whole scope and influence of the schools. He had the genius of tact. His earliest success was seen in the improvement of methods of teaching geography. He made his mark in Bradford by the impulse he gave to the development of manual training. He was not satisfied with suggesting—he began with his own hands. After his official work was done for the day, he set himself to work with a class of pupils, and in all that they made together he kept steadily before himself and them the formative and true educational value of such training. Horticulture as a branch of general education was another subject to which he gave a great impetus by his own interest and enthusiasm. It is, perhaps, to him that the wide-spread cultivation of school gardens as part of the work of both public and private schools is largely due. He held strongly that by all such subjects as physiography, manual training, horticulture, school work was really made more educative. It was in the filling up of the hours of school with interest and occupation that he found the secret of good discipline. Admiral Collingwood in his ships abolished corporal punishment by making it unnecessary. His men were always busy and happy. The same success could be achieved in the school on the same lines. Mr. Rooper's wonderful tact and organizing power were shown in other ways at Southampton, where he succeeded in transforming an old endowment which was being misused into the splendid Hartley Institute. Education was not only his work, but his play. His holidays were spent in visiting foreign schools and gathering fresh ideas. His relaxation from routine he found in the byways of education. The subject was always with him.

DURING a tour through Canada (says the *Morning Post*), Dr. T. C. Fry, the Head Master of Berkhampstead School, had many opportunities of observing the unhappy fate of the British emigrant, who, chiefly because of the lack of preliminary training, drifts into the "remittance man" class or succeeds only in losing his money. In order to prevent such a fate overtaking the Berkhampstead boys who emigrate to the West he decided to establish a training institution in connexion with his school. A square mile of land was purchased near Red Deer, the market town of one of the very best mixed farming districts in Alberta. A comfortable farmhouse, with the necessary outbuildings, was erected on the "section," stock for dairy purposes was bought, and shares taken in the Government "creamery" at Red Deer, and land was prepared for growing wheat, which is a successful crop in all parts of Northern Alberta. Thus the Berkhampstead Farm came into being. It was arranged (1) that only Berkhampstead boys should be received there on leaving school, so that the tie of *esprit de corps* might not be broken, and (2) that a premium of £50 for two years' training should be charged, wages of from £2 to £3 a month being paid to pupils as soon as they had become efficient workers. The age limit is eighteen, and only those who are likely to make steady farmers are taken. Since its institution the school farm has had half a dozen pupils—many requests from boys at other schools have been refused—and it is certain that the number will increase year by year. As yet the farm does not pay its expenses, but when the whole of the arable land is broken and it is fully stocked there is no reason why it should not be as profitable as any of the similar undertakings in the neighbourhood. No prairie farm can be expected to show a profit on the amount invested until the third year. Much kindly interest has been shown in the experiment by the Red Deer people, and McGill University has given the farm a good selection of modern books for winter reading. So far all the pupils have done well.

THE Archbishop of Tuam the Most Rev. Dr. Healy), speaking (November 8) on the Irish University education question, said (*Irish News*):

Not only has the system, as a whole, been condemned by all the statesmen that have had any share in the government of Ireland for the last thirty or forty years, not only has it been condemned by the Royal Commission, but it has been condemned, and emphatically condemned, by the Senate of the Royal University itself. I think that not only is it a lamentable and a deplorable thing, but I might say it is almost a shameful thing, in the face of all these strong facts, known to the whole community, that the Government should leave things *in statu quo* not only in an unsatisfactory, but in, I might say, an intolerable, position. They cry out "*Non possumus*; we cannot do it until all Irishmen agree together in pointing out the lines on which it should be settled." Was there ever a more lamentable confession coming from statesmen at Westminster who undertake to govern this country? I hope the day will come—and that the day will come soon—when all that is best in Ireland of every class and creed will unite together for the good of the country. If we are able to settle these questions ourselves which they confess that they cannot settle, then the whole *raison d'être* of government from Westminster goes to the wall. They will have no moral claim to govern us. They say: "We cannot govern you." Then let us govern ourselves. I hope the day will come when we will be able to do it. I believe it is coming. I was glad to see signs recently that it was coming; that some of the best and most intelligent and largest-minded are coming, so to speak, to meet the popular party half-way. When that day comes, depend upon it it will be a great day for Ireland.

THE School Nature-Study Union held its first monthly meeting for discussion at the College of Preceptors (November 18), Mr. C. B. Gutteridge, M.A., in the chair. Miss C. Von Wyss, of the L.C.C. Day Training College, read a paper on "What is Nature Study?" A spirited debate followed.

WE regret to record the death of the Rev. Dr. Fowler, President of Corpus Christi College, Oxford, after a lingering illness. His text-books on logic have been widely appreciated.—The Rev. Albert Watson, Fellow (late Principal) of Brasenose, who is said to have been greatly upset by the death of Dr. Fowler, was found dead in bed next morning. Well over twenty years ago he published an esteemed edition of "Select Letters" from Cicero's correspondence (Clarendon Press).

UNIVERSITIES AND COLLEGES.

(*From our own Correspondent.*)

Oxford.

WE have had a busy month, and at the time of writing we are just about to be plunged once more into the great Greek controversy. There were many who thought that the matter would be allowed to rest for a while or even that we should wait to see "how the cat jumped" at Cambridge, but the "Anti-Greeks" (as, despite their protests, they are still called) have determined that Oxford is to lead the way. So far, however, we have been spared the usual warfare of pamphlet and squib, but the organizers of the two parties have been very busy, and the statute comes before Congregation on November 29. It is interesting to note that the Lord Chancellor, in giving away the prizes at the Magdalen College School, expressed himself strongly in favour of Greek, and regarded those who would sunder Latin and Greek as heretics.

We have just lost from our midst one of the most familiar of Oxford figures in the person of Dr. Fowler, the President of Corpus—"Tommy Fowler" as he was familiarly known even to the undergraduate. He was a Head of the old school, erudite in his especial subject, most painstaking in university and college business, full of kindliness and simplicity, and yet with a certain naïve dignity of his own. His little peculiarities and foibles formed the theme of many stories more or less true, but he had no enemies. His death was followed by that of Mr. Watson ("Toby Watson," as he was styled) who was Principal of Brasenose from 1886 to 1889. So slowly but surely the old race of Heads is passing, though in Dr. Bellamy we still have a notable representative.

The Rhodes benefaction has set a good example—or, to put it more correctly, the Rhodes Trustees have both in their corporate and public capacity done so. In the first place, as trustees they are to give £1,000 (£200 for five years) to assist the University in retaining the very eminent abilities of Dr. Ritchie as Reader in Pathology. It will be remembered that at one time it was rumoured that Dr. Ritchie was to be made Regius Professor of Medicine, the truth being that this seemed one of the only ways of keeping so good a teacher for the Oxford Medical School. However, the idea of using a Regius Professorship in this way did not win general commendation, and there were no dissentients when Dr. Osler was appointed to the post. Now we are to have both Dr. Osler and Dr. Ritchie, and, with professors like Messrs. Gotch and Arthur Thomson, the Oxford Medical School should more than hold its own. In the second place, Mr. Alfred Beit, one of the

Digitized by Google

Trustees, has offered to endow a Professorship of Colonial History and to enable other teaching to be given in the subject. The announcement has already caused considerable excitement among the teachers of History, and we are already wondering whether among their number exists one qualified to fill the professorship. Such a professorship is indeed the natural corollary to the admission of Rhodes Scholars from the colonies. Will the German Emperor now proceed to endow a Professorship of the History of the Fatherland?

The inaugural lecture of the new Regius Professor of History —containing, as it did, a severe criticism of our much vaunted History School—came as a rather unpleasant surprise, and he set us all talking: both those of us who know anything on the subject and those who believe that whatever is is wrong. Whether Prof. Firth's view that the History School is meant to be a training school for the production of historical writers is the true view it is not our place or purpose to discuss; it is, at any rate, the view apparently held by our new official head in the department. Yet, after all, the number of those who proceed from the History School to sit down and become historians is not large, and the School probably does much more service by the cultivation of general historical knowledge.

We have had lately several distinguished visitors. On Monday, November 14, Lord Rosebery unveiled the statue to Lord Salisbury at the Union, and delighted his hearers both by his power of critical analysis and wonderful gift of finished oratory. In the evening he was at his best in his reply to the toast of "The Empire," as proposed by the Rector of Exeter. Then, at St. Mary's, we have had as preachers the Bishop of Worcester and the Bishop of London—both most popular in Oxford. In the case of the former sermon considerable dissatisfaction was openly expressed that the undergraduates' gallery was largely filled with ladies—who were admitted, so it is said, before the regulation hour.

In matters athletic University won "the Fours" after early defeating Balliol (the former holders) in the first heat, then Magdalen, and eventually Merton in the final. It is rumoured that the Trial Eights ought to be above the average, and that old "blues" will this year row in them. The Rugby team had been doing great things until they met Richmond, and so had their record broken. The team has some fine players, but there are weak spots, and the absence through accident of Cartwright from the forwards has made enormous difference. The Association XI. is fair, the hockey team rather unfortunate, and the golfers hardly up to the high average of some of our recent teams.

(*From our own Correspondent.*)

Cambridge. A CURIOUS sidelight is thrown upon the working of the Education Act by the report of the Local Lecture Syndicate. High expectations were formed that the Local Authorities would eagerly seize the opportunity of subsidizing the lecture system, but the business instincts of the various educational bodies seem to induce them to buy their wares locally. In some centres grants in aid were made to various local centres, but now these have been in many cases withdrawn; the claims of elementary education are paramount, and—be it whispered with bated breath—perhaps the common sense of the common councillor has detected the fact that lecturing to large audiences is not the only way of instilling knowledge.

We have had a Council election, the manner whereof is as follows. Certain unknown persons issue lists of those for whom they request the electors to vote; an unknown body representing what is called the other side in university politics issues a corresponding ticket with diverse names, save and except that the most popular names occur on both tickets, just to show that selection is entirely by merit. Then the voter copies down accurately upon cards the names found upon his party ticket. Dr. Chase and Dr. Keynes, being upon both tickets, headed the poll; Sir Richard Jebb and Prof. Darwin represented the professors; Dr. Mollison, Mr. Parry, and Mr. Shipley the ordinary members of the Senate. As four of the successful candidates have had experience of the work of a college tutor, we may hope to see their humanizing experiences translated into corporate action.

The Lectureship in Russian is to be continued. This valuable institution is hardly as well known as it deserves to be. The War Office people hold out great inducements to Army men to study this language, and when our new military scheme is in working order we hope to be able to send out candidates not only well grounded in military subjects, but equipped with educational extras which will ensure a higher rate of pay. Although the general scheme under which the University is to supply commissioned officers to the service has long been spoken of, yet the detailed rules are still non-apparent. Waste of time and waste of money result. The War Office would require a reasonable start from the common snail.

The Anti-Greek report is out. It is sublime—thirty-five pages quarto, including appendices. Paraphrased, it runs thus:—"We wish to abolish Greek as a compulsory subject; we have consulted the schoolmasters. They would allow a dispensation in cases where a hardship would otherwise be caused." Let us have no invidious distinctions, say the Syndicate; away with Greek in the Little-go (it must follow in the General). The Classical Tripos is shrinking, Greek will vanish, and we shall all be happy. Speaking quite seriously, there may be excellent reasons for abolishing compulsory Greek at Cambridge, but, in the language of the law, the verdict of the jury is in this case all against the weight of evidence put before us in the report.

The schedule of the proposed first part of the Little-go gives eight papers—two each in Latin, Greek, French, and German, the second paper in modern language including translation into that language. Two languages are to be taken up, of which one must be Latin. Instead of taking the two papers in one modern language the candidate may take the first or translation paper in each of two languages. Now hear the schoolmasters: by a memorandum they authorize their delegates to emphasize the weight attached by the Conference to the maintenance of a high standard in both languages simultaneously, and not in one only. The exemption from Greek is to be for all, say the Syndicate. Eight out of fifty-five members of the Head Masters' Conference agree with them, forty-seven do not.

"Are you in favour of substituting a single modern language for Greek?" To this question out of fifty-four Head Masters thirty-six answer No, and a further seven Yes, but two with qualifications. One point stands out prominently in the discussion—that the Syndicate seize with avidity upon any evidence adduced by the Head Masters in favour of their plan, but they fail to see that it is for the universities to set the standard of education and for the schools to follow. As long as the colleges pay such exaggerated deference to reckoning their greatness on a *per capita* basis so long will the schoolmasters be our masters. A most interesting appendix gives an estimate of the numbers sent to the universities by the various schools in the last two years. The chief items are as follows:—Eton, 128; Harrow, 112; Marlborough, 82; Rugby, 78; Charterhouse, 61; Clifton, 69; Cheltenham, 55; Uppingham, 66; Haileybury, 47; St. Paul's, 49. All the private schools account for no more than 119.

The discussion will be held on December 1 and 2. A lively debate is expected.

Our football teams have been doing fairly well: the Association XI. has maintained a high level of play all through the season; the Rugby XV. began life as a despised side, but is now quite respectable, though some of the most valuable players have been put aside by hard knocks. On November 21 a fairly strong team representing the West of Scotland Club came with hopes of an easy victory, but returned rather decisively beaten by 55 points to 0. Those who have wagered precious bullion on the chances of an Oxford victory are now looking up trite adages to express their sentiments.

On the river sleet and hail and fog. A boat coming in with a battered bow was reported to have suddenly come upon a bank of fog, but it is authentically stated that the real obstacle was a solid odour in Barnwell Pool.

The electric trams are going through the Backs: they would be allowed through the colleges if the bids were high enough,

In politics things are moving. The tariff reformers are organizing stealthily under another name; the Liberals have had the inspiring aid of Mr. Asquith; and the Conservative caucus is deliberating how to get rid of Sir John Gorst. Term ends on December 9, and we shall be glad.

London. THE Senate has approved the following two years' course of study for such students at the Day Training College as have not passed an Intermediate Examination:—FIRST YEAR COURSE (*General Education*)—(1) English Composition, Grammar, and Literature, including an adequate study of the classical writers of Greece and Rome in literary translations; (2) elementary Mathematics (including Arithmetic) taken to a standard rather less than that of the University Intermediate Examinations; (3) a modern foreign language, or, in the case of qualified candidates, Latin; (4) Geography, Nature Study;

Digitized by Google

(5) English History; (6) Drill, Drawing, Needlework, Voice Management and Enunciation.—SECOND YEAR COURSE (*Professional Education*).—I. Theory and Practice of Education:—Mental Development; logical processes as exemplified in the instruction of children; educational ends; government and conduct of a school; the assimilation of knowledge and order of its acquisition; co-ordination of studies; attention and interest; Method (1) General, (2) Special (*a*) Reading, (*b*) Writing, (*c*) Arithmetic, including practical exercises in Weighing and Measuring, (*d*) the Mother Tongue, (*e*) Geography, (*f*) History, (*g*) Nature Study, (*h*) Needlework, (*i*) Drawing (including Brushwork); Practical Training in a School—the observation of teaching; preparation of teaching notes; the giving of lessons under supervision; criticism and demonstration lessons. II. History of Education, treated in relation to the work of some one great educator. III. Blackboard Drawing, including the preparation of sketch-maps, diagrams, and rough drawings to illustrate lessons. IV. Music, Voice-management and Enunciation. V. School Hygiene. Elements of Hygiene—Ventilation, Warmth, Light, Cleanliness, Exercise, Rest, Food and Drink, Clothing, Infection and Contagion, Simple First Aid.

From the annual report of the Board to promote the Extension of University Teaching, just presented to the Senate, it appears that the work conducted under its direction is making substantial progress. The number of University Extension courses delivered during the past session was 179, as against 167 in the preceding session. The number of sessional courses was considerably larger than in the previous year; thus the tendency noted in the last report towards greater continuity in the work at the several Centres is still observable. The Holiday Course for Foreigners organized by the Board during the summer was attended by 208 students, mostly teachers. Of these 126 were men and 82 women. They were drawn from fifteen foreign countries, the largest contributor being Germany, Denmark being second, and France third. The Senate have authorized the Board to arrange a similar course annually. The number of candidates for School-leaving Certificates has more than doubled since the first examination was held in 1903. The "Leaving Certificates" of the University have been recognized by the Army Council as qualifying candidates to attend the Competitive Examination for entrance to the Army. In addition to conducting the inspection of a number of schools, the Board prepared during the past session reports (1) on the modern language teaching in about forty schools for the London County Council, (2) on the provision for secondary education in the Borough of Croydon for the Croydon Education Committee, and (3) on the secondary schools and the provision to be made for secondary education in Hertfordshire for the Hertfordshire Education Committee.

Arrangements have been made by which, during the coming session, classes will be maintained at the Goldsmiths' Institute, New Cross (recently presented by the Company to the University), in the following subjects:—Mathematics, physics, chemistry, engineering, building trades, art, and domestic economy, besides a few miscellaneous classes. In addition to these or similar classes the Senate will establish in the autumn of 1905 a day training college, in respect of which scheme they have secured the co-operation of the County Councils of London, Kent, Middlesex, and Surrey, and of the Borough Council of Croydon.

Dublin. EARLY last year an appeal was made for a fund for the development and better equipment of the science schools in Trinity College. Lord Iveagh offered to provide all the estimated building expenses (£34,000) conditionally upon the amount required for annual upkeep being obtained by public subscription. For the latter purpose, a capital of £78,000 invested at 3½ per cent. is required. The committee in charge of the fund now announce that of this amount £15,886 has been subscribed or promised, a site and designs have already been prepared for a new physical laboratory, and building operations will begin before the end of the year. The committee in making an earnest appeal for further subscriptions point out that the next most urgent need of the University is the development of the School of Botany and Plant Physiology.

A special school for candidates for the Army has been opened in Trinity College. Lectures will be delivered in military topography and engineering, military law and administration, and military history and strategy. In addition to the theoretical part of the work, the military authorities will give students every facility for instruction in the practical side of their profession. It is calculated that the expenses of living and of education at Sandhurst are nearly twice as great as in Trinity College.

Durham. THE Bishop of Durham, sitting as Visitor of the University, gave judgment on an appeal by Miss Cadell, a lady doctor, against a decision of the Warden, requiring that she should withdraw and express her regret for certain letters before being permitted to offer herself again for any examination held by the University. The appellant claimed to be allowed to sit for the Final Examinations for M.B. and B.S. without withdrawing and apologizing for the letters in question, His Lordship gave judgment to the effect that the letters contained "charges of partiality and injustice" against the accredited Examining Board in Medicine, and that "the appellant should not be admitted to examination within the University of Durham until she had withdrawn the offending letters and had expressed her regret for having written them."

Manchester. THE report of the Council shows that the Faculty of Theology has made a successful start with an entry of twenty students studying for the B.D., besides a number of others taking classes in the Faculty. Courses of lectures have been recognized in the following institutions:—The Scholae Episcopi, the Lancashire Independent College, the Wesleyan College, Didsbury, the Baptist College, Rusholme, the Unitarian Home Missionary College, and the Moravian College, Fairfield. By the assistance of a generous friend of the University, who desires to remain anonymous, and who has promised £400 annually for five years, it has been possible to institute Chairs of Biblical Exegesis and Comparative Religion in the University. In the arrangements for the Faculty of Theology the University has acted in consultation with representatives of various theological colleges in or near Manchester. An advisory board has been appointed, which will be of great value in bringing skilled opinion to assist in settling questions that may arise. Fourteen students have entered for the degree of B.Com. The classes in Chinese have been continued, and, though the numbers have been small, the value of the classes has been demonstrated by the nature of the appointments obtained and of the work entrusted to those who had studied the Chinese language under Prof. Parker's instruction.

Birmingham. THE Council unanimously passed the following resolution on the resignation of Prof. Windle:—"That the Council receives the resignation of Dr. Windle with regret, and, while congratulating him on his important educational and administrative appointment in Ireland under the Crown, takes the opportunity of thanking him for his long and distinguished services to the School of Medicine in Mason College and to the Medical Faculty of this University, both as Dean and Professor, as well as to the general cause of higher education in the Midlands."

Mansfield. A SPECIAL appeal for more funds is accompanied by a statement reviewing the growth and development of the College, written by Principal Fairburn. During the eighteen years since Mansfield came to Oxford, 160 have been through the College. Of these 2 have died, 118 have "gone down," and 40 are still pursuing their studies. Of the *alumni* of Mansfield 5 are Methodists, 8 Presbyterians, 13 Baptists, and the others Congregationalists. Of the 118 all but one (says Dr. Fairbairn) have become either ministers or missionaries, though their ministry has been realized in varying kinds of service—religious, civil, educational, or literary. Ninety-three have become Congregational ministers, nineteen either professors or tutors. All have graduated, at home, or in the colonies, or in the United States. Mansfield men have become ministers or missionaries, preachers or teachers, all the world over.

Wales. IN view of the decision of the Chancellor of the Exchequer to increase substantially the Treasury grants to university colleges in England, representatives of the three Welsh university colleges met at Shrewsbury (November 10) to consider what further action should be taken to secure the same advantages for those institutions. It was unanimously decided to recommend the Councils of the colleges to appoint a joint deputation to wait again upon the Chancellor of the Exchequer and return an affirmative reply to the Chancellor's suggestion that the colleges of Wales should submit themselves to an inspection by the Treasury once every five years in the same manner as the university colleges of England. It is understood that by this means the three university colleges of Wales will obtain the same financial advantages

Digitized by Google

as the English colleges. At the last meeting of the Cardiff College Governors, Principal Griffiths stated that, if the Welsh Treasury grants were placed on the same basis as those to the colleges of England, the Cardiff grant, instead of being £4,000, would be at least £6,500 per annum.

Wales—Aberystwyth. At the half-yearly meeting of the Council Principal Roberts reported that at the opening of the session there were 467 students, being an advance of 15 over last year. Of these 242 were women. There were 73 from North Wales and 240 from South Wales. There were 413 pursuing complete university courses. In June 313 passed the degree examinations of the University of Wales, including 43 in Honours. There was a satisfactory increase in the law students. For the agricultural section a farm of 180 acres had been taken, which, it was hoped, Lord Onslow would open at an early date. In spite of careful economy the finances of the college for the third year showed a substantial deficit, and there was pressing need of aid from public funds. With the two sister colleges, they would make a further appeal to the Chancellor of the Exchequer for increase of the Treasury grant. It had been resolved to transfer the Welsh library to trustees as a national trust on condition that it continued at Aberystwyth, and the Council had approved the appointment of a committee to appeal for funds to provide the building for the library, which was estimated to cost £20,000. Already £1,600 had been promised, and the site, valued at £2,000, was secured.

Bristol—University College. The annual report shows steady progress. The students number 1,084. Donations of nearly £5,000 outside the ordinary income were given during the past year. Still, the funds are inadequate; and they are also insecure, there being no endowment. "The support that Bristol, the sixth among the large cities of England, has given Bristol University College," said Mr. Lewis Fry, Chairman of the Council, "is by no means commensurate with its wealth and importance."

Aberdeen. It has now been definitely decided to celebrate the quatercentenary of Aberdeen University in the end of the academic year 1905–6, which will mark the establishment by Bishop Elphinstone in 1505–6 of a regular teaching institution (at first called the College of St. Mary, but afterwards King's College, in honour of its patron James IV.), within the University founded eleven years earlier under a Bull granted by Pope Alexander VI. It is a happy coincidence that the same year, 1906, will see the completion of the new buildings of Marischal College, a foundation which will then have reached the respectable age of 313 years.

THE TEACHING OF LATIN IN SECONDARY SCHOOLS.

MEMORANDUM TO INSPECTORS.

The following instructions, just issued by the Board of Education, have been drawn up with special reference to the work in second-grade boys' schools, and can only be applied to first-grade schools and girls' schools with some modification:—

Pronunciation.

It does not yet seem possible to require a uniform system of pronunciation for all schools, but it is essential that the pronunciation should be uniform within each school. The head master, in sending in the syllabus of work, should state the system used in the school, and the inspectors should inquire whether it is consistently carried out. If asked for advice on the system of pronunciation which should be adopted, the inspector can refer to a pamphlet published by the Cambridge Philological Society, entitled "The Pronunciation of Latin in the Augustan Period." Trubner, 1889. Price 3d.

In all schools careful attention must be paid to quantity, in prose no less than in verse. No teacher can be recognized as an efficient teacher of Latin who is not thoroughly acquainted with the structure of the more common forms of Latin verse and the general laws of quantity.

Course of Instruction.

It is not proposed to lay down any rules as to the age at which Latin should be begun. Inspectors should, however, inquire whether it seems that boys are beginning it who, because of their immaturity, are unable to profit by the instruction. It is generally advisable that the boys should have received some elementary instruction in the analysis of the sentence before beginning Latin. If they have not, it is necessary that the master who teaches Latin should himself give this instruction, and the inspector must inquire whether this be done.

Under no circumstances can a course be considered satisfactory in which the first stage is the learning by heart of grammatical forms without exercises in which the pupil becomes accustomed to their use.

Throughout the course there must be a constant study of Latin texts. The inspectors must inquire whether they are properly graded in difficulty. After the stage of isolated sentences the pupils should have practice in short passages, whether selected from easy Latin authors or composed for the purpose. A course cannot be accepted in which the boys are without preparation of this kind put on to the translation of, *e.g.*, a Book of Caesar. In the books taken for translation, verse as well as prose must be represented.

It is important that the pupils should have an opportunity of becoming acquainted with the matter of the ancient authors they study, and with the more important aspects of ancient life and ancient history. Inspectors should inquire what provision is made for this. They should also inquire whether the school is sufficiently supplied with books of reference, atlases of ancient geography, representations of ancient buildings, dress, &c.

CURRENT EVENTS.

Fixtures. A paper on "The Method of Teaching French after the First Stage" will be read by Mr. F. B. Kirkman, B.A., at the meeting of members of the College of Preceptors to be held on December 14.

* * *

Miss C. A. Raisin, D.Sc., will lecture on "London, its early Foundation and later Growth: a Geological Study" at Bedford College for Women on December 8, at 5 p.m.

* * *

Lord Londonderry will receive a deputation from the Association of Chambers of Commerce on December 12 with reference to the resolution passed at the Manchester conference of the Association on the question of higher technical and commerical education, for which the Chambers think better provision should be made.

* * *

The prizes for the session 1903–04 at the Northampton Institute will be distributed by Lord Reay on December 9, at 8 p.m. Conversazione to follow.

Honours. Dr. F. G. Kenyon has been elected a Fellow of Winchester College by the Warden and Fellows of New College, Oxford. Dr. Kenyon was a scholar of Winchester and of New College, and was afterwards a Fellow of Magdalen College.

* * *

Prof. Osler, the new Regius Professor of Medicine at Oxford, has been elected a Student of Christ Church.

* * *

The University of Bombay has conferred the honorary degree of LL.D. upon Dr. R. G. Bhandarkar, the distinguished Sanskritist.

* * *

Mr. Andrew Carnegie, LL.D., has been re-elected Lord Rector of the University of St. Andrews without opposition, Mr. Andrew Lang and Sir Henry Craik having declined to stand.

* * *

Miss L. M. Faithfull, Vice-Principal of the Women's Department, King's College, London, has been elected a Fellow of the College.

Endowments and Benefactions. Mr. J. Cosmo Melvill, the Chairman of the Manchester Museum Committee, has presented to the Botanical Department of the Museum his extensive herbarium, the collections of some forty years. Thus, according to Sir W. T. Thiselton Dyer, Manchester University is in possession of botanical teaching appliances more admirably designed and more efficiently carried out than he has seen anywhere else.

Digitized by Google

Mr. Alfred Beit and Mr. Werner have offered to found a Professorship and an assistant-professorship of Colonial History in the University of Oxford, with an annual prize in the subject, payment of examiners, and a donation to the Bodleian Library for the purchase of pertinent books.

* * *

The Rhodes Trustees will give £200 a year towards the stipend of the Reader in Pathology at Oxford for the next five years.

* * *

In recognition of the welcome and facilities offered to the British Medical Association, the Executive Committee of the Oxford Division of the Association has presented the Pitt Rivers Museum with a permanent installation of electric light.

* * *

Under the will of the late Mr. Isaac Roberts, D.Sc., F.R.S., &c., chief of the Crowborough (Sussex) Beacon Observatory, two scholarships in science, £50 a year each, will eventually be established in each of three institutions—Liverpool University, Bangor University College, and Cardiff University College.

* * *

The Rev. Alexander Warrack, M.A., has presented to Aberdeen University a collection of books on minor Scots poets and poetry formed by him in connexion with work done for Prof. Wright's "Dialect Dictionary." Mr. Warrack graduated at Marischal College in 1855.

* * *

Mr. Higgins, M.L.A., Attorney-General in the Labour Ministry, has given £1,000 to endow a scholarship for (knowledge of) poetry in Melbourne University. The Victorian Government is pledged to give a sum equal to the gift in all cases of new scholarships.

* * *

Cornell University is expected to receive well over £100,000 under the will of the late Prof. D. W. Fiske.

Scholarships and Prizes.

A number of scholarships and exhibitions at University, Exeter, and Oriel Colleges, Oxford, will be awarded on a common examination beginning January 10. Particulars and forms of entry from the Dean of Christ Church.

* * *

St. Hilda's Hall, Oxford, offers two open scholarships, £40 and £30 for three years, to students proving need of pecuniary assistance for a university course. Examination in last week of June next. Particulars from the Principal.

* * *

The award of the Reid Fellowship at Bedford College for Women, £50 a year for two years, is deferred till 1905. Apply by May 30. Candidates must be Associates of Bedford College and graduates of London University.

* * *

Preliminary examinations for fifteen free open scholarships at the Royal College of Music, South Kensington, will be held on January 25 in various local centres throughout the United Kingdom. The scholarships entitle the holders to free musical education at the college, and are, as a rule, tenable for three years. Further information and official forms of entry may be obtained from the Registrar.

Appointments and Vacancies.

Prof. Arrhenius, the distinguished physicist of Stockholm, recent recipient of a Nobel prize, has been invited to accept a Chair in the University of Berlin.

* * *

Dr. E. Ray Lankester, Director of the Natural History Museum, South Kensington, has been appointed Romanes Lecturer at Oxford for 1905.

* * *

Principal Dale of Liverpool University succeeds the late Dr. Mackennal as Chairman of the Council and Board of Education of Mansfield College, Oxford.

* * *

Mr. Henry Cecil Wyld, B.Litt. (Oxon.), Lecturer in English at Liverpool University, has been appointed to the Baines Chair of English Language in the University.

* * *

Mr. W. Owen Williams, formerly Principal of the New Veterinary College, Edinburgh, recently closed, has been appointed Professor of Veterinary Medicine and Surgery in the University of Liverpool.

* * *

At the University of Liverpool, Dr. J. H. Grindley has been appointed Lecturer, and Mr. A. Leitch, Assistant Lecturer, in Engineering; and Mr. G. E. Piper, Demonstrator in Applied Mechanics and Engineering Design and Drawing.

* * *

Mr. T. Hudson Williams, M.A. (Lond.), assistant lecturer in Classics, has been appointed to the Chair of Greek, in Bangor University College.

* * *

Mr. J. F. Gill, M.Sc. (Vict.), has been appointed a Demonstrator in Mechanical Engineering in Birmingham University.

* * *

At Royal Holloway College, Miss P. Walters, A.R.C.M., has been appointed Staff Lecturer in Music; Miss D. Mason, Assistant Lecturer in Classics; and Prof. A. F. Pollard, Lecturer in Modern History.

* * *

Miss Kate Warren has been appointed to act as deputy-assistant Lecturer in English at Bedford College for Women for the Session 1904–05.

* * *

Mr. S. L. Brown, B.A., late Scholar of Wadham, has been appointed Lecturer in Theology at Ripon Theological College.

* * *

Dr. E. Collet, McGill University, Montreal, succeeds Prof. Dalby in the Chair of Mechanical Engineering and Applied Mathematics at the City and Guilds Technical College, Finsbury.

* * *

Dr. Frederic Rose, British Consul at Stuttgart, whose score of reports on technical education in Germany are well known, has been appointed Assistant Educational Adviser to the London County Council.

* * *

Mr. T. R. Collier, M.A., retires from the Principalship of Belfast Royal Academy after 31 years' tenure, and is succeeded by Mr. J. N. Shearman, B.A. (T.C.D.), formerly assistant English and Classical master at St. Andrew's College.

* * *

Mr. W. F. Eastwood, a graduate of the Massachusetts Institute of Technology, and formerly a technical instructor under the Leicester School Board, has been appointed head of the Department of Metal Work, Machine Work, and Mechanical Drawing in the Cleveland (Ohio) University School.

* * *

The death of Dr. T. A. Stewart has caused a movement in the Scotch Inspectorate. Mr. A. E. Scougal, of the Glasgow district, goes to Edinburgh as Chief Inspector of Schools, in room of Dr. Stewart. Mr. A. R. Andrew becomes Chief Inspector in Glasgow, in room of Mr. Scougal. Mr. W. G. Fraser, Junior Inspector, has been promoted to be Inspector; and Mr. David Thompson, first-class sub-inspector, has been promoted to be Inspector, and succeeds Mr. Macleod at

Digitized by Google

Elgin. Mr. J. H. Murray, second-class sub-inspector, succeeds Mr. Fraser as a Junior Inspector, and Mr. A. McDonald, second-class sub-inspector, succeeds Mr. Thompson as a first-class sub-inspector.

* * *

Mr. R. D. T. Alexander, of King's College, and Mr. F. W. Elsden, of the City and Guilds Central Technical College, have been appointed Assistant Engineers in the Department of Public Works in India.

Literary Items.

In Messrs. A. & C. Black's delightful series of "Beautiful Books," "Bonnie Scotland," by R. Hope Moncrieff (Ascott R. Hope), has just appeared; and "Familiar London," painted by Rose Barton, and presenting for the first time "an approximately complete picturing of London in colour," and "Edinburgh," painted by John Fulleylove, R.I., and described by Miss Rosaline Masson, are announced to follow.

* * *

Messrs. Longmans promise "The Adventures of King James II. of England," exhibiting the King in new lights. They also announce "The Wampum Library of American Literature," edited by Prof. Brander Matthews, Litt.D., of Columbia University, and "planned to include a series of uniform volumes, each of which shall deal with the development of a single literary species, tracing the evolution of this definite form in the United States and presenting in chronological sequence typical examples chosen from the writings of American authors."

* * *

Mr. Fisher Unwin is publishing in the "New Irish Library" a new edition of the "Life of Owen Roe O'Neill," by J. F. Taylor. He also announces "Party Organization and Machinery in the United States," by Jesse Macy, Professor of Political Science in Iowa College, whose work on "The English Constitution" is well known in this country.

* * *

Messrs. Kegan Paul, Trench, Trübner, & Co. announce "The Home Education Series"—five volumes (in the first instance)—edited by Miss Charlotte M. Mason, for the Parents' National Educational Union.

* * *

Messrs. Nelson's "New Century Library" already includes a fine selection of the best fiction, extremely well printed and attractively bound in neat and convenient form. We prophesy a run upon it at Christmas time.

* * *

Messrs. Macmillan will presently publish the "Harvard Lectures on Greek Subjects" delivered by Dr. S. H. Butcher, late Professor of Greek in Edinburgh University.

* * *

Mr. Brimley Johnson announces a reprint of four of Disraeli's novels—"Vivian Grey," "Coningsby," "Sybil," and "Tancred"—under the title of "Young England," edited by Mr. B. Langdon Davies, and illustrated by Mr. Byam Shaw.

* * *

The Normal College Press has recently been registered as a limited company under the name of The Normal Press, Ltd.

General.

Prof. Barrett Wendell, of Harvard, lately Clark Lecturer at Trinity College, Cambridge, has offered to place a brass tablet to the memory of John Harvard in the chapel of Emmanuel College, Cambridge, of which John Harvard was a member.

* * *

Sheffield still wants £60,000 of the sum required before application can be made for the University charter.

A bust of Richard Roberts, the celebrated inventor of the self-acting mule (1832), and of a varied series of other mechanical devices, has been unveiled at University College, Aberystwyth.

* * *

The Cambridge Local Examinations and Lectures Syndicate announce that after the present year the arrangements made for examining Senior Candidates in the Local Examinations in Spoken French and Spoken German will be extended to Junior candidates.

* * *

The syllabus of the Local and other examinations of the London College of Music, valid till April, 1906, is now available. The Annual Report for 1904, just issued, shows remarkable progress.

* * *

On the celebration of the Jubilee of Cheltenham Ladies' College (November 9), Miss Dorothea Beale, LL.D., was presented with her portrait (in her doctor's robes), painted by Mr. F. J. Shannon, A.R.A. In her forty-six years' connexion with the College, Miss Beale has seen the students rise from under fifty to nearly a thousand.

* * *

The L.C.C. propose to utilize the late Colonel North's house at Avery Hill as a residential training college for teachers.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—Ed. *E.T.*]

THE DIPLOMA EXAMINATIONS.

Some More Friendly Criticism.

To the Editor of "The Educational Times."

Sir,—In March, 1903, I drew the attention of readers of *The Educational Times* to the fact that the higher teaching diplomas of the College of Preceptors did not include advanced English or History as optional subjects, and I suggested that, if the London Intermediate Arts were chosen as a model for the L.C.P., and the Final B.A. for the F.C.P., the subjects might be employed as two groups for these diplomas. As a result of some correspondence, the Council of the College has accorded Higher English a certain degree of recognition, but History none whatever.

Higher English, too, instead of being employed as a group, was only included as a branch of the Language groups, and, although this maintains the uniformity of these groups, one cannot help thinking that it is but scant recognition for such an important subject; moreover, English is the only language in which more than *one* paper is set.

The work in the English group for Licentiate comprises: Anglo-Saxon (over a hundred pages of grammar and a fair amount of prepared translation), Chaucer's "Prologue," Tennyson's "In Memoriam," Shakespeare's "As You Like It" and "Coriolanus," Milton's "Paradise Lost" Books I. and II., and History of the English Language.

Yet this work was not treated as a group, nor were the candidates exhaustively examined in it, but it was crowded into two papers of a couple of hours each. My plea with regard to English is the same as it was more than a year and a half ago—that it be accorded the full recognition of a branch, as so wide a subject surely deserves. It seems a somewhat herculean task to expect even the most expert examiners to examine candidates *thoroughly* on the work I have indicated within the scope of two papers of two hours' duration.

But, scant as the recognition of English has been, it is still stranger to find that History has not been employed as an optional subject.

As I have previously pointed out, there must be hundreds of teachers in the country whose principal work is history teaching; yet they are afforded no opportunity of taking their diploma in the subject in which they have specialized. Surely History in all its branches—Constitutional, Ancient, Modern, &c.—is a wide

Digitized by Google

and sufficiently comprehensive subject to delight the heart of any examiner! By the actual introduction of English the Council of the College has shown itself willing to be influenced by the opinion of teachers, and there is no reason to suppose that, if the defects of the present system were clearly pointed out to them, they would not amend the existing conditions, and at the same time give History the meed of recognition that it fully deserves. I believe that already several teachers have availed themselves of the new regulations to take English in their diplomas, and no doubt History, too, would be popular among candidates.

If teachers approve of my views, they should endeavour to introduce their opinions to the College authorities, who would probably be willing to go into the matter once again, for no doubt they are desirous of placing their diplomas within the reach of as many teachers as possible without lowering their high standard in the least.—I am, Sir, &c.,

GILBERT J. PASS.

Craufurd College, Maidenhead, Berks.
November 9, 1904.

AN EMPLOYER ON AFTER-SCHOOL STUDY.

AN ENCOURAGING EXAMPLE.

To the Editor of "The Educational Times."

SIR,—I have been much interested in perusing the report of a lecture by the Rev. J. O. Bevan on "Study after School-days," contained in your issue of the 1st inst.

The subject is of national importance from an ethical point of view, and is vital in its bearing upon the prosperity of our manufactures and commerce generally.

In an age when science is daily superseding the old methods of production it is imperative that the rank and file of the industrial army should have at least a fair technical knowledge of the arts, or the trade of the country will gradually drift to States where the units are better equipped.

All large employers of labour can tell of the difficulty they experience in finding workmen of sufficient technical knowledge when modern methods are, perforce, introduced into their works, and how they are frequently obliged to import foreign operatives.

Mr. Bevan makes some practical suggestions in the direction of creating an incentive to after-school study which are valuable; but, when faced with the problem of earning a living, the commercial conscript, surrounded by fresh associations, is apt to take too narrow a view of his position and prospects and to regard the continuance of study as a loss of time.

Surely, then, it is to the interest of the employers of labour to second the efforts of the school teacher by offering inducements to their employees to continue their studies on lines which in a few years will render their services more valuable.

The perusal of Mr. Bevan's paper led me to recognize this, and I decided to offer a small monetary reward to every employee in the works which I control (where over two thousand are engaged) who shall secure an Elementary Certificate at the local technical schools.

If this meets with success, I propose offering larger rewards on securing certificates in the higher stages.

The experiment is at least worth a trial, and teachers throughout the country might make the suggestion to the employers in their respective localities.—I am, Sir, &c.,

W. E. HIPKINS.

16 Augustus Road, Edgbaston, Birmingham,
November 14, 1904.

THE HERTFORDSHIRE BIBLICAL SYLLABUS.

To the Editor of "The Educational Times."

Dr. F. H. HAYWARD, P.-T. Centre, Torquay, writes: "It may be of interest to your readers to mention that practically every feature which distinguishes this very good syllabus from the very bad ones which were set forth by the great School Boards is found in the work on the subject which I published two years ago. The use of Amos, of the history of Isaiah, of selections from the latter half of Isaiah, the reference to the great contemporary monarchies, the use of pictures, the non-employment of the earlier chapters of Genesis, the use of St. Mark as the basis of the study of the Gospels, nay, the comparative subordination of the miraculous in the Gospel story—in all these and in other matters I find I was in the right."

SEELEY & CO.'S NEW BOOKS.

*** *A Miniature Illustrated Catalogue will be sent on application.*

PICTURES IN THE TATE GALLERY. By C. GASQUOINE HARTLEY. With 20 Collotype Plates. Demy 4to, 12s. 6d. net. Also an Edition de Luxe on Dutch Hand-made Paper, with extra Plate, limited to 100 Copies, buckram, 25s. net.

"An admirable study of the Gallery, . . . marked by wide range of sympathy and much critical acumen. The pictures illustrated are well chosen and beautifully reproduced."—*Daily News.*

NOW READY.

THE PEEL COLLECTION AND THE DUTCH SCHOOL OF PAINTING. By Sir WALTER ARMSTRONG. With 4 Photogravures and many other Illustrations. Super-royal 8vo, 5s. net; or in cloth, gilt top, 7s. net.

GREAT COMPOSERS AND THEIR WORK. By LOUIS C. ELSON. With Photogravure Frontispiece of Johannes Brahms. Crown 8vo, cloth, gilt top, 5s. net.

"A lucid and genially written account of the great masters."—*Spectator.*

"A delightful little book."—*Leeds Mercury.*

A CRITICAL HISTORY OF OPERA. By ARTHUR ELSON. With Photogravure Frontispiece of Richard Wagner. Crown 8vo, cloth, gilt top, 5s. net.

"Even better than 'Great Composers.'"—*Yorkshire Post.*

PROFESSOR CHURCH'S NEW BOOK.

THE CRUSADERS. A Story of the War for the Holy Sepulchre. By the Rev. A. J. CHURCH. With 8 Coloured Illustrations by GEORGE MORROW. Extra crown 8vo, 5s.

"The foremost place among the historical tales of the season may well be assigned to 'The Crusaders.'"—*Educational Times.*

"We welcome Professor Church's excellent historical tale."—*Spectator.*

MISS MARSHALL'S NEW STORY.

THE QUEEN'S KNIGHT-ERRANT. A Story of the Days of Sir Walter Ralegh. By BEATRICE MARSHALL. With 8 Illustrations by T. HAMILTON CRAWFORD, R.S.W. Extra crown 8vo, 5s.

DIANA POLWARTH, ROYALIST. The Story of a Girl's Life in the Days of the Commonwealth. By J. F. M. CARTER. With 8 Illustrations by T. HAMILTON CRAWFORD and C. V. HARCOURT. Extra crown 8vo, 5s.

"A striking story."—*Times.*

"Offers fine opportunities for spirited narrative, of which Miss Carter has made good use."—*Athenæum.*

THE ROMANCE OF MODERN EXPLORATION. By ARCHIBALD WILLIAMS, F.R.G.S. With 26 Illustrations. Extra crown 8vo, 5s.

"The prettily bound 'Romance of Modern Exploration' is as good as its cover. Every word of it will be read."—*Daily News.*

"Just such a book as an intelligent lad would like to have for a Christmas prize."—*Athenæum.*

THE ROMANCE OF THE ANIMAL WORLD. By EDMUND SELOUS. With 16 Illustrations by LANCELOT SPEED and S. T. DADD. Extra crown 8vo, 5s.

"Full of interesting and sometimes thrilling stories from the wide field of natural history."—*Athenæum.*

PROFESSOR CHURCH'S HISTORICAL STORIES.

Greek Story and Song. With Illustrations. 5s.

Helmet and Spear. Stories of the Wars of the Greeks and Romans. With Illustrations. 5s.

Stories from Homer. With Illustrations. 5s.

Stories from Virgil. With Illustrations. 5s.

Stories from the Greek Tragedians. With Illustrations. 5s.

Stories from the Greek Comedians. With Illustrations. 5s.

Stories of the East, from Herodotus. With Illustrations. 5s.

The Story of the Persian War. With Illustrations. 5s.

Stories from Livy. With Illustrations. 5s.

Roman Life in the Days of Cicero. With Illustrations. 5s.

The Story of the Iliad. With Illustrations. 5s.

The Story of the Odyssey. With Illustrations. 5s.

Heroes of Chivalry and Romance. With Illustrations. 5s.

The Count of the Saxon Shore. With Illustrations. 5s.

With the King at Oxford. With Illustrations. 5s.

The Hammer. A Story of Maccabean Times. With Illustrations. 5s.

The Story of the Last Days of Jerusalem. With Illustrations. 3s. 6d.

Three Greek Children. With Illustrations. 3s. 6d.

A Young Macedonian in the Army of Alexander the Great. 2s. 6d.

A Greek Gulliver. Stories from Lucian. 1s. 6d.

Heroes of Eastern Romance. With Illustrations. 2s. 6d.

The Stories of the Iliad and the Æneid. With Illustrations. 1s. 6d.

To the Lions. With Illustrations. 1s. 6d.

The Burning of Rome. A Story of Nero's Days. With 16 Illustrations. 3s. 6d.

Stories from English History. With many Illustrations. 3s. 6d.

POPULAR SCIENCE.

SUN, MOON, AND STARS. Astronomy for Beginners. By AGNES GIBERNE. With Illustrations. 26th Thousand. Revised and Enlarged. 5s.

"Certainly the best book on the market for teaching children the elements of astronomy. It is, moreover, a book which persons of all ages will read with pleasure and advantage."—*School Guardian.*

The Great World's Farm. How Nature grows her Crops. By SELINA GAYE. With a Preface by Prof. BOULGER, and 16 Illustrations. 5s.

The Story of the Hills. By the Rev. H. N. HUTCHINSON. With Illustrations. 5s.

The Ocean of Air. Meteorology for Beginners. By AGNES GIBERNE. With Illustrations. 5s.

The World's Foundations. Geology for Beginners. By AGNES GIBERNE. With Illustrations. 5s.

Among the Stars. A Child's Book of Astronomy. By AGNES GIBERNE. With Illustrations. 5s.

LONDON: SEELEY & CO., LTD., 38 GREAT RUSSELL STREET.

MR. MURRAY'S NEW LIST.

MURRAY'S

SMALL CLASSICAL ATLAS FOR SCHOOLS.

Edited by G. B. GRUNDY, M.A., D.Litt.,

Fellow and Tutor of Corpus Christi College, Oxford.

Folio (14½ × 9¾ ins.). Price 6s.

The Atlas consists of 14 Sheets (containing 38 Maps and Plans) with a complete Index of 19 pages. The Maps incorporate the results of recent scholarship, and have been most carefully prepared so as to accentuate all the chief names and natural features of the countries, and by eliminating those of minor importance to avoid overcrowding. The use of colour contours, whilst displaying the configuration of the countries at a glance, enhances the effect of simplicity, which cannot be achieved in maps where the old-fashioned method of hachured mountains obscured the names. [*Just published.*

NEW EDITION OF

LITTLE ARTHUR'S HISTORY OF ENGLAND.

By LADY CALLCOTT.

With 45 Illustrations. **Fcap 8vo, 1s. 6d.**

This edition contains two additional chapters, bringing the History up to the end of the Reign of Queen Victoria, and many additional Illustrations.

[*Just published.*

OVER HALF-A-MILLION COPIES OF THIS BOOK HAVE BEEN SOLD.

A FURTHER COURSE OF PRACTICAL SCIENCE.

MECHANICS, HYDROSTATICS, HEAT.

By J. H. LEONARD, B.Sc. Lond., and W. H. SALMON, B.Sc. Lond.

With Illustrations, Diagrams, and Exercises at the end of each Chapter.

Fcap. 8vo, 2s.

This book is a continuation of the *First Course of Practical Science* (1s. 6d.) by Mr. J. H. LEONARD. These two works, together with the *First Course of Chemistry* (1s. 6d.) by the same Author, cover between them all the ground included in the Oxford and Cambridge Local Examinations under the following heads:—Elementary Science (Juniors) and Heat (Juniors); also Heat (Preliminary, Cambridge), Elementary Mechanics (Juniors, Cambridge), and Elementary Mechanics and Hydrostatics (Juniors, Oxford).

NATURE TEACHING.

Based upon the General Principles of Agriculture.

FOR THE USE OF SCHOOLS.

By F. WATTS, B.Sc., and W. G. FREEMAN, B.Sc.

Large crown 8vo, 3s. 6d.

". . . forms a welcome change from the many books appearing under similar titles in that it is avowedly based upon experiments, and treats of things about which the writers really know, and have not merely read up."—*Nature.*

". . . this volume of elementary agricultural botany appears to be admirable in arrangement and expression."—*Spectator.*

INTERMEDIATE FRENCH READER.

Edited, with Historical, Biographical, and Grammatical Notes, by

M. A. GEROTHWOHL, B.Phil., L.-ès-L., F.R.S.L.,

Examiner to the Oxford and Cambridge Schools Examination Board.

Crown 8vo, 2s. 6d.

Ière PARTIE. Premières Connaissances: Histoire Naturelle, Découvertes et Inventions. IIe PARTIE, Pièces relatives à l'Histoire de France.

The Historical and Biographical Notes are printed in French.

PRACTICAL ARITHMETIC.

AN INTRODUCTION TO ELEMENTARY MATHEMATICS.

By S. O. ANDREW, M.A., Head Master of Whitgift Grammar School, Croydon, **and A. CONSTERDINE, M.A.**

Fcap. 8vo. [*Ready in December.*

A SCHOOL HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TO THE ACCESSION OF KING EDWARD VII.

By Miss M. A. TUCKER, Newnham College, Cambridge.

With Coloured Maps, Plans, and Tables. **Crown 8vo, 2s. 6d.**

[*Ready in December.*

A BOOK OF BRITISH SONG FOR HOME AND SCHOOL.

Edited by **CECIL J. SHARP.**

Principal of the Hampstead Conservatoire.

Crown 8vo, Words and Air only: Paper, **1s. 6d.**; Cloth, **2s.** With Pianoforte Score and Words: Large 4to, **7s. 6d.** net.

"We have nothing but praise for 'A Book of British Song.' . . . The songs are exceedingly well chosen, and represent the choicest of our great store of traditional ballads."—*Yorkshire Post.*

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,194,485. Annual Income, £398,982.

Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

CASSELL & CO.'S LIST.

NEW AND ENLARGED EDITION NOW READY OF

The Story of English Literature.

By ANNA BUCKLAND. Cloth boards, 3s. 6d.

A charming Reading Book for Pupil-Teachers and Young Students generally.

This new edition contains chapters covering the Victorian Period. The volume gives a clear and attractive account of the development of English Literature, and the great names connected therewith, not in the form of an examination cram-book, but as a simple introduction to the subject. The new chapters are the work of Miss CHRISTABEL COLERIDGE.

A History of England. By The Right Hon. H. O. ARNOLD-FORSTER, M.A., M.P. 28th Thousand, Revised. Fully Illustrated. Extra crown 8vo, 816 pp., bound in cloth, price 5s.; or handsomely bound, cloth gilt, 6s. 6d.

CASSELL'S UNRIVALLED DICTIONARIES.

Cassell's New French Dictionary. (French-English—English-French.) Edited by JAMES BOÏELLE, B.A. 1,220 pp., demy 8vo, strongly bound in cloth, 7s. 6d.; or in half-leather, 10s. 6d.

Cassell's French Dictionary. (French-English—English-French.) 711th Thousand. Revised and Corrected. 1,150 pp., cloth, 3s. 6d.; half-morocco, 5s.

Cassell's German Dictionary. (German-English—English-German.) 327th Thousand. 1,201 pp. Cheap Edition. Cloth, 3s. 6d.; half-morocco, 5s.

IS THE NEW GEOMETRY WORTH PRESERVING?

AT the Monthly Meeting of the College of Preceptors on November 23, Mr. E. A. BUTLER in the Chair, the Rev. D. L. SCOTT, M.A., LL.D., opened a discussion on the above subject.

Dr. SCOTT said he wished it understood that he was not about to give a lecture, but to initiate a discussion on a subject of practical importance in the work of the school, and for this purpose he thought it would be useful if he were to indicate certain points which might serve as a basis of debate. All present had probably had much experience of the subject, and some would remember Mr. Eggar's lectures, which were delivered in the same lecture hall two years ago, when he (Dr. Scott) had the honour of presiding. They would recollect the crusade of many years ago against Euclid on account of his errors and the defects of his logic, and, above all, most would remember how in their own school days they had fancied Euclid could never do them much good; and hence they had been glad to hear of a new system by which the subject might be approached in a more interesting way. These ideas remained long in the air; but at last they were informed that the universities had given assent to the new form of geometrical teaching, and all were most eager to find out what that meant. In a very short space of time there descended on the schools a flood of new text-books bewildering to the teacher: most of them, singularly enough—as it had been pointed out to him—the result of collaboration; every school publisher put out a new book, and one firm was responsible for no fewer than three. They had all been stirred up to find out what they were to do, and he feared the advice of the university had not afforded them much real help. The speaker, being himself an oldish teacher, and brought up with very strong notions as to the exact use of references, they could appreciate his bewilderment at the lack of agreement as to sequence in the books referred to. There were most peculiar orders, with the great difficulty added that one could not quite tell whether he was bound to keep to the old order or allowed to follow the order of a particular teacher. Many of the new text-books jarred very much on his sense of logical sequence. One text-book started with a considerable number of theorems, followed by a number of problems in parallel courses, and the author stated that theorems 1 to 6 must be read with problem 25; but theorem 6 assumes a bisector, which you did not get until problem 26 was reached. Another book gave what in Euclid is Prop. 26, then Prop. 4, next Prop. 24, then 25, and then Prop. 8; and Prop. 46 assumed what is not proved earlier than Prop. 64. Thus it seemed that the old rule of not assuming the truth of anything not already proved was set at naught. And surely the proof of Prop. I. 4 by I. 26 was far too tempting and too convenient for boys to be permitted to resort to it. Again, on a certain page of another book a method was given of finding the area of a triangle with the direction that the use of this method must be deferred until a considerably later page had been read. Many new methods and many shorter methods had been already employed in regard to Euclid's propositions, and he felt quite certain that Euclid himself would cordially accept them. But the great point was whether they were to teach Euclid for the sake of the geometry or for the sake of the mental training to be gained by the study. According as they answered this question, they approached the study of Euclid from opposite sides. He regretted that the "donkeys' bridge" had disappeared, with I. 7 and many others; and, if mental training were the object in view, he felt that this disregard of logical sequence jarred upon him. A Simson was wanted who should, with the authority of the universities, take all the new geometries and from them produce one and say: "That is the sequence you must follow." He himself would recommend that they should keep to Euclid's order, though not necessarily to his proofs. He desired a definite order put forward by authority, and that should be accepted as binding. He trusted he had suggested something for discussion; but he wished to put the

Digitized by Google

matter before them in a particular form. It would not do to discuss any particular book, or to advocate the use of any particular book. He would put to them three questions:—

1. Did the new geometrical teaching give better results, especially in the teaching of riders?
2. Did they find that their boys, especially in the upper forms, liked geometry better than when they had to learn Euclid?
3. Did they find that their boys' thoughts were as well regulated as they were under the old system?

The title he had given to the subject of the discussion might possibly offend some susceptibilities; but he had chosen it in order to provoke a more lively debate.

Mr. ANDRADE did not see any objection to the putting of Prop. 26 before Prop. 4, since both could be proved by first principles—viz., the definitions of an angle and a straight line, and the one assumption that, if two plane figures can be made to coincide, they are equal—and each could be proved independently of the other. As to the questions put by the opener, he thought the first was not as clear as it might have been: so much depended on what was meant by "the new geometry." What he felt to be the chief improvement in the new method was something more or less independent of any text-book—viz., that it admitted of young boys beginning mere practical geometry without any theory at all—that, as far as possible, they should deal first with the familiar and gradually proceed to the unfamiliar, and that they should not be required to tackle any question of logic. He would, moreover, recommend that for the first year the boys should be allowed to find out for themselves the facts of the case. He found that a great deal of ground was thus covered without letting them feel that they had learnt absolute and incontrovertible truths. Afterwards a new beginning might be made with any book, and theory could be applied. First geometry, then logic. Carroll's "Picture Logic" did not take long to explain to a boy of eleven or twelve. He considered the new geometry did give very much better results, and he quite agreed that the principles should be taken in some definite order, preferably Euclid's order. A distinct gain would result from the plan he advocated, and children would no longer come to the study of Euclid without really knowing what an angle or a straight line was.

Mr. BAYLISS thought the arguments against the new system might have been made more definite. It was too early a day to say definitely that it was better than the old. He believed it to be better, and would like to give his grounds for that belief from three points of view—of the mathematician, of the non-mathematician, and of the educationist. From the point of view of the mathematician it could be urged that it had given freedom in place of a hampering rigid system, had done away with the method of sequence and intersequence of theorems and problems, and had given instead classification, which was the foundation of every science. Instead of now being required to learn a large number of propositions in an order invented by one extremely clever man two thousand years ago, they were now enabled to go to first principles, and found that all the geometry that was required for Euclid's six books could be classified under some dozen fundamental principles from which every single proposition could be proved. It had, therefore, made the whole subject infinitely clearer, more scientific, and easier; and, in addition, geometry could now be co-ordinated with arithmetic and algebra. The non-mathematician ought to welcome the new geometry on the grounds of greater intelligibility, of rapidity of acquisition, and of utility as seen in the shorter time spent in acquiring a knowledge of the facts of geometry and the more practical value of the facts when acquired. From the educational point of view the advantage to be derived from the new system was also great. It was now possible to combine theory and practice in a manner hitherto unattainable. Again, the new method trained the average boy's imagination in a manner that Euclid never could. He found the boys under his (the speaker's) own observation were most distinctly gaining in reasoning power. Three years ago, when the system was introduced, the boys could do the practical work, but found it difficult to state in writing the reasons for their conclusions; but, after seeing a few propositions worked out from fundamental principles, they saw what was expected of them, and now the majority were able to give much more intelligent proofs than he had ever before received from students of Euclid. He would add that the new method required, not new teachers, but teachers who would give their whole time and thought to the work. Under the old system it was the common practice for the master to call up boy after boy and see if he could "say" his lesson. Now a master's time was taken up in carefully watching that each boy did his own individual work. Instead of having one set of words to hear, he had to receive twenty different accounts, to approve the good and to condemn the bad. Therefore, if the masters of the present day were welcoming the new method, it could not be to save themselves trouble. He agreed that the multiplicity and diversity of text-books was a serious disadvantage. A head master should draw up a scheme suitable for his own school, and for the boys, at any rate, there should be no books; the master should have full discretion to take the problems and theorems and to deal with them in the manner he thought best for his pupils. Reference should always be made to fundamental principles, and not to numbered propositions. He would ask rather for an accepted classification of ideas, and not a sequence in the present sense—not an authority, but a general recognition of fundamental principles.

Mr. PATTERSON thought that without books they would be much more liable to error. If every form master were to work according to a scheme of his own, as the last speaker seemed to suggest, there could not fail to be much confusion when a boy passed from a lower to a higher form. It would at least be necessary to have one plan of work formulated for the whole school. Then, as to classification, he did not see that the new geometry was better arranged than Euclid, since Euclid's books, as they knew, corresponded to certain classes. And, after all, they must teach in some order, if not in Euclid's order: it would be impossible to deal with the five or twelve classes at once. This applied to Euclid and to the modern systems alike, and Euclid lent itself to classification in a not less degree than they. Like so many of the strong supporters of the new geometry, the last speaker had assumed that Euclid was always taught badly, but his strictures might apply equally to the teachers of the newer system. As to practical work, he would point out that "to bisect a given angle" was as much Euclid as the new geometry. The teaching of Euclid did not preclude the use of drawing or of measuring. An arithmetic in common use had long ago made them familiar with the co-ordination of Euclid with arithmetic. He (the speaker) could not see why Euclid should not be adopted as the text-book, with as much practical work and co-ordination as might be desired, as well as any of the others. It had been said that the new geometry gave boys a much better mastery of facts. That they got a mastery of twelve facts he could quite grasp; but he was inclined to think that those twelve fundamental principles corresponded to Euclid's axioms. He agreed with the last speaker as to the desirability of every boy's being familiarized with the notions of line, angle, circle, and so on, before beginning Euclid, but he had rather understood him to say that he would like them to go through the whole of their geometry in this way before they came to the formal proofs. The objection to this was that they could not see the object of the formal proofs afterwards. If they had to learn their chief geometrical facts and then to go back to the beginning for formal proofs, they would be more disgusted with the subject than ever they were said to have been under the old system. As to the first of Dr. Scott's questions, he did not think they had been teaching the new system sufficiently long to find out. They could not help the fact that they had been brought up under Euclid, and thus might not be giving the new geometry a really good chance. One gain certainly was that boys could now draw a neater figure, that they had a better eye for form and a better eye for geometry; he found, however, that they solved riders just about as well, or as badly, as of old. He was now being asked continually by pupils if this or that might be assumed by them. He was accustomed to tell them what he thought and what the last speaker would consider—but which was by no means necessarily what an examiner might think—was the proper answer—viz., to assume nothing, but to go back to first principles. That was the safest course. In reply to the second question, he did not find that boys did like the new system very much as yet. Undoubtedly, certain boys who before could not take to the study of geometry at all, but who had a turn for drawing, did like it better. The bright boy did just about as well as before; but the average boy did not care any more for his geometry now than he did before. The last of these questions rather assumed that the subject was relied upon to regulate the thoughts of boys. He considered it rather hard upon geometry that it alone should bear the whole of this burden. Doubtless there was a great deal of mental discipline

Digitized by Google

in Euclid, and that there was so much seemed to be its greatest drawback. Even the definitions presented difficulties when not (as in one bad system of teaching) taken in their whole extent before proceeding further, and the earlier propositions presented difficulties too. Many, unfortunately, never really got through them: they just left them behind. If they did actually learn them, they had accomplished a really hard piece of work at something they did not like, which was a praiseworthy achievement and most excellent discipline. Most subjects, including the one under discussion, were now made too easy for boys; all the difficulties were knocked out of them or carefully prepared for easy digestion beforehand. He was inclined to think that a boy's thoughts were not quite so well regulated as they used to be, and that his first thought was perhaps not so much to grapple with a difficulty as to get round it somehow. He did not consider that boys did get as good mental training out of the new geometry as from the old method.

Mr. WILSON said there seemed to him to be considerable confusion in the minds of teachers as to the objects of geometry teaching. Geometry was an abstract science, and, as such, had a method of its own which must be kept in view from the first. If the chasm between the concrete and the abstract could be bridged over by the methods of teaching elementary geometry now coming into use, something might be gained; but it should be remembered that the utmost dexterity in the use of instruments and the construction of figures do not make a geometer—no more than going over Euclidean or non-Euclidean proofs of theorems will do so. The teaching of geometry had failed if it did not put the student in the way of finding proofs of his own. The great fallacy that some teachers seemed to him to fall into with regard to the Euclidean geometry was that there must be something false about a system that had existed so long. Now, the subject-matter of geometry—the investigation of space relations—had not changed since Euclid's time. The most amazing thing was that Euclid's method, after the lapse of two thousand years, had not been improved out of existence, but still held its own. The attempts at improvement from Euclid's day to ours had doubtless added greatly to the advance of the higher geometry, but in elementary geometry they resolved themselves into the adoption of equivalent definitions and axioms, the introduction of these gradually as they are required, and a change in the sequence of theorems, taking practical geometry as a preliminary, or *pari passu* with theoretical geometry. It was, perhaps, too early to say whether these changes would produce all the advantages their advocates claimed, but there was little novelty in them. The intelligent teacher of geometry in the past did, as a matter of fact, use the constructions of practical geometry, did contrast Euclid's proofs with others, and did discuss with his pupils the blemishes, or supposed blemishes, of the text, especially in respect to parallels and proportion; and then, as now, such handling gave vitality to the teaching. Much of the difficulty experienced in teaching geometry arose from the study being begun before the pupil's mind was able to grasp an abstract chain of reasoning. He must confess that his own experience, so far, as an examiner had not given him a very favourable opinion of the results of the new methods, although he welcomed all improvements in geometry teaching.

Mr. EGGAR said his own experience as an examiner for the last two years was at variance with that of the last speaker. He had been much gratified with the uniform improvement in the results sent up. At the outset, as might have been expected, the practical work left something to be desired, and the reasoning part in many cases was also defective; but at the most recent examination the results showed a truly surprising improvement. The number of bad papers was very small, and there were very few cases indeed of the absolute nonsense that examiners were accustomed to meet with in looking over Euclid papers. He did not think the papers were harder to mark than before, but undoubtedly they were much harder to set. It was much harder to set a paper which should be fair to all candidates than a paper confined to the first four books of Euclid. Under the present system of examination, where any order was accepted, there was no possibility of a definite sequence of propositions becoming established, and so the examiner was restricted as to what he could set in the way of book-work, though not at all in regard to applications of the book-work. His own earlier experience as an examinee was that he could get very good marks on a Euclid paper, but it was not until he came to teach the subject that he found that there were points in his earlier work which he had never adequately grasped. Newton's experience was worth recalling. When he went up to Cambridge Newton regarded Euclid as a "slight book," but some years later he realized what a wonderful logical system it was, and after that he never wavered in his allegiance to Euclid. This pointed to what he thought was the real fact, that logic and strict geometrical reasoning were not a subject for young boys, but rather for the university. He hoped Euclid would not disappear altogether. As a logical system it was superior to any of the new forms.

Mr. MONK said he retained a very vivid remembrance of the early geometrical instruction he had received before the modern methods which they were now discussing had been thought of. He could say, with the utmost assurance, that the geometry teaching of those early days had left on his mind no such impression as that which had been attributed to it by a previous speaker. It was, indeed, the old Euclidean propositions that were the basis of that instruction; but anything less resembling a wooden or mechanical method of imparting geometrical truths could scarcely be conceived. The lesson was rather a familiar conversation than a piece of distasteful task-work, the teacher leading his pupils on step by step to the recognition of the facts and the assurance of the truth of the demonstration they were considering together.

Mr. ORCHARD remarked that in answering the three questions put by the opener, both teachers and examiners appeared to be divided. Geometry in any form was undoubtedly a difficult subject, on account of its abstract character. The new method no doubt sometimes shortened the proof, and sometimes made it easier of comprehension—a not unimportant point in these days of educational pressure, and that was an argument for retaining some of the new system, though there might be some danger of inducing slipshod reasoning in the process. It might perhaps be found possible to retain Euclid, and to have a supplementary geometrical text-book embodying the best results of the new methods. As a mental discipline, he thought that Euclid must be allowed to be superior to anything to be found in the new geometry. Exception had been taken to the rigid adherence to a particular sequence in Euclid's plan, but surely all logical reasoning was dependent on sequences. There had been an attack on the Euclidean definitions, but he (the speaker) considered precise definitions to be of the first importance. It could not be denied that there was something to be said for the new geometry; but, for true geometry as a model of rigorous logical synthesis and of clear demonstration, they must, he thought, continue to award the palm to Euclid's "Elements."

MR. KETTLE said there was, as a matter of fact, no such thing as "new geometry"—what was so described being but the natural development of the old. Some of the speakers had insisted on the value of the mental training afforded by the study of Euclidean geometry, but how could a fair comparison be made? Geometry was, indeed, as one speaker had been at some pains to assert, an abstract science; but, in any case, it was necessary to work from the concrete up to the abstract, and the amount of concrete work required would depend on the individual. A born mathematician would take in his geometry however it might be presented; but, in the case of the average boy, it was better for the teacher to begin where the pupil could begin with him. He would, indeed, be an exceptionally gifted man who could reason out the fourth proposition of Book I. without mental reference to the figure. He did not think any case had been made out against the "new" geometry. The opener had asked was the new geometry worth preserving, and his whole indictment had been that its sequence was faulty, and that there were so many geometries flooding the schools that teachers were perplexed as to choice. Why should they be dependent on text-books at all? The next question was whether the pupils liked it. Interest in the lesson of course depended on the personality of the teacher and on his methods; but he was convinced by his own experience that the new mode of teaching geometry step by step, taking it as far as possible heuristically, and leading the pupils to find things out for themselves, was far better than the old method. He could not see why the new plan should not include the logical and mental training of Euclid and a great deal more. He agreed with Mr. Eggar that the work was now a great deal better done, and also that it was far harder to set papers of questions. The boys had a better grasp of the subject, and answered questions much more intelligently, and the results of only two or three years' work were surprisingly favourable. As preparation for concrete work in every department the new teaching was also superior. It had been found over and over

Digitized by Google

again that young men, when required to make practical use of their Euclidean geometry, were completely at a loss. Euclid was not intended to be used as a text-book for children, and the subject was presented in a manner the reverse of that in which the knowledge had come to the geometer himself. His work might be useful for a philosopher, but it never had been and never could be the means by which a child might learn of the things about him.

The CHAIRMAN said that one or two points had come out in the course of the discussion. In the first place, that there were two aspects of the study of geometry, and some preferred to look at it from one point of view and some from the other—the one regarding the value of the facts learned, and the other the value of the mental training. He was inclined to think that those who had been trained on Euclid's methods had probably laid too much stress on the mental training aspect, and that, on the other hand, those who were the advocates of modernized geometry had laid a little too much stress on the acquisition of facts. It had also come out that a very great deal depended on the teacher. His own sympathy had been with those who, having been brought up in the older school, had felt themselves called upon to adopt a new plan of teaching; but he was bound to say that the subject had not been by any means badly taught under the old methods. One other point stood out—viz., that, whatever the method, it was very advisable to begin with practical work, and not to introduce the theoretical till somewhat later. That which was the very spirit of the new geometry had long been practised by those who had been working on the old Euclidean lines.

Dr. SCOTT, in reply, said he regretted that some teachers of lower forms had not spoken, not so much from the mathematical standpoint as of their own special practical difficulties. If there were teachers present who had come with the object of learning something that they might use in their teaching, they must have been disappointed. He would advise them for the present to keep their views to themselves, that they should not imagine that it had been the common practice to learn Euclid by heart, or that teachers of Euclid expected it to be so learned, and, above all, they should not accept the advice that had been given them by one of the speakers, never to use a book if they wished to deal effectually with the type of boy who always said: "Please, sir, we were never taught that." He had not been quite satisfied with the title of the discussion, which implied rather more than he had intended: he had chiefly designed to provoke discussion. His first question had been answered with an emphatic affirmative by Mr. Eggar. His second had referred especially to upper forms, and not much evidence had been adduced on that point; while, as to the third, one of the speakers considered that there were no available data. He earnestly hoped that, as a result of the discussion, they might soon have such a definite sequence put before them that they would be able to see exactly how they were to teach the subject, and what was expected in the way of results by those who came to examine their pupils and test their work as teachers.

A vote of thanks to Dr. SCOTT concluded the proceedings.

COLLEGE OF PRECEPTORS.

PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH.

The following is a List of Successful Candidates at the Examination held in October, 1904:—

CLASS I.

Bowesman, E. B.
Coy, Miss E.
Jones, M.
Piffe-Phelps, W.

CLASS II.

Sawyer, Miss H. L.
Schwemmer, Miss E. M.
Young, Miss A. M.

STUDY AFTER SCHOOL-DAYS:

A SUPPLEMENTARY MEMORANDUM.

By the Rev. J. O. BEVAN, M.A., F.C.P.

IN the paper on "After-Study" reported in the October number an endeavour was made to focus the subject in the public eye, and to suggest certain remedies for any weakness which may have been discovered in the existing system. In the present issue an opportunity is presented for setting forth certain facts on which were based conclusions as to the present unsatisfactory state of things, and for furnishing a fitting conclusion to the paper by pointing out the necessity for stimulating and guiding the study after the first school life is over and for elaborating a further organization in respect of schools and teachers for the purposes of after-study.

IMPORTANCE OF THE SUBJECT.

The matter before us is of supreme importance, by reason of the numbers concerned and the general issues involved. In elementary schools alone in England and Wales there are 31,548 departments, and 5,037,498 scholars in actual average attendance. The total cost of elementary education for 1901–2 was thirteen millions. To these scholars must be added those attending secondary schools. Probably from six to seven hundred thousand children leave school year by year.

The question we are propounding is: How far has the education and training which these children have received predisposed and fitted them to continue their studies with interest, vigour, and success when they have become comparatively free agents? If, to a greater or less degree, this is not the case, by so much are the expense and the labour expended in the elementary processes thrown away. It is the last step that counts: if that be not taken, the goal is not reached—the steps between have availed but little. Leaving out of account all prejudice and ignorant criticism by outsiders, we may assume that none of us is quite satisfied with the results actually attained. We acknowledge regretfully that, in numberless cases, boys and girls regard their school progress and their very elementary acquisitions as complete, and not partial—as stopping, and not starting, places; that they consider the end of school as the end of learning; that, consequently, many lads and lasses go forth into the big world knowing so little that they esteem themselves as knowing everything; their heads being swelled with self-sufficiency, not with learning. Again, such is the imperative necessity of their going forth to earn a living that for a large proportion of our scholars the educational ladder is broken short off at the top. Teachers tell us that, if young people of this sort present themselves at a night school a year or so after they have started in life, it is found that many have forgotten nearly all that they ever knew. One would have liked to feel that, as a result of all our toil, the love of learning on the part of those committed to our charge would have been deeply implanted: but the fact remains that (whether through innate philistinism on the pupils' part, or through wrong methods on the part of the teacher, or through whatever other causes) a distaste for study for its own sake is generally felt and freely expressed. The testimony alike of master and mistress, farmer, merchant and manufacturer, goes far to prove that young people have a tendency to regard manual labour as derogatory; that they are practically worthless in the home, the counting house, and the farm; while they are often fond of idle pleasure, impatient of control, lacking in reverence, in civility, in initiative, and in the power of engaging in hard and sustained work. Experts point also to manifest signs of physical deterioration.

The Educational Remedy.

How far are these weaknesses due to our system of education? In what ways can this system be amended? In replying to these questions, and in offering a remedy, one leaves out of account questions relating to finance and administration, and deals solely with the matter from its highest side—the educational.

Naturally, the problem relates to all classes and grades of schools and scholars; but, needless to say, it is most acute in the case of children whose school course is so ordered as to terminate at the age of twelve or thirteen. It cannot, however, be affirmed that the outcome in regard to those who remain until they are sixteen or eighteen is altogether satisfactory. Of course one cannot ignore the fact that the schoolmaster alone is not responsible for the whole life of the child—its ad-

Digitized by Google

vance or retrogression, its success or failure; but must acknowledge that this responsibility must be shared by the parent, the clergyman, and society at large. It must also be admitted that, if our system of education be faulty, the evil will be intensified as time goes on, so that it behoves us to apply a remedy without delay.

There are therefore three elements to be considered—the man, the machine, the material, *i.e.*, the teacher, the system, and the child. The problem to be solved is how to get as much as possible out of these three elements—how to provide that every child, at every moment, should have something to do, and a motive for doing it.

It is a problem that leads us to face both ways, and to keep before us a double task; namely, how to teach during school days so as to evoke a taste for reading and study; also how to provide an organization and a staff of teachers after the first school life is ended, whereby this taste may be further encouraged, gratified, and pursued to the utmost legitimate limit.

How far is the Child at fault?

It cannot be that the child does not want to learn. Our bantling is nothing at first but a note of interrogation. Are we not sometimes wearied out with the bombardment of questions to which we are subjected in the course of a journey or country stroll? All things and appearances are novel to the child. It is his bent to be original, for the young of every creature is naturally inquisitive.

To what then is due the subsequent distaste for study and investigation? Partly to the ingrained disinclination for hard work of all kinds displayed by the average child; partly to the compulsory element, to the repression of natural activities under existing conditions of school life; partly to our making the acquisition of learning too empirical, bookish, dogmatic, too much dominated by the aggressive personality of the teacher. There is not enough made of observation, experiment, original research, even of partial failure. The divine and illimitable curiosity of the child is not exploited. We even chide him if he asks questions; we desire to keep the monopoly of questioning to ourselves. The glory of surprise and discovery is lacking. We sin against the sound philosophical canon of Mr. Weller, Senior, enunciated in regard to his son's love letter, by blurting out the whole truth about a thing at a time, leaving nothing to minister to the child's passion for "finding out." Too much is done for the pupil, too little left for him to find out and do for himself. We prepare and prescribe all mental food in the tabloid form, with the effect upon the brain-digestion like unto that which would follow if we pursued the like course in reference to bodily nourishment. A teacher cannot hand out any ready-made success to his pupil; it would do him no good, and it would do the school harm. A lad should not expect to be always personally conducted along the primrose path, or to meet with unchequered fortune or uninterrupted success in study.

How far are we ourselves, as Teachers, at fault?

Our failure is mainly due to the cramped systems under which we have been trained and under which we carry on our work. Teachers are able, conscientious, sympathetic, and hardworking, but they obtrude themselves too much on their pupils. They have too great faith in sign, symbol, and shibboleth, and in the dispensing of the mixture "as before." We speak of teachers in the gross, allowing that a heaven-born teacher can work wonders, even under the most blighting conditions. Thus an indifferent teacher can be suffered to instruct those who are willing to learn, but the best teacher must be kept for the laggard and the dunce. The great secret is to create an appetite when the scholar is not hungry. That needs the original thinker, the planner—in other words, the genius. There are some representatives, doubless, who would be disinclined to get out of the groove, to raise the standard, or to take off their own mask. Thus a lad is often switched off the right path by having it pointed out to him the wrong way. It does not matter how good old methods are: new ones are better, even if they are only just as good.

How far is the System at fault?

If we have changed the point of view of the teacher and the scholar, and succeeded in applying the right stimulation to both, we shall have done something to adapt the educational machine to the work laid upon it, inasmuch as that system which is best administered is best. Still, it is incumbent upon us periodically to overhaul our methods and administrative machinery, especially when we bear in mind how the control of a State Department constrains all elementary education in an iron grip, and how a lengthened and almost sacred tradition still retains a hold on our secondary and public schools.

After-Study needs Organization.

If we consider the matter carefully, it will be found that we are apt to be unreasonable in the demands upon our scholars in regard to after-study. We enforce upon them what is expected when they leave school; yet society at large, and even their own friends and relatives, do very little by way of advice, active interest, or encouragement. Nay, many parents, who lead lives of idle pleasure, show the worst possible example. To the end that the race may make a real advance, generation by generation, the individual must begin where his progenitors left off; that is, he must be put in the way of learning in the most effective way what is already known.

Young people with unformed minds and habits suddenly becoming their own masters, with a tendency to exciting pleasures and self-indulgence rather than to quiet and self-denying study and investigation, cannot be expected to walk alone all at once; to consider that virtue is her own reward; and, in a trice, to evolve the highest conceptions of duty. They need counsel, tendance, and companionship. Thus, there is a pressing necessity for as complete an organization and a body of teachers for after-study as for first school life. It is not enough to say: "My young friends, I wish to inform you of the fact that all over the land there are picture galleries, museums, free libraries, continuation schools, and other educational institutions; mark all these possibilities for reading, culture, study, and experiment; find them out, introduce yourself, pay the charges, use them, profit by them."

We should bear in mind that, without a strong desire and a proper introduction, these helps might be used very unprofitably; yea, even, in a way tending to weariness and ultimate disgust. The story hid *behind* the book, the picture, the exhibit, or the experiment, may be veiled even from the keenest glance and most eager mind, save it be revealed by "one who knows." Is it too much to expect that those who have already mastered the various subjects and enjoyed the fruits of study should devote their energies to *imparting* as well as to *acquiring* knowledge, to *giving* as well as to *getting* objects of interest? The want of the age is for the aristocracy of learning to be broadened out into a democracy; to the end that sympathy, guidance, direction, encouragement, and reward might be furnished to those who have embarked on the wide sea of learning in their frail and trembling barques.

A Principle of Action.

It must be realized what a difficult position it is to take up and start from—viz., that of entering upon a certain course of self-denying study at the recommendation of another, without, at the start, any absorbing love for it or even any clear idea of ultimate success or reward. Such a possibility, as revealed to many, reminds one of the Siberian rivers, some of which idly lose themselves in the sandy plain. It should be the primary object of ourselves as Mentors to establish a principle of action, a duty to a higher power, to the students themselves, and to all others, their neighbours; we should clearly set forth the varying fortunes of the way, the end to be gained, and the triumphs that await upon the seeker after truth. We should make known the means, and furnish suggestions, sympathy, and active assistance; we should evoke, on their behalf, the virtues of companionship, the forces of emulation and legitimate display.

Again, it should be sternly realized that all these things are not wrought in a day, in a hocus-pocus kind of way; that there is no sudden or violent conviction or conversion, but that we must rather surround our pupils with an atmosphere, and see that they are in a state of grace. Lastly, we must be prepared to expend time, money, effort, and enthusiasm in organization and endeavour.

Difficulties to be removed.

Doubtless it is a counsel of perfection: but it must be acknowledged that, to carry our plans into execution, it would be necessary to burn down every existing school, and to wipe off the statute book all legislation relating to education, especially our laws of compulsion. In our ideal world it is fatal to seize the scholar by the scruff of the neck and haul him, all unwilling, to

Digitized by Google

the master's desk. Compulsion awakens resistance, obstinacy, aversion to the teacher and to the thing taught. The excellent way is to cause the teacher to be sought after, rather than avoided, by the scholar. Should we apply this system of force and stress to the cultivation of art, music, and science, or to the production of a Gainsborough, a Beethoven, a Kelvin? No; spontaneity is the vital breath of education on the part, be it remarked, both of teacher and scholar. Education is a coy goddess: she must be sought for herself alone. If compulsion be a necessity, it should be looked upon as a cruel, a disagreeable, necessity—to be abandoned as soon as may be. It is degrading to force ourselves upon our scholars: we should rather wait to be entreated, and hold back till the learner felt his need. We ought to possess the characteristics of the educator and of the instructor, of course; but, better still, of the *inspirer* of youth, the quickener of the dulled intellect, the one above all others to light the torch, to fire the imagination, to lead the way, to say not "Go!" but "Come!"

It is worse than useless to scold, to threaten, to say: "You *should* do this or that"; "You *should* be this or that"; "You *ought* to love good literature; you are wrong and foolish if you do not"; altogether in the spirit of the schoolmaster who is reported to have said to his form: "You ought to be pure in heart; and, if you are not, I will flog you until you are." That is often the mental attitude assumed with reference to our scholars. We are so convinced of the necessity of a good education, of the elevating tendencies of literature, of the glory of science, of the gratification to be derived from a well ordered mind, of the obligation under which we lie to fill our life, enlarge our interest, and refine our character, that we are possessed with disappointment and alarm when we find that these considerations are not self-evident to others; but that the idea arouses indifference, and even aversion, in some of our scholars, who obstinately refuse to have anything to do with the improvement of their minds or the work of self-culture when they pass out of our hands.

We repeat, it is of no use to scold, to argue, to quote our own experience; in this region coercion entirely fails. The lives of those addressed are probably lived on another plane, their home experience is entirely different, their line of life widely divergent from that which lies straight forward to *our* goal. Our end must be gained by indirect means and by slow degrees; by awakening interest, by causing certain facts to dawn upon the minds of these young people, by surrounding them with illustrations from all sides, by evoking a personal and active interest in the successive unfolding and development of fact.

Two women might spend the same amount upon their dress, and even wear the same materials; but the one might be "torn out" in garish and unbecoming fashions, whilst the other might be perfectly dressed. Why? Because the first would have no eye for colour, whilst the other would be possessed of exquisite *taste*. But the former could not be taught to dress like a true lady merely as a result of a single lesson in colour and form; she would require to pass through a gradual transformation in point of *character* before the result could be attained and the change evidenced to the outward eye.

The Teacher.

Some teachers might be found who would regard the present state of things and all belonging to it—the curriculum, time-table, inspection—as the *ne plus ultra* of effort and perfection; who would look upon the result, imperfect as it is, as the best obtainable; nay, more, who would be disinclined to make the smallest effort to get out of the groove, to raise the standard, and to strain the wine from the lees. Such individuals think they have finished their education when they leave the training college; and that their only end in life, as teachers, is to repeat, parrot-like, before their class, day by day, the pet formulæ they have assimilated—the same old lesson in the same old way. It takes a long time for them to realize that one never gets out of one's self more than is put in. Like the Bourbons, they learn nothing, they forget nothing. A teacher like unto this may impart much knowledge, very little of which is calculated to stick. He may make a great din and clatter, but it is all of "sound and fury," signifying nothing. He builds an arch, but forgets to insert the keystone; he teaches, but does not cause to learn. Far different is the instructor, the true pedagogue, who is fired with a sense of his mission. He brings out of his treasure daily things new as well as old, for he takes all Nature for his province, and is always learning. He never repeats a lesson—even the simplest and most familiar—without studying it afresh, putting old truths in a new setting, gleaning experience from each repetition to render his words more adaptable to the slender apprehension of those he addresses. Such a man may not become a universal genius, for the day of universal geniuses is past—although a teacher should merit the designation more than any other man—but he will furnish an effective means to bring about an effective end.

As an embodiment of all our needs then, *this* is needed, namely, the true, refined, cultivated—or, rather, cultured—teacher; not the pedant, the purveyor of trifles of useful information, the hewer of wood and drawer of water in the arid field of knowledge; but the seer, the prophet, the pioneer, who holds the master-key to unlock the secrets of Nature—so jealously guarded, yet so freely offered—the friend and companion to the young mind, to point to fairer worlds and lead the way!

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on November 19. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Armitage Smith, Mr. Barlet, Rev. J. O. Bevan, Rev. J. B. Blomfield, Mr. E. A. Butler, Mr. Charles, Mr. Chettle, Miss Dawes, Mr. Easterbrook, Mr. Eve, Dr. Findlay, Mr. Hawe, Mr. Holland, Mr. Kelland, Miss Lawford, Sir Philip Magnus, Dr. McClure, Bishop Mitchinson, Mr. Morgan, Mr. Pinches, Mr. Rule, Mr. Starbuck, Rev. J. Stewart, Mr. Storr, and Mr. Vincent.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the number of candidates entered for the approaching Certificate and Lower Forms Examinations was about the same as that for the corresponding examination last year.

The thanks of the Council were voted to the several heads of schools who had afforded facilities for the examinations conducted by the College for Certificates of Ability to Teach, and for registration under Reg. 5 (2) (*b*) of the Order in Council.

The report of the Special Committee on the proposals of the Consultative Committee for a system of School Certificates was considered, and its further consideration was deferred to a Special Meeting of the Council.

The report of the representatives of the College on the Joint Federation Committee was submitted, and it was resolved that counsel's opinion should be taken as to whether the proposals for federation under an amended Charter could be entertained legally by the College in their present form.

The report of the Examination Committee was adopted.

The report of the Finance Committee was adopted.

It was resolved that reports of Committees should, whenever in the opinion of the Committee it is thought advisable, be circulated among the members of the Council before their meeting.

The following persons were elected members of the College:—

Miss M. E. Findlay, B.A. Lond., 250 Trinity Road, Wandsworth Common, S.W.
Mr. C. E. Lacy, L.C.P., Ronaldsholme, North Finchley.
Mr. E. S. Letts, A.C.P., The Grammar School, St. Ives, Cornwall.
Mr. B. B. Thompson, Eastward Ho! College, Felixstowe.
Miss J. A. Warne, A.C.P., The College, Nightingale Lane, S.W.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHORS.—Leonard and Salmon's Further Course of Practical Science.

By G. BELL & SONS.—Bell's York Readers (Infants' and Introductory); Baker and Bourne's Examples in Algebra; Borchardt and Perrott's New Trigonometry for Schools; Pendlebury's Arithmetical Test Cards, Scheme B, Standards III. and IV.

By A. & C. BLACK.—Taylor's Synthetical Maps—Indian Empire, British South Africa, Australia and New Zealand, and Minor British Possessions.

By W. B. CLIVE.—London University Guide and U.C.C. Calendar; Matriculation Directory, September, 1904.

By HACHETTE & Co.—Lallemand's Beissier's Les Mémoires d'un Moineau; Minoggio's De Witt's Histoire d'un Chien.

REVIEWS.

Napoleon.

(1) *The Life of Napoleon I.*; including new materials from the British Official Records. Cheap edition, in two volumes. (10s. net.) (2) *Napoleonic Studies.* (7s. 6d. net.) Both by J. Holland Rose, Litt.D. (George Bell.)

In all the essential qualities of historical composition—diligence and accuracy of research, balance of judgment, and effectiveness of presentment—Dr. Holland Rose's work stands easily first among the many biographies of Napoleon. The scale is reasonably large, and not deterrent; and the literary handling increases the interest. There is no need to insist on the importance of Napoleon in the field of modern history; and teachers of the subject, as well as the general reader, will be very glad to have at ready command so excellent and trustworthy an account of the part played by the great Emperor. The publishers deserve special acknowledgments for bringing out the work in such handsome form at a popular price.

The collateral volume of "Napoleonic Studies" is also most welcome. They deal with a dozen more important questions connected with the Revolution and the career and the personality of Napoleon. With the exception of four, they are now reprinted from various reviews where they appeared during the past decade, and the student will be very grateful for their publication in this convenient collection.

The first of the new essays reviews the "Idealist Revolt against Napoleon," with special reference to Wordsworth, Schiller, and Fichte, who "in all essentials were in accord alike in the reasons that moved them to hatred of the French Emperor and in their belief in the future deliverance of Europe from the burden of his domination." The essay on "Pitt's Plans for the Settlement of Europe" is fresh from the archives of the British Foreign Office, and the inquiry lies in the years 1795, 1798–99, and 1804–05. Though Pitt's life appeared to close "amidst scenes of almost unrelieved gloom and failure," yet his "plans" were far more lasting than those of the victor of Austerlitz." By his perception that "in the absence of ideal principles a balance of power is the only safeguard for the peace of Europe," and "of the means that were ultimately to conduce to its realization, Pitt rose to the level of that small and select band of statesmen who have moulded European policy far beyond the limits of their own age and of their own land." The essay on "Egypt during the first British occupation" (1801–02) is mainly based on "what is probably the first description of the condition of Egypt penned by a British official," now lodged in our Foreign Office Archives (Turkey, No. 36). It was written by Mr. William Hamilton (secretary to Lord Elgin, then our Ambassador at Constantinople), who "rendered signal service in helping to secure for this country the antiquities which now form so valuable a portion of the Egyptian collection in the British Museum." The haggling with General Menou over the famous Rosetta Stone is very amusing. In the last of the four new essays, "Austria and the Downfall of Napoleon," Dr. Rose deals with the version of the Napoleonic history presented by the State Papers of Vienna and the biographies of Austrian diplomatists—an instructive pendant to the British, French, and Prussian versions. The reprinted articles are concerned with the religious beliefs of Napoleon, Canning's "ulterior and highly statesmanlike aims" in sending the British expedition to Copenhagen in the autumn of 1807, an explanation of how Canning acquired the news as to the designs matured by Napoleon and the Tsar Alexander at Tilsit, the policy of Napoleon against British commerce, Britain's supply of food in the Napoleonic War (with bearings on future eventualities), the attitude of the Whigs to the French War (with preliminary general observations that invite criticism), the Prussian co-operation at Waterloo (to which we recently directed attention), and the detention of Napoleon by Great Britain. The twelve essays thus furnish a comprehensive collateral criticism, which will be found a most useful adjunct to the biographical narrative. Ten important "Notes and Documents" are placed in appendix; and there are two plans—of Rochefort and the Île d'Aix, and of Austerlitz.

Rational Geometry. By George Bruce Halsted, A.B., A.M. (Princeton), Ph.D. (Johns Hopkins). (Price $1.75. Chapman & Hall.)

Although so many books on elementary geometry are continually appearing, no apology need be offered for the publication of the present work. It has nothing in common with the ordinary text-book, except that it deals with the same subject. Prof. Halsted yields to none in his reverence for the marvellous work achieved by Euclid; nevertheless, he belongs to that school of mathematicians which maintains that Euclid's system is not infallible; that his theory is, in fact, built up from an imperfect and incomplete set of fundamental axioms to which he himself tacitly and, perhaps even unconsciously, added. In the opinion of Prof. Halsted and kindred thinkers it has become necessary, for the advancement of truth, that the system which has held sole sway for so many centuries should give place to another and a better one. Unlike many of the writers who undertake the task of reforming Euclid, Prof. Halsted shows no tendency to be content with less rigid proof: on the contrary, he urges the necessity for the utmost rigour; and this, we venture to think, is one of the strongest of his many strong claims to consideration. He asserts that the principles which form the groundwork of his book secure both greater simplicity and increased rigour for his demonstrations. Hilbert's "Foundations of Geometry" furnish the basis for the present treatise. Accustomed as we are to the small number of simply worded axioms which are met with in Euclid, it is somewhat difficult to acquire readily a comprehensive grasp of the five groups of "assumptions" considered essential by Hilbert, and, seeing that an authority as notable as Poincaré failed to detect the redundancy of one of Hilbert's "betweenness assumptions," no humbler mathematician need hesitate to reserve for a time any definite expression of opinion as to the exact extent to which Hilbert's "assumptions" are deserving of being regarded as unimpeachable. None, however, will dispute the care and the effort to attain perfection which mark the drawing up, the classification, and the enunciation of the "assumptions"; none can fail to recognize how in Prof. Halsted's hands they yield simple and delightful proofs of many of the propositions with which every student of mathematics is familiar. Four only of the five groups of "assumptions" are used in the present work, viz., those in which the ideas of "association," of "betweenness," of "congruence," and of parallelism claim attention. The Archimedean principle of continuity is avoided in demonstrating the theory of proportion, and in its place stands a sect calculus which furnishes for geometry an analogue to the operations of algebra as applied to real numbers. The associative, commutative, and distributive laws which govern algebra are shown to apply equally to the sect calculus for geometry. The charm of many of the author's methods of proof has been referred to: it exists in a marked degree in the sixth chapter, where the originality displayed in the solution of problems is specially attractive. When Hilbert's "Foundations of Geometry" appeared there at once arose in the mind a doubt as to the possibility—at any rate, at the present time—of adapting the system to the needs of the immature student; but the production of Prof. Halsted's work shows that no cause for the doubt really existed.

The Tate Gallery.

Pictures in the Tate Gallery. By C. Gasquoine Hartley. (12s. 6d. Seeley.)

This handsome volume is practically a short history of British painting in the nineteenth century. The story is, indeed, made to turn around the works exhibited in the Tate Gallery; but these are used only for illustration, and the book is not intended as a guide to the Gallery. The plan is occasionally hampered by the omissions in this national collection; but Mrs. Hartley does not fail to take account of the influences and names that are not directly represented here.

The introduction, narrating the origin of this National Gallery of Modern British Art, is followed by three chapters devoted to the *genre*, historical, and landscape painters of the early Victorian period. While fully admitting individual excellences, Mrs. Hartley lays stress on the low condition of art at the time and the need for the infusion of a new spirit. *Genre* and historical painting were dominated by the idea of telling an interesting story; and the legitimate objects of art were subordinated to the irrelevant interests of the subject. The tendency is apparent even in Landseer's animal paintings, in which, along with real power in this department, is seen the inclination to seek questionable and unreal sources of interest by giving human expression to his animals. In landscapes again conventional ideas prevailed, and scenes were painted, not as they were, but according to the established ideas of what they should be. Mrs. Hartley of course recognizes the great exception to this general-

Digitized by Google

ization in Turner, and partial exceptions in others; yet the statement is true in regard to the ordinary work of the popular painters.

The *renaissance* of British painting that began about the middle of the century is traced with fullness and appreciation. The forerunners of the pre-Raphaelite movement are recognized in Dyce, Lewis, and especially Madox Brown; and separate chapters are given to Rossetti and Millais. It is much to be regretted that there is not a single representative of Holman Hunt in the Gallery; but Mrs. Hartley does him full justice. "Perhaps it may not be wholly fanciful," as she happily expresses it, "to say that Rossetti was the soul, Millais the body, and Holman Hunt the conscience of the movement: the first had inspiration, the second technical mastery, while the third had patience." As regards the essential nature and results of the movement, Mrs. Hartley shows how far it went beyond mere carefulness in details, according to the popular idea. "The sincerity, the simplicity, the depth of intention, and the personality realized in this work of Madox Brown and the triad of pre-Raphaelite brothers yielded abundant fruitage. It was these qualities which united in re-moulding British art."

Fully one half of the volume is devoted to the leading British painters in the second half of the century, the names being mostly grouped according to subject—imaginative, classical, poetic art, landscape, sea, animals, &c. Thus the works of Watts, Leighton, Alma-Tadema, Briton Riviere, and many others are passed in review, and their places appreciatively assigned in the history of British art. Mrs. Hartley sums up the whole in the statement that "the general trend of modern art has been in the direction of original expression," and that "this key-note of personality," though an outgrowth of the pre-Raphaelite revival, "has now become the common heritage of the British school."

The value of the work is greatly enhanced by twenty full-page collotype reproductions of representative pictures in the Gallery. The process is most successful in reproducing broad effects, but one occasionally feels a serious inadequacy in the rendering of details; yet the plates as a whole are very fine. Rossetti's "Ecce Ancilla Domini!" holds the place of honour as frontispiece; and among other striking reproductions are Millais's "Ophelia" and "Vale of Rest," Watts's "Love and Life," Albert Moore's "Blossoms," Leighton's "Bath of Psyche," Mason's "Wind on the Wold," and Henry Moore's "Catspaws off the Land."

The work is not merely a fine drawing-room volume or a handsome Christmas gift-book. To the Londoner it will serve as a competent summary of the history of modern British art, with the Tate Gallery as furnishing constant illustrations; while the visitor to London will find it a beautiful and instructive remembrancer of the time spent in the Gallery.

A Survey of English Literature.

English Literature: a New History and Survey from Saxon Times to the Death of Tennyson. By J. M. D. Meiklejohn, M.A. (6s. Meiklejohn & Holden.)

The manuscript of this book, the publishers tell us, was left unfinished by Prof. Meiklejohn; and Mr. John Cooke, M.A., of Dublin, assisted by Mr. S. A. O. Fitz-Patrick, of the Irish Intermediate Education Office, has revised it and supplied the unwritten chapters and sections. We find no indication of the precise division of labour, and infer that substantially the work may be regarded as Prof. Meiklejohn's. At any rate, it is he that has shaped its outline and method with distinctive freshness and good sense. The work runs to 650 pages, mostly of large open type, giving fair scope for a really intelligent representation of the general course of English literary development and a reasonably adequate statement of the personality and characteristics of the more important writers. This advantage has been jealously utilized by a careful selection of the details recorded and by the sustained employment of a plain and concise style, which yet attracts and holds the interest of the reader. There is little room for illustrative extracts, but no part of the space devoted to them is wasted: the examples are typical, and at the same time such as "arouse an intelligent interest in literature as a living force." In very many cases, too, brief opinions of the best critics are cited in smaller type; the selections are careful, judicious, and most suggestive, while pointing the way to further study of the several authors. Explanations of literary allusions, archaic terms, historic usages, and so forth, are presented in foot-notes, with the view of rendering the book self-sufficing; yet there is no sense of overloading the page. Appended are useful historical tables, showing the relation of the chief writers to national and foreign history, to political and other historical personages, and to contemporary literature. The volume is thus exceptionally effective for its purpose. Indeed, we doubt whether there is any other book of the class more likely to seize the mind of the student and bring him into really living contact with the literature of the country. It is handsomely got up and attractively and serviceably bound.

GENERAL NOTICES.

MATHEMATICS.

Elementary Pure Geometry, with Mensuration. By E. Budden, M.A. Oxon., B.Sc. Lond. (3s.; Parts I. and II. only, 2s. Chambers.)

The author is fully justified in calling this useful manual "a complete course of geometry for schools." It covers the whole ground, from the now accepted preliminary training in experimental geometry, through the theorems of Euclid's six books, to the mensuration of areas and the geometrical treatment of trigonometry, as far as the solution of triangles. The last Part introduces the methods of modern geometry, as well as a sufficient amount of geometrical conics and solid geometry to satisfy the fullest needs of a boy specializing in mathematics at school. It is a book that a good teacher may use with great advantage, but from the first it wants teaching. The early pages introduce some words—such as "angular," "coincident"—before they have been explained, much less defined; and the first definition of an angle (page 5) as a *figure* ignores the idea of an angle as formed by two lines one of which revolves, an idea which is not only nearer the true connotation but has been found practically to give rise to less confusion in the beginner's mind than any other suggestion. The proofs are clear, and in some cases original, especially those relating to ratio by both modes of treatment. We commend the book as likely, if skilfully taught, to enable a whole sixth form, and not a selected few merely, to get a good idea of the methods of advanced modern geometry before they leave school.

Elementary Plane Geometry: Inductive and Deductive. By Alfred Baker, M.A., F.R.S.C., Professor of Mathematics, University of Toronto. (2s. Ginn.)

Keenly alive to the importance of induction in geometrical as in all other science, the author outlines an interesting preliminary course of elementary training in geometry and employs inductive methods throughout. In this course accurate figures tested in numerous examples by careful measurement and the application of other experimental processes yield the material for a sufficient array of particular observations, and lead in due course to the enunciation of the general geometrical truth as the necessary inference to be drawn from the comparison of results.

Pitman's Scheme A Arithmetic, Book V. By W. H. Higden. 1s. net.

Teachers using "Pitman's Scheme A Arithmetic" will be glad that there is a teacher's edition. This is evidently a specimen volume. It contains both questions and answers, and also a quantity of material for practice in mental calculation. Many useful hints are offered to the young teacher, and a scheme is drawn up which allows the course of instruction provided for the school year to be evenly distributed over the period. Intervals are set apart for revision and examination.

The Metric System. By Georges Rousselle. Translated and adapted by R. Smith. (1s. 6d. net. London: Hachette. Paris: Gedalge.)

A comprehensive elementary account of the units and tables of the metric system, accompanied by an explanation of the arithmetic involved in their use and by a full complement of worked examples and unworked exercises. The principal units are illustrated by scale drawings, some of which are full size, and the tables connecting the principal and subsidiary units of measure and weight are clearly arranged in compact diagrams.

Decimals and the Metric System. (2d. Blackie.)

A reprint of a useful little book—one of the series known as "Blackie's Supplementary Arithmetics." On reissue the price has been reduced by one-third. But is it not a pity to burden children with the names of quantities that are not used, such as the dekare and the deciare?

We have before us *Bulletin I.* of the recently formed Association of Teachers of Mathematics in the Middle States and Maryland. The Society was organized about a year ago for the improvement of mathematical teaching, and its magazine gives the text of a series of papers read during the first session, together with an account of the constitution of the Association and a list of its members. It is the papers, of course, which principally concern the general body of mathematicians. These will be found of a very interesting character; for they deal not with side issues, but with topics of vital importance to one of the leading educational questions of the time. They may

Digitized by Google

be looked upon, moreover, as, in a measure, representative of the ideas of a considerable section of the teaching community, whilst they constitute individually the direct expression of opinion of various able thinkers who have at heart the interests of mathematical science and the cause of ideal education. The papers, taken as a whole, are so instructive that it would be invidious to discuss one to the exclusion of others. We prefer to send the reader to the *Bulletin* itself with the assurance that it will repay a careful perusal.

The first number of the *Wiskundig Tijdschrift* (October), which we recently announced, offers a considerable variety of fresh and instructive articles. We may note as of more general interest a paper by Dr. A. van Thijn, of Assen, on "Het Onderwijs in de eerste Beginselen der Algebra" ("Instruction in the first Beginnings of Algebra"). We observe with pleasure that the writers are already familiar with *The Educational Times* and its *Mathematical Reprints*. The journal is well printed, the geometrical figures being particularly neat and clear.

ENGLISH LITERATURE.

The Belles-Lettres Series. (Heath.)

Messrs. Heath are embarking on a considerable enterprise—150 volumes, we understand, are in preparation—under the general editorship of Edward Miles Brown, Ph.D., Professor of the English Language and Literature in the University of Cincinnati. The First Section will include the main examples of English literature down to the year 1100. Of this section we have two specimens: (1) *Judith*, edited by Albert S. Cook, Professor of the English Language and Literature in Yale University (1s. 6d. net); and (2) *The Battle of Maldon*, with some "Short Poems from the Saxon Chronicle," edited by Walter John Sedgefield, Litt.D., Lecturer in Anglo-Saxon and English Philology in the Imperial University of St. Petersburg (1s. 6d. net). There are full literary introductions, brief notes on really important points, bibliographies, and glossaries. The treatment is thoroughly capable, special attention being given to the text in critical notes. In the "Judith" a page of the Cottonian MS. is reproduced. We have also two specimens of the Third Section, which is devoted to the English Drama: (1) *Eastward Hoe!* (Jonson, Chapman, and Marston) and *The Alchemist* (Jonson) in one volume, edited by Felix E. Schelling, Litt.D., Professor of English Literature in the University of Pennsylvania (3s. net); and (2) *The Good Natur'd Man* and *She Stoops to Conquer* (Goldsmith), with introduction and biographical and critical material by Austin Dobson, LL.D., the text collated by George P. Baker, A.M. (2s. 6d. net). Here, too, great attention has been paid to the text, and the introductory, explanatory, bibliographical, and glossarial matter is careful and scholarly. Each volume has an excellently reproduced frontispiece. In all the four volumes the type and general get-up are tasteful and agreeable, and the form is very handy. The Series makes a most promising start, and we have no doubt that it will help greatly to extend the knowledge of, and interest in, English literature.

The Sonnets of Shakespeare. Edited by H. C. Beeching, M.A., D.Litt. (3s. Ginn. Athenæum Press Series.)

A pretty and tasteful edition, with ample illustrative apparatus. The introduction handles very frankly all the disputed questions on the subject of the Sonnets. With regard to the date, Mr. Beeching suggests a test that, so far as we remember, is new, namely, "the argument from repeated expressions," on comparison with the plays: a suggestion, it seems to us, of substantial value, but requiring discreet application. "It must not be confused with the argument from what are called 'parallel passages': it is primarily an argument from the use of identical words, only secondarily from similar ideas." The various views on crucial difficulties are discussed shrewdly and with all necessary freedom, especially the more recent ones: we could have wished that Minto's criticisms had not been treated quite so incidentally. However, the reader will obtain a good summary of the more important considerations. Mr. Beeching writes with great force and charm. The notes are very full, interesting, and useful. We do not know of any edition likely to be more serviceable to students.

RELIGION AND MORALS.

Handbook to the Book of Common Prayer. By the Rev. Bernard Reynolds, M.A. (4s. 6d. Rivingtons.)

As might be expected from an Archbishop's Inspector of Training Colleges and Chief Diocesan Inspector of London, who is also a Prebendary of St. Paul's, this substantial volume will furnish ample practical help to teachers of the Prayer Book and the Catechism and to pupil-teachers preparing for their examinations, and it will prove most instructive to the general reader. Historical and doctrinal explanations are given lucidly, adequately, and in interesting form. The work has evidently grown from large experience.

MISCELLANEOUS.

Mr. Fisher Unwin publishes a timely and striking volume—*The Hungry Forties* (6s.)—depicting by descriptive letters and other testimonies from contemporary witnesses the deplorable conditions of "life under the bread tax" in all parts of the country. Names and addresses of the writers or witnesses are given in most, indeed in almost all, cases; and the language of the writers is left unpolished. It is a remarkably realistic presentation. A very effective introduction is furnished by Mrs. Cobden Unwin, containing many reminiscences of old inhabitants of Heyshott, Cobden's native village. A concluding chapter, by Mr. Brougham Villiers, draws the moral of the letters, which certainly "read like the records of a besieged city." There are two appropriate illustrations. The volume is liberally printed and attractively got up.

Mr. Brimley Johnson publishes three "Carpet Plays," edited by Lucian Oldershaw (6d. net each), suitable "for the drawing-room" at Christmastide, as well as at other times: (1) *Spoken Thoughts*, by Margaret B. Cross; (2) *The King's Command*, a comedietta in one Act, by Carlton H. Terris; and (3) *Two Old Children*, by W. Teignmouth Shore. They are simple and sprightly; and directions are carefully given in ample measure.

NEW EDITIONS AND REPRINTS.

Messrs. Macmillan publish a second edition of *Billiards Mathematically Treated*, by G. W. Hemming, K.C., Senior Wrangler of his year (3s. 6d. net). Some new matter has been introduced, "aimed mainly at an exact and exhaustive discussion of certain problems which were only slightly dealt with in the first edition." An able and clever work of curious interest.

Mr. Fisher Unwin issues a complete popular edition—the twelfth—of *The Lives of Robert and Mary Moffat*, by John Smith Moffat, with portrait and four illustrations (2s. 6d. net). A fine record of noble lives at a remarkably modest price.

Messrs Watts & Co. add to the Rationalist Press Association's series of "Cheap Reprints" John Stuart Mill's *Three Essays on Religion*, with Miss Helen Taylor's introductory notice (6d.); and a first series of *Lectures and Essays*, by Colonel R. G. Ingersoll, nine in number, with preface by Charles T. Gorham (6d.). Author's portrait on each reprint.

Mr. H. R. Allenson offers a "cheap edition" of Carlyle's *Sartor Resartus*, with explanatory and commendatory introduction by Jonathan Nield (6d.).

DIARIES.

Letts's Diaries (Cassell) are of long-proved convenience and utility. No. 11, three days on page, with a mass of useful information of a practical kind prefixed, and strongly bound (4s. 6d.); No. 13, similar, but smaller (2s. 6d.); No. 20, a dainty little thing for the vest pocket, three days on page (1s.); No. 25, 5 × 3½ in., weak in opening, with pencil (2s.); No. 32, foolscap, 13 × 8 in., week on page, interleaved blotting (1s. 6d.); No. 35, octavo, 7¾ × 5 in., week in opening (1s.); No. 44, quarto, 10 × 8 in., two days on page (2s. 6d.). Office Calendar, No. 2 (2s.), clear and neat. Daily Health Diary, by Eustace Miles, M.A., with illustrations by Miss J. M. Bloxam—a new comer, week in opening, 4¾ × 3 in., thin, compact, for the pocket (1s. 6d.). Each diary contains a coupon for accident assurance.

Pitman's Shorthand and Type-writing Year-Book and Diary (1s.), week on page, is mostly filled with information in great variety on these two subjects. The form is convenient.

CHRISTMAS GIFT-BOOKS.

II.

Historical Tales.

There seems to be a strong tendency to weave a private story into or about the narrative of some historical episode. Already we have "a story of the Russo-Japanese War"—*Kobo*, by Herbert Strang (5s., Blackie), whose personal experiences give local colour to the narrative. The English hero takes part in some of the most noteworthy naval actions of the struggle, and after some stirring adventures reaches General Kuroki's army in time for the Battle of the Yalu. Meantime he has been captured by Cossacks, has escaped, and has fought with a band of Manchus. The Japanese hero Kobo is an interesting study of a fine character, more or less typical. To readers of "Tom Burnaby" Mr. Strang will need no fresh recommendation. Illustrations by William Rainey, R.I.

Another spirited volume by Herbert Strang is *Boys of the Light Brigade*, a story of Spain and the Peninsular War (6s., Blackie). Colonel Willoughby Verner, late of the Rifle Brigade, furnishes an interesting historical introduction. The Light Brigade, he tells us, "was the name given to the first British Brigade of Light Infantry, consisting of the 43rd Light Infantry, 52nd Light Infantry, and the 95th Rifles, which were trained together as a war brigade at Shorncliffe Camp in the years 1803-1805, just a century ago, by General Sir John Moore, the Hero of Corunna." The young hero of the story—a subaltern in the 95th Rifles—goes through the famous Retreat and does brilliant service at Corunna, and afterwards shares in the heroic defence of Saragossa. The private story interwoven with the military element is sufficiently engaging and exciting, and the character sketches of the British Army of the time are full of interest and

Digitized by Google

amusement. An excellent book for boys. Illustrations by William Rainey, R.I.

Yet another dashing story by the late George Henty—*By Conduct and Courage* (6s., Blackie); but "this is the last of Mr. Henty's great series of historical stories." Being laid in the days of Nelson, it is, of course, full of the vigour of the battle and the breeze. The hero is a boy from a Yorkshire fishing village, who has varied experiences with pirates, mutinous Cuban negroes, and the French, and eventually shares in the battles of Cape St. Vincent and Camperdown. His natural ability receives early and vigorous development and no inconsiderable rewards. Nelson himself is brought on the scene in operations on the coast of Corsica. The book is written with Henty's accustomed force and versatility. Eight illustrations by William Rainey, R.I.—With this we may place a group of three stories by Henty, the principal of which is *In the Hands of the Malays* (1s. 6d., Blackie), narrating a bustling adventure with Malay pirates in 1669, on the south-west of Sumatra. The second story, which is about three times as long, is concerned with the unravelling of a bank mystery; and the third, "A Frontier Girl," takes us out into the backwoods among the Red Indians. All the stories are graphically told and exhibit various moral qualities in action.

Captain F. S. Brereton presents *A Hero of Lucknow* (5s., Blackie), a tale of the Indian Mutiny of 1857. The heroes, two brothers, bear a hand in the defence of Cawnpore, from which they get away on the capitulation and before the massacre, but afterwards are separated. One of them is dragged to Lucknow, where he experiences thrilling adventures. Passing on to Delhi, he encounters Hodson, of Hodson's Horse, takes part in the assault (not without some personal damage), and finds his lost brother—also wounded. Thereafter he marches to the relief of Lucknow. The story is full of action and breathes the spirit of the terrible time. Six illustrations by William Rainey, R.I.

The Children's Crusade, by E. Everett-Green (3s. 6d., Nelson), utilizes a famous episode of the second decade of the thirteenth century to display certain adventures of three Frankish youths by land and sea. The outline of the mad project lies mainly in the background, and the chief part of the adventures lies among the Moors and afterwards in Egypt, though one of the heroes does reach Palestine—yet not in a Crusade. The story is brightly and deftly told, and the interest is steadily maintained. Four pretty illustrations, full-page and coloured.

Miss Gertrude Hollis places *A Slave of the Saracen* (2s. 6d., Nelson) in the seventh Crusade under Louis the Saint. The course of the Crusade, which is outlined in some detail, develops the qualities of the hero, who is in search of his brother Raimond, son of the Seigneur de Vendôme, who had been seized and carried off to the East by Jean de Clairvaux in private vengeance. The story is told with much vigour and address, and with unfailing interest. Two coloured illustrations.

The White Standard, by Eliza F. Pollard (2s. 6d., Blackie), is a very well written story centring in the ever attractive career of Joan of Arc. It opens, indeed, at the Court of James I. of Scotland, but quickly passes to France, the Princess Margaret going over to marry the Dauphin—and in her train three scions of noble family, who play important parts in the drama. These young people meet with many stirring adventures, and by and by come into close association with the Maid, who exercises a powerful influence upon them. The severer aspects of the real history are not too vividly presented, and the private story is deftly interwoven with the historical events. Four good illustrations by J. Jellicoe.

In the Fen country a foundling is called "God's bairn," and *God's Bairn*, by Dorothea Moore (3s. 6d., Blackie), is an admirable story of the Fens in the troublous times before and during the great Civil War. The hero is found as a baby on Christmas Eve, 1632, in the Church of Marlowe-in-the-Fens, by Master Gregory Awl, the ancient clerk and sexton. Whether the mystery of his origin be cleared up or no must be left to the discovery of the reader. Incidentally, too, will be unfolded the story of the great dam of Marlowe and why it was partially destroyed. A fresh, brightly written, and charming tale. Eight excellent illustrations by Paul Hardy.

Viva Christina! by Edith E. Cowper (3s. 6d., Chambers), narrates vividly the varied adventures of a young Highland youth in the British Legion under De Lacy Evans assisting Queen Christina of Spain against the Carlists in 1835-36. The marching, the fighting, and the other aspects of the campaign, though conveying a fair impression of the enterprise, only form a background for the private experiences, which are sufficiently mixed and exciting. The character drawing is very good. Six illustrations by W. H. C. Groome, R.B.A.

My Sword's my Fortune, by Herbert Hayens (6s., Collins' Clear-Type Press), is "a story of Old France"—in the days of the Regency, when Cardinal Mazarin was in power (1650-53). The youthful hero, De Lalande, goes to Court, to make his way and to restore the broken fortunes of his family. Plots, captures, escapes, fighting—there is no lack of excitement; and in the background is suggested some inkling of the conditions of the period. The plan is well conceived and effectively executed, and the interest is always fresh. Eight illustrations by F. C. Tilney, and excellent get-up.

The President's Scouts, by the same author (5s., Collins' Clear-Type Press), is "a story of the Chilian Revolution" that upset President Balmaceda. The hero, a boy of sixteen, goes out to his uncle, a wealthy engineer in Chili, high in favour with the President, and has a very adventurous time indeed. The narrative is vivid and exciting, skilfully managed and forcibly told. Eight illustrations by J. B. Greene.

Two very distinctive stories of the olden time are *The Thrall of Leif the Lucky* and *The Ward of King Canute*, both by Ottilie A. Liljencrentz (5s. each, Ward, Lock, & Co.). The first is "a story of the Viking days," the second "a romance of the Danish Conquest." Both are full of interest, written with dramatic power and literary charm, and instinct with the spirit of their times. The historical setting and colour has not been attained without prolonged study of the period. Both books are characteristically and skilfully illustrated with pictures and designs by Troy and Margaret West Kinney.

There is no lack of excitement and interest in *A Trusty Rebel*, by Mrs. Henry Clarke (3s. 6d., Nelson). The hero is at first a trusty friend of Perkin Warbeck, fully persuaded that his claims were just; but, when he becomes convinced of the imposture, he reverts to his allegiance to Henry VII., and regains his rightful title. The story is brightly written, with large knowledge of the period. Six coloured illustrations.

The Phantom Spy, by Fox Russell (2s. 6d., Nelson), moves in scenes of keen interest—smuggling, fighting, and hairbreadth escapes. The hero's name is appropriately Dare. "We all knows that Jack Dare is a wonderful man, and what another would find impossible he *don't*." One of the first things he does is to get out of General de Busset the French plans for the invasion of England, and he keeps well to the fore through the Peninsular War. The story is written with verve and with considerable force of characterization.

Tales of Adventure.

Dr. Gordon Stables is to the fore with "a story of wild adventures," *In Regions of Perpetual Snow* (5s., Ward, Lock, & Co.). Eustace Solomon Bumbleby-Fipps, from the great establishment of miscellanies in the City (E.C.)—and Croydon—and the Yorkshire Wolds—and Ilfracombe—seeks and finds sport in a northern Scottish county, among Canadian grizzlies and bad Injuns, among great implacable grey sub-Arctic wolves, "high up on the mountain-sides of the mighty Haramont" and elsewhere in the Himalayas, in Japan, in Eastern Siberia, &c. And he has enterprising companions, ladies as well as gentlemen. The course of the "Stormy Petrel" will be followed with constant keenness.

The War God and the Brown Maiden is from the active pen of Tom Bevan, and Warwick Goble furnishes it with eight illustrations (3s. 6d., Collins' Clear-Type Press). It breathes the romance of the sixteenth century and the Spanish Main. The hero, marooned on the unexplored coast of Mexico, has a rough time among the Aztecs, when the Brown Maiden—Huitzila (the Humming-bird)—proves helpful in view of sacrificial intentions of the priests of the War-God. A vigorous and stirring story, with a touch of pathos.

Where Flies the Flag, by Henry Harbour (2s. 6d., Collins' Clear-Type Press), links together the larger colonies by the adventures of two brothers. One of them ranges Canada from Montreal westwards, tries his luck at Klondike, turns cowboy, and then serves as a Canadian mounted rifleman in the South African War. The other, taking to the sea, gets shipwrecked (after escaping a shark's jaws) on the Australian coast, experiences the attentions of "the King of the Bush," and helps to quell a mutiny on the home voyage, when he falls in with his brother. So there is plenty of peregrination and racket. Six coloured illustrations by Arthur Rackham.

Flights of Fancy.

Open out *The Pedlar's Pack*, by Mrs. Alfred Baldwin (6s., Chambers), and you behold nine delightful stories, beginning with the Giant's baby and ending with the child that dropped from the clouds, with kings and queens, and princesses and fairies between. "There's that within this book suits young and old"—young especially. And there are nine coloured illustrations by Charles Pears, to say nothing of headpieces and tailpieces to each story; and the type is bold and open and the get-up handsome.

Mr. P. G. Wodehouse, turning aside from school stories, has audaciously burlesqued a venerable tradition in *William Tell told again* (6s., Black). "So much doubt has been cast on William Tell's doings—some going the length of saying that he never existed—that the publishers feel that this book should be a valuable contribution to the history of the great archer, as showing what it was that he really did." The argument would lead to very strange results, and we wish Mr. Wodehouse had selected another subject. There are 16 illustrations in colour by Philip Dadd; and J. W. Houghton provides descriptive verses in consonance with the tone of the narrative. In point of get-up it is indeed a "beautiful book."

Marvels of Fact.

A very charming volume, full of suggestion to older as well as to younger readers of a thoughtful turn, is *The Glamour of the Earth*, by

Digitized by Google

George A. B. Dewar (6s. net, George Allen). Mr. Dewar makes one feel the spell, whatever the season, and whatever the conditions. He teaches delight in the garden, in the field, in the wood, and on hill and river, with an intimate familiarity and devoted appreciation that remind one of Richard Jefferies or William J. Long. Fifteen fine illustrations by R. W. A. Rouse, four of them photogravures. The book is beautifully printed and artistically produced.

The Rat, by G. M. A. Hewett (6s.), appears to be the first of the series of "Animal Autobiographies" projected by Messrs. A. & C. Black. Mr. Hewett speaks of the Rat as "my most intimate friend," and indeed there is no disputing the assertion after one reads the minute and most instructive story he draws from the animal's own lips. A curious and varied story it is, and it will be read with unfailing interest. Twelve full-page illustrations in colour by Stephen Baghot de la Bere. The series is an excellent idea, and not boys only, but also grown-ups, will find both interest and instruction in it. If the succeeding volumes maintain the standard of "The Rat," the series will be educationally valuable as well as popular.

Mr. R. Kearton, F.Z.S., this year relates *The Adventures of Cock Robin and his Mate* (6s., Cassell). The story is told by an old cock robin to his chicks night by night before they go to bed; and so here we have the truth of the matter, in the guise of fiction indeed, but really solid fact quite as wonderful as any fiction. Mr. Kearton has personally witnessed "nearly every strange happening related" in the book, and the rest are from reports of competent observers. It is thus a natural history book in the strictest sense, and a most interesting and delightful book it is. There are more than 120 admirable illustrations from photographs "taken direct from Nature by Cherry and Richard Kearton," and they are capitally reproduced.

Embroideries of History and Science.

Partly mythical, partly historical, with an imaginative setting of both the mythical and the historical elements, are *Tales from Plutarch*, retold by F. Jameson Rowbotham (5s., Fisher Unwin). There are four tales—the stories of Theseus, Romulus, Fabius Maximus, and Alcibiades. They are told in a fashion likely to help realization and to imprint lessons of conduct; the tone is excellent, and the interest is continuous. There are 8 full-page illustrations by Cecil Wilson, and finely worked initials and tailpieces by Amy B. Schultz; and the type is bold and agreeable.

A Tale of the Time of the Cave Men, by Stanley Waterloo (3s. 6d., Black), takes us back to the Age of Stone, and relates the doings of Ab from his babyhood, when he lay in his nest of beech leaves near the Running Water (not yet the Thames), which then ran to the Rhine, down to a green old age as mighty hunter and head of the people of the Fire Valley. While a strangely interesting romance to young people, it presents a scientifically imaginative aspect to their elders: "only once does the writer depart from accepted theories of scientific research"—he concludes that "no convulsion of Nature, no new race of human beings, is needed to explain the difference between the relics of Palæolithic and Neolithic stragglers." A book of absorbing interest. Eight illustrations in colour by Simon Harmon Vedder.

Stories of the School.

Let "School" bear an elastic connotation for the sole sake of *Godfrey Marten, Undergraduate* (6s., Heinemann), for it is a year since we read of him as a "Schoolboy." Mr. Charles Turley achieved a marked success in describing his hero's school life; and now he has thrown that achievement into the shade by an admirable narrative of the various experiences of his undergraduate life at St. Cuthbert's, Oxford. There is no aspect of that life but he has represented with sober truthfulness, touched with a quiet yet incisive humour. A solidly good book all through; and liberally and tastefully got up.

Out of the Running, by Harold Avery (2s. 6d., Collins' Clear-Type Press), is frankly "a school story," with plenty of football and bicycle, and incidents thereto appertaining both naturally and exceptionally, and we must not forget the "cure for toothache." A good bustling all-round story. Six coloured illustrations by John Cameron.

By a Schoolboy's Hand, by Andrew Home (A. & C. Black), while providing abundance of youthful interest, and exhibiting a manly spirit, is written in capital style and with inventive and descriptive power. Among other school affairs, something turns on a scholarship, something more on a cheque; there is the scent of the sea, and the doings of smugglers, and adventures on a coasting brig, and "the Hermit of Gull's Island." Certainly "Dick's a trump." Eight illustrations in colour, by Strickland Brown.

The Gold Bat, by P. G. Wodehouse (A. & C. Black), turns on the vicissitudes of "a small gold ornament shaped like a bat"—"about an inch long by an eighth of an inch wide"—specially fashioned, by the liberality of the head master, "for the captain of the winning team to have and to hold." So there are house-matches, and ferrets, and so forth, and the general incidents of school life, set forth with some freshness and considerable vigour, if not with the artistic restraint that the author should be developing now. Eight spirited full-page illustrations by T. M. R. Whitwell.

Brought to Heel, by Kent Carr (5s., Chambers), is a nervous, clear-cut story of "the Breaking in of St. Dunstan's" by the new head master. We are not quite sure about the propriety of Mr. Firth's allowing little Belloc's tongue to run so freely without warning at their first meeting, or of the probability of such conduct as the second master's in preparation for "the great bar-out"; but, in any case, the development of the proceedings is shrewdly conceived and vigorously worked out, and the most rebellious of boys will be fascinated with the quelling process. There is a local difficulty also woven into the school story—a difficulty settled in a very surprising way, tending to the general final result. One of the very best boys' books of the season. Eight drawings by Harold Copping.

A School Champion, by Raymond Jacberns (3s. 6d., Chambers), is a very lively and piquant story of two little girls, of thirteen and ten, who had "only learnt what we liked to learn, and father liked teaching those things more than stupid old arithmetic and geography." So when they went to Lyndhurst College they found themselves in a very different world. Being of a military family, they had naturally been fond of heroic stories, and thus took to the idea of "championing." The complications of the situation are prettily worked out. The get-up is excellent, and there are ten good drawings by Percy Tarrant.

Partners, by H. F. Gethen (1s. 6d., Nelson), tells school experiences of a bright boy of ten, with frequent glimpses of a sister of eight, in fluent and pleasant style. Tom and a schoolfellow go "partners," and there eventually arise difficulties straining the relation, but we dare say they prove but temporary. The school affairs are sufficiently varied and exciting, and they are described with much verve. Eight illustrations in colour by P. B. Hickling.

Jefferson Junior, by Meredith Fletcher (3s. 6d., Blackie), relates the first term's adventures and misadventures of two boys at a public school. They fall in with each other on the way up, and the younger is awed to find that the elder is brother to the captain of the school, and gratified with his promise to befriend him. On arrival, Jefferson Junior "makes things hum with a vengeance." A sprightly and vigorous story. Six illustrations by J. R. Burgess.

For Girls.

Mrs. W. K. Clifford is about her best in *The Getting Well of Dorothy* (3s. 6d., Methuen)—a very charming story of two little girls, especially Dorothy. Neither Celestine (the doll) nor the rabbit from Paris did it, nor yet the sojourn at grandmamma's in Devonshire; Gibraltar and quince jam were probably more effective; and there was a wandering period in Switzerland. At last she got well, indeed; and the end is the coming of the kitten, which, though vigorously stroked the wrong way night and morning, has only grown into a big black cat, "and hasn't come Persian yet." The little folks will be delighted with it all. Twenty-six illustrations by Gordon Browne.

Hope's Tryst, by Bessie Marchant (3s. 6d., Blackie), turns on the courage and honest simplicity of a young girl—the daughter of an English merchant at Kiakhta, on the borderland between Siberia and Mongolia, whose main object was to rescue his brother from unjust internment in the mines. The brother escapes into the forest, however; a Russian friend of Hope's gets implicated in gold smuggling, and one night Hope keeps a tryst for her at the edge of the forest of Taiga—in spite of the long-drawn mournful howl of the wolf; and thereout issue complications. The story is told in excellent tone, and the interest is fresh and continuous. Six illustrations by James F. Sloane.

The Girls of Wakenside, also by Bessie Marchant (5s., Collins' Clear-Type Press), involves school a little, but is mainly a matter of ups and downs, surprises, and mystery deepening to the clue, with the usual sort of ending, only three-fold. The scenes are mostly enacted in the Kootenay country, in the Rockies, but they might, with small alterations, be equally well enacted elsewhere. The interest is briskly maintained. Eight illustrations by G. Leslie Hunter.

Mrs. L. T. Meade makes herself responsible for *A Madcap* (3s. 6d., Cassell)—a young Spanish *señorita*, who comes to England to take possession of property she has inherited and meets with trials and troubles enough. The contrast between her and her English cousins is sharply outlined. She may not be quite the pink of perfection, but Mrs. Meade treats her very sympathetically, and describes her difficulties vividly and interestingly. Eight full-page illustrations by Harold Copping, and very tasteful get-up.

Peerless Women, by Jeanie Douglas Cochrane (1s. 6d., Collins' Clear-Type Press), consists of eleven good popular biographies, with four coloured illustrations and inset portraits of the ladies, not flatteringly reproduced. The "peerless women" are Queen Victoria, Sister Dora, Mary Carpenter, Sarah Robinson, Agnes Weston, Baroness Burdett-Coutts, Florence Nightingale, Mrs. Isabel Reaney, Mary Ann Rogers, and Frances Power Cobbe. Very well; but surely there are equally "peerless" women not in the number. Perhaps they will follow.

Mrs. Edwin Hohler weaves a pretty little story about the Palazzo Rosso—*The Deserted Palace* (1s., Blackie)—vaguely situated "on the shores of the sunny Mediterranean." The explorations of Tony and Olivina will be followed with interest, and perhaps the mystery of the picture whose eyes changed colour will be explained. We must not tell what came of the pursuit of that purple hen intended for the Festa.

Digitized by Google

For Little Ones.

In *The Little Folks Adventure Book* (3s. 6d., Cassell) Mr. S. H. Hamer relates in graphic fashion more than thirty stirring stories of youthful adventure by land and by sea—daring deeds, fights with flame and flood, hairbreadth escapes, episodes of the sea, the cliff, the hunting-field, &c. The illustrations are numerous and good, and the get-up is attractive.

To Mr. Hamer's diligent pen is also due *The Little Folks Animal Book*—stories about animals, several of them told by the animals themselves (3s. 6d., Cassell). The interest is fresh and varied; the stories are told with much address; and there are many good illustrations, with a coloured plate as frontispiece.

Grandmother Pussy, by Edith Carrington (Cassell), who has already written (among many other things) about "The Cat, her place in Society," and ought to know, makes a very interesting story indeed, reported by the heroine herself. There are eight full-page illustrations and forty-one smaller pictures.

Sea Stories for Wonder Eyes, by Mrs. A. S. Hardy (2s., Ginn), is a simple and delightful account of various marvels of the sea-shore and the sea, in beautiful type and binding, and with abundance of pretty illustrations.

Little Folks of Many Lands, by Lulu Marie Chance (2s., Ginn), is a similarly simple and attractive sketch of certain race types—Indian, Eskimo, Dutch, African, Arabian, Japanese, and, of course, Filipino—four girls and three boys—in excellent type and artistic get-up, with numerous illustrations, the full-page ones in colour.

Messrs. Nelson furnish forth most spaciously and handsomely a selection of *La Fontaine's Fables*, pictured for children by Carton Moore Park and René Bull, and translated from the original into English verse by Edward Shirley (5s.). Really a work of art, and certain of general popularity.

Claws and Paws, by Louis Wain (2s. 6d.), with verses by Clifton Bingham, depicts various aspects of "Kittenland" in a way that will delight the nursery. After diligent search, we regret to acknowledge that we find no clue to the well-deserving publishers.

Snap-Shots for Small People, by Winifred Rose Carey, with 20 coloured pictures by Margery Helen Carey (1s. net, Swan Sonnenschein), has the general appearance of an "Oogley-Oo" book of superior quality. There is fun in the pictures, and there is usually a sting of satire in the tail of the verses.

Careless Jane, and Other Tales, by Katharine Pyle (2s. 6d., Chambers), is lavishly illustrated and tastefully got up. There are twelve "other tales"; and all the thirteen are briefly told in verse, with a moral thrust in somewhere about the end. Children will be delighted with the pictures anyhow.

The Golden Windows, by Laura E. Richards (2s. 6d. net, Allenson), is "a book of fables for young and old"—some 40 or 50 fables, simply written with good moral intention. The get-up is tasteful.

The Twins (6s., Nelson) are depicted in 24 large coloured pictures by John Hassall, and in explanatory verses by Edward Shirley. As the one is alleged to be "the very best boy that ever was seen," and the other "the very worst," the variety of aspects is naturally considerable and piquant. The book is handsome, as well as lively and amusing.

Sea and Sand (3s. 6d., Nelson) is another pretty book of pictures—twenty, we should think—recalling or anticipating the delights of a seaside holiday—by Ruth Cobb. The verses are again supplied by Edward Shirley. This too should be a general favourite.

Cheepy the Chicken, by Harry Rowntree and S. H. Hamer (1s. 6d., Cassell) is a wonderful account of the experiences of a discontented chicken, which gets changed successively into several other kinds of animals. There are 4 coloured plates and numerous amusing illustrations.

Of a more sober character is *True Stories about Animals*, by Edith Carrington (2s., Blackie)—a very interesting series of anecdotes about animals of many kinds, abundantly illustrated in colour and in black and white. The first portion of it appears separately as *True Tales of Animal Life* (6d., Blackie)—a pretty "picture-book for little folk."

New Editions of Notable Books.

Messrs. Macmillan issue a revised and enlarged edition of *The Golden Treasury of Songs and Lyrics*, by Francis T. Palgrave, in green limp leather, full gilt back and gilt edges (3s. 6d.)—a very artistic and charming volume.—Also delightful editions of *Alice's Adventures in Wonderland*, with 42 illustrations by John Tenniel (2s. net), and *Through the Looking-Glass*, with 50 illustrations by John Tenniel (2s., net)—both in the attractive series of "Illustrated Pocket Classics for the Young."—*The Story of a Red Deer*, by the Hon. J. W. Fortescue (2s. net)—a most interesting sketch of "the most beautiful of all creatures to the eye"—reappears (after half-a-dozen reprints) in the same series.—Moreover, *The Story of Sylvie and Bruno* (Lewis Carroll, 3s. 6d. net)—containing such portions of the two original volumes as tell the tale of the two fairy children—with numerous spirited illustrations by Harry Furniss.

The New Pupil, with illustrations by Gertrude Demain Hammond, and *Three Rascals*, with illustrations by Ella and Agnes Tomlinson, both capital stories by Raymond Jacberns, are reissued in very agreeable and handy forms by Messrs. Macmillan (2s. 6d. each).

Japhet in search of a Father (Marryat), with numerous illustrations by Henry M. Brock, and a biographical and critical introduction by David Hannay, *Henry Esmond* (Thackeray), and *Christmas-Tree Land*, by Mrs. Molesworth—2s. 6d. each—are issued in very agreeable form by Messrs. Macmillan. They look as if they might belong to "Macmillan's Prize Library," and in any case any of them will make a very welcome prize or gift-book.

Messrs. George Bell & Sons have added to their convenient and delightful series of "Pocket-book Classics" *The Satires, Epistles, and Ars Poetica of Horace*, the Latin text (that of Dr. Gow, taken from the new edition of the "Corpus Poetarum Latinorum") with Conington's translation opposite. The size is small imperial 32mo, the paper thin, the binding in limp leather, with gilt edges (2s. 6d. net). A capital Christmas present to any that can spell their way through Horace.

Messrs. Blackie present a thick volume of *Grimm's Fairy Tales* (5s.), with more than seventy illustrations (nearly half of them coloured) by Helen Stratton. A very attractive book, which will be widely read with delight.

Messrs. Adam & Charles Black reissue *Stories*, by Ascott R. Hope, with eight clever illustrations in colour by Dorothy Furniss, in an artistic binding (3s. 6d.). There are thirteen stories, originally selected a dozen years ago as "characteristic specimens" of the author's multitudinous writings in this kind, but as fresh as ever for the newer generation. "If entertainment, of a quiet kind, appear to be my first object," says the author, "I have sought to raise no idle laughter, but to enforce the useful lessons life itself teaches, while observing that truth to nature which is the morality of fiction." For young readers there is no more soundly entertaining or better book of its class in all our multifarious Christmas batch.

Uncle Tom's Cabin, by Harriet Beecher Stowe, is issued by Messrs. A. & C. Black in a handsome volume with 8 full-page illustrations in colour by Simon Harmon Vedder, and 130 woodcuts in the text engraved by Matthew Urlwin Sears (6s.). It would be an exacting taste that would desire any more liberal edition; it is certainly a "beautiful book."

We find no express statement that *In the Icy North* (Arctic Explorers: Franklin and Nansen), by Henry Harbour, and *Two Old Sea Dogs* (Drake and Blake), by Herbert Hayens (1s. 6d. each, Collins' Clear Type Press), are reissues, but we take it they are; and, anyhow, they are good as new to a new set of readers. They are very instructive as well as entertaining, and both are illustrated (the former more freely) and nicely got up.

Annuals.

The yearly volume of *Cassell's Saturday Journal* (7s. 6d.) is as comfortable in aspect as ever, and no whit less entertaining and useful in contents. It runs to nearly 1,100 three-column pages, containing serial stories of merit by Mrs. C. N. Williamson and Headon Hill, five special series of articles on public and social institutions of importance and interest, and about 100 complete stories. Much instructive matter is thrown into the shape of interviews on popular topics with well known personages, and brief paragraphs deal with a wide variety of matters of practical and speculative interest. There is a winter's good reading in the book. The illustrations are numerous, the coloured plates being unusually good.

The *Little Folks Christmas Volume* (3s. 6d., Cassell) is always welcome. This year there are two serial stories by Mrs. E Cuthell and B. Sidney Woolf, and a number of smaller stories suited to the young people, as well as a great variety of articles and other matters of interest. There are plenty of pictures too, and very good pictures—pictures on nearly every page, to say nothing of the six full-page coloured plates. A very attractive volume.

The new volume of *Work*—Vol. XXVII. (February 6 to July 30)—if only a half-annual, contains a quantity of varied matter quite worthy of a whole annual (4s. 6d.). For boys (as well as for elders) with a turn for craftsmanship in any form, it offers in its thousands of short practical articles a treasury of everyday mechanical interests. There are six elaborate plates and a profusion of illustrations besides.

Messrs. Ward, Lock, & Co.'s *Wonder Book*, edited by Henry Golding (3s. 6d.), makes a very handsome volume, with 8 large coloured plates and a great number of capital illustrations besides. The contents—prose and verse—are varied and suitable to "a picture annual for boys and girls." Those that obtain "The Wonder Book" this year will eagerly look for its coming next year.

Blackie's Children's Annual (3s. 6d.) makes a strong bid for popularity, with abundance of capital pictures after designs by experienced artists, and numerous stories and rhymes by deft writers. The letterpress is spaciously displayed, and many of the illustrations are brightly coloured. The volume is sure to be a favourite.

STANDARD OXFORD EDITIONS OF POETRY AND PROSE.

Crown 8vo, bound in cloth, gilt lettered on side and back, price 2s. per Volume; or, in leather bindings, from 3s. 6d. Printed on Oxford India paper, from 5s. per Volume.

The Volumes are well printed in the largest possible type compatible with the length of the work, on good paper, and are tastefully and strongly bound. Each book contains a Portrait of the Author, or other Illustrations.

LIST OF THE VOLUMES.

Shakespeare.—Bunyan's Pilgrim's Progress (Cruikshank's Illustrations).—**Boswell's Johnson** (2 Vols.).—**E. B. Browning.—Burns.—Byron.—Longfellow.—Milton.—Scott.—Tennyson.—Whittier.—Wordsworth.**

Educational Times.—"Beautifully printed on good paper, and the binding is flexible and tasteful."

Boswell's Johnson is issued complete in One Volume, on Oxford India paper, extra fcap. 8vo, bound in cloth, at 5s. net, or in Two Volumes at 3s. net per Volume; also in leather bindings.

Bunyan.—The Pilgrim's Progress. Demy 8vo, printed on superior thick rag-made paper. With 25 Illustrations by GEORGE CRUIKSHANK, a Life of Bunyan, General Index, and Index of Scripture Texts. Bound in art cloth, with a special design in gilt on the cover, 4s. Specially suitable for Prizes and Presentations.

Blackie's Little French Classics

"The idea is an excellent one, and admirably carried out."—*Prof. SAINTSBURY.*

"A considerable boon to teachers and taught."—*SPECTATOR.*

"These little books supply a great want."—*Dr. W. H. ROUSE.*

This New Series, which is produced under the most competent editorship, embraces all classes of French Literature—Travels, Stories of Adventure, Scenes of Domestic Life, Essays, Letters, Poetry, and Drama—so graduated in difficulty and so varied in matter as to be suitable for boys and girls of all ages. Many authors hitherto unobtainable in a suitable form for class reading are represented, as, for example, Bossuet, Balzac, Stendhal, Rousseau, and Pascal.

The volumes have already found their way into constant use in most of the leading Schools in this country, and Examining Bodies, both at home and in the colonies, are prescribing the books for study during the coming year.

Complete List on application.

Price 4d. each book.

Blackie's Little German Classics

This new series is uniform in aim and general appearance with the well known series of "Little French Classics," which received so instant a welcome from teachers and pupils.

Each book consists of about 48 pages, including a short biographical and critical note, a well printed text, and a few brief explanatory notes. The editing has been entrusted to teachers of experience and position. Price 6d. each volume.

Kotzebue—Der gerade Weg der beste. A short Play. Edited by the Rev. J. H. D. MATTHEWS, M.A., late Head Master of Leeds Grammar School.
Schiller—Select Ballads. Edited by Mrs. WEEKLEY.
Heine—Die Harzreise. Selections edited by W. G. ETHERIDGE, M.A., of Westminster School.
Heine—Select Ballads. Edited by D. THIEMS, Ph.D., D.D.
The Nibelungenlied. Selections, modernized: in two Parts. Parts I. and II. Edited by H. B. COTTERILL, M.A., formerly of Haileybury College.
Körner—Select Songs. Edited by E. P. ASH, M.A., of Haileybury College.
Poems for Recitation. Edited by Miss MATHILDE BOYES.
Goethe—The Road to Italy. Edited by E. R. MILNER-BARRY.

Blackie's Illustrated Latin Classics

General Editor—
Prof. R. Y. TYRRELL,
Litt.D., Fellow of Trinity College, Dublin.

Caesar.—Gallic War. Books I.-VII. Edited by Prof. JOHN BROWN, M.A. I., II., III., and IV., 1s. 6d. each; V., VI., and VII., 2s. each.
Cicero. — The Catiline Orations. Complete. Edited by Prof. C. H. KEENE, M.A. 2s. 6d. **The First Oration.** 1s. 6d.

Vergil.—Aeneid, II. and III. Edited by Prof. SANDFORD, M.A. II., 2s.; III., 1s. 6d.
Virgil.—Georgics, I.-IV. Edited by S. E. WINBOLT, M.A. 1s. 6d. each.

Blackie's Illustrated Greek Classics

General Editor—
Prof. R. Y. TYRRELL,
Litt.D., Fellow of Trinity College, Dublin.

This Series is similar in aim and general arrangement to *Blackie's Illustrated Latin Series*, its special features being interesting and scholarly introductions, well-printed texts, interesting literary notes, specimens of famous translations, and numerous illustrations, including full-page coloured plates, full-page photographs of bas-reliefs, statues, &c., beautifully printed on superfine art paper, black-and-white illustrations specially drawn for the series, and maps where these are required for the elucidation of the text.

Aeschylus.—Eumenides. Edited by L. D. BARNETT, M.A., Litt.D. 3s. 6d.
Euripides.—Cyclops. Edited by the Rev. J. HENSON, M.A. 1s. 6d.
Euripides.—Alcestis. Edited by A. TATE, M.A. 2s.
Homer.—Iliad XVIII. Edited by Prof. PLATT. 1s. 6d.
Homer.—Odyssey I. Edited by the Rev. E. C. EVERARD OWEN, M.A. 2s.
Plato.—Crito. Edited by A. S. OWEN, M.A. 2s. 6d.
Xenophon.—Anabasis I. Edited by C. E. BROWNRIGG, M.A. 2s.
Xenophon.—Anabasis II. and IV. Edited by the Rev. G. H. NALL, M.A. 2s. each.
Xenophon.—Anabasis III. Edited by A. C. LIDDELL, M.A. 2s.
Theophrastus.—Characters. Edited by J. MAXWELL EDMONDS, M.A., and G. E. VAUGHAN AUSTEN, M.A. 4s. 6d.

Blackie's Little English Classics

Price (with a few exceptions) **2d.; cloth, 8d. each.**

BLACKIE'S LITTLE ENGLISH CLASSICS contains some of the best-known and most representative **Selections from Standard Authors.** Each volume is carefully edited by teachers of ripe experience, and is provided with a short Biographical Sketch, and brief, concise Explanatory Notes. Among the Poets represented the following are included:—

Aytoun.	**Coleridge.**	**Hogg.**	**Milton.**	**Shelley.**
Browning.	**Cowper.**	**Johnson.**	**Moore.**	**Southey.**
Burns.	**Emerson.**	**Keats.**	**Scott.**	**Tennyson.**
Byron.	**Goldsmith.**	**Longfellow.**	**Shakespeare.**	**Wordsworth.**
Campbell.	**Gray.**	**Macaulay.**		

Blackie's New English Texts

Edited by ***W. H. D. ROUSE, D.Litt.***

Messrs. BLACKIE & SON have commenced to issue, under the above title, a new series of English texts for school use. The series will include specimens of all the acknowledged masters of English, each number being complete in itself, of a convenient size, well printed in clear type on good paper, and issued at a low price. Each book will have a brief introduction, but no notes. Price **8d.** each.

Defoe's Journal of the Plague Year.
Irving's Companions of Columbus.
Hawkins's Voyages.
Dickens—Christmas Carol.
Erasmus's Essays.
Tales from Boccaccio.
Essays from De Quincey.
Lamb's Essays.
Macaulay's First Chapter.
Tales from the Decameron.

MATHEMATICS.

8059. (T. Muir, LL.D., F.R.S.E.)—Prove that the Pfaffian

$$\begin{vmatrix} a_1+a_2, & a_1+a_3, & a_1+a_4, & \dots, & a_1+a_{2n} \\ & a_2+a_3, & a_2+a_4, & \dots, & a_2+a_{2n} \\ & & a_3+a_4, & \dots, & a_3+a_{2n} \\ & & \dots & \dots & \dots \\ & & & & a_{2n-1}+a_{2n} \end{vmatrix} = 2^{n-1}(a_1a_3a_5\dots a_{2n-1} + a_2a_4a_6\dots a_{2n}).$$

Solution by Professor Nanson

Let P denote the Pfaffian and Δ the generating zero-axial, so that $\Delta = P^2$. Then P is of the first degree in each frame line and therefore of the form $\lambda a_1a_2 + \mu a_1 + \nu a_2 + \rho$, where λ, μ, ν, ρ do not contain a_1, a_2. Next, Δ contains no term with $a_1^2a_2^2$ as factor and has two rows identical if $a_1 = a_2 = 0$. Hence $\lambda = 0$, $\rho = 0$. Further, Δ is unaltered by a cyclic interchange of the suffixes 1, 2, ..., $2n$. Hence $\mu = \nu$ and P is of the form $k(a_1a_3\dots a_{2n-1} + a_2a_4\dots a_{2n})$, where k is numerical. Now, making $a_1 = a_2 = \dots = 1$, the terms of P are each numerically 2^n, and of these terms there is one more positive than negative. Hence $k = 2^{n-1}$.

15629. (A. W. T.)—A number is raised to the power (-1) and reduced to a decimal. It is found that the original number is just n times the digit nearest the decimal point. Find the limits between which the number lies.

Solution by Lt.-Col. Allan Cunningham, R.E.

Let a_1, a_2, ... be the digits of 1/N, expressed as a decimal, and let a_r be the first digit greater than 0 ($a_1 = a_2 = \dots = a_{r-1} = 0$). Then $N > 10^{r-1}$, but $< 10^r$, and $N = n.a_r$. Also $1/N = a_r/10^r + a_{r+1}/10^{r+1} + \dots$. Hence (except when a_r is the only finite digit)

$$1/N < a_r/10^r \quad \text{and} \quad 1/N < (n.a_r)/(n.10^r) = N/(n.10^r),$$

whence $N > \sqrt{(n.10^r)}$. Hence $N > \sqrt{(n.10^r)}$, but $< 10^r$.

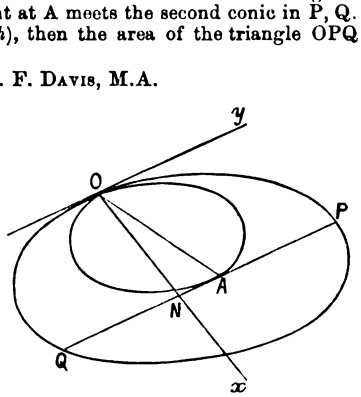
Also $N^2 > n.10^r$, whence $N > n(10^r/N)$. Hence $N > n$ (because $10^r/N > 1$). This lower limit of N is not so high as the previous one [$N > \sqrt{(n.10^r)}$], but has the advantage of not involving r.

15527 (with changed notation). (L. Isserlis.)—Two conics touch at O. The distances of their centres from the tangent at O are h, H and their radii of curvature at O are r, R. The diameter of the first through O meets it again in A and the tangent at A meets the second conic in P, Q. Prove that, if $1/h - 1/H = 1/\sqrt{(rh)}$, then the area of the triangle OPQ is $4R^{\frac{1}{2}}r^{-\frac{1}{2}}h^{\frac{1}{2}}$.

Solution by R. F. Davis, M.A.

If (h, k) are the co-ordinates of the centre of the first conic referred to the normal at O as axis of x and the tangent at O as the axis at y, the equation to the conic is

$$(k^2+hr)x^2 - 2hkxy + h^2(y^2-2rx) = 0.$$



Similarly, the equation to the second conic is

$$(K^2+HR)x^2 - 2HKxy + H^2(y^2-2Rx) = 0.$$

The co-ordinates of A are of course $(2h, 2k)$, and the equation to the tangent at A is $x = 2h$.

To determine P, Q we have

$$4h^2(K^2+HR) - 4HKhy + H^2(y^2-4Rh) = 0,$$

$$y^2 - \frac{4Kh}{H}y + \frac{4h^2(K^2+HR) - 4H^2hR}{H^2} = 0;$$

therefore

$$(PQ)^2 = (y_1 \sim y_2)^2 = (y_1+y_2)^2 - 4y_1y_2$$

$$= \frac{16K^2h^2}{H^2} - \frac{16h^2(K^2+HR) - 16H^2hR}{H^2}$$

$$= 16hR - 16h^2R/H = 16Rh(1-h/H).$$

$$4(\text{area } \Delta OPQ)^2 = PQ^2 . ON^2 = PQ^2 . 4h^2;$$

therefore

$$(\text{area } \Delta OPQ)^2 = 16Rh^3(1-h/H).$$

This result does not involve r; which is not to be wondered at.

Note also the expression for the area vanishes when $h = H$. In this case the line $x = 2h$ is a tangent to both curves.

If now the condition $1/h - 1/H = 1/\sqrt{(rh)}$ be introduced, the above expression for Δ takes the form given in the Question.

15438. (G. Heppel, M.A.)—P is any point within a circle. APA′ BPB′, CPC′ are three chords making angles of 120° with one another. Prove that AP + BP + CP = A′P + B′P + C′P, and that each ranges between 3 and $\sqrt{3}$ times the radius.

Solution by the Proposer.

O is the centre; OK is at right angles to PA′, the longest line from P; DL, EM are projections of OK on BB′, CC′; then

DL = EM. PD = PE = ½PK,

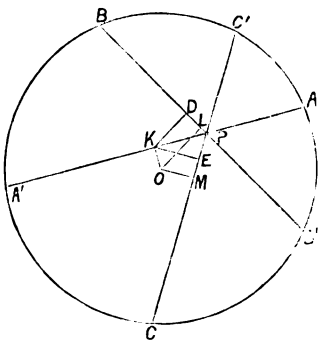
BP − B′P = 2PL = PK − 2DL,

CP − C′P = 2PM = PK + 2EM,

AP − A′P = −2PK;

therefore

AP + BP + CP = A′P + B′P + C′P.



The maximum limiting case is when P is at O, and then the sum is $3r$. The minimum limiting case is when P is on the circumference, and one chord, as BB′, becomes a tangent; then A′P and CP are each $r\sqrt{3}$ and BP, B′P, C′P, AP all vanish.

Note by Constance I. Marks, B.A.

The two solutions furnished to this Question (*cf. Reprint*, New Series, Vol. VII., p. 91) are in perfect agreement, since the lower limit is actually reached only when P ceases to be *within* the circle and when one of the chords ceases to be a *chord* and becomes a *tangent*.

15471. (Rev. T. Roach, M.A.)—Prove

(1) $\cosh^{-1}(\sec x) = \log\cot(\frac{1}{4}\pi - \frac{1}{2}x)$ or $\log\tan(\frac{1}{4}\pi - \frac{1}{2}x)$;

(2) $\sinh^{-1}(\tan x) = \log\cot(\frac{1}{4}\pi - \frac{1}{2}x)$ or $\log\tan(\frac{1}{4}\pi + \frac{1}{2}x)$.

Solutions (I.) *by* W. Scrimgeour, M.A., B.Sc., *and others*; (II.) *by* W. R. Bruce.

(I.) (1) Let $\cosh^{-1}(\sec x) = y$; therefore $\cosh y = \sec x$; therefore $\frac{1}{2}(e^y + e^{-y}) = \sec x$. Solving for e^y, after reducing,

$$e^y = \sec x \pm \sqrt{(\sec^2 x - 1)};$$

therefore $e^y = \sec x + \tan x$ or $e^y = \sec x - \tan x$;

therefore

$$e^y = (1+\tan\frac{1}{2}x)/(1-\tan\frac{1}{2}x) \quad \text{or} \quad e^y = (1-\tan\frac{1}{2}x)/(1+\tan\frac{1}{2}x);$$

therefore $y = \log\tan(\frac{1}{4}\pi + \frac{1}{2}x)$ or $y = \log\tan(\frac{1}{4}\pi - \frac{1}{2}x)$;

therefore $\cosh^{-1}\sec x = \log\cot(\frac{1}{4}\pi - \frac{1}{2}x)$ or $\log\tan(\frac{1}{4}\pi - \frac{1}{2}x)$.

(2) Similarly, let $\sinh^{-1}(\tan x) = z$; therefore $\sinh z = \tan x$; therefore $\frac{1}{2}(e^z - e^{-z}) = \tan x$. Therefore, solving for e^z, as before,

$$e^z = \tan x \pm \sqrt{(\tan^2 x + 1)};$$

therefore $e^z = \tan x + \sec x$ or $e^z = \tan x - \sec x$;

therefore $e^z = (1+\tan\frac{1}{2}x)/(1-\tan\frac{1}{2}x)$

or $e^z = (1-\sin x)/-\cos x = (\tan\frac{1}{2}x - 1)/(\tan\frac{1}{2}x + 1)$;

therefore $z = \log\tan(\frac{1}{4}\pi + \frac{1}{2}x)$ or $z = \log\tan(\frac{1}{2}x - \frac{1}{4}\pi)$.

This is negative when $x < \frac{1}{2}\pi$; therefore

$$\sinh^{-1}(\tan x) = \log\cot(\tfrac{1}{4}\pi - \tfrac{1}{2}x) \quad \text{or} \quad = \log\tan(\tfrac{1}{4}\pi + \tfrac{1}{2}x).$$

Note.—The common value of (1) and (2) is $\log\cot(\frac{1}{4}\pi - \frac{1}{2}x)$, the inverse Gudermannian of x. Thus

$$\cosh^{-1}(\sec x) = \sinh^{-1}(\tan x) = \log\cot(\tfrac{1}{4}\pi - \tfrac{1}{2}x) = gd^{-1}x$$

when only the positive value of the above radicals is taken, as in finding, say, $\cosh^{-1}y$.

(II.) We know that

$$\cosh^{-1}(\sec x) = \log[\sec x + \sqrt{(\sec^2 x - 1)}] = \log(\sec x + \tan x) = y \text{ (say)}.$$

Differentiating, we have

$$dy = [(\sec x\tan x + \sec^2 x)/(\sec x + \tan x)]dx = \sec x\,dx = dx/\cos x.$$

Therefore $y = \int dx/\cos x = \log\cot(\frac{1}{4}\pi - \frac{1}{2}x)$,

which is a well-known integral.

The solution $\log\tan(\frac{1}{4}\pi + \frac{1}{2}x)$ follows at once.

To show that $\sinh^{-1}(\tan x) = \log\cot(\frac{1}{4}\pi - \frac{1}{2}x)$, we have

$$\sinh^{-1}(\tan x) = \log[\tan x + \sqrt{(\tan^2 x + 1)}] = \log(\tan x + \sec x) = y \text{ (say)}.$$

Therefore

$$dy = \sec x[(\sec x + \tan x)/(\sec x + \tan x)]dx = \sec x\,dx = dx/\cos x.$$

Therefore $y = \int dx/\cos x = \log\cot(\frac{1}{4}\pi - \frac{1}{2}x)$ or $\log\tan(\frac{1}{4}\pi + \frac{1}{2}x)$.

15371. (Professor Neuberg.)—Trouver le lieu des centres des hyperboles équilatères qui passent par deux points donnés A, B et dont une asymptote passe par un troisième point donné C.

Digitized by Google

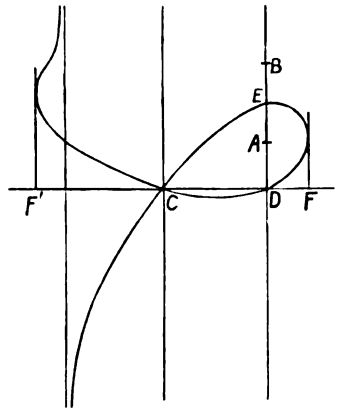
Solutions (I.) *by* A. M. Nesbitt, M.A.; (II.) *by* Professor Sanjána, M.A.

Take C for origin, and let the co-ordinates of A, B be (c, a), (c, b). Let the equation to the asymptotes be $y = mx$, $my + x = h$. Then the equation to the curve will be

$$(y - mx)(my + x - h) = k^2,$$

and we have at once

$$(a - mc)(ma + c - h) = (b - mc)(mb + c - h).$$



But, if x, y be the co-ordinates of the centre (*i.e.*, of the intersection of the asymptotes), we have

$$m = y/x,$$

$$h = x(1 + m^2) = (x^2 + y^2)/x;$$

whence the equation to the locus is

$$x(x^2 + y^2) = xy(a + b) + c(x^2 - y^2),$$

a circular cubic with $x = -c$ as its real asymptote and a real double point at C. The locus will be found to cut the x axis at D, and, if CF = CF' = CE, where E is the middle point of AB, then CF and CF' are the limits of x for *real* values of y.

Moreover the curve passes through E, the values of dy/dx at D and E being respectively $c/(a + b)$ and $-\{c^2 - [\frac{1}{2}(a + b)]^2\}/[c - (a + b)]$; and at the double point the two values are of opposite sign. The curve cuts the asymptote at the point whose ordinate is $2c^2/(a + b)$; hence it is approximately as depicted.

[Rest in *Reprint*.]

9308. (Professor Nilkantha Sarkar, M.A.)—A uniform rod rests in a horizontal position, being supported by two smooth pegs equidistant from its centre. If the distance between the pegs $= 1/\sqrt{3}$ times the length of the rod, prove that, if one of the pegs be suddenly removed, the pressure on the other will be initially unaltered.

Solution by Frances E. Cave.

Let θ be the inclination of the rod to the horizon at any instant before it leaves the second peg, r the distance of its centre from the peg, P the pressure. With the usual notation,

$$mk^2\ddot{\theta} = Pr, \quad (m/r)(d/dt)(r^2\dot{\theta}) = mg\cos\theta - P;$$

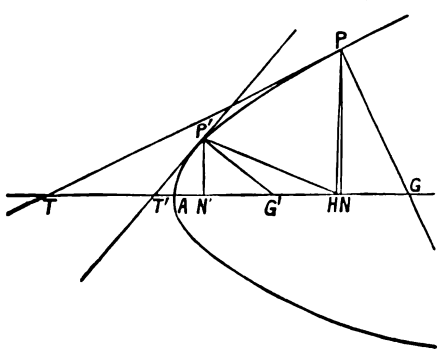
therefore initially $Pr^2 = k^2(mg - P)$; therefore $P = [k^2/(k^2 + r^2)]\,mg = \frac{1}{3}mg$, since $r^2 = k^2$.

15688. (A. M. Nesbitt, M.A.)—The normals to a parabola at P and P' meet the axis in G and G'. If H be the mid-point of GG', prove geometrically that HP = HP'.

Solutions (I.) *by* R. Tucker, M.A., C. Bickerdike, *and many others*; (II.) *by* Kela Deva Rau, B.A.

(I.) GG' = NN' and

$$HP^2 \sim HP'^2 = 4AS.AN + 4AS^2 - 4AS.HG + HG^2 \sim (4AS.AN' + 4AS^2 + 4AS.HG' + HG'^2) = 4AS.NN' - 4AS.GG' = 0, \ldots.$$

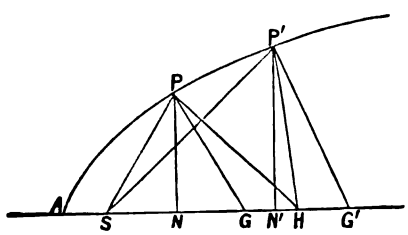


(II.) Join SP and SP'. From P and P' draw PN and P'N' perpendicular to the axis.

$$PH^2 = SP^2 + SH^2 - 2SH.SN = SG^2 + SH^2 - 2SH.SN.$$

Similarly,

$$P'H^2 = SG'^2 + SH^2 - 2SH.SN';$$



therefore

$$P'H^2 - PH^2 = SG'^2 - SG^2 - 2SH(SN' - SN) = (SG' + SG)(SG' - SG) - 2SH.NN' = 2SH.GG' - 2SH.NN' = 2SH(GG' - NN') = 0.$$

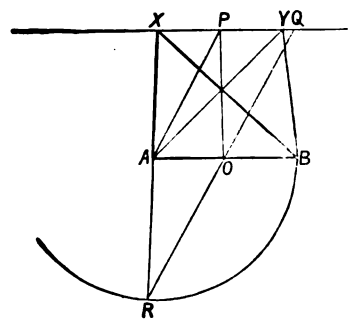
Since $GG' = NN' + N'G' - NG = NN'$; therefore P'H = PH.

15509. (C. M. Ross.)—Having given the base and the altitude of a triangle, and that one of the angles at the base is double the other, show how to construct the triangle.

Solutions (I.) *by* J. H. Carson; (II.) *by* C. Searle.

(I.) At O, the mid-point of the given base AB, erect OP perpendicular to AB and make OP equal to the given altitude. Through P draw XPY parallel to AB. Join AP. With A for centre and AB for radius describe an arc of a circle BR. Through O draw QOR parallel to AP. Join RA, and produce it to meet XPY in X. Cut off

$$PY = PX.$$

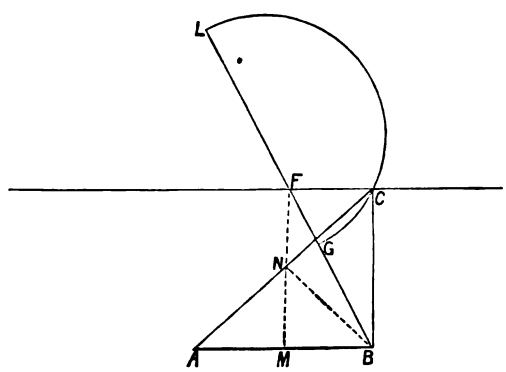


Then either ABX or ABY is the required triangle. For

$$XP : XA = PQ : AR = AO : AB = 1 : 2.$$

Thus AX = XY = YB, and the quadrilateral ABYX is clearly cyclic. Hence the angles XAY, YAB and ABX standing on equal arcs are equal; therefore $\angle XAB = 2\angle ABX$.

(II.) Let AB be the base, MF the altitude. Draw MF bisecting AB



at right angles. Divide FB at G and L, so that

$$FG : GB = FL : LB = 1 : 2.$$

On LG describe a semicircle cutting FC (parallel to AB) at C. Join CA, CB. Where CA cuts FM, viz. N, join BN. It can easily be shown that LCG is the locus of vertices of all triangles having the base FB and sides CF, CB, such that CF : CB = 1 : 2; therefore CF : CB = AM : AB, CF : AM = CB : AB. But CF : AM = CN : NA; therefore

$$CB : AB = CN : NA;$$

therefore BN bisects $\angle ABC$. But the triangles AMN, BMN are equal in all respects; therefore

$$\angle MAN = \angle MBN = \tfrac{1}{2}\angle MBC \quad \text{or} \quad \angle ABC = 2\angle BAC.$$

15628. (Robert W. D. Christie.)—If $x_1^2 + 1 = p_1 y^m$ for all integal values of m, then $x_n^2 + 1 = p_n y^m$ ad inf. Generalize.

E.g.: $239^2 + 1 = 2.13^4$; then $85922^2 + 1 = 5.17.3041.13^4$ ad inf.

Solution by Lt.-Col. Allan Cunningham, R.E.

The scope of this question is by no means clear; for, if $x_1^2 + 1 = p_1 y^m$ be true for one value of m, this involves

$$x_1^2 + 1 \equiv 0 \pmod{y, y^2, y^3, \ldots, y^{m-1}, y^m};$$

so that $x_1^2 + 1 = P_m y^m$ is true with the same x_1 (and different values of P_m) for all lesser positive integral values of m.

Further, the result $x_1^2 + 1 \equiv 0 \pmod{y}$ involves $x_m^2 + 1 \equiv 0 \pmod{y^m}$ for all positive integral values of m, the value of x_m being, however, usually different for each m. Along with each value of m there are always two (incongruous) values of x_m, each less than y^m.

The mode of obtaining these two (the least possible) values of x_m, *i.e.*, the roots of $x_m^2 + 1 \equiv 0 \pmod{y^m}$, from a given solution (x_1) of $x_1^2 + 1 \equiv 0 \pmod{y}$ is very fully explained and illustrated by examples in the present writer's paper on "Period Lengths of Circulates," in *Mess.*

Digitized by Google

of Math., Vol. XXIX., 1900, pp. 145 *et seq.*; a table of x_m for all primes $y \not> 200$ is also there given (p. 166).

When the two roots x_m have been found of $x_m^2 + 1 \equiv 0 \pmod{y^m}$, all the other roots, say $x_{m,n}$, are included in the formula $x_{m,n} = M \cdot y^m \pm x_m$, and the value of p_n (in the original Question) is then given, simply as the quotient $p_n = (x_{m,n}^2 + 1)/y^m$.

This seems to be the generalization asked for.

Ex.—Given $239^2 + 1 \equiv 0 \pmod{13^4}$ [see p. 166, *op. cit.*]; therefore

$$(3 \cdot 13^4 + 239)^2 + 1 \equiv 0, \quad i.e., \quad 85922^2 + 1 \equiv 0 \pmod{13^4}.$$

The PROPOSER solves the problem as follows:—

Let $x^2 + 1 = py^m$. Then

$$(x + y^m)^2 + 1 = (p + 2x + y^m)\, y^m \quad \text{or} \quad \lambda^2 + 1 = Xy^m.$$

Similarly, if $x^2 + r = py^m$, where r = any root of p, then

$$(x + y^m)^2 + r = (p + 2x + y^m)\, y^m, \quad i.e., \quad \lambda^2 + r = Xy^m.$$

Ex.—Let $13^2 + 2 = 19 \cdot 3^2$; then

$$265^2 + 2 = 17^2 \cdot 3^5, \quad 2695^2 + 2 = 41 \cdot 3^{11}, \quad \ldots.$$

Similarly for any other prime.

15605. (JAMES BLAIKIE, M.A.)—A. and B. play at lawn-tennis, and A.'s chance of winning each point is to B.'s chance as m to n. Find A.'s chance of winning the game (1) when the score stands at "deuce," (2) when it stands at A.'s vantage, (3) at B.'s vantage.

Solution by the PROPOSER *and* A. M. NESBITT, M.A.

(1) If the score stand at deuce, the chance that A. will obtain vantage is $m/(m+n)$, that B. will obtain it $n/(m+n)$. In the next hand the chance that A. wins the game is clearly $m^2/(m+n)^2$, that B. wins it $n^2/(m+n)^2$; and thus the chance of deuce is $2mn/(m+n)^2$. Thus A.'s total chance of winning the game is

$$\frac{m^2}{(m+n)^2}\left[1 + \frac{2mn}{(m+n)^2} + \frac{4m^2n^2}{(m+n)^4} + \ldots\right] = \frac{m^2}{m^2+n^2}.$$

(2) If the score stand at A.'s vantage, his chance of winning in the next hand is $m/(m+n)$, while the chance of deuce is $n/(m+n)$; therefore A.'s chance of winning the game is

$$\frac{m}{m+n} + \frac{n}{m+n} \cdot \frac{m^2}{m^2+n^2} = \frac{m(m^2+mn+n^2)}{(m+n)(m^2+n^2)}.$$

(3) If the score stand at B.'s vantage, the chance of deuce in the next hand is $m/(m+n)$, and thus A.'s chance of winning the game is

$$\frac{m}{m+n} \cdot \frac{m^2}{m^2+n^2} = \frac{m^3}{(m+n)(m^2+n^2)}.$$

Example: When $m = n$, A.'s chance of winning is $\frac{1}{2}$ at deuce, $\frac{3}{4}$ at A.'s vantage, $\frac{1}{4}$ at B.'s vantage.

12865. (W. BOOTH.)—If a plane be drawn touching the sphere $x^2 + y^2 + z^2 = R^2$ along its intersection with $z^2 = a^2x^2 + b^2y^2$, prove that the equation of the developable so generated is obtained by equating to zero the discriminant of $x^2/(1-\lambda a^2) + y^2/(1-\lambda b^2) + z^2/(1+\lambda) - R^2 = 0$.

Solution by E. F. TIPPLE.

The surfaces $x^2(1-\lambda a^2) + y^2(1-\lambda b^2) + z^2(1+\lambda) = R^2$ intersect in the given curve. Reciprocating with respect to the sphere $x^2 + y^2 + z^2 = R^2$, we obtain that the surfaces $x^2/(1-\lambda a^2) + y^2/(1-\lambda b^2) + z^2/(1+\lambda) = R^2$ are enveloped by the developable into which the given curve reciprocates. But this developable is the envelope of the tangent planes to the sphere along the given curve. Hence developable is the envelope of the surfaces

$$x^2/(1-\lambda a^2) + y^2/(1-\lambda b^2) + z^2/(1+\lambda) - R^2 = 0.$$

QUESTIONS FOR SOLUTION

15677. (ROBT. W. D. CHRISTIE.)—Let p be any prime and the letters integral. Prove that

$$pqr = l^3 + l^2s + lt + n = (\mathrm{LMN})^{\frac{1}{3}}, \ \ldots;$$

e.g., $103 \cdot 18 \cdot 35 = 25^3 \cdot 25^2 \cdot 53 + 25 \cdot 635 + 265 = (630 \cdot 3605 \cdot 1854)^{\frac{1}{3}}$.

15678. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Show that $F_m^4 + F_n^2$, where $F_x = 2^{2^x} + 1$ (a Fermat's number), can always be resolved into *two* factors when $n - m \not< 2$. Write down the co-factors when $n - m = 2$.

15679. (ALEXANDER HOLM, M.A.)—In Diophantus V. 19 it is required to find three numbers such that, if each is subtracted from the cube of their sum, the remainder may be a cube.

Diophantus' method leads to the numbers

$$\frac{68574961}{549353259}, \quad \frac{134953109}{549353259}, \quad \frac{162707336}{549353259}.$$

In the *Ladies' Diary* for 1716–17 (Leybourn's *Math. Questions*, Vol. I., pp. 52–62) it is stated that the lowest numbers hitherto found to satisfy the problem are $\frac{13851}{85184}, \frac{18954}{85184}, \frac{19467}{85184}$; required to find still lower numbers, for example, $\frac{351}{3136}, \frac{832}{3136}, \frac{833}{3136}$.

15680. (A. W. T.)—

$$[(b-d) - p(a-c)/3]^3 = (c-a)[(ad-bc) + 5p^3(a-c)/27 + p^2(b-d)/3];$$
$$d(a-c)^3 = \{c(a-c)^2 + p[(a-c) - (b-d)](b-d)\}(b-d).$$

If one of the above holds, show that the other holds also.

15681. (Professor SANJÁNA, M.A.)—Let the integer r be divided into two integers a_1, a_2; into three, b_1, b_2, b_3; into four, c_1, c_2, c_3, c_4; and so on. Let n be any other integer ($> r$); then show that

$${}^nC_1 + {}^nC_2 r!\left(\Sigma \frac{1}{a_1!\, a_2!}\right) + {}^nC_3 r!\left(\Sigma \frac{1}{b_1!\, b_2!\, b_3!}\right) + {}^nC_4 r!\left(\Sigma \frac{1}{c_1!\, c_2!\, c_3!\, c_4!}\right) + \ldots + {}^nC_r r! = n^r,$$

where the Σ's exhaust all possible arrangements of the letters in the denominators. When $n \not> r$ the last term is

$${}^nC_n r!\left(\Sigma \frac{1}{n_1!\, n_2! \ldots n_n!}\right).$$

15682. (J. J. BARNIVILLE, B.A.)—Having $u_n + 2u_{n+1} + u_{n+2} = u_{n+3}$, prove that

$$\frac{1.2.5}{1.2.3.4} + \frac{3.5.10}{1.4.6.9} + \frac{6.10.22}{3.9.13.19} + \frac{13.22.47}{6.19.28.41} + \ldots = \frac{3}{2};$$

$$\frac{2.3.7}{1.3.4.6} + \frac{4.7.15}{2.6.9.13} + \frac{9.15.32}{4.13.19.28} + \frac{19.32.69}{9.28.41.60} + \ldots = \frac{7}{6}.$$

15683. (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Find the product of n terms of the series $2 + 34 + 246 + 1028 + 3130 + \ldots$ by n terms of the series $0 + 30 + 240 + 1020 + 3120 + \ldots$.

15684. (A. M. NESBITT, M.A.)—(1) Over the whole of an infinite plane area are described a number of equal circles, each touching six others. A point is taken at random on the plane. Compare the chances of its falling within a circle with that of its falling in the space between three convex circumferences.

15685. (D. BIDDLE.)—Three rods of equal length, but of infinitesimal thickness, are thrown at random on a horizontal plane, so that each intersects the other two. Find the proportion of such throws that will result in every pair of intersections being within the middle thirds of the rods, and generalize by using $1/(2n+1)$ for "third."

15686. (G. H. HARDY, M.A.)—The area Δ and semi-perimeter s of a triangle are fixed. Show that the maximum and minimum values of one of the sides are roots of the equation $sx^2(x-s) + 4\Delta^2 = 0$. Discuss the existence of real maximum and minimum values.

15687 (R. CHARTRES.)—Three random points are taken in the sides of a triangle, one in each side, and joined. Find the mean value of the square of the area of the triangle thus formed. Elementary proof wanted.

15688. (Professor S. SIRCOM.)—If A, B, C, D, E, F be points on the edges YZ, ZX, XY, UX, UY, UZ respectively of the tetrahedron UXYZ, and if XYA denote the area of the triangle XYA, then the ratios

$$\frac{\mathrm{XYA} \cdot \mathrm{YZB} \cdot \mathrm{ZXC} \cdot \mathrm{UXE} \cdot \mathrm{UYF} \cdot \mathrm{UZD}}{\mathrm{ZXA} \cdot \mathrm{XYB} \cdot \mathrm{YZC} \cdot \mathrm{UXF} \cdot \mathrm{UYD} \cdot \mathrm{UZE}}$$

and

$$\frac{\mathrm{XYD} \cdot \mathrm{YZE} \cdot \mathrm{ZXF} \cdot \mathrm{UXC} \cdot \mathrm{UYA} \cdot \mathrm{UZB}}{\mathrm{XYE} \cdot \mathrm{YZF} \cdot \mathrm{ZXD} \cdot \mathrm{UXB} \cdot \mathrm{UYC} \cdot \mathrm{UZA}}$$

are unaltered by projection.

15689. (C. E. YOUNGMAN, M.A.)—Any four points A in a plane can generally be inverted from four different centres B into an orthocentric group of points; this relation between groups A and B is reciprocal, and the eight inverse figures are all of the same shape. The sixteen lines AB intersect in four fresh points C, centres of four circles for each of which the A's are inverse to the B's; these circles cut orthogonally at six (real) points D; and from any D the A's, B's, and C's invert into the corners of three parallelograms, and the other five D's into the corners and centre of a square. The first two parallelograms are duplicates, and all three are concentric with the square.

15690. (R. TUCKER, M.A.)—ABC is a triangle, K is the S. point, and $\omega_1, \omega_2, \omega_3$ are the B. angles of the triangles BKC, CKA, AKB. Prove that $\Sigma \cot \omega_r = 6 \cot \omega - \mathrm{cosec}^2 \omega - 2$.

15691. (JAMES BLAIKIE, M.A.)—BAC is an angle in a circle, and AB, AC meet a diameter in D and E; D and E' are the images in O of D and E. Prove that BE', CD' meet (in A') on the circumference.

15692. (Professor SANJÁNA, M.A.)—At every point P of a parabola the radius of curvature, PO, is taken, and from O the remaining normal, OP', is drawn to the curve. Prove that the envelope of the chord PP'

Digitized by Google

is a parabola with the same vertex and with its concavity in the opposite direction.

15693. (Professor NANSON.)—If a fixed straight line cut one of a series of concentric similar and similarly situated conics at angles θ, ϕ, the length of the intercepted chord varies inversely as $\cot\theta + \cot\phi$.

15694. (Professor NEUBERG.)—Trouver l'enveloppe de la droite symétrique de l'axe d'une parabole par rapport à ses tangentes.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

4817. (Professor SYLVESTER, F.R.S.) [Re-proposed by special request for the sake of a more detailed solution (*cf. Reprint*, Vol. XXXIII., p. 53)].—In a school of 15 girls a rule has been laid down that they shall walk out every day in rows of three, but that the same two girls shall never come together twice in the same row. The rule is supposed to have been carried out correctly during the six working days of the week, but when the time comes for their going to church together on Sunday it is found to be absolutely impossible to continue it any further. Investigate whether the rule *can* have been correctly carried out during the six previous days, and, if so, show how.

9297. (J. O'BYRNE CROKE, M.A.)—Find, in quaternions, the equation of a surface of revolution such that the sum of the slant surfaces of pairs of cones having a circular section for a common base and two fixed points in the major axis as vertices shall be constant.

10754. (Professor DONALD MCALISTER.)—A convex inextensible pliable envelope in the form of a surface of revolution with its axis vertical is exposed to water pressure from within. Prove that at the widest part the tension along the meridians is a maximum or minimum according as it is less or greater than the tension across them.

10790. (H. W. SEGAR, B.A.)—Show that

$$\tfrac{1}{2}\pi\int_0^{\frac{1}{2}\pi} dx \log(1+\cos\theta\cos x)/\cos x = \cos\theta/1^3 - \cos^3\theta/3^3 + \cos^5\theta/5^3 - \dots .$$

10816. (G. S. CARR, M.A.)—If five equal spherical conductors be placed with their centres at the corners of a square pyramid, an edge of the base being a and the slant edge b, and if the sphere at the vertex be insulated and charged with electricity E, while the other spheres are connected to Earth, show that, if r, the radius of the spheres, be small compared to their mutual distances, the charge induced upon each of the uninsulated spheres will be $-ra\sqrt{2}\,E/\{b[a\sqrt{2}+(2\sqrt{2}+1)]\}$.

10848. (Professor B. O. PEIRCE.)—Let U be any function of the two polar co-ordinates r and θ which with its first space derivatives is finite, continuous, and single-valued throughout that part of the co-ordinate plane which is shut in by the closed curve T. Let δ be the angle between the radius vector drawn from the origin to any point P on T, and the normal to T at P drawn from within outwards. Then, if T does not include the origin, the line integrals of $U\cos\delta$ and $U\sin\delta$ taken around T are equal respectively to the surface integrals $D_r(rU)/r$, $D_\theta U/r$ taken over the area enclosed by T. [This theorem is a particular case of one to be proposed hereafter.]

NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

Vol. V. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 *Farringdon Street, E.C. Price to Subscribers, 5s.; Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, November 10th, 1904 (Annual General Meeting).—Prof. H. Lamb, President, in the Chair.

Dr. G. H. Hallett was elected a member.

The President referred to the losses sustained by the Society by the deaths of Prof. Pirie and Mr. R. W. H. T. Hudson.

The Treasurer presented his report. The report was received and Dr. Leathem was appointed Auditor.

In connexion with the election of a Council and Officers for the ensuing Session, the President stated that Prof. Burnside was retiring from the office of Honorary Secretary. He expressed the appreciation of the Society of the services which Prof. Burnside had rendered during his tenure of the office, and referred to the advantage which had accrued to the Society through having had Prof. Burnside as a Secretary.

The Council and Officers for the ensuing Session were elected. The list is as follows:—President, Prof. A. R. Forsyth; Vice-Presidents, Prof. W. Burnside, Prof. E. B. Elliott, Prof. H. Lamb; Treasurer, Prof. J. Larmor; Secretaries, Prof. A. E. H. Love and Mr. J. H. Grace; other members of the Council, Mr. A. Berry, Mr. J. E. Campbell, Dr. J. W. L. Glaisher, Dr. E. W. Hobson, Major P. A. MacMahon, Mr. G. B. Mathews, Mr. A. E. Western, Mr. E. T. Whittaker, Mr. A. Young.

Prof. Forsyth having taken the Chair, the retiring President, Prof. Lamb, delivered an address on "Deep-water Waves." The address was ordered to be printed in the *Proceedings* of the Society.

The following papers were communicated:—

"Note on the Application of the Method of Images to Problems of Vibrations," by Prof. Volterra.

"On the Zeroes of certain Classes of Integral Taylor's Series (two papers)," by Mr. G. H. Hardy.

"The Linear Difference Equation of the First Order," by Rev. E. W. Barnes.

"Remarks on Alternants and Continuous Groups," by Dr. H. F. Baker.

"Expansions of the Elliptic and Zeta Functions of $\frac{1}{2}K$ in powers of q," by Dr. J. W. L. Glaisher.

"Examples of Perpetuants," by Mr. J. E. Wright.

"Two Simple Results in the Attraction of Uniform Wires obtained by Quaternions, with, for comparison, their Verification by the Geometry of the Complex," by Prof. R. W. Genese.

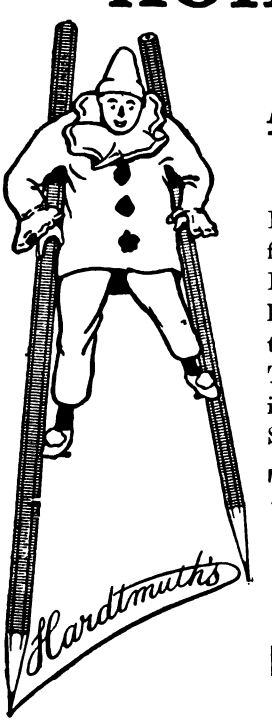
"On the Reducibility of Covariants of Binary Quantics of Infinite Order," by Mr. P. W. Wood.

"A Theorem relating to Quotient Groups," by Prof. G. A. Miller.

"On certain Classes of Syzygies," by Mr. A. Young.

THE PENCILS WITH THE UNBREAKABLE POINTS.

Hardtmuth's KOH-I-NOOR Pencils



Are First and Best wherever Pencils are used.

It is nearly a Century since the firm built its reputation on Pencils. To-day all that is known about Pencils goes into the making of HARDTMUTH'S. They are uniform in Economical Working Quality, and are Standard makes in the trade.

THE PENCIL WITH THE USEFUL POINTS.

REGISTRATION FOR SECONDARY DAY AND EVENING SCHOOLS.

A Copy of FORM 487.

From the Supplementary Regulations issued by the Board of Education, South Kensington.

PRINTED ON SUPERFINE PAPER.

UNBOUND. Published Price per Dozen, 3s.
" " per Hundred, 16s.

IN BOOK FORM. In Stout Cover, Published Price, 8d. each.

THE GEOGRAPHY IS IN USE AT WELLINGTON COLLEGE.

TEXT-BOOKS FOR HIGHER SCHOOLS.

Edited by Rev. C. S. DAWE, late of St. Mark's College, Chelsea.

Specially prepared for the Oxford and Cambridge Preliminary and Junior Local Examinations and Candidates for Minor Scholarships, &c.

The Series consists of the following books:—

ARITHMETIC. Small amount of **Theory,** large amount of **Practice.** Worked-out **Examples** for each step. Prominence given to the **Metric System. Laboratory Exercises** in a special section.

GEOGRAPHY. Physical facts made the basis of **Political. Commercial** aspects kept constantly in view. **British Empire** fully treated. **Many Coloured Maps and Diagrams.**

ENGLISH GRAMMAR. Example made the basis of instruction. **Analysis** introduced **early.** Aids to **correct speaking** a prominent feature. Plenty of scope given for "practice."

ENGLISH HISTORY. Contains landmarks of our national history. More than usual attention given to the last three centuries.

The **Growth** and **Greatness** of the **Empire** specially considered.

PUBLISHED AT ONE SHILLING EACH.

Specimens gratis on application.

Prize Distribution,

CHRISTMAS, 1904.

The Educational Supply Association

HAS NOW IN STOCK

AN IMMENSE ASSORTMENT OF

REWARD BOOKS,

for the selection of which its greatly enlarged show-rooms afford every facility.

PRIZES. *Bound in Morocco.* *Bound in Calf.* *Bound in Paste Grain.* *Bound in Cloth.* PRIZES.

The Association, having purchased a great number of selected books at much under the usual prices, is offering them at special prices.

MEDALS. GOLD, SILVER, BRONZE, TO SUIT ALL PURPOSES, AT VARIOUS PRICES.

Mathematical Prizes, Instruments, &c., &c.

Catalogues now Ready—
(1) **CLOTH BOUND VOLUMES,** (2) **LEATHER BOUND VOLUMES,**
Both of which will be sent post free on application.

The Educational Supply Association, Ltd.,

42 HOLBORN VIADUCT, LONDON, E.C.

Educational Works by A. K. ISBISTER, M.A., LL.B.

(LATE DEAN OF THE COLLEGE OF PRECEPTORS).

New Edition. 12mo, price 1s. 6d.

LESSONS IN ELOCUTION AND EXPRESSIVE READING FOR BOYS, based on Grammatical Analysis; with a choice Selection of Extracts for Reading and Repetition, classified, of Goldsmith's "Deserted Village," set out into Principal and Subordinate Sentences, illustrating the theory of Emphasis and Pauses.

New Edition. 12mo, price 1s. 6d.

LESSONS IN ELOCUTION AND EXPRESSIVE READING FOR GIRLS, based on Grammatical Analysis; with a choice Selection of Extracts for Reading and Repetition, classified, under heads for practice in various styles of Reading, and annotated for Expression, Emphasis, and Pauses, and the Analysis of Sentences, with the figure [of a *Girl*] showing the proper attitude in Reading.

Fifth Edition. Two Quarto Copy Books, price 6d. each.

THE GEOMETRICAL COPY-BOOK. Arranged for writing out the Propositions of Euclid in the Abbreviated and Symbolical Form adopted in the Universities and Public Schools.

Third Edition. 12mo, price 1s. 6d.

FIRST STEPS TO EUCLID: Comprising the Propositions of Book I., prepared for writing out, with a recapitulation of the steps of the Demonstration appended to each. Forming a Text-book for the above.

Sixteenth Edition, with Map. 12mo.

CÆSARS COMMENTARIES on the GALLIC WAR.

BOOKS I.–V. With Notes Critical and Explanatory, a Vocabulary of all the Words in the Text, and Easy *Reading Lessons for Beginners* ..... price 3s. 6d.
BOOKS I.–VII. do. do. 4s. 6d.
Do. (without the Reading Lessons) ..... 4s. 0d.

Twenty-fifth Edition.

BOOK I. (with Vocabulary, Reading Lessons, &c.) ..... 1s. 6d.

Fourteenth Edition. 12mo, price 3s. 6d.

XENOPHON'S ANABASIS, Books I. to III. With Notes, Vocabulary of all the Words in the Text, and *a Series of Easy Reading Lessons for Beginners.* Designed as a First Greek Reading Book in Schools.

Nineteenth Edition. 16mo, 1s. 6d.; or in Two Parts, price 9d. each.

THE ELEMENTS OF ENGLISH GRAMMAR AND COMPOSITION, including the Analysis of Sentences, simplified for Beginners.

Tenth Edition. 12mo, price 6d.

A FIRST BOOK OF ENGLISH GRAMMAR, GEOGRAPHY, AND ENGLISH HISTORY. With Arithmetical Tables, Dates, &c.

Eleventh Edition. 12mo, price 1s. 6d.

FIRST STEPS IN READING AND LEARNING: a Reading-Book for Beginners, designed to utilize the time of those learning to read, by presenting, in a series of Easy Reading and Writing Lessons, a First Course of Scripture and English History, Geography, English Grammar, Spelling, and Arithmetic, interspersed with Moral Lessons and Simple Poetry for Repetition.

4to, 1s. each.

ENGRAVED ACCOUNT BOOKS. Ruled and Interleaved for Copying, adapted to the above.

No. I. Business Forms. 1. Bills of Parcels and Book Debts. 2. Invoices. 3. Account Sales. 4. Receipts. 5. Promissory Notes and Drafts. 6. Bills of Exchange.
No. II. Day-Book and Cash-Book.
No. III. Ledger, Index, and Balance Sheet.

A SCHOOL GEOMETRY.

By **H. S. HALL, M.A.**, and **F. H. STEVENS, M.A.** Crown 8vo.

This work is based upon the recommendations of the Mathematical Association, and will be found to satisfy the requirements of University, Local, London Matriculation, Army, Navy, and other Examinations. In particular, the suggestions recently proposed by the Cambridge Syndicate have been carefully considered.

Parts I.–VI. 4s. 6d.
Parts I. and II.—Part I., LINES and ANGLES, RECTILINEAL FIGURES. Part II., AREAS OF RECTILINEAL FIGURES (containing the Substance of Euclid, Book I.). 1s. 6d.
Part III.—CIRCLES (containing the Substance of Euclid, Book III., 1–34, and part of Book IV.). 1s.
Parts I., II., and III. 2s. 6d.
*** This volume exactly suits the requirements of the New Syllabus for the King's Scholarship Examination.
Part IV.—SQUARES AND RECTANGLES, GEOMETRICAL EQUIVALENTS OF CERTAIN ALGEBRAICAL FORMULÆ (containing the Substance of Euclid, Books II. and III., Props. 35–57). Sewed, 6d.
Parts I.–IV. 3s.
Parts III. and IV.—Containing the Substance of Euclid, Books II. and III. and part of Book IV. 1s. 6d.
Part V.—Containing the Substance of Euclid, Book VI., with additional Theorems and Examples. 1s. 6d.
Parts I.–V. 4s. 6d.
Parts IV. and V.—Containing the Substance of Euclid, Book II., Book III., 35–37, and Book VI. 2s.
Part VI.—Containing the Substance of Euclid, Book XI., 1–21, together with Theorems relating to the Surfaces and Volumes of the Simpler Solid Figures. 1s. 6d.
Parts IV., V., and VI. 2s. 6d.

CAMBRIDGE LOCAL EXAMINATIONS, 1905.
